Acerca de este libro

Esta es una copia digital de un libro que, durante generaciones, se ha conservado en las estanterías de una biblioteca, hasta que Google ha decidido escanearlo como parte de un proyecto que pretende que sea posible descubrir en línea libros de todo el mundo.

Ha sobrevivido tantos años como para que los derechos de autor hayan expirado y el libro pase a ser de dominio público. El que un libro sea de dominio público significa que nunca ha estado protegido por derechos de autor, o bien que el período legal de estos derechos ya ha expirado. Es posible que una misma obra sea de dominio público en unos países y, sin embargo, no lo sea en otros. Los libros de dominio público son nuestras puertas hacia el pasado, suponen un patrimonio histórico, cultural y de conocimientos que, a menudo, resulta difícil de descubrir.

Todas las anotaciones, marcas y otras señales en los márgenes que estén presentes en el volumen original aparecerán también en este archivo como testimonio del largo viaje que el libro ha recorrido desde el editor hasta la biblioteca y, finalmente, hasta usted.

Normas de uso

Google se enorgullece de poder colaborar con distintas bibliotecas para digitalizar los materiales de dominio público a fin de hacerlos accesibles a todo el mundo. Los libros de dominio público son patrimonio de todos, nosotros somos sus humildes guardianes. No obstante, se trata de un trabajo caro. Por este motivo, y para poder ofrecer este recurso, hemos tomado medidas para evitar que se produzca un abuso por parte de terceros con fines comerciales, y hemos incluido restricciones técnicas sobre las solicitudes automatizadas.

Asimismo, le pedimos que:

+ *Haga un uso exclusivamente no comercial de estos archivos* Hemos diseñado la Búsqueda de libros de Google para el uso de particulares; como tal, le pedimos que utilice estos archivos con fines personales, y no comerciales.

+ *No envíe solicitudes automatizadas* Por favor, no envíe solicitudes automatizadas de ningún tipo al sistema de Google. Si está llevando a cabo una investigación sobre traducción automática, reconocimiento óptico de caracteres u otros campos para los que resulte útil disfrutar de acceso a una gran cantidad de texto, por favor, envíenos un mensaje. Fomentamos el uso de materiales de dominio público con estos propósitos y seguro que podremos ayudarle.

+ *Conserve la atribución* La filigrana de Google que verá en todos los archivos es fundamental para informar a los usuarios sobre este proyecto y ayudarles a encontrar materiales adicionales en la Búsqueda de libros de Google. Por favor, no la elimine.

+ *Manténgase siempre dentro de la legalidad* Sea cual sea el uso que haga de estos materiales, recuerde que es responsable de asegurarse de que todo lo que hace es legal. No dé por sentado que, por el hecho de que una obra se considere de dominio público para los usuarios de los Estados Unidos, lo será también para los usuarios de otros países. La legislación sobre derechos de autor varía de un país a otro, y no podemos facilitar información sobre si está permitido un uso específico de algún libro. Por favor, no suponga que la aparición de un libro en nuestro programa significa que se puede utilizar de igual manera en todo el mundo. La responsabilidad ante la infracción de los derechos de autor puede ser muy grave.

Acerca de la Búsqueda de libros de Google

El objetivo de Google consiste en organizar información procedente de todo el mundo y hacerla accesible y útil de forma universal. El programa de Búsqueda de libros de Google ayuda a los lectores a descubrir los libros de todo el mundo a la vez que ayuda a autores y editores a llegar a nuevas audiencias. Podrá realizar búsquedas en el texto completo de este libro en la web, en la página `http://books.google.com`

This is a reproduction of a library book that was digitized by Google as part of an ongoing effort to preserve the information in books and make it universally accessible.

Section II.—Papers and Reports

Review of Work of Sub-Committee on Wave Shape Standard of the Standards Committee. By Harold S. Osborne, New York, February 20, 1919 1
Electric Power Generation in Ontario on Systems of Hydroelectric Power Commission. By Arthur H. Hull, Toronto, Canada, November 22, 1918 29

Copyright 1918. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII JANUARY, 1919 Number 1

A. I. E. E. MEETING IN NEW YORK, JANUARY 10, 1919

The 345th meeting of the American Institute of Electrical Engineers will be held on Friday evening, January 10, 1919, in the Auditorium of the Engineering Societies Building, 33 West 39th Street, New York, at 8:30 p. m. The subject of the meeting will be "Aeronautics," and a lecture will be given by Major General George O. Squier, Chief Signal Officer of the United States Army on "Aeronautics in the United States." The lecture will include the developments in this field from the beginning of the war down to the present time and will be illustrated by moving pictures showing details of the processes of manufacturing airplanes and accessories. There will also be displayed several groups of models of certain equipment which has been developed by the Signal Corps during the period of the war.

Non-members of the Institute who are interested in this subject, including ladies, are cordially invited to attend this lecture.

A. I. E. E. MIDWINTER CONVENTION FEBRUARY 19-21, 1919

The Seventh Annual Midwinter Convention of the American Institute of Electrical Engineers will be held at the Institute headquarters, 33 West 39th Street, New York, February 19, 20 and 21, 1919. While the complete details of the program have not yet been completed the tentative arrangements may be described as follows:

On Wednesday afternoon there will be a joint meeting with the American Institute of Mining Engineers at which several papers on Electric Welding will be presented.

On Wednesday evening there will be a popular lecture with moving pictures which were adopted by the U. S. Government for the instruction of troops in regard to various mechanical and engineering processes.

On Thursday morning there will be a technical session opened with an address by President Adams.

Thursday afternoon has been reserved for trips of engineering interest to points in and about New York, and Thursday evening there will be a reception and dance at the Institute headquarters.

On Friday morning there will be a technical session under the auspices of the Electrophysics Committee, and the last session of the convention will be on Friday afternoon at which several papers under the auspices of the Telegraphy and Telephony Committee will be presented.

The complete program will be published in the February issue of the PROCEEDINGS.

FUTURE SECTION MEETINGS

Baltimore.—January 10, 1919. Subject: "Ship Propulsion."

Boston.—January 7, 1919, Chipman Hall, Tremont Temple. Subject: "The Principles of Camouflage for Land, Sea, and Air. Speaker: M. Luckiesh.

Philadelphia.—January 15, 1919, Engineers' Club. Subject: "Lighting in War Times." Speaker: Preston S. Millar.

A 51.1
v. 38

Schenectady.—January 17, 1919. Subject: "Features of Design and Operation of the Turners Falls Power & Electric Company." Speaker: F. L. Hunt.

Washington.—January 14, 1919. Subject: The Electrification of the Chicago, St. Paul and Milwaukee Railway. Speaker: N. W. Storer.

A. I. E. E. DIRECTORS' MEETING PHILADELPHIA, DECEMBER 13, 1918

The regular monthly meeting of the Board of Directors was held at the Bellevue-Stratford Hotel, Philadelphia, on Friday, December 13, 1918, at 10:30 a. m.

There were present: President C. A. Adams, Cambridge, Mass.; Vice-Presidents F. B. Jewett, New York, and John B. Taylor, Schenectady; Managers C. E. Skinner, Charles Robbins, and Frank D. Newbury, Pittsburgh, N. A. Carle, Newark, N. J., Walter A. Hall, Lynn, Mass., Wm. A. Del Mar and W. I. Slichter, New York; Treasurer George A. Hamilton, Elizabeth, N. J., and Secretary F. L. Hutchinson, New York.

The action of the Finance Committee in approving monthly bills amounting to $8557.03, was ratified.

Chairman Slichter of the Meetings and Papers Committee reported upon plans for coming Institute meetings, including the Midwinter Convention, February 19, 20, and 21, as referred to elsewhere in this issue.

A report of the meeting of the Board of Examiners held November 25 was presented; and the actions taken at this meeting were approved.

In accordance with the recommendations of the Board of Examiners the following action was taken upon pending applications: 5 students were ordered enrolled; 54 applicants were elected to the grade of Associate; 3 applicants were re-elected to the grade of Associate; 6 applicants were elected to the grade of Member; 1 applicant was elected to the grade of Fellow; 13 applicants were transferred to the grade of Member; and 2 applicants were transferred to the grade of Fellow.

Announcement was made that in accordance with the by-laws of the Institute President Comfort A. Adams will become a member of the John Fritz Medal Board of Award for a term of four years beginning on the third Friday in January.

A considerable amount of other business was transacted by the Board, reference to which will be found in this and future issues of the PROCEEDINGS.

NOMINATIONS FOR INSTITUTE OFFICERS FOR 1919-20

As provided in Section 20 of the Institute by-laws, candidates may now be proposed for nomination for the offices to be filled at the next annual election in May, 1919, by the petition or by the separate endorsement in writing, of not less than fifty members. The petitions or separate endorsements must be in the hands of the Secretary not later than January 25, 1919. For the convenience of members, a form of petition has been prepared by the Secretary, and copies of it may be obtained upon application to Institute headquarters. Endorsements may, however, be made by letter if the form is not available. A member is not limited in the number of candidates he may endorse in this manner.

The officers to be elected are: a President and a Treasurer, for the term of one year each, six Vice-Presidents for the term of one year each, and three Managers for the term of four years each.

The Constitution provides that "the President, Vice-Presidents and Managers shall not be eligible for immediate reelection to the same office. A Vice-President shall not be eligible for immediate election to the office of Manager."

For the information of members, the full text of Section 20 of the by-laws, governing the proposal of candidates for nomination, is printed below:

Sec. 20. In addition to the names of incumbents of office, the Secretary shall publish on the "form showing offices to be filled at the ensuing annual election in May" provided for in Article VI of the Constitution, the names, as candidates for nomination, of such members of the INSTITUTE as have been proposed for nomination for a particular office by the petition or by the separate endorsement of not less than fifty members, received by the Secretary of the INSTITUTE in writing by January 25 of each year.

The names of such candidates for nomination shall be grouped alphabetically under the name of the office for which each is proposed, and this by-law shall be reprinted prominently in the December and January issue of each year's PROCEEDINGS, and shall be reproduced on the form above referred to.

A. I. E. E. MEETING IN PHILADELPHIA

The 342nd meeting of the American Institute of Electrical Engineers was held in the Bellevue Stratford Hotel, Philadelphia, December 13, 1918, under the auspices of the Philadelphia Section.

The total attendance at the meeting was 230 including Institute members and visitors. The meeting consisted of an afternoon and evening session with an informal dinner between the sessions. The papers for the afternoon session were provided under the auspices of the Committee on Mines and were as follows:

"The Use of Electric Power in the Mining of Anthracite Coal," by J. B. Crane.

"Drum Shape as Affecting the Mine Hoist Duty Cycle," by F. L. Stone.

The meeting was opened at 2:30 o'clock p. m. and was called to order by Mr. W. F. James, Chairman of the Philadelphia Section, who after a few remarks of welcome turned the meeting over to President C. A. Adams. President Adams called on Mr. Crane who abstracted his paper and was followed by Mr. Stone who also presented his paper in abstract. The two papers were discussed together and the discussion brought out that the Coal Administration has arranged for redistribution of excess station power to coal mines needing the supply and that much work has been done along this line to the advantage of both mine operators and power stations. On the subject of speeds of hoists as affected by the method of elevation it was pointed out that the best practise tended towards slower speeds and the use of large skips for handling coal in considerable quantities.

The informal dinner between sessions was held at 6:00 o'clock on the roof garden of the Bellevue Stratford with 130 members in attendance.

The evening session was called to order by President Adams, who presented the first speaker of the evening, Dr. W. R. Whitney, who gave an address on "American Engineering Research." Dr. Whitney was followed by Colonel R. A. Millikan who spoke on the subject of "Engineering Research After the War." Both of these addresses will be printed in a future issue of the PROCEEDINGS. There was a general discussion following these addresses which emphasized the lack of publicity agencies in regard to the appreciation of the relatively poor standing of scientific research in the United States, and the necessity of financial support of research work in the universities of the country if the United States is to take a proper place among the nations in scientific development. It was pointed out that financial support in the case of agricultural research had put this country among the first along these lines and similar assistance should also prove of equal value in stimulating scientific research.

The technical excursion past the shipyards down the Delaware River planned for Saturday morning had to be abandoned on account of the heavy fog that prevailed, but about 50 of the members took advantage of the opportunity to visit the Chester generating station of the Beacon Light Company (Philadelphia Electric Company) which is in process of construction. One 30,000 kw. generator set is in operation and a second one almost completed. The ultimate capacity of this station, which is a handsome piece of archi-

165515

tecture, will be four of these units. A bank of two boilers is provided for each turbine unit and one of the special features of this installation is the indicator panel and control board for these boilers. After completing the inspection of the plant the visitors were entertained at luncheon by the Philadelphia Electric Company.

AMERICAN ENGINEERS GO TO FRANCE

At the invitation of the French Society of Civil Engineers and a committee of the French Engineers' Congress, and with the official approval of the French government, a delegation of American engineers has been appointed to study with French engineers certain problems involved in the industrial rehabilitation of France after the war.

This delegation was invited to go to Paris to examine in joint conference questions of the utilization of commercial ports, the development of navigable waterways, the development of water power and the improvement of road systems. Although these were the only subjects mentioned specifically, the congress will probably take up many other questions of development in which all engineers are directly interested.

The invitation was sent to the American Society of Civil Engineers and was accepted at once by cable, the acceptance stating that such a delegation would be organized in cooperation with the other American national societies.

The Executive Committee of the American Institute of Electrical Engineers selected Mr. Lewis B. Stillwell, Consulting Engineer, 100 Broadway, New York, as a representative upon this delegation.

The complete delegation, which sailed from New York December 5 on the steamer Espagne, is as follows: Messrs. James F. Case, Chairman, George W. Fuller, A. M. Hunt, Nelson P. Lewis, Charles T. Main, E. Gybbon Spilsbury, Lewis B. Stillwell, George F. Swain, and George W. Tillson.

FIELD OF ACTIVITY OF ENGINEERING COUNCIL

Engineering Council held its organization meeting June 27, 1917, in Engineering Societies Building, New York. A remarkable period has since passed in the history of the country and the engineering profession. Created under By-Laws of United Engineering Society granting broad powers, Council has refrained from defining its field of activity until it had experience to guide it. This course has been the more necessary because of the unusual conditions. At a special meeting held November 21, 1918, at which a number of interesting and important actions were taken, the following resolutions were adopted:

WHEREAS, United Engineering Society has, in accordance with the desires of the four Founder Societies (American Society of Civil Engineers, American Institute of Mining Engineers, American Society of Mechanical Engineers, American Institute of Electrical Engineers), established a department, "in addition to its other activities and entirely separate therefrom," "known as the Engineering Council," (preamble to By-Laws 114 to 124); and

WHEREAS, provision has been made for the admission of "other national engineering or technical societies," (By-Law 123); and

WHEREAS, the By-Laws of United Engineering Society stipulate that Engineering Council is to provide for convenient cooperation between Engineering Societies, "for the proper consideration of questions of general interest to engineers and to the public, and to provide the means for united action upon questions of common concern to engineers," and that "Council may speak authoritatively for all member societies on all public questions of common interest or concern to engineers, unless objection be made by a majority of the representatives present of one of the Founder Societies or by one-quarter of the representatives present and voting," (By-Laws, preamble and 116); be it

RESOLVED: That Engineering Council understands its field of activity to be approximately as follows.

(1) Council may deal with any matter of general interest for which joint action of two or more of its member societies would have been appropriate, if Council had not been established.

(2) Council may initiate and carry through projects of the general character defined in the

by-laws, for which the necessary financial provision has been made; but Council shall not undertake expenditures in excess of appropriations for its uses made by United Engineering Society on behalf of the Founder Societies and the contributions from other member societies, unless specific provision shall have been made therefor by subscription, donation or otherwise; moneys received by Engineering Council shall be turned into the treasury of United Engineering Society and disbursed by it, for the purposes designated.

(3) Council may take up, and in its discretion act upon, any matter of general interest referred to it by any member society or by any other society,—national, state or local,—or by any branch of Government, or by an individual or group of individuals.

Resolved: That Engineering Council will as a rule avoid considering any matter which is specifically within the province of only one member society and not of others.

PAST SECTION MEETINGS

Baltimore.—November 11, 1918, Engineers Club. Illustrated address by President C. A. Adams on "Application of Electric Welding to Ship Building." Attendance 100.

Boston.—December 3, 1918, Engineers Club. Illustrated address by Dr. Ellwood B. Spear on "Problems of Gas Warfare." Attendance 45.

Chicago.—November 25, 1918, Western Society of Engineers' Rooms. Papers: (1) "Lighting Curtailment" by Preston S. Millar; (2) "Conservation of Coal During War Times in the State of Illinois" by Harold Almert. Joint meeting of local engineering organizations. Attendance 225.

Cleveland.—November 19, 1918, Electrical League. Illustrated address by President C. A. Adams on "Electric Welding." Attendance 112.

Detroit—Ann Arbor.—December 13, 1918, Detroit Board of Commerce. Paper: "Fundamental Principles and Calculations of Direct-Current Circuits" by John C. Parker. Attendance 30.

Fort Wayne.—November 21, 1918, Building 16, G. E. Co. Address by Capt. R. N. Vyvyan on "The Application of Wireless Telegraphy and Telephony to Aeroplane Work." Attendance 23.

Ithaca.—December 6, 1918, Franklin Hall, Cornell University. Address by Dr. Carl Hering on "Departures from the Beaten Track." Attendance 125.

Lynn.—November 20, 1918, General Electric Hall. Paper: "The Transformer Industry and Some of Its Problems" by Matthew O. Troy. Attendance 90.

Pittsburgh.—November 19, 1918, Auditorium, Chamber of Commerce. Paper: "New Locomotive and Substation Equipment for Chicago, Milwaukee and St. Paul R. R." by N. W. Storer. Attendance 135.

December 10, 1918, Chamber of Comermerce Auditorium. Paper: "The Power Developments at Niagara" by P. M. Lincoln. Attendance 75.

Pittsfield.—November 14, 1918, New American House. Address by Hon. Allen T. Treadway on "War Time Legislation." Informal talks by Messrs. F. R. Whittlesey, G. Faccioli, and M. O. Troy.

November 22, 1918, Masonic Temple. Illustrated lecture by Mr. William Henry Blood on "The Building of Hog Island Shipyard—A Great Achievement of a Great Epoch." Attendance 625.

December 5, 1918, New American Hotel. Illustrated lecture by President C. A. Adams on "Arc Welding as Applied to Ship Building." Mr. R. E. Wagner showed motion picture of a large electrically welded pressure tank while being subjected to a breathing test. Attendance 165.

Rochester.—November 29, 1918, Rochester Engineering Society. Address by Mr. E. S. Johnson on "The Chicago, Milwaukee and St. Paul Electrification." Attendance 60.

San Francisco.—December 6, 1918, Engineers' Club. Paper: "New Charts for the Ascertaining of Sag Constants in Aerial Suspension" by Joseph N. LeConte. Attendance 65.

Schenectady.—November 15, 1918, Edison Club Hall. Address by Dr.

Gulick on "Immigration." Attendance 200.

December 10, 1918, Edison Club Hall. Address by President C. A. Adams on "Electric Welding with Special Reference to Its Application to Ship Building." Attendance 345.

Seattle.—November 19, 1918, Chamber of Commerce. Paper: "A Basic Plan for the Development of our National Electric Power Resources." by C. E. Magnusson. Attendance 37.

St. Louis.—November 27, 1918, Engineers' Club. Address by Mr. E. E. Huffman on "United States Patent Law and Procedure." Attendance 25.

Toronto.—December 6, 1918, Toronto University. Illustrated lecture by Dr. Saul Dushman on "Modern Applications of the Electron Theory." Attendance 120.

Urbana.—November 20, 1918, Electrical Engineering Laboratory. Election of officers as follows—chairman, A. R. Knight; secretary-treasurer, E. H. Waldo; chairman membership committee, E. B. Paine.

ASSOCIATES ELECTED DECEMBER 13, 1918

Douglas, Charles H., Distribution Engineer, Union Electric Light & Power Co., 315 N. 12th St., St. Louis, Mo.

Flight, William Stanley, Technical Electrical Engineer, British Westinghouse E. & M. Co.; res., 21 Primrose Ave., Urmston, Manchester, Eng.

Lyons, Benjamin Franklin, Vice-Pres. & Gen. Mgr., Beloit Water, Gas & Electric Co., 429 E. Grand Ave., Beloit, Wis.

Montabone, A. J. F., Consulting Engigineer, Imperial Theatre Bldg.; res., 25 De L'Epee Ave., Montreal,Quebec.

Smith, J. Fred, Asst. Electrical Engineer, Air Nitrates Corp., 469 5th Ave., New York, N. Y.; res., 164 Ashland Ave., Bloomfield, N. J.

FELLOW ELECTED DECEMBER 13, 1918

Varley, Thomas Wilcock, Consulting Engineer, The Auto Coil Co., Jersey City N. J.; res., 423 W. 120th St., New York, N. Y.

TRANSFERRED TO GRADE OF FELLOW DECEMBER 13, 1918

Bryans, Henry B., Engineer, Counties Gas and Electric Co., Norristown, Pa.

Gaby, Frederick A., Chief Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ont.

TRANSFERRED TO GRADE OF MEMBER DECEMBER 13, 1918

Brofos, Einar A., Telephone Engineer, Western Electric Co. Ltd., London, England.

Brown, Bedford J., Superintendent of Meter Dept., Southern Power Co., Charlotte, N. C.

Combs, Robert H., General Manager and Chief Engineer, Prest-O-Lite Co. of Canada, Ltd., Toronto, Ont.

Elsom C. H., Member of Firm, West Virginia Engineering Co., Charleston, W. Va.

Grant, Louis T., Major E. R. C., Office of Chief of Engineers, Washington, D. C.

Lopez, Ernesto F., Manager, J. K. Robinson, Inc., New York, and Suc. J. K. Robinson, Iquique, Chile, S.A.

Pennington, Paul, Lieut., (J. G.) U.S. N. R. F., Radio Officer, U. S. S. Orizaba.

Proctor, Elwynne B., Chief Insurance Engineer, Marine Underwriters, New York, N. Y.

Sclater, Robertson H., Inspector, Southern Underwriters Ass'n, Richmond, Va.

Sirnit, John A., Designing and Electrical Engineer, Alabama Power Co., Birmingham, Ala.

Stafford, R. T., Manager, Allis-Chalmers Mfg. Co., Seattle, Wash.

Terrell, Charles F., Superintendent of Transformation, Puget Sound Traction, Light & Power Co., Seattle, Wash.

Willey, Frank W., Member of Firm, Willey-Wray Electric Co., Cincinnati, O.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on December 30, 1918, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Magalhaes, Frank V., Superintendent of Test Dept., N. Y. Edison Co., New York, N. Y.

Wyman, Walter Scott, Treasurer & General Manager, Central Maine Power Co.; General Manager, Adirondack Electric Power Corp.; Augusta, Me.

To Grade of Member

Berger, Julius G., Chief Engineer, Wm. Gordon Corp., Philadelphia, Pa.

Calman, Cecil G., Engineer, Wm. Adams, & Co. Ltd., Sydney, Australia.

Clark, H. O., Jr., Captain, Quartermaster Corps, Construction Div., Camp Logan, Tex.

Harden, William H., Engineering Dept., American Telephone & Telegraph Co., New York, N. Y.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before January 31, 1919.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

Eduardode A. Braga
(former address)
2-4 Stone St.,
New York, N. Y.

Howard K. Cook,
(former address)
Counties Gas & Elec. Co.
Norristown, Pa.
F. C. Dieterich
(former address)
17 Watertown Ave.,
Waterbury, Conn.
H. S. Logan
(former address)
214 15th Ave.
Seattle, Wash.
Merwin, F. R.
(former address)
1831 T St.,
Sacramento, Cal.
Lincoln Nissley
(former address)
(Room 1213, Pioneer Bldg.,
St. Paul, Minn.
Louis F. Nosek
(former address)
2245 E. 82nd St.
Cleveland, Ohio.

PERSONAL

Meldon H. Merrill and Thomas B. Sweeney announce the organization of the firm of Merrill, Sweeney & Co., engineers, managers and purchasing agents for public service properties, with offices at 50 State Street, Boston, Mass.

Dwight P. Robinson & Co., Inc., Constructing and Consulting Engineers, announce the opening of their offices at 61 Broadway, New York. This organization is prepared to construct, either from their own designs or from designs of others, hydroelectric developments, steam power plants, transmission systems, industrial plants, housing developments and steel and reinforced concrete structures; to undertake the electrification of steam railways and to make engineering and financial reports and appraisals.

Vratislav Adolph Zehr, consulting engineer of the E. T. Perkins Engineering Co. of Chicago, formerly in charge of the Green Bay Levee & Drainage District construction is now superintendent of construction at the Rocky Ford Drainage District, Pekin, Ill.

Captain George B. Nichols has obtained his discharge from the Engineer Corps of the U. S. Army and has returned to his former position of Chief Engineer in the Dept of Architecture, Albany, N. Y.

Herbert B. Reynolds, formerly a fuel engineer in the United States Bureau of Mines, has returned to the Motive Power Department of the Interborough Rapid Transit Company of New York City as Mechanical Research Engineer.

OBITUARY

Henry E. Randall, Jr., died from influenza on October 21 at Montreal, Canada. Mr. Randall graduated from M. I. T. in 1913 and then entered the employ of the Shawinigan Water and Power Co., first at Cedar Rapids and later at the companys' office in Montreal. He finally became power sales engineer and in October 1 severed his connection with the company to become general manager of the Ludlum Electric Furnace Corporation, the position he held at the time of his death. Mr. Randall was elected an Associate in the Institute in 1917.

Lieut. Colonel Frank J. Duffy, of the 103rd Engineers, U. S. Army was killed in France on August 17, 1918. Colonel Duffy was formerly General Foreman, Electric Dept., D. L. & W. R. R. at Scranton, Pa. He became an Associate in the Institute in 1911 and was transferred to the **Grade of Member** in 1917.

Archer F. Moray formerly, Chief Operating Engineer of the St. Maurice Paper Co., Ltd., Montreal, P. Q., died from the effects of influenza on October 11, 1918. Mr. Moray was elected an Associate in the Institute in 1911.

EMPLOYMENT SERVICE

ESTABLISHMENT OF ENGINEERING SOCIETIES EMPLOYMENT BUREAU

The employment service which has been maintained for many years by the Institute has satisfactorily met the demands upon it and has been greatly appreciated by the membership at large, many of whom have obtained desirable engagements through it. The individuals and industries seeking competent engineers have also been greatly benefited.

Similar effective service has been maintained by some of the other national engineering societies, and for sometime the desirability of more closely coordinating the employment activities of these societies and broadening the scope of the service has been discussed, as a result of which the establishment of the Engineering Societies Employment Bureau under the direction of a Board of Management consisting of the Secretaries of the American Society of Civil Engineers, the American Institute of Mining Engineers, the American Society of Mechanical Engineers and the American Institute of Electrical Engineers, was authorized at a meeting held November 21 by the Engineering Council, which is the instrument created by the four societies named above for the purpose of conducting activities of common interest.

In creating this joint bureau the Engineering Council turned over to the Board of Management the office equipment, records and operating staff of the American Engineering Service, a similar body organized by Engineering Council and representing several engineering societies including the Institute, which had been engaged during the war in assisting the various branches of the Army, Navy and other governmental departments to obtain suitable engineering personnel.

The Bureau is especially needed in the period of readjustment upon which the country is just entering. One of its most important functions will be to aid engineers who have been in military service to find suitable engagements upon their return to civilian life.

The Bureau will not be conducted exclusively for the benefit of members of the societies named above; non-members who are properly introduced will also be registered. No charge will be made either to the available engineer or the organization or individual seeking engineering talent.

The number of opportunities for employment of which the Institute and the joint bureau have knowledge does not at present equal the number of engineers whose services are available, and as this disparity will be accelerated as demobilization of military forces progresses, the cooperation of members of the Institute, industrial establishments and others needing the services of engineers is earnestly desired. The necessary qualifications for each position and the approximate salary should be stated in each case.

The Board of Directors of the Institute has instructed the Secretary to continue the Institute employment service substantially as rendered to the membership for many years past and has authorized him to coordinate this service with similar activities of other engineering societies.

The plan for coordination will not involve any limitation of the privilege previously given to Institute members to have, upon application to the Secretary, brief announcements of their qualifications published under key numbers in the Institute PROCEEDINGS, but on the contrary, will result in the members' names being carried also on the joint bureau's lists. Announcements of vacancies will also be published as formerly but in many instances vacancies will not be announced in this manner, as they will frequently be filled promptly from the list of available men on the files of the Institute and the joint Bureau.

Communications may be sent either to the headquarters of the Institute, or to Mr. W. V. Brown, Manager Engineering Societies Employment Bureau, 29 West 39th Street, New York.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute is glad to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in the BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office reference files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

OPPORTUNITIES FOR SERVICE

V-447. Steam-electrical engineer for 1200 H-P plant in New Jersey. Man not afraid, if necessary, to put on overalls. Experience in electro-chemical factory operation valuable. Supervision of two operating engineers. Salary dependent on capability.

V-448. Graduate physics or science, post graduate or Ph. D. preferred, for special physical and electrical research in small well equipped laboratory. Previous experience not essential. Permanent position.

V-449. Draftsmen and detailers wanted for industrial plant layout work, preferably men with experience in elevating and conveying machinery. State age, education, nationality, previous experience and salary desired.

V-450. A well established company manufacturing both alternating and direct current motors and generators has a splendid opening for a designing engineer. None but A-1 experienced engineers considered. State age and experience on both alternating and direct current design.

V-451. Large electrical manufacturer needs man familiar with switchboards, circuit breakers, and meters, who knows how to write. Technical graduate preferred.

V-452. Superintendent of electrical distribution for town of 30,000. Executive ability necessary, also experience in high tension transmission distribution and meter departments. Salary $1800. to $2400.

V-453. Meter expert. Large operating company in the east desires services of man capable of calibrating and maintaining A. C. and D. C. meters, relays, and similar electrical apparatus. State experience and salary desired.

V-454. Young engineer, several years experience operating, drafting or testing, for boiler room, generating station and switchboard layout. Opportunity for young man willing to work. Salary dependent on ability and experience.

V-455. Wanted—Man having technical training for general steam and electrical testing work in New York City. Salary approximately $2000. per year. State age, education and experience.

V-456. Electrical engineer with theoretical knowledge of physics and chemistry wanted by eastern manufacturer of fuses. Give age, experience and minimum salary.

V-457. Cost engineer to oversee cost keeping and raw material distribution wanted by eastern manufacturer of fuses.

V-458. Experienced salesman with electrical repair company. Four or five years' experience in general electrical machine repairs. Some experience in motor design desirable. Salary $125. per month.

V-459. Man to act as assistant to head of electrical engineering school. Technical knowledge as well as practical experience. Salary to start about $1500 per year.

V-460. Wanted man thoroughly experienced in design of alternating current generators. In reply give age, experience record and salary desired.

V-461. Operator for switchboard in a water-power generating plant. Young man with some electrical training necessary and at a salary of about $100. per month.

V-462. Wanted—Electrical superintendent for hydroelectric power company. Salary about $150. per month.

V-463. Opening for an electrical construction man with hydroelectric power company, general installation and construction work. Salary about $150. per month.

V-464. Manufacturer of electric control apparatus wants young electrical engineer, at least two years practical experience, to do technical writing. Must be familiar with electric motor and control line. Give age, experience and minimum salary.

V-465. Large manufacturer requires a sales manager, thoroughly familiar with design and use of trucks, tractors, storage batteries and accessories. Salary $2000. to $3000., depending on experience.

V-466. Recent electrical engineering graduate, for development and research work with prominent communication company. Must have initiative and ability. Good opportunity, permanent position. Location New York.

V-467. Assistant engineer with technical training and experience in construction and repairs of industrial plants qualified to design special machinery and make layouts of new equipment. Permanent position. Prefer man with experience in chemical plant or office of consulting engineer. State qualifications and details of experience. Salary $1500. to $2000. Location southern Ohio.

SERVICES AVAILABLE

1083. Captain of Engineers, U. S. Army, available about February 1. College graduate, married, ten years' experience in mechanical and electrical engineering and manufacturing of which last four and a half have been executive work. Minimum salary $3,000.

1084. Electrical and mechanical engineer, age 33, desires technical executive position, ten years varied experience switchboards, substations, machine shops, marine appliances, development work. College graduate.

1085. Power Specialist. Ten years' experience design, construction, operation electric power plants, high tension distribution substations and industrial use of electric power. Had recent charge of electrical and mechanical design (fifty men), supervision of construction (one thousand men) large steel shipyard. Executive engineer, age 30, married, available January 1, 1919.

1086. Power Sales Engineer. Graduate engineer wishes to engage in power sales work with large operating company upon his release from naval service. Experience of several years covers work done with large power and operating companies. Annual revenue from sales and contracts has averaged better than $75,000. Excellent references as to character, fitness and ability can be given. Available February 1, 1919. Salary $175.

1087. Electrical-Mechanical Draftsman. Graduate Rose Polytechnic Institute 1915. In charge drafting last three years on work including shell machinery, oil well equipment, hydraulic pumps, safety work. Student Alexander Hamilton Institute, Member A. I. E. E. Would like opportunity leading to works management, efficiency or sales engineer.

1088. Electrical-Mechanical Engineer. Age 30. Technical graduate with specialized experience on installation and maintenance of A. C. and D. C. motors, automatic control, substations and wiring. Competent to handle men and take complete charge of electrical department of industrial plant. References to present employer. Give full details. Available within month.

1089. Electrical engineer, college graduate, with six years practical and executive experience in the design and manufacture of electrical apparatus desires position as assistant to manager or assistant to chief engineer of company manufacturing electrical apparatus. At present hold commission in Ordnance Department U. S. A. Age thirty. Minimum salary $2500.

1090. Graduate electrical engineer with ten years' experience in construction and maintenance of telephone plant, wishes responsible position as telephone plant superintendent or engineer, or as manager for good sized telephone company. Now in the military service.

1091. Executive engineer, technical graduate, eight years' experience with large electrical manufacturer and five years as superintending engineer with street railway, desires position with power or railway utility or with consulting and contracting company. Age 39. Married. Good references.

1092. Electrical technical graduate, 29 years, married, Associate A. I. E. E. Yale Engineering Assoc. Two years linework and meter testing central station. Eight months G. E. Student course, two years sales department. Eight months electrician and three years superintendent hydroelectric plant. Available January. Want position as power salesman, efficiency engineer, or division superintendent in East or Middle West.

1093. Engineer and Executive. Technical graduate with ten years varied mechanical and electrical experience along engineering and administrative lines. Principal experience on construction, management and consulting engineering for gas, electric and street railway properties. Available February 1 for responsible position in public utility or industrial company. Salary $5000.

1094. A Captain of Signal Corps, now in the East, electrical engineer, age 30, married, Associate A. I. E. E., with six years' experience in power and substation construction, operation and maintenance, handling all kinds of electrical apparatus, including telephone systems, expects to secure discharge soon. Executive ability and experience in handling men.

1095. Research engineer completing military duties at Government laboratory is available for industrial experimental department about to be or already established. Broad scientific, chemical, mechanical experience. Successful patentee.

1096. Electrical-Mechanical Engineer. Graduate E.E., Member A. I. E. E., now employed, age 37, married, desires permanent location. Executive work near New York City preferred. Recently designed and constructed large shell loading plant and housing proposition. Have designed, constructed and operated electric railway, light and power and high tension stations and high tension transmission lines. Will consider appraisal work. Available soon.

1097. Electrical engineer wishes to locate with firm in New York City on construction work. Graduate of G. E. Student course. Present position with large loading company in South Jersey on power plant equipment, power and lighting design and supervisor on construction. In reply please arrange for interview. Available January 15.

1098. Technical graduate, age 31, married, executive as well as engineering ability, ten years varied electrical and mechanical experience wishes to connect with industrial or power business as superintendent of power or other responsible position. Available in one month. Present salary $2000.

1099. Steel mill electrical engineer and department manager just returning from foreign service as First Lieutenant of Engineers will soon be available for a design, sales or administration engineering position. Two college degrees in engineering. Eight years' experience in the above lines. Age 31, and in best of health.

1100. Electrical engineer, 36, married, eighteen years varied mechanical and electrical experience covering steam plants, electrical shop and test, drafting, industrial engineering, teaching high and low tension design work, general engineering work. Available on reasonable notice. Minimum salary $4000. Position with considerable travel preferred.

1101. Manufacturing executive. Mechanical engineer. Fifteen years' experience in factory management. Two years general manager, two years works manager, and two years production manager in automobile factory. Five years industrial engineer for large plants in the East. Thoroughly familiar with all phases of manufacturing in big production, engineering, purchasing, stock and production, shipping, costs and sales.

1102. A graduate of a well-known technical university in electrical engineering, also a large portion of civil engineering course, desires a permanent connection with a firm offering good chances for an ambitious man. Age 25. Experience: assistant construction engineer, General Electric heavy machine testing. Foreign position considered. Good references.

1103. Graduate electrical engineer, age 32, eight years' experience in maintenance, testing and inspection of electric car lighting equipment desires position as sales engineer or executive in maintenance work. Salary $2400.

1104. Experimental electrical engineer, recently released from war service. Six years varied experience with well-known electrical manufacturing companies. Salary $200. per month.

1105. Electrical engineer, 30 years of age, married, technical education with twelve years' experience on power plant and substation design and construction. Competent to handle position as electrical engineer for a light and power company. Also experienced in steel mill electrical requirements. Available February 1, 1919. Minimum salary $2700.

1106. Electrical-Mechanical Engineer, technical graduate, fifteen years' experience. Associate member A. I. E. E. Specialist on motor drives and industrial power systems. Desires position as chief electrician of large industrial concern or as industrial power expert with central station company. Now employed, but desire wider opportunity for service.

1107. Electrical engineer, executive as well as engineering ability. Familiar with operating rules that are productive of the best results. Would prefer position with supervision over power station transmission, distribution and meter departments in town of ten to twenty thousand inhabitants. Available on thirty days' notice.

1108. Graduate electrical engineer, age 26, experienced in construction and maintenance electrical and mechanical. At present commissioned in Naval Reserve. Will be open for engagement about February 1, 1919.

1109. Instructor in electrical engineering. Graduate degree from University in Middle West. Three and one-half years experience in teaching. Resigned former position to teach radio telegraphy in military school during the war. Two years practical experience G. E. test, and power plant engineering. Salary $1500. Age 29.

1110. Captain, Engineers, U. S. Army, expects to be released from service in January. Technical graduate in electrical engineering. Actively engaged in engineering work for past eleven years. Experienced in design, construction and operation of both steam and hydroelectric properties, mostly with large companies. Have been superintendent and manager during last four years. Seeks opportunity to use experience and ability to mutual advantage.

1111. Electrical-mechanical engineer draftsman, university graduate, sixteen years' experience in design, proposal and construction of switchboards, power stations, industrial plant electrification (light and power), transmission and distribution in Europe, United States and Cuba. Working knowledge of French and Spanish. Excellent references.

1112. Naval Reserve Senior Lieutenant, age 28, with demonstrated inventive ability, desires responsible engineering position with electrical manufacturer. Electrical engineering degree, seven years broad and exceptional experience with General Electric Company, especially in development of signalling, protective and circuit-controlling devices. Commissioned in the Navy. Now member of Annapolis faculty. P. O. Box 515, Annapolis, Maryland.

1113. Army Officer who will be discharged about February 8th desires a position. Electrical engineering graduate with three years practical engineering experience. Age 28.

1114. Electrical engineering graduate, age 26, married, with four years' experience in the design, construction and operation of generating stations, substations and high tension transmission lines, desires position as district engineer with power company or similar position.

1115. Electrical engineer, 31, university graduate, seven years' experience in design and construction of power plants, substations, transmission lines, etc. Have had charge of designing. At present assistant engineer with large power and railway company.

1116. Mechanical-electrical engineer graduate Cornell, member A. I. E. E., with seven years' experience as experimental and research engineer. Thoroughly familiar with air-brake and automatic railway signal work. Junior Lieutenant U. S. N. R. F. Have just been ordered inactive duty from U. S. Naval Torpedo Station, Newport, where engaged as assistant experimental officer. Immediately available.

1117. Graduate electrical and mechanical engineer, six years college training, seven years experience construction, design, operation, installation, maintenance and management, desires permanent position as engineer or executive. Have had central station, small plant, transmission line, factory, building and ship experience. Member A. I. E. E. Married, Age 30.

1118. Technical and practical man, experienced in installation and repair work. Have been engaged as an instructor at the U. S. N. Electrical School for the past two years. Desirous of now becoming connected with a progressive concern. Reconstruction work would be preferred. (Age 24).

1119. Executive of public utility with engineering experience, at present connected with Government service as Fuel Administrative Engineer, desires position requiring valuable business experience and executive ability. Minimum salary considered $6000. per annum.

1120. Engineer, mechanical and electrical, graduate University of Penn., experienced in the construction, inspection and operation of power and substations. At present Lieutenant U. S. N. (engineering duties only). Desires a position as sales engineer or executive. Available after January 1, 1919.

1121. Executive engineer, five years' experience maintenance power apparatus, five years' experience design electrical specialties. Experienced in solution, "how to do it electrically". Member A. I. E. E. Has held active commission as electrical engineer in Navy during war. Available April 1. Valuable to consulting engineer in industrial power, or to manufacturer electrical specialties, navy or commercial.

1122. Electrical engineer, technical graduate, seven years' experience in testing electrical equipment and in appraisal and inspection of public utility properties. Age 28; married. Salary $1800.

1123. Technical graduate, four years experience in electrical contracting, as field and office engineer on industrial light and power installations, desires permanent position with general contractor or manufacturer. Have thorough business as well as electrical experience. Age 24.

1124. Graduate electrical engineer with six years' experience steam generating station operation, one year design, one and a half year of war service as captain of engineers in army, desires permanent location in New York City in executive capacity or as electrical engineer. Age 30, married. Salary $3000.

1125. A graduate electrical engineer of twelve years' experience desires a business connection with a small, growing manufacturing firm; or with a small engineering and contracting concern. In reply please give full details.

1126. Commercial or operating engineer central station. Long experience in power station management, steam and electrical engineering. At present Lieutenant Naval Reserve Force. Past year in charge of radio experimental work. Desire definite proposition before effecting release from active duty. Married. Age 32.

1127. Graduate electrical engineer, Associate A.I.E.E., twenty years' experience electric light and power construction, operation and maintenance, power house and overhead and underground distribution. Sixteen years one public utility company as electrical engineer and general superintendent. At present civilian Government service. Minimum salary $3000.

1128. Army officer being discharged. Technical electrical engineer with seven years' experience as engineer, production man, sales engineer and sales manager successively of electrical machinery manufacturer wants position as sales manager of electrical manufacturing concern. Minimum salary $6000. Especially prefers connections with a specialty company that is willing to sell stock to new blood.

ACCESSIONS TO THE ENGINEERING SOCIETIES LIBRARY

(From November 1, 1918, to November 30, 1918)

Unless otherwise specified, books in this list have been presented by the publishers. The Societies do not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

AERO ENGINES, MAGNETOS AND CARBURETORS.

By Harold Pollard. N. Y., The Macmillan Co., 1918. 84 pp., 15 illus., 15 pl., 6 x 4 in., cloth, $1.

A brief manual, written in simple language and intended for beginners, which makes no pretense to be an exhaustive technical treatment of its subject.

AUTOMOTIVE MAGNETO IGNITION:

Its Principle and Application, with special Reference to Aviation Engines. By Mich. E. Toepel. 1st edition. N. Y., Spon and Chamberlain; Lond., E. & F. N. Spon, Ltd., 1918. 103 pp., illus., charts, diags., 8 x 4 in., cloth, $2.

Presents the subject in the form of questions and answers covering the general principles of magneto ignition. References to specific types of apparatus have been avoided. Numerous illustrations and wiring diagrams are included.

CENTRAL STATION HEATING:

By Byron T. Gifford. 2nd edition. N. Y., Heating and Ventilating Magazine Company, 1918. 278 pp., 34 illus., tab., 9 x 6 in., cloth, $3.

Particular attention has been directed in this edition to the regulations adopted by the various state governments for the control of public utilities, especially to the methods of cost accounting necessitated by rate and valuation investigations. The discussion of high-pressure steam distribution has been expanded and the entire book has been revised.

COAL AND ITS SCIENTIFIC USES.

By William A. Bone. (Monographs on Industrial Chemistry) Lond. and N. Y., Longmans, Green and Co., 1918. 15+491 pp., illus., pl., charts, diags., tab., 9 x 6 in., cloth, $7.

The author, who was chairman of the British Association Fuel Economy Committee in 1915–17, has tried to give in essential outline an account of the present state of science and practice in relation to coal and its various uses.

Beginning with an account of the general and scientific aspects of the coal question from a British point of view, there follows a review of the present state of science regarding the origin and chemistry of coal, including its distillation, oxidation and combustion. The latter part of the book considers the principal economic and industrial uses of coal as a fuel, and closes with an account of surface combustion.

The monograph is intended to provide a succinct account of the statistical, chemical and technical aspects of the subject as a whole, without unnecessary detail, for use by the scientific public, and especially by the chemical section of it.

CONVEYANCE AND DISTRIBUTION OF WATER FOR WATER SUPPLY:

Aqueducts, Pipe-lines and Distributing Systems. A Practical Treatise for Water-works Engineers and Superintendents. By Edward Wegmann. N. Y., D. Van Nostrand Co., 1918. 663 pp., 367 illus., 8 pl., 9 x 6 in., cloth, $5. (Gift from author).

By restricting himself to the conveyance and distribution of water, the author has been able, within the limits of a single volume, to discuss the subject in sufficient detail to be of practical value to engineers and superintendents of water works.

Beginning with a chapter on the consumption of water, the flow of water in aqueducts and pipes is next discussed. Then follow chapters on the design and construction of pipes, aqueducts, service reservoirs, stand pipes and tanks, fire protection and high pressure systems. The remaining chapters take up maintenance and operation, the cleaning of aqueducts and mains, thawing frozen pipes, leakage, electrolysis, pipe tools and the detection and prevention of water waste.

DAVISON'S TEXTILE "BLUE BOOK", UNITED STATES AND CANADA:

Cotton, Woolen, Silk, Jute, Flax and Linen Manufacturers; Dyers, Bleachers and Print Works: Commission Merchants; Converters and Brokers; Yarn, Cotton, Waste, Linter Dealers; Mattress Manufacturers; Wool, Rag and Mill Remnant Dealers; Raw, Thrown and Spun Silk Dealers, &c. With a full classified Directory of Cotton and Woolen Mills and a Textile Supply Directory. 31st annual edition July 1918 to July 1919. N. Y., Davison Publishing Co., (copyright 1918) 1471 pp., 7 maps, 9 x 7 in., cloth, $5.

This directory covers the textile manufacturers, dyers, bleachers, printers, commission merchants, dealers, and makers of textile mill supplies in the United States and Canada. The various lists are carefully classified for quick reference. The capitalization, officers, equipment, products and railroad connections of each mill are given. Maps showing the location of the textile mills of the country are included.

ELECTRIC WELDING:

A Comprehensive Treatise on the Practice of the Various Resistance and Arc Welding Processes, Covering Descriptions of the Machines and Apparatus Used and the Applications, both in Manufacturing and Repair Work. By Douglas T. Hamilton and Erik Oberg. 1st edition. N. Y., The Industrial Press, 1918. 294 pp., 217 illus., 2 tab., 9 x 6 in., cloth, $2.50.

A summary of present practice. The authors announce that they have had the assistance of the most prominent American firms engaged in this work, and that they have thus been able to present information on the latest improvements and discoveries.

ENGINEERING DIRECTORY:

Buyers' Reference Section.—1918 Edition. A Comprehensive Directory of Manufacturers of Mill, Steam, Mine, Plumbing, Heating and Lighting Supplies, Machinery and Tools. Chicago, The Crawford Publishing Co., (copyright 1918) 566 pp., 11 x 8 in., cloth.

This volume contains a list of American manufacturers, trade names and brands of industrial and engineering supplies and machinery, arranged under approximately four thousand subject headings, and a directory of manufacturers. An extensive cross index to the classification is provided.

THE J. E. ALDRED LECTURES ON ENGINEERING PRACTICE, 1917–18.

The Johns Hopkins University, Department of Engineering. Baltimore. The Johns Hopkins Press, 1918. 263 pp., illus., 2 folded pl., 1 map, 9 x 6 in., paper. (Gift from The Johns Hopkins University).

CONTENTS: Steam-electric Power Plant Design; The Relation between Civil Engineering and Military Engineering; The Development of Concrete Road Construction; Copper Refining; The Coal Problem; The Growth of Electric Systems; The Operation of a Manufacturing Plant; The Control of Stream Pollution; The Manufacture of Structural Steel.

A presentation of the tangible and obvious features and principles of present engineering practice, intended to instruct the undergraduate students of the University in everyday working methods of design, construction, and operation.

MAP READING AND TOPOGRAPHICAL SKETCHING.

By Edwin R. Stuart. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1918. 11 + 139 pp., 46 illus., 1 map, 8 x 5 in., cloth, $1.

This textbook represents the results of the author's thirteen years of experience in the practice and teaching of topographic surveying and sketching at the United States Military Academy.

PRACTICAL SURVEYING AND FIELD WORK:

Including the mechanical Forms of Office Calculations with Examples completely worked out. By Victor G. Salmon. Lond., Charles Griffin & Co., Ltd.; Phila., J. B. Lippincott Co., 1918. 204 pp., 87 illus., 3 folded diag., 8x5 in,. cloth. (Gift from J. B. Lippincott Co.).

The author has endeavored to supply to students a series of calculations which, in connection with well-known textbooks, will equip the young surveyor for the practice of the profession.

The work consists mainly of solutions to questions set in examinations for qualification as surveyors in the South African colonies. It is not intended as a textbook, and includes only so much theory as is necessary to explain the examples.

THE RESULT OF MUNICIPAL ELECTRIC LIGHTING IN MASSACHUSETTS:

By Edmond Earle Lincoln. (Hart, Schaffner and Marx Prize Essays, No. 27). Bost. and N. Y., Houghton Mifflin Co., 1918. 20 + 484 pp., 14 charts, 1 map, 58 tab., 8x5 in., cloth, $3.

As a contribution to the discussion on the advantages and disadvantages of public ownership, the author has prepared this impartial, comparative study of results in one well-established business in a specific locality where adequate records covering a period of years can be secured. The aim of the book is to suggest and exemplify those methods of approach and investigation which may most profitably be followed in future studies of the problems of municipal and state ownership. It is based on a careful, personal statistical study of the annual returns made by the plants to the Massachusetts Board of Gas and Electric Commissioners and a personal survey of the plants themselves.

SCREW PROPELLERS:

and Estimation of Power for Propulsion of Ships. Also Air-ship Propellers. By Rear Admiral Charles W. Dyson, U. S. N. 2nd edition, rewritten. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1918. 325 pp., 62 illus., 32 pl., 18 tab., 2 vols. (text and atlas), cloth, $7.50.

The first edition of this work on propeller design suffered, the author states, from two serious faults; one being the vagueness of the method for determining the thrust deduction factor and the other being the method of applying it in determining the characteristics of the propeller. These have both been eliminated to a great degree in this edition and other improvements have been introduced in the text. The author's ideas on cavitation are now fully presented. A chapter on airplane propeller design has been added.

STRUCTURAL SERVICE BOOK, Volume I:

A revised Reprint from the twelve Issues for 1917 of The Journal of the American Institute of Architects Structural Service Department. D. Knickerbacker Boyd, Editor. Wash., The Journal of the American Institute of Architects, 1918. 16 + 226 pp., including Industrial section, 12 x 9 in., cloth, $3.50.

The first volume of an annual review of structural activities throughout the United States with particular reference to the standards adopted or under consideration by the various societies, associations or other agencies whose work concerns itself in any way with the materials which enter into building construction, the methods and safety of their production, manufacture and erection.

The material is classified and indexed for ready reference. Under each heading are given lists of references to publications giving general information, describing recommended practice, and adopted standards.

THEORY OF STRUCTURES.

By Arthur Morley. New edition. Lond. and N. Y., Longmans, Green and Co., 1918. 11 + 584 pp., 319 illus., 4 pl., tab., 9 x 6 in., cloth, $4.50.

The author sets forth the theory of the simpler structures so far as it relates to strength, stiffness and stability. In order to present the subject completely he has included in the earlier chapters considerable matter dealing with the theory of strains and stresses in single pieces, practically as it appeared in his "Strength of Materials."

The discussion is confined to wooden and metallic structures, reinforced concrete being omitted. Worked-out examples form a feature of the text.

165715

IN SERVICE

IN recognition of the services rendered by the membership of the Institute during the World War the Institute publishes herewith an Honor Roll containing the names of all members who have been in the uniformed forces of the United States and the Allies. Revised to January 1, 1919.

Summary

U. S. ARMY

Major Generals	**7**
Brig. Generals	**5**
Colonels	**9**
Lieut. Colonels	**20**
Majors	**110**
Captains	**219**
First Lieutenants	**187**
Second Lieutenants	**151**
Sergeants	**35**
Corporals	**13**
Miscellaneous	**228**
Total	**984**

U. S. NAVY

Rear Admirals	**2**
Captains	**1**
Commanders	**5**
Lieut. Commanders	**9**
Lieutenants	**31**
Lieutenants (j. g.)	**85**
Ensigns	**71**
Miscellaneous	**69**
Total	**273**

U. S. MARINE CORPS

Lieutenants	**2**

ALLIED FORCES

British Army	**55**
British Navy	**6**
French Army	**5**
Italian Army	**1**
Japanese Navy	**1**
Total	**68**

Total on Honor Roll **1327**

Honor Roll

Membership of the American Institute of Electrical Engineers in service in the Army and Navy of the United States and the Allies in the World War.

This list is made up from replies received at Institute headquarters in response to requests for information regarding members in service, and it is probably not complete. It is requested that omissions or inaccuracies be brought to the attention of the Secretary.

The names of members who have died in service are indicated by an asterisk.

ABADIE, EUGENE H.
Major, Engineer Corps, U. S. Army.

ABBOTT, LEWIS W.
Major, 401st Telegraph Battalion, Signal Corps, U. S. Army.

ABLETT, CHARLES ANTHONY
Lieutenant, Royal Engineers, British Army.

ACHARD, FRANCIS H.
Captain, 24th Engineers, U. S. Army.

ADAM, E. N.
362nd Infantry, U. S. Army.

ADAMS, CHAS. S.
Ensign, U. S. N. R. F.

AGEE, HOWARD H.
Captain, Engineer Corps, U. S Army.

AIME, FRANK L.
U. S. Army.

ALBRECHT, AUGUST H.
134th Field Artillery, U. S. Army.

ALBRECHT, F. C.
Captain, Ordnance, U. S. Army.

ALDEN, C. R.
Provisional Ensign, U. S. N. R. F.

ALDRICH, LOUIS C.
Radio Operator, U. S. Navy.

ALDWORTH, EDWARD L.
Second Lieutenant, Ordnance, U. S. Army.

ALGER, PHILIP L.
First Lieutenant, Ordnance, U. S. Army.

ALLCUTT, C. T.
Engineer Officers' Training School, U. S. Army.

ALLEN, ARTHUR E.
Lieutenant, Royal Air Force, British Army.

ALLEN, E. W.
Major, 341st Infantry, U. S. Army.

ALTLAND, COMER P.
Sergeant, Radio Operator, Signal Corps, U. S. Army.

AMES, AZEL
Major, Coast Artillery Corps, U. S. Army.

ANDERSON, ARVID R.
324th Field Artillery, U. S. Army.

ANDERSON, EARL G.
Second Lieutenant, 302nd Engineers, U. S. Army.

ANDERSON, PIERSON A.
First Lieutenant, Engineer Corps, U. S. Army.

ANDERSON, STEWART W.
First Lieutenant, 307th Engineers, U. S. Army.

ANDRAE, GEORGE H.
1st Engineers' Replacement Regiment, U. S. Army.

ANNETT, F. A.
First Lieutenant, Ordnance, U. S. Army.

ANTHONISEN, R. P.
30th Engineers, Gas and Flame, U. S. Army.

APPLEGATE, K. P.
Lieutenant, U. S. Navy.

ARNETT, W. W.
Sergeant, 328th Brigade, Tank Corps, U. S. Army.

ARNOLD, BION J.
Lieutenant Colonel, Air Service, U. S. Army.

ARNOLD, C. N.
Lieutenant, Junior Grade, U. S. N. R. F.

ARNOLD, HAROLD D.
Captain, Signal Corps, U. S. Army.

ARNOLD, HARRY S.
Captain, Engineers Corps, U. S. Army.

ARTHUR, JAMES B.
First Lieutenant, Ordnance, U. S. Army.

ASHER, LEON
U. S. Navy.

ASHLEY, EDWARD E.
Captain, Air Service, U. S. Army.

ASHMEAD, EDWARD W.
37th Engineers, U. S. Army.

ASHTON, OLIVER
Ensign, Flying Corps, U. S. Navy.

ASIRE, HORACE W.
First Lieutenant, Chemical Warfare Service, U. S. Army.

ATKINSON, KERR
Second Lieutenant, 303rd Engineers, U. S. Army.

ATKISSON, EARL J.
Colonel, 1st Gas Regiment, Engineer Corps, U. S. Army.

AVERBACH, J. E.
First Lieutenant, 490th Aero Squadron, U. S. Army.

AVERY, F. B.
First Lieutenant, 314th Engineers, U. S. Army.

AYRES, MILAN V.
Major, Statistics Branch, General Staff, U. S. Army.

BABCOCK, A. H.
Major, Engineer Corps, U. S. Army.

BACH, WALLIS K.
Ensign, U. S. N. R. F.

BACON, FRANK R.
Major, Ordnance, U. S. Army.

BADGER, C. K.
Captain, 417th Telegraph Battalion, Signal Corps, U. S. Army.

BAER, C. A.
Captain, 56th Engineers, U. S. Army.

BAILEY, R. S.
Flying Corps, U. S. Navy.

BAKER, LOUIS A.
Lieutenant, junior grade, U. S. N. R. F.

BAKER, PAUL W.
Second Lieutenant, 314th Engineers, U. S. Army.

BALDWIN, BERT L.
Major, Engineer Corps, U. S. Army.

BARKER, CHARLES M.
Radio School, Signal Corps, U. S. Army.

BARKER, HARRY
Captain, Engineer Corps, U. S. Army.

BARNERT, MEYER
First Lieutenant, Engineer Corps, U.S. Army.

BARNS, FREDERICK
Master Engineer, 37th Engineers, U. S. Army.

BARRETT, SAMPSON K.
Lieutenant, U. S. N. R. F.

BARROW, GEORGE M.
2nd Lieutenant, Engineer Corps, U. S. Army.

BARTLETT, C. C.
First Lieutenant, Engineer Corps, U. S. Army.

BARTON, PHILIP P.
Major, Engineer Corps, U. S. Army.

BASS, LELAND B.
Second Lieutenant, Air Service, U S. Army.

BAXTER, HAROLD C.
Engineer Officers' Training School, U. S. Army.

BEALE, S. HAROLD
Sapper, Engineers, Canadian Army.

BEALL, JOHN C.
Captain, Signal Corps, U. S. Army.

BEAMES, C. F.
Major, Ordnance, U. S. Army.

BEAR, S. LEE
Second Lieutenant, Coast Artillery Corps, U. S. Army.

BEARY, D. B.
Lieutenant, U. S. Navy.

BEAVER, GEORGE L.
Second Lieutenant, 303rd Engineers, U. S. Army.

BEAZLEY, ARTHUR TETLEY
Captain, British Army.

BECHLEM, A. W.
Lieutenant, U. S. Army.

BECK, VERNON S.
Second Lieutenant, Air Service, U. S. Army.

BECKMAN, FRED. G.
37th Engineers, U. S. Army.

BEHRENS, EDWARD L.
Captain, Engineer Corps, U. S. Army.

BEHRINGER, CHARLES R.
Engineer, Ordnance, U. S. Army.

BELL, RALPH S.
Lieutenant, Signal Corps, Canadian Army.

BELL, W. I.
Captain, Quartermaster Corps, Construction Division, U. S. Army.

BELT, J. H.
106th Engineers, U. S. Army.

BEMAN, R. H.
First Lieutenant, Signal Corps, U. S. Army.

BENEDICT, E. G.
Captain, 301st Engineers, U. S. Army.

BENNETT, A. C.
First Lieutenant, Engineer Corps, U. S. Army.

BENNETT, JOHN L.
Lieutenant, 371 Aero Squadron, U. S. Army.

BENZ, W. KARL
Artillery School, France, U. S. Army.

BENZING, H. F.
Lieutenant, junior grade, U. S. N. R. F.

BERGSTRESSER, HAROLD F.
Instructor, Radio Officers' School, U. S. Army.

BERKELEY, L. R.
First Lieutenant, 107th Engineers, U. S. Army.

BERNHARD, ALBERT H.
Sub-inspector, U. S. Navy.

BERSSENBRUGGE, B.
310th Engineers, U. S. Army.

BESSESEN, BEN. B.
First Lieutenant, 537th Engineers, U. S. Army.

BESSEY, CARL A.
Lieutenant, 113th Engineers, U. S. Army.

BETTS, CHARLES R.
Engineer Corps, U. S. Army.

BETTS, EUGENE
Major, Quartermaster Corps, Construction Division, U. S. Army.

BETTS, H. H.
Captain, Royal Engineers, British Army.

BETTS, PHILANDER
Lieut. Colonel, Quartermaster Corps, Construction Division, U. S. Army.

BEVERIDGE, WM. B.
First Lieutenant, 319th Field Signal Battalion, U. S. Army.

BIDWELL, M. C.
First Lieutenant, Mobile Ordnance Repair Corps, U. S. Army.

BILLINGS, A. W. K.
Lieut. Commander, U. S. N. R. F.

BILLINGSLEY, F. N.
Lieutenant, 301st Engineers, U. S. Army.

BIRDSALL, WILFRED T.
Coast Artillery Corps, U. S. Army.

BISHOP, ALBERT B.
Second Lieutenant, Air Service, U. S. Army.

***BISHOP, REMSEN**
Air Service, U. S. Army.

BLACK, CHAS. N.
Lieut. Colonel, Ordnance, U. S. Army.

BLACKMORE, CHARLES T.
Medical Corps, U. S. Army.

BLAIR, EDWARD J.
Major, 311th Engineers, U. S. Army.

BLAIR, SHIRAS A.
First Lieutenant, Air Service, U. S. Army.

BLAISDELL, JEROME L.
Sergeant, Ordnance, U. S. Army.

BLAKE, EDWIN T.
Captain, Engineer Corps, U. S. Army.

BLAKEMORE, M. N.
Captain, Engineer Corps, U. S. Army.

BLAKESLEE, D. W.
First Lieutenant, 56th Engineers, U. S. Army.

BLITMAN, CHAS. H.
Second Lieutenant, Air Service, U. S. Army.

BLUMBERG, LEO
Sergeant, Quartermaster Corps, U. S. Army.

BODENMULLER, H. R.
Sergeant, 348th Infantry, U. S. Army.

BOGGS, CLARENCE
First Lieutenant, Engineer Corps, U. S. Army.

BOHNERT, ARTHUR M.
Captain, Engineer Corps, U. S. Army.

BOLLE, HERMAN A.
Chief Radio Operator, U. S. Navy.

BONAMY, LEO J.
Recruiting Station, U. S. Army.

BOND, F. M.
Major, Ordnance, U. S. Army.

BOSSHART HARRY J.
37th Engineers, U. S. Army.

BOWER, GEO. W.
315th Infantry, U. S. Army.

BOWES, LAWRENCE C.
503rd Engineers, U. S. Army.

BOYD, RICHARD L.
Major, 325th Infantry, U. S. Army.

BOYD, VALENTINE
Captain, Engineer Corps, Canadian Army.

BRACKETT, ROSS D.
Ensign, U. S. N. R. F.

BRADLEY, ALONZO B.
Captain, Ordnance, U. S. Army.

BRADLEY, C. R.
Air Service, U. S. Army.

BRADLEY, H. H.
Electrician Gunner, U. S. N. R. F.

BRANSON, EDWARD H.
Second Lieutenant, Ordnance, U. S. Army.

BRANTLY, E. C.
Captain, Engineer Corps, U. S. Army.

BRATE, C. F.
Corporal, 303rd Engineers, U. S. Army.

BREED, GEORGE
Lieutenant, U. S. Navy.

BRESSLER, H. V.
Lieutenant, junior grade, U. S. N. R. F.

BRIGHTBILL, FLOYD G.
Second Lieutenant, Coast Artillery Corps, U. S. Army.

BRILL, OSCAR C.
Captain, Signal Corps, U. S. Army.

BRINKMEIER, A. E. H.
Lieutenant, junior grade, U. S. N. R. F.

BROADBENT, W. W.
Sergeant, 23rd Engineers, U. S. Army.

BROCKWAY, R. M.
First Lieutenant, Ordnance, U. S. Army.

BRODIE, J. M.
Lieutenant, U. S. N. R. F.

BROE, ARTHUR L.
U. S. Navy.

BROOKE, H. L.
Second Lieutenant, Signal Corps, U. S. Army.

***BROOKS, HENRY N.**
Captain, 308th Engineers, U. S. Army.

BROOKS, H. W.
Lieutenant, U. S. N. R. F.

BROOME, F. H.
Electrician, Hospital No. 6, U. S. Army.

BROWN, CARLETON M.
Lieutenant, junior grade, U. S. N. R. F.

BROWN, CLAUDE C.
Master Engineer, senior grade, 134th Engineers, U. S. Army.

BROWN, GEORGE N.
First Lieutenant, 303rd Engineers, U. S. Army.

BROWN, GLENN O.

Major, U. S. Army.

WAGNER, C. F.
Captain, Engineer Corps, U. S. Army.

WAHL, JAMES H.
Lieutenant, junior grade, U. S. N. R. F.

WAITE, LESLIE O.
First Lieutenant, Engineer Corps, U. S. Army.

WAITE, RAYMOND A.
First Lieutenant, Air Service, U. S. Army.

WAITT, ARTHUR M.
Major, Engineer Corps, U. S. Army.

WAKEMAN, H. R.
Lieutenant, junior grade, U. S. N. R. F.

WALDMANN, C. A.
Major, Ordnance, U. S. Army.

WALDRON, LOUIS D.
Captain, Engineer Corps, U. S. Army.

WALKEM, GEO. A.
Captain, Royal Engineers, British Army.

WALLACE, W. S.
Lieutenant, junior grade, U. S. N. R. F.

WALTON, JOS. N.
Second Lieutenant, Chemical Warfare Service, U. S. Army.

WARD, BUTLER E.
First Lieutenant, 303rd Engineers, U. S. Army.

WARD, J. A.
First Lieutenant, 417th Engineers, U. S. Army.

WARING, J. M.
Major, U. S. Army.

WARNER, OSCAR C.
Major, Coast Artillery Corps, U. S. Army.

WARNER, RUSSEL A.
First Lieutenant, 2nd Engineers, U. S. Army.

WATSON, FRANCIS HOBBS
Officers' Training School, U. S. Army.

WATSON, JAMES L.
Master Mechanic, Flying Corps, U. S. Navy.

WATSON, McCLELLAND B.
Lieutenant, Royal Engineers, British Army.

WATSON, THOMAS S.
Major, Ordnance, U. S. Army.

WATT, GEORGE Y.
Ensign, U. S. Navy.

WATTS, E. M.
Major, General Staff, British Army.

WEBB, L. W.
Master Electrician, U. S. Navy.

WEBBER, LEON H.
Lieutenant, junior grade, U. S. N. R. F.

WEBER, R. L.
Ensign, U. S. Navy.

WEBSTER, JAMES C.
First Lieutenant, 1st Gas Regiment, U. S. Army.

WEEKS, J. R., JR.
Radio School, Signal Corps, U. S. Army.

WEEKS, ROBERT W.
First Lieutenant, Chemical Warfare Service, U. S. Army.

WEILBACHER, WILLIAM C.
38th Engineers, U. S. Army.

WEISS, CHARLES G. A.
Instructor, Electrical School, U. S. Navy.

WELKER, JAS. A.
First Lieutenant, Engineer Corps, U. S. Army.

WELLER, F. M.
First Lieutenant, Ordnance, U. S. Army.

WELLHOUSE, FREDERICK J.
Captain, Ordnance, U. S. Army.

WELLS, A. E.
Major, 54th Pioneer Infantry, U. S. Army.

WELLS, A. S.
Medical Corps, U. S. Army.

WELLS, GEORGE A.
Captain, Ordnance, U. S. Army.

WELLS, GRANT R.
Second Lieutenant, U. S. Army.

WENTWORTH, HERBERT H.
Ensign, U. S. Navy.

WENZEL, ADOLPHE H.
Ensign, U. S. Navy.

WERTH, J. R.
Major, Construction Division, U. S. Army.

Lieutenant, U. S. Army.
ZORING, H. H.
Major, Ordnance, U. S. Army.

OFFICERS AND BOARD OF DIRECTORS, 1918-1919.

PRESIDENT.

(Term expires July 31, 1919)
COMFORT A. ADAMS

JUNIOR PAST-PRESIDENTS.

(Term expires July 31, 1919)	(Term expires July 31, 1920)
H. W. BUCK	E. W. RICE, Jr.

VICE-PRESIDENTS.

(Term expires July 31, 1919)

W. B. JACKSON	JOHN B. TAYLOR
RAYMOND S. KELSCH	A. H. BABCOCK
F. B. JEWETT	HAROLD PENDER

MANAGERS.

(Term expires July 31, 1919)	(Term expires July 31, 1920)
C. E. SKINNER	CHARLES S. RUFFNER
JOHN B. FISKEN	CHARLES ROBBINS
N. A. CARLE	E. H. MARTINDALE

(Term expires July 31, 1921)	(Term expires July 31, 1922)
WALTER A. HALL	WALTER I. SLICHTER
WILLIAM A. DEL MAR	G. FACCIOLI
WILFRED SYKES	FRANK D. NEWBURY

(Term expires July 31, 1919)

TREASURER	SECRETARY
GEORGE A. HAMILTON	F. L. HUTCHINSON

HONORARY SECRETARY	DIRECTOR OF THE LIBRARY
RALPH W. POPE	HARRISON W. CRAVER

GENERAL COUNSEL.

PARKER and AARON,
52 Broadway, New York.

PAST PRESIDENTS—1884-1918.

- *NORVIN GREEN, 1884-5-6.
- *FRANKLIN L. POPE, 1886-7.
- T. COMMERFORD MARTIN, 1887-8.
- EDWARD WESTON, 1888-9.
- ELIHU THOMSON, 1889-90.
- *WILLIAM A. ANTHONY, 1890-91.
- ALEXANDER GRAHAM BELL, 1891-2.
- FRANK JULIAN SPRAGUE, 1892-3.
- *EDWIN J. HOUSTON, 1893-4-5.
- *LOUIS DUNCAN, 1895-6-7.
- FRANCIS BACON CROCKER, 1897-8.
- A. E. KENNELLY, 1898-1900.
- CARL HERING, 1900-1.
- CHARLES P. STEINMETZ, 1901-2.
- CHARLES F. SCOTT, 1902-3.
- BION J. ARNOLD, 1903-4.
- JOHN W. LIEB, 1904-5.
- SCHUYLER SKAATS WHEELER, 1905-6
- SAMUEL SHELDON, 1906-7.
- *HENRY G. STOTT, 1907-8.
- LOUIS A. FERGUSON, 1908-09.
- LEWIS B. STILLWELL, 1909-10.
- DUGALD C. JACKSON, 1910-11.
- GANO DUNN, 1911-12.
- RALPH D. MERSHON, 1912-13.

- PAUL M. LINCOLN, 1914-15.
- JOHN J. CARTY, 1915-16.
- H. W. BUCK, 1916-17
- E. W. RICE, Jr. 1917-18.

*Deceased.

INSTITUTE COMMITTEES.

Revised to January 1, 1919.

GENERAL STANDING COMMITTEES.

EXECUTIVE COMMITTEE

Comfort A. Adams, Chairman,
33 West 39th Street, New York.
N. A. Carle, Harold Pender,
George A. Hamilton, C. E. Skinner,
F. B. Jewett, John B. Taylor.

FINANCE COMMITTEE.

N. A. Carle, Chairman,
Public Service Electric Company, Newark, N.J.
Walter A. Hall, Charles Robbins.

MEETINGS AND PAPERS COMMITTEE.

W. I. Slichter, Chairman,
Columbia University, New York.
L. W. Chubb, Secretary,
W. E. & M. Co., E. Pittsburgh, Pa.
B. A. Behrend, L. T. Robinson,
Harris J. Ryan,
and the chairmen of the technical committees.

EDITING COMMITTEE.

Henry H. Norris, Chairman,
Electric Railway Journal, 10th Ave. and 36th St., New York.
L. W. Chubb, L. T. Robinson,
M. G. Lloyd, W. I. Slichter.

COMMITTEE ON SAFETY CODES

Farley Osgood, Chairman,
80 Park Place, Newark, N. J.
J. C. Forsyth, Henry N. Muller,
H. B. Gear, H. R. Sargent,
H. O. Lacount, G. A. Sawin,
Johnston Livingston, A. M. Schoen,
M. G. Lloyd, George F. Sever,
R. W. E. Moore, H. S. Warren.

BOARD OF EXAMINERS.

F. L. Rhodes, Chairman,
A. T. & T. Co., 195 Broadway, New York.
H. N. Latey, Clayton H. Sharp,
H. H. Norris, H. S. Wynkoop.

SECTIONS COMMITTEE.

Walter A. Hall, Chairman,
General Electric Co., West Lynn, Mass.
C. Francis Harding, Vice-Chairman,
Purdue University, Lafayette, Ind.
L. T. Robinson, A. M. Schoen,
J. Lloyd Wayne.
and the chairmen of all Institute Sections, *ex-officio.*

COMMITTEE ON STUDENT BRANCHES.

(Sub-Committee of Sections Committee.)
C. Francis Harding, Chairman,
Purdue University, Lafayette, Ind.
P. H. Daggett, A. C. Lanier,
Alexander M. Gray, Charles F. Scott.

MEMBERSHIP COMMITTEE.

H. A. Pratt, Chairman,
W. E. & M. Co., 165 Broadway, New York.
H. C. Carpenter, Wills Maclachlan,
R. W. Krass, J. Franklin Stevens,
G. E. Stoltz,
and the chairmen of local membership committees

PUBLIC POLICY COMMITTEE.

Calvert Townley, Chairman,
W. E. & M. Co., 165 Broadway, New York.
H. W. Buck, John W. Lieb,
N. A. Carle, C. E. Skinner,
L. B. Stillwell.

HEADQUARTERS COMMITTEE.

N. A. Carle, Chairman,
Public Service Electric Company, Newark, N. J
William A. Del Mar, F. L Hutchinson,

ELECTRICAL ENGINEERING SERVICE COMMITTEE

William A. Del Mar, Chairman,
Room 909, 10 East 43rd St., New York.
Walter A. Hall, G. L. Knight,
A. S. McAllister.

UNITED STATES NATIONAL COMMITTEE OF THE INTERNATIONAL ELECTRO-TECHNICAL COMMISSION.

C. O. Mailloux, President,
20 Nassau St., New York.
F. B. Crocker, Vice-President,
A. E. Kennelly, Secretary,
Harvard University, Cambridge, Mass.
Comfort A. Adams, A. S. McAllister,
B. A. Behrend, M. I. Pupin,
James Burke, E. B. Rosa,
John J. Carty, David B. Rushmore,
Gano Dunn, Charles F. Scott,
H. M. Hobart, Clayton H. Sharp,
Dugald C. Jackson, C. E. Skinner,
John W. Lieb, Elihu Thomson.

COMMITTEE ON CODE OF PRINCIPLES OF PROFESSIONAL CONDUCT.

George F. Sever, Chairman,
404 Wells Fargo Bldg., San Francisco, Cal.
A. H. Babcock, A. S. McAllister,
Gano Dunn, Schuyler Skaats Wheeler

EDISON MEDAL COMMITTEE.

Appointed by the President for terms of five years.

Term expires July 31, 1919.
Charles F. Brush, C. C. Chesney,
N. W. Storer.

Term expires July 31, 1920.
Carl Hering, Chairman, Harris J. Ryan,
Robert Lindsay.

Term expires July 31, 1921.
W. C. L. Eglin, Bancroft Gherardi,
E. W. Rice, Jr.

Term expires July 31, 1922.
Comfort A. Adams, L. A. Ferguson,
S. W. Stratton.

Term expires July 31, 1923.
Frederick Bedell, L. T. Robinson,
Calvert Townley.

Elected by the Board of Directors from its own membership for terms of two years.

Term expires July 31, 1919.
F. B. Jewett, Harold Pender,
John B. Taylor.

Term expires July 31, 1920.
Charles Robbins, C. E. Skinner,
W. I. Slichter.

Ex-Officio

Comfort A. Adams, President,
George A. Hamilton, Treasurer,
F. L. Hutchinson, Secretary.

STANDARDS COMMITTEE.

L. T. Robinson, Chairman,
General Electric Co., Schenectady, N. Y.
E. J. Cheney, Secretary,
Public Service Commission, Albany, N. Y.
P. G. Agnew,
G. A. Anderegg,
Frederick Bedell,
Joseph Bijur,
L. F. Blume,
James Burke,
G. A. Burnham,
N. A. Carle,
P. H. Chase,
H. H. Clark,
F. P. Cox,
Willian A. Del Mar,
A. M. Dudley,
E. J. Edwards,
H. W. Fisher,
W. S. Gorsuch,
F. C. Hanker,
H. M. Hobart,
Henry D. James,
A. E. Kennelly,
G. L. Knight,
F. A. Laws,
J. L. McQuarrie,
C. O. Mailloux,
W. L. Merrill,
L. F. Morehouse,
Frank D. Newbury,
H. S. Osborne,
Harold Pender,
Charles Robbins,
Clayton H. Sharp,
C. E. Skinner,
Arthur B. Smith,
John B. Taylor,
R. B. Williamson.

SUB-COMMITTEES OF THE STANDARDS COMMITTEE

Rotating Machinery D. C.

James Burke, Chairman
F. C. Hanker
W. L. Merrill
R. H. Tapscott

Rotating Machinery A. C.

F. D. Newbury, Chairman
R. B. Williamson
W. J. Foster,
J. B. Mahoney.

Electric Traction Excluding Automobiles

P. H. Chase, Chairman
H. M. Dudley,
J. J. Linebaugh

Lighting and Illumination

Clayton H. Sharp, Chairman
E. J. Edwards

Storage Batteries

Harold Pender, Chairman
A. Churchward
J. L. Woodbridge
J. Bijur
Carl Hering
G. M. W. Goettling

Circuit Breakers and Switches

G. A. Burnham, Chairman
J. N. Mahoney
N. A. Carle
E. M. Hewlett
H. D. James
J. B. McNeil

Industrial Controllers

H. D. James, Chairman
J. Brobst
E. Friedlaender,
R. E. Barnum,
G. A. Burnham.

Electrical Equipment for Automobiles

J. Bijur, Chairman
T. H. Schoepf,
A. Churchward.

Lightning Protection

P. H. Thomas, Chairman
O. A. Brackett,
H. R. Summerhayes

Stationary Induction Apparatus

G. L. Knight, Chairman
L. F. Blume,
N. A. Carle,
W. M. McConahey
John B. Taylor,
T. O. Moloney.

Telephony and Telegraphy Including Radio

A. E. Kennelly, Chairman
Guy Hill,
O. B. Blackwell,
G. A. Anderegg,
J. L. Hogan, Jr.
Donald McNicol

Wires and Cables

W. A. Del Mar, Chairman
H. W. Fisher,
C. E. Skinner,
Wallace Clark
E. B. Rosa,
P. H. Chase,
F. A. Laws,
LeRoy Clark,
P. Torchio
W. C. L. Eglin,
L. L. Elden
Wilfred Sykes,
C. B. Martin
E. B. Meyer,
M. W. Day,
R. W. Krass.

Meters and Instruments

F. P. Cox, Chairman
W. Bradshaw,
Clayton H. Sharp
F. W. Roller,
F. A. Laws

Testing and Measurements

A. E. Kennelly, Chairman
C. E. Skinner
J. D. Harnden,
Clayton H. Sharp
R. B. Williamson
P. G. Agnew,
F. A. Laws,
John B. Taylor
P. Torchio,
P. H. Chase

Wave Shape Standard

H. S. Osborne, Chairman
F. Bedell,
L. W. Chubb
F. M. Farmer,
H. B. Gear.
L. T. Robinson
C. A. Adams
A. W. Copley,
A. E. Silver.

Form but Not the Substance

W. A. Del Mar, Chairman
C. leMaistre
Charles Robbins,
R. B. Williamson,
Harold Pender.

Joint Committee on Metric System

A. E. Kennelly, Chairman
Clayton H. Sharp,
P. G. Agnew,
James Burke,
C. E. Skinner

Definitions, Nomenclature, and Symbols

P. G. Agnew, Chairman
E. J. Cheney,
C. H Colpitts,
W. L. Merrill,
Harold Pender,
A. E. Kennelly,
F. Bedell
F. A. Laws.

French Translation

C. O. Mailloux, Chairman
A. E. Blondel
A. S. Garfield,
Marius C. A.Latour,
R. V. Picou

Representation on N. E. L. A. Committee on Terminology

N. A. Carle, Chairman
E. J. Cheney,
W. S. Gorsuch.

Class B Insulation and Internal Temperatures of Large Turbo-Alternators

C. E. Skinner, Chairman
N. A. Carle,
P. Torchio,
G. L. Knight,
H. M. Hobart,
E. F. Mueller,
R. B. Williamson.

Foreign Rules

C. E. Skinner, Chairman
H. M. Hobart,
P. Torchio,
C. O. Mailloux.

TECHNICAL COMMITTEES.

Revised to January 1, 1919.

POWER STATIONS

Philip Torchio, Chairman,
124 East 15th St., New York.

W. L. Bird,
N. A. Carle
W. L. R. Emmet,
W. S. Gorsuch,
F. C. Hanker,
James T. Lawson,

W. G. Gordon,
John Murphy,
Ralph H. Rice,
Guy A. Richardson,
Charles F. Scott,
E. R. Shepard,
N. W. Storer,
H. M. Warren.

INDUSTRIAL AND DOMESTIC POWER.

A. G. Pierce, Chairman,
2211 Farmers Bank Building, Pittsburgh, Pa.

H. W. Cope,
James Dixon,
A. M. Dudley,
R. H. Goodwillie,
A. L. Hadley,
H. D. James,
W. C. Kalb,
E. H. Martindale,
W. L. Merrill,
S. D. Sprong,
L. E. Underwood,
H. Weichsel,
R. B. Williamson.

SUB-COMMITTEES OF INDUSTRIAL AND DOMESTIC POWER COMMITTEE.

Application of Machine Tools.

Henry D. James, Chairman,
W. E. and M. Company, East Pittsburgh, Pa.

T. E. Barnum,
R. H. Goodwillie,
W. T. Snyder,
W. C. Yates.

Application of Industrial Power to Cement Industry.

R. B. Williamson, Chairman,

A. M. Dudley,
H. Weichsel,
C. A. Kelsey,
Arthur Simon.

Motor Characteristics.

A. M Dudley, Chairman,

R. H. Tillman,
Wilfred Sykes,
A. C. Lanier,
John C. Parker.

LIGHTING AND ILLUMINATION.

C. E. Clewell, Chairman,
University of Pennsylvania, Philadelphia, Pa.

G. N. Chamberlin,
J. R. Cravath,
Bassett Jones,
P. G. Nutting,
R. C. Powell,
E. B. Rosa,
W. D'A. Ryan,
Clayton H. Sharp,
W. M. Skiff,
John B. Taylor.

ECONOMICS OF ELECTRIC SERVICE.

William B. Jackson, Chairman,
c/o Camp Quartermaster, Camp Merritt, N. J.

Philander Betts,
H. V. Bozell,
C. L. Cory,
Leavitt L. Edgar,
W. S. Gorsuch,
Ralph G. Hudson,
A. H. Kruesi,
J. F. Meyer,
S. G. Rhodes,
Allard Smith.

PROTECTIVE DEVICES.

D. W. Roper, Chairman,
72 W. Adams Street, Chicago, Ill.

P. H. Chase,
W. H. Cole,
E. E. F. Creighton,
James C. Dow,
E. M. Hewlett,
P. MacGahan,
A. A. Meyer,
N. L. Pollard,
F. E. Ricketts,
R. F. Schuchardt,
Philip Torchio,
H. R. Woodrow.

ELECTROCHEMISTRY AND ELECTRO-METALLURGY.

Carl Hering, Chairman,
210 S. 13th St., Philadelphia, Pa.

E. R. Berry,
Joseph L. Dixon,
I. R. Edmands,
F. A. J. FitzGerald,
F. A. Lidbury,
J. A. Seede,
John B. Taylor,
W. R. Whitney,
J. L. Yardley.

ELECTROPHYSICS.

F. W. Peek, Jr., Chairman,
General Electric Co., Pittsfield, Mass.

P. G. Agnew,
H. D. Arnold,
Frederick Bedell,
L. W. Chubb,
A. C. Crehore,
E. P. Hyde,
Chester W. Rice,
C. E. Skinner,
John B. Taylor.

TELEGRAPHY AND TELEPHONY.

Donald McNicol, Chairman,
253 Broadway, New York.

E. F. W. Alexanderson,
O. B. Blackwell,
R. E. Chetwood,
A. W. Copley,

ELECTRICAL MACHINERY.

Alexander M. Gray, Chairman,
Cornell University, Ithaca, N. Y.

B. A. Behrend,
James Burke,
Alexander Churchward,
A. M. Dudley,
Charles Robbins,
H. R. Summerhayes,
R. B. Williamson.

INSTRUMENTS AND MEASUREMENTS.

S. G. Rhodes, Chairman,
104 East 32nd St., New York.

P. G. Agnew,
Charles W. Burrows,
F. P. Cox,
F. V. Magalhaes,
Harold Pender,
T. S. Perkins,
Clayton H. Sharp.

EDUCATIONAL.

V. Karapetoff, Chairman,
Cornell University, Ithaca, N. Y.

J. M. Bryant,
R. E. Doherty,
C. R. Dooley,
Charles S. Howe,
E. A. Loew,
C. E. Magnusson,
E. B. Merriam,
Chester W. Rice,
W. I. Slichter,
W. E. Wickenden.

INSTITUTE REPRESENTATIVES.

ON BOARD OF AWARD, JOHN FRITZ MEDAL.

H. W. Buck,
E. W. Rice, Jr.,
John J. Carty,
Comfort A. Adams.

ON BOARD OF TRUSTEES, UNITED ENGINEERING SOCIETY.

Samuel Sheldon,
Calvert Townley.
L. T. Robinson.

ON LIBRARY BOARD OF UNITED ENGINEERING SOCIETY.

Edward D. Adams,
Samuel Sheldon
W. I. Slichter,
Alfred W. Kiddle
F. L. Hutchinson.

ON ELECTRICAL COMMITTEE OF NATIONAL FIRE PROTECTION ASSOCIATION.

The chairman of the Institute's Code Committee.

ON JOINT COMMITTEE ON ENGINEERING EDUCATION.

Charles F. Scott,
Samuel Sheldon.

ON COUNCIL OF AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

W. S. Franklin,
John B. Taylor.

ON ADVISORY BOARD OF AMERICAN YEAR-BOOK.

Edward Caldwell.

ON U.S. NATIONAL COMMITTEE OF THE INTERNATIONAL ILLUMINATION COMMISSION.

A. E. Kennelly,
C. O. Mailloux,
Clayton H. Sharp.

ON PAN-AMERICAN ENGINEERING COMMITTEE.

Gano Dunn,
John H. Finney
William McClellan,
Charles W. Stone,
Calvert Townley.

ON NATIONAL JOINT COMMITTEE ON OVERHEAD AND UNDERGROUND LINE CONSTRUCTION.

Farley Osgood,
Percy H. Thomas.

AMERICAN COMMITTEE ON ELECTROLYSIS.

Bion J. Arnold,
F. N. Waterman,
Paul Winsor.

ON ENGINEERING COUNCIL.

H. W. Buck,
E. W. Rice, Jr.,
C. A. Adams,
C. E. Skinner,
N. A. Carle.

ON ELECTRICAL ENGINEERING SECTION OF ENGINEERING DIVISION, NATIONAL RESEARCH COUNCIL.

Comfort A. Adams.

ON ENGINEERING FOUNDATION BOARD.

Michel I. Pupin,
E. W. Rice, Jr.

ON NAVAL CONSULTING BOARD.

Benjamin G. Lamme,
Frank J. Sprague

ON AMERICAN ENGINEERING STANDARDS.

C. A. Adams,
N. A. Carle,
H. M. Hobart.

COMMISSION OF WASHINGTON AWARD

John Price Jackson,
Charles F. Scott.

LOCAL HONORARY SECRETARIES.

Guido Semenza, N. 10 Via S. Radegonda, Milan, Italy.

Robert Julian Scott, Christchurch, New Zealand,

T. P. Strickland, N. S. W. Government Railways, Sydney, N. S. W.

W. G. T. Goodman, Adelaide, South Australia.

James S. Fitzmaurice, Perth, West Australia.

L. A. Herdt, McGill Univ., Montreal, Que.

Henry Graftio, Ministry of Ways of Communication, Petrograd, Russia.

A. S. Garfield, 45 Boulevard Beausejour, Paris 16 E. France.

Harry Parker Gibbs, Tata Hydroelectric Power Supply Co., Ltd., Bombay, India.

John W. Kirkland, Johannesburg, South Africa.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII FEBRUARY, 1919 Number 2

A. I. E. E. SEVENTH MIDWINTER CONVENTION

February 19-21, 1919

The Seventh Annual Midwinter Convention of the American Institute of Electrical Engineers will be held February 19-21, 1919, in the Engineering Societies Building, 33 West 39th Street, New York.

The Convention will open Wednesday afternoon in joint session with the American Institute of Mining Engineers, at which a symposium on "Electric Welding" will be presented. Members of the American Society of Mechanical Engineers are cordially invited to participate in this session.

Wednesday evening will be devoted to a lecture by Dr. John A. Brashear, on "An Evening with the New Astronomy," which will be followed by an exhibition of technical moving pictures as adopted by the U. S. War Department for the instruction of the army in the operation of various mechanical devices. The pictures will be accompanied by brief explanatory remarks. Ladies will be welcome at this session.

On Thursday morning there will be a technical session, opened by an address by President C. A. Adams, followed by the presentation of papers by Dr. C. P. Steinmetz and Mr. Harold S. Osborne, on subjects as announced in the program following.

Thursday afternoon will be devoted to a technical excursion to the Brooklyn Navy Yard, by courtesy of the Navy Department. Opportunities to visit the prominent electrical plants in New York and vicinity during the time of the Convention have also been provided. Details in regard to these trips are given under Technical Excursions

On Thursday evening there will be a Dinner-Dance at the Hotel Astor for members and guests in attendance at the Convention. Particulars in regard to this function will be found under the heading Entertainment

Friday morning's technical session is under the auspices of the Electrophysics Committee and papers will be presented by Messrs. G. B. Shanklin and J. J. Matson, by Mr. F. Dubsky, and by Messrs. L. F. Blume and A. J. Boyajian.

On Friday afternoon the final session of the Convention will be held under the auspices of the Telegraphy and Telephony Committee at which papers by the following authors will be presented: Messrs. E. B. Craft and E. H. Colpitts, Mr. J. R. Carson, and Mr. W. W. Crawford.

PROGRAM

WEDNESDAY AFTERNOON, FEBRUARY 19

AUDITORIUM, 2:30 P. M.

Joint Technical Session

1. *Microstructure of Iron Deposited by Electric Arc Welding*, by G. F. Comstock. (A. I. M. E.)
2. *Path of Rupture in Steel Fusion Welds*, by S. W. Miller. (A.I.M.E.)
3. *Welding Mild Steel*, by H. M. Hobart. (A. I. M. E.)
4. *Electric Welding in Shipbuilding*, by S. V. Goodall. (A. I. E. E.)
5. *Fusion in Arc Welding*, by O. H. Eschholz. (A. I. E. E.)

WEDNESDAY EVENING, FEBRUARY 19,
AUDITORIUM, 8:15 P. M.

Lecture

6. *An Evening With the New Astronomy*, by Dr. John A. Brashear. Ladies welcome.
7. *Technical Moving Pictures Showing Various Mechanisms in Operation.*

THURSDAY MORNING, FEBRUARY 20
ASSEMBLY ROOM NO. 1, 10:30 A.M.

Technical Session

8. Address, by President C. A. Adams.
9. *The General Equation of the Electric Circuit*, III, by C. P. Steinmetz.
10. *Review of Work of Sub-Committee on Wave-shape Standard, of the Standards Committee*, by H. S. Osborne.

THURSDAY AFTERNOON, FEBRUARY 20

Technical Excursion

Visit to Brooklyn Navy Yard, For details of trip see item, Technical Excursions, following.

THURSDAY EVENING, FEBRUARY 20,
HOTEL ASTOR, 7:00 P. M.

Dinner-Dance at Hotel Astor, For details see item, Entertainment, following.

FRIDAY MORNING, FEBRUARY 21,
ASSEMBLY ROOM NO. 1, 10:30 A. M.

Technical Session

11. *Ionization of Occluded Gases in High-Tension Insulation*, by G. B. Shanklin and J. J. Matson.
12. *The Dielectric Strength of Air Films Entrapped in Solid Insulation*, by F. Dubsky.
13. *Abnormal Voltage in Transformers*, by L. F. Blume and A. J. Boyajian

FRIDAY AFTERNOON, FEBRUARY 21,
ASSEMBLY ROOM NO. 1, 2:30 P. M.

Technical Session

14. *Radio Telephony*, by E. B. Craft and E. H. Colpitts.
15. *Theory of Transient Oscillations*, by John R. Carson.
16. *Telephone Circuits With Zero Mutual Induction*, by W. W. Crawford

ENTERTAINMENT

Dinner-Dance

A Dinner-Dance will be held at the Hotel Astor, Broadway and 44th Street, New York, Thursday evening, February 20, 1919, at 7:00 o'clock. The purpose of the dinner-dance is to provide a pleasant social function for the entertainment of the members and their guests in attendance at the convention.

The dinner will be served at 7:00 o'clock and prompt attendance is desired in order that the Entertainment Committee's arrangements may be carried out as planned.

The subscription price is $5.00 per person. This does not include wine, cigars, ciagrettes, or a late supper.

The tables will accommodate eight persons each. Members are requested to make up their own tables and to state their seating preference to the committee. Communications should be addressed to the Committee on Entertainment, A. I. E. E., 33 West 39th Street, New York. To assure satisfactory seating arrangements please advise as promptly as possible.

TECHNICAL EXCURSIONS

Special Excursion

Thursday afternoon, February 20, has been set aside by the Excursions Committee for a visit to the Navy Yard. Members and guests who desire to take advantage of this opportunity should indicate their intention to participate, at the A. I. E. E. registration desk at convention headquarters, promptly upon arrival at the building. It is planned to start from the Engineering Societies Building promptly at 1:30 p.m.

Inspection Trips

The following companies have courteously offered to open their plants for inspection by members and guests, either individually or in groups, on dates and at hours which will be announced in the final Program. The A. I. E. E. convention badge will be accepted as sufficient identification.

New York Edison Company—Waterside Power Stations, East 38th-40th Streets and First Avenue; Substation, 115-117 West 39th Street.

United Electric Light and Power Company—Power Station, 201st St. and Harlem River; Substation, Tremont Avenue and Watson Lane.

Interborough Rapid Transit Company—Power Station, 74th Street and East River; Substation, 57th Street, East of Lexington Avenue.

Electrical Testing Laboratories—80th Street and East End Avenue.

Laboratories of the Bell System—at Western Electric Company, 463 West Street. Chemical, Transmission Physical, Circuit, Radio Design, Research, Automatic, and Printing Telegraph Laboratories.

FUTURE A. I. E. E. MEETINGS

March Meeting.—The 348th meeting of the American Institute of Electrical Engineers will be held in Boston, Mass., on Friday March, 14, 1919. This meeting will be under the auspices of the Boston Section of the A. I. E. E. At the afternoon session there will be presented a paper entitled "Electromagnetic Theory of the Telephone Receiver with Special Reference to Motional Impedance" by A. E. Kennelly and H. Nukiyama. The evening session will be devoted to addresses on the general subject "Research."

April Meeting.—The 349th meeting of the Institute will be held at Institute headquarters, 33 West 39th St., New York on April 11, 1919. This will be a joint meeting under the auspices of the Lighting and Illumination Committee and in conjunction with the Illuminating Engineering Society. Mr. George H. Stickney will present the paper of the evening on "The Present Status of Industrial Lighting Codes in the United States."

May Meeting.—The 350th meeting of the Institute will be the Annual Business Meeting held at Institute headquarters, New York, May 16, 1919. At this meeting the annual report of the Board of Directors will be presented and announcement made of the election of officers for the ensuing year. The feature of chief interest at this meeting will be the ceremonies in connection with the presentation of the Edison Medal.

Annual Convention.—It has been decided to hold the 35th Annual Convention of the American Institute of electrical Engineers at the Lake Placid Club, Adirondacks, New York, during the week of June 23. Complete program and exact dates to be announced later.

FUTURE SECTION MEETINGS

Baltimore.—February 14, 1919. Subject: The Manufacture and Use of Toxic Gases in Modern Warfare." Speaker: Colonel William H. Walker.

Chicago.—February 24, 1919. Subject: Phenomena of Sound Waves. Speaker: John B. Taylor.

Philadelphia.—February 10, 1919, Engineers Club. Subject: The Importance of the Electrochemical Industry. Speaker: Prof. Jos. W. Richards.

Washington. — February 11, 1919. Cosmos Club. Subject: New Application of Electricity to Ships. Speaker: H. A. Hornor.

A. I. E. E. MEETING IN NEW YORK JANUARY 10, 1919

The 345th meeting of the American Institute of Electricial Engineers was held at Institute headquarters, 33 West 39th St., New York onJanuary 10, 1919. The evening was devoted almost exclusively to a lecture delivered by Major General George O. Squier, Chief Signal Officer of the United States Army on "Aeronautics in the United States." That the subject was one of intense interest to the engineering profession is instanced by the attendance of about 1100 members and guests.

President C. A. Adams, called the meeting to order at 8.40 p. m. In introducing General Squier he spoke of the enviable position of those who had been privileged to fight on the other side and of those who had the direction of the great efforts made. He pointed out the inability of people not intimately connected with affairs during the war to realize the character of the responsibility involved in such direction and the multitudinous and complicated problems that had to be solved, particularly in the new field of aeronautics over which General Squier presided.

Major General Squier then delivered his lecture which will be printed in full in a future issue of the PROCEEDINGS.

Succeeding the lecture a series of moving pictures was shown illustrating various phases of aircraft production and types of machines used. Capt Albro commented on the pictures as they appeared and furnished necessary explanations.

After a unanimous rising vote of thanks to General Squier proposed by Prof. Slichter the meeting adjourned at 10.30 p. m.

A. I. E. E. DIRECTORS' MEETING NEW YORK, JANUARY 10, 1919

The regular monthly meeting of the Board of Directors was held at Institute headquarters, New York, Friday, January 10, 1919, at 3:30 p. m.

There were present: President C. A. Adams, Cambridge, Mass.; Vice-Presidents W. B. Jackson, Chicago, F. B. Jewett, New York, John B. Taylor, Schenectady; Managers C. E. Skinner, Charles Robbins, and Wilfred Sykes, Pittsburgh, N. A. Carle, Newark, N. J., Walter A. Hall, Lynn, Mass.; Wm. A. Del Mar and W. I. Slichter, New York; Secretary F. L. Hutchinson New York.

The action of the Finance Committee in approving monthly bills amounting to $10,942.56, was ratified.

Chairman Slichter of the Meetings and Papers Committee reviewed the program of the Midwinter Convention.

The Board approved a meeting, including both afternoon and evening sessions, to be held in Boston, on Friday, March 14, subject to such arrangements as the Boston Section and the Meetings and Papers Committee may make.

Upon the recommendation of the Committee on Time and Place of Annual Convention, it was voted to hold the June 1919 Annual Convention at the Lake Placid Club, Lake Placid, N. Y.

A report was presented of the meeting of the Board of Examiners held December 30, 1918; and the actions taken at that meeting were approved.

Upon the recommendation of the Board of Examiners, the following action was taken upon pending applications: 78 Students were ordered enrolled; 77 applicants were elected to the grade of Associate; 3 applicants were reelected to the grade of Associate; 6 applicants were elected to the grade of Member; 9 applicants were transferred to the grade of Member; and 4 applicants were transferred to the grade of Fellow.

A proposed revision of the by-laws of the Standards Committee was submitted for approval; and it was voted to approve the by-laws as submitted.

The following representatives were appointed: Engineering Council—C. A. Adams and C. E. Skinner were reappointed, for a term of three years beginning February 1919; Board of Trustees, United Engineering Society —Dr. Samuel Sheldon was reappointed, for a term of three years beginning January 1919; Commission of Washington Award—Mr. John Price Jackson was reappointed, for a term of two years beginning January 1919.

A considerable amount of other business was transacted by the Board, reference to which will be found in this and future issues of the PROCEEDINGS.

1919 YEAR BOOK

The Institute Year Book for 1919 will be ready for distribution early in February and may be obtained free of charge by any member upon application to the Secretary, 33 West 39th Street, New York, by mail or otherwise.

This book contains in addition to the constitution, by-laws, lists of officers and committees, and considerable other general information relating to the activities of the Institute, an alphabetical and geographical catalogue of the membership corrected to January 1, 1919.

COLLECTION OF DATA ON TELEPHONE INTERFERENCE FACTOR

In a paper entitled, "Review of the Work of the Sub-committee on Wave Shape Standard of the Standards Committee," which appeared in the January PROCEEDINGS, an account is given of work which has led to the adoption of three new standardization rules regarding wave shape, standardization rules No. 407, 408 and 409. Rule No. 407 defines the telephone interference factor of a wave and rule No. 408 gives the physical basis for its evaluation. Rule No. 409 reads as follows:

> Limiting Value of Telephone Interference Factor.—A telephone interference factor (See paragraphs 17a and 407) of the open-circuit terminal voltage wave not exceeding ——— is permissible except when otherwise specified. This rule shall apply in cases where synchronous machinery is required for use in connection with open-wire transmission or distribution circuits and shall be supplementary to paragraph 406.* The purchaser shall in each case indicate whether or not the conditions are such that this section applies.

The Subcommittee on Wave Shape Standard of the Standards Committee wishes to obtain a large amount of further information before recommending any value to be inserted in rule No. 409 for use as a limit. This information should include data regarding the telephone interference factor on open circuit of synchronous machinery and also regarding the T. I. F. (telephone interference factor) of systems under ordinary operating conditions. The T. I. F. of individual machines and name plate data are desired to establish the relation between T. I. F. and construction of individual machines. The T. I. F. of systems on which these machines are operated is desired to establish the relation between T. I. F. of system and of individual machines connected thereto, which relation will be taken into account by the Committee in its recommendations.

Readings are desired at main generating stations and at important substations. The readings on individual machines should be on open circuit at rated speed and terminal voltage. As speed of the machine is an important factor of the T. I. F. the machine should be driven as near as possible to the rated speed and a record made of the actual speed. Two readings of the T.I.F. on open circuit should be made for each machine on different phases if possible.

The readings of T. I. F. of the system voltage should be made at hourly intervals over a complete 24-hour period. Since the readings depend on the nature of the load the data should include a record of the approximate character of the load, giving especial attention to loads such as rectifiers or electric furnaces which might have particularly important effects on the wave form. Also, the readings depend on the generating apparatus in use. Therefore, the data should identify all synchronous machinery connected to the system at the station at which the measurements are made and state the total load on that station.

The Subcommittee requests the cooperation of power operating engineers and others in the collection of these data. A few instruments for measuring the T. I. F. will be available for loan. Further information can be obtained from any member of the Subcommittee.*

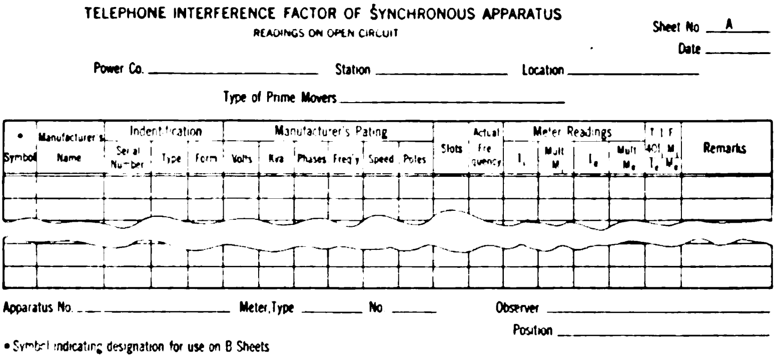
---

*Rule No. 406 relates to deviation factor as heretofore defined.

*The members of the Subcommittee are, C. A. Adams, Frederick Bedell, L. W. Chubb, A. W. Copley, F. M. Farmer, H. B. Gear, H. S. Osborne, L. T. Robinson and A. E. Silver.

Arrangements have been made for the cooperation of the Overhead Lines and Inductive Interference Committee of the National Electric Light Association and some of the electric manufacturing companies.

In the following paragraphs instructions are given for obtaining the desired readings and for using the apparatus for the measurement of telephone interference factor.



TELEPHONE INTERFERENCE FACTOR OF SYNCHRONOUS APPARATUS

RECORD OF DATA

The attached record forms indicate the data which should be obtained in each case. Sheet "A" is for the open-circuit data and sheet "B" is for the system data. In some cases it may not be possible to give the actual frequency because of the lack of a reliable frequency indicator. In such cases the speed of the machine as obtained from a tachometer reading or speed count may be substituted. In any case it is desirable to check with a speed count the indications of the frequency meter.

The form for recording the readings on open circuit provides space for the name plate data of the machine. In case information given on the name plate does not correspond to the headings of the columns, these may be altered to fit the actual conditions. This applies particularly to the columns headed "Type" and "Form." Space is provided on this form for the number of slots in the armature winding of the machine for use when such information is available.

A general statement of the character of the load should be given on the back of the data sheet which records the readings under load. In case the load is mainly of one particular sort, such as synchronous motor-generator sets, synchronous converters or induction motors, this should be noted. If there are any large rectifier or electric furnace loads, their magnitude and location relative to the station where the telephone interference factor measurements are made should be given. Important changes in the character of the load should be noted in the column headed "Remarks."

METHOD OF MEASUREMENT

The pair of terminals on the top of the apparatus marked "Line" should be connected to the secondary of the potential transformer. If one side of this secondary circuit is grounded the "Line" terminal marked *Lg* should be connected to this side. The pair of terminals marked "Meter" should be connected to the measuring instrument.

When making an observation with the apparatus the dial switch marked "Multiplier for Meter" on the top should first be set at the value marked "40" before depressing the key which places the measuring instrument in the circuit. In case the deflection obtained is too small the key should be released and the dial switch set at the next value and so on until a satisfactory deflection is obtained. No switching either in the circuit external to the apparatus or with the switches on the top should be done while the key is depressed.

To obtain a value of the telephone interference factor the currents in the meter for the two positions of the double-throw double-pole switch should be read and recorded, together with the values of the multipliers used. These current readings are denoted I_e and I_i for the "Voltage" and "Current" positions, respectively, of the switch. If the settings of the multiplier dial switch be denoted M_e and M_i respectively, the telephone interference factor is given by the expression.

$$\text{T. I. F.} = 40 \frac{I_i\ M_i}{I_e\ M_e} \text{ microamperes}$$

per volt.

This expression follows from the definition of the telephone interference factor as the ratio of the current in the meter branch of the network in microamperes to the potential across the network terminals in volts. $I_i\ M_i$ is the current in the meter branch of the network and $I_e\ M_e$ the current in a 25000-ohm resistance across the network terminals, both expressed in milliamperes. Hence the current in microamperes is 1000 $I_i\ M_i$ and the potential in volts 25 $I_e\ M_e$. The ratios is thus

$$\frac{1000\ I_i\ M_i}{25\ I_e\ M_e} = 40 \frac{I_i\ M_i}{I_e\ M_e}$$

which is the expression given above.

ENGINEERING COUNCIL

A New Member Society

American Society for Testing Materials has accepted an invitation to become a member of Engineering Council. All formalities have been completed and this Society is now in full membership. Its representative is expected to take his place in the Annual meeting, February 20. The member societies of Engineering Council are now: American Society of Civil Engineers, American Institute of Mining Engineers, American Society of Mechanical Engineers, American Institute of Electrical Engineers, American Society for Testing Materials, United Engineering Society.

THE JOHN FRITZ MEDAL FOR GENERAL GOETHALS

Awarded by Engineering Societies

The John Fritz Medal Board of Award, composed of representatives of the National Societies of Civil, Mining, Mechanical and Electrical Engineers, held their annual meeting for 1919 at the Engineers' Club, Friday evening, January 17th, and awarded their gold medal to George W. Goethals, the builder of the Panama Canal.

The medal has previously been awarded to Lord Kelvin, George Westinghouse, Alexander Graham Bell, Thomas A. Edison, Charles T. Porter, Alfred Noble, Sir William Henry White, Robert W. Hunt, John Edson Sweet, James Douglas, Elihu Thomson, Henry M. Howe and J. Waldo Smith.

Col. John J. Carty, now in France, has been Chairman of the Board, but in his absence Ambrose Swasey, of Cleveland, presided.

George H. Pegram has been elected Chairman for 1919 and W. F. M. Goss, Treasurer, in place of Prof. F. R. Hutton, who died during the year.

NATIONAL RESEARCH COUNCIL

At the University Club, New York, January 23, Chairman George E. Hale and other officers of the National Research Council, gave a dinner to officers of the National engineering and other societies. About thirty persons were present, including officers of National Research Council, the four Founder Societies, American Society for Testing Materials, Society of Automotive Engineers, Inc., Illuminating Engineering Society, United Engineering Society and Engineering Foundation. Letters were received from the Western Society of Engineers, which also had been invited. Gano Dunn, Vice-Chairman of National Research Council, was toastmaster.

Dr. Hale outlined the proposed permanent organization of the National Research Council and possible methods of connection with the National engineering societies, either directly or through Engineering Foundation. In the permanent organization of the Engineering Division of National Research Council, it was suggested that not only the four Founder Societies should have a part, but also the other National engineering societies admitted to membership in Engineering Council.

The toastmaster called upon many representatives of the societies for opinions. Among the sentiments prominently expressed were the following:

1. That there should be close union between Engineering Foundation and the Engineering Division of the National Research Council without submerging the identity of either.

2. That Engineering Foundation should contribute to the financial support of the Engineering Division.

3. That the headquarters of the Engineering Division should be in Engineering Societies Building, New York.

4. That the Engineering Division should have as chairman, an engineer of the highest professional attainments and wide reputation, who should devote his whole time to the development and establishment of the Division.

5. That the Industrial Relations Division, also, should have offices in Engineering Societies Building, New York.

REPORT OF PATENT COMMITTEE OF NATIONAL RESEARCH COUNCIL

In response to a request of the Commissioner of Patents in 1917 and with the approval of the Secretary of the Interior, a Patent Committee was appointed by the National Research Council to investigate the Patent Office and patent systems with a view to increasing their effectiveness and usefulness to the industrial life of the country. The Committee appointed by the National Research Council consisted of Dr. William F. Durand, Chairman, Drs. Leo H. Baekeland, M. I. Pupin, R. A. Millikan, S. W. Stratton, Reid Hunt, and Messrs. Frederick P. Fish, Thomas Ewing and Edward J. Prindle. In the absence of Dr. Durand in Europe Dr. Baekeland was appointed Acting Chairman.

This Committee has recently submitted a report which has the concurrence of the Patents Committee of the Engineering Council. This report proposed a program consisting of three features, which are as follows:

1. Single court of patent appeals.
2. Making the Patent Office a separate institution independent of the Department of the Interior.
3. Providing an increase in force and salaries of the Patent Office.

The report gives arguments at considerable length showing the advantages which would accrue through the adoption of these three proposals.

The report also contains a recommendation with reference to compensation for infringement of patents. Under the present law while an injunction can be obtained against an infringer in a case where a patent has been adjudged valid, a money recovery has not been possible except under most favorable circumstances, and the Committee therefore proposes that the law be amended so that the court, on due proceedings, may adjudge payment of a reasonable royalty or other form of general damages to the complainant.

Three proposed bills covering the recommendations of the Committee accompany the report.

STANDARDIZATION OF TECHNICAL SYMBOLS

A conference for the standardization of technical symbols has been organized consisting of the Committee on Nomenclature of the Society for the Promotion of Engineering Education with the addition of delegates appointed by other national societies. Among the societies represented are the American Institute of Electrical Engineers, American Society of Mechanical Engineers, American Institute of Mining Engineers, Society of Automotive Engineers, and American Society of Civil Engineers. The first meeting of the conference was held in New York City, December 1918, at which meeting Prof. John T. Faig was elected Chairman, and Mr. Sanford A. Moss, Temporary Secretary. It was agreed that the conference should be enlarged by the addition of delegates from all other national societies which might be interested. Each society has been asked to send in a list of symbols in common use in its own field before February 1st, in order that the symbols may be compiled and charted for presentation at a meeting to be held as soon after February 1st as is feasible. Members of the A. I. E. E. who are interested in the standardization of technical symbols are invited to write the representative of the A. I. E. E., Mr. George R. Metcalfe, 33 West 39th Street, presenting their ideas for consideration at the conference.

PAST SECTION MEETINGS

Boston.—January 7, Chipman Hall, Tremont Temple. Illustrated address by Mr. M. Luckiesh on "Camouflage on Land, Sea and Air." Joint meeting with Boston Section of Illuminating Engineering Society. Attendance 300.

Chicago.—December 30, 1918, Western Society Rooms. Address by President Comfort A. Adams on "Electric Welding in Ship Building." Attendance 325.

Cleveland.—December 16, 1918, Nela Park. Illustrated address by Mr. John E. Randall on "The History and Development of Incandescent Electric Lamps." Motion pictures were shown of the various processes in lamp manufacture. Attendance 95.

Detroit—Ann Arbor.—December 27, 1918, Detroit Board of Commerce. Paper: "Alternating Current Circuits" by H. H. Higbie. Attendance 30.

January 10, 1919, Detroit Board of Commerce. Paper: "Development of Industrial Control" by H. D. James. Attendance 75.

Lynn.—January 8, 1919, G. E. Hall. Lecture by Mr. Robert P. Burrows on "Motion Picture Projection." Attendance 107.

Pittsfield.—December 19, 1918, New American Hotel. Illustrated lecture on "The Manufacture of the Modern

Incandescent Lamp." by Mr. A. L. Powell. Attendance 175.

Portland.—December 3, 1918, Gasco Building. Paper: "Electric Smelting" by W. L. Morrison. Attendance 40.

Rochester.—December 20, 1918, Rooms of Rochester Engineering Society. Paper: "Increased Production by Correct Illumination" by F. C. Taylor. Attendance 40.

Schenectady.—December 20, 1918, Edison Club Hall, Illustrated address by Mr. A. H. Armstrong on "Steam Road Electrification." Attendance 245.

January 3, 1919, Edison Club Hall. Lecture by Mr. C. A. Kelsey on "The Sugar Industry." Moving pictures entitled "Cuba, the Island of Sugar." Attendance 165.

Seattle.—December 17, 1918, Arctic Club Building. Paper: "Electric Welding —A New Industry" by H. A. Hornor. Attendance 29.

Washington.—December 10, 1918, McKinley Memorial Training School. Address by Lieut. Col. John H. Finney on " Experiences Abroad in the Study of Zeppelins." Attendance 47.

January 14, 1919, Cosmos Club. Address by Mr. N. W. Storer on "Electrification of Steam Railroads." Attendance 75.

PAST BRANCH MEETINGS

University of California.—November 27, 1918, Mechanics Building. Paper: "The Electric Gyroscope and Its Application to Marine Work" by A. E. Mc Mahon.

December 11, 1918, Mechanics Building, Paper: "The Operating Characteristics of Vacuum Tube Apparatus" by L. M. K. Boelter.

Virginia Polytechnic Institute.—January 14, 1919. Election of officers as follows—chairman, J.A.Carr; secretary-treasurer, L. D. Fry; executive committee Professors S. R. Pritchard and C. Lee, and Messrs. A. W. Fairer, R. C. Smith and E. W. Bryant.

University of Virginia.—January 15, 1919, Electrical Laboratory. Election of officers as follows—J. E. B. Stuart, chairman; J. A. Evans, secretary; executive committee, Prof. W. S. Rodman and Messrs. H. L. Painter and G. C. Boyer. Address by Prof. W. S. Rodman on "Benefits Derived from the A. I. E. E."

Washington University.—December 11, 1918. Election of officers as follows—Dean A. S. Langsdorf, honorary chairman; Walter J. Sprainka, chairman; A. Murphy, vice-chairman; Harold T. Lange, secretary-treasurer; N. Sprainka engineers council representative.

State College of Washington.—January 10, 1919, Mechanic Arts Building. Paper: "Electrical Development in the West" by J. W. Beyer. Attendance 19.

University of Washington.—January 7, 1919. Paper: "The Future Demands in the Engineering Field" by Mr. Crawford. Attendance 22.

ASSOCIATES ELECTED JANUARY 10, 1919

*BAKER, WALTER R. G., Electrical Engineer, Standardizing Laboratory, General Electric Co.; res., 1 James St., Schenectady, N. Y.

BALDWIN, JOHN ROBINSON, Engineer, Testing Section, Engineering Dept., Georgia Railway & Power Co., 456 Gas-Electric Bldg., Atlanta, Ga.

BARRETT, JOSEPH R., Chief Draftsman, Switchboard Dept., Condit Electrical Mfg. Co.; res. 674 Second St., So. Boston, Mass.

BEERSTECHER, LEONARD H. C., Construction Foreman, Construction Dept., General Electric Co., Schenectady, N. Y.

BERG, LOUIS, Electrician, Great Northern Railway Co.; res., 610 1st Ave. North, Great Falls, Mont.

BERGMANN, CARL A., Engineer, Searchlight Dept., Sperry Gyroscope Co.; res., 263-75th St., Brooklyn, N. Y.

BROBST, JOHN E., Asst. Engineer, Industrial Control Dept., General Electric Co.; res., 21 Elder St., Schenectady, N. Y.

Burr, Clifford B., Electrical Contractor, 100 Main St., Ansonia; res., Academy Hill, Derby, Conn.

Campbell, Arthur Ballard, Testing Engineer, General Electric Co.; res., 1860 Lindley Ave., Ft. Wayne, Ind.

Carlson, Wendell L., Radio Electrician, Radio Test Shop, Navy Yard; res., 805 B. St., S. E., Washington, D. C.

Chapman, Fred Elton, Assistant Engineer, Bangor Railway & Electric Co., Bangor; res., Carmel, Maine.

TEAGUE, NEWTON NESBITT, 2nd Lieut., Air Service Section, U. S. A., 1201 Lamar Building, Augusta, Ga.

TRANSFERRED TO THE GRADE OF MEMBER JANUARY 10, 1919

AGNEW, PAUL G., Physicist, Bureau of Standards, Washington, D. C.

BARNERT, MEYER,Power Sales Engineer & Industrial Engineer, Northern States Power Co., Minneapolis, Minn.

DOSTAL, JOHN F., General Manager, Colorado Springs Light, Heat & Power Co., Colorado Springs, Colo.

FAHY, FRANK P., Consulting Magnetic Engineer, New York, N. Y.

GARDETT, HELMUTH C., Assistant Electrical Engineer, Bureau of Power & Light, Dept. of Public Service, Los Angeles, Cal.

GUTTING, LEO A., Manager, Southern Indiana Power Co. and Interstate Public Service Co., Bedford, Ind.

Oesterreicher, Sandor I., Electrical Engineer with T. E. Murray, New York, N. Y.

Parrott, Robert P., Special Representative, Edison Lamp Works of G. E. Co., Harrison, N. J.

Swanstrom, Frank N., Chief Engineer, Electric Machinery Co., Minneapolis, Minn.

TRANSFERRED TO THE GRADE OF FELLOW JANUARY 10, 1919

Cohen, Louis, Consulting Engineer, Signal Corps, U. S. A.; Professor, Radio Engineering, George Washington University, Washington, D. C.

Lawton, Arthur H., Asst. Chief Engineer and Manager, Construction Dept., Consumers Power Co., Jackson, Mich.

Ricker, Charles W., Assistant General Manager and Chief Engineer, Havana Electric Railway, Light & Power Co., Havana, Cuba.

Staege, Stephen A., General Engineering Dept., Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting held on January 27, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Frank, John J., Asst. Engineer, Transformer Dept., General Electric Co., Pittsfield, Mass.

To Grade of Member

Bush, Vannevar, Consulting Engineer, American Radio & Research Corp., Medford Hillside, Mass.

Dubilier, William, Consulting Engineer, New York, N. Y.

Falkenburg, Eugene L., Supt. of Power, Riegos y Fuerza del Ebro, Barcelona, Spain.

Harbin, George F., Electrical Engineer, Washington Terminal Co., Washington, D. C.

Scott, Carl F., Manager, Specialty Apparatus Sales, Sprague Electric Works, New York, N. Y.

Simon, Emil J., Radio Engineer, New York, N. Y.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before February 28, 1919.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

Edward de A. Braga
(former address)
2-4 Stone St.,
New York, N. Y.

Howard K. Cook
(former address)
Counties Gas & Elec. Co.
Norristown, Pa.

F. C. Dieterich
(former address)
17 Watertown Ave.
Waterbury, Conn.

Nils Erricksson
(former address)
198 Beverly St.
Toronto, Canada.

A. Guerra
(former address)
Mexican Light and Power Co.
Mexico City, Mex.

Samuel K. Lessey
(former address)
510 So. 47th St.
Philadelphia, Pa.

H. S. Logan
(former address)
214 15th Ave.
Seattle, Wash.

Percival Moore
(former address)
Pendennis Club
Louisville, Ky.

B. Neel
(former address)
Floral Park
Wilkinsburg, Pa.

Louis F. Nosek
(former address)
2245 E. 82nd St.
Cleveland, Ohio

PERSONAL

Paul Cloke has been elected to a Professorship of Electrical Engineering at the University of Arizona, Tucson, Arizona.

Mortimer Freund, who has been in charge of the Trench Warfare Branch, Loading Section of the Explosives and Loading Division, Ordnance Department at Washington, D. C., has resigned from that service and has resumed his activities in the firm of Eadie, Freund and Campbell, consulting mechanical and electrical engineers, New York City.

Professor A. E. Kennelly, Past President, of Harvard University and the Massachusetts Institute of Technology, has been elected recently an Honorary Member of the Institution of Electrical Engineers in London.

Harold G. Payne having completed recent government appointments is now available for engagements as electrical engineer on problems in connection with design of power plants and systems, industrial electric power and lighting layouts, reports on utility properties, valuations and rate adjustments, management and operation. Offices at 201 Chamber of Commerce, Boston, Mass.

Frank P. Fahy has been recently awarded the John Scott Legacy Medal and Premium by the City of Philadelphia, acting on the recommendation of the Franklin Institute, for his work in connection with the development of the Fahy Permeameter. With this instrument accurate measurements of the characteristics of materials can be made with ease, and it is so constructed that long specimens of bar, rod and sheet material may be tested at any point of their length.

N. M. Haralson who has been connected with the Bureau of Aircraft Production since September 1917, and who has been Chief of the Instrument Department of the New York office since June 1918 has resigned his position and after February 15th will be connected with the Haralson Sales Company, Inc., 752 Brown Marx Bldg., Birmingham, Ala., in the capacity of Sales Engineer.

Charles R. Underhill, until recently Captain in the Air Service, Aeronautics, received his discharge from the army on January 8th and has returned to New Haven in the capacity of Chief Electrical Engineer for the Acme Wire Co. For sometime Capt. Underhill was in charge of tests in flight for the Radio Development Section of the Signal Corps at Langley Field, and when this work started at Little Silver he was transferred to the School for Aerial Observers at Langley Field, where he organized the Radio Department and the Simulative Artillery System. Later Capt. Underhill was transferred to the Division of Military Aeronautics, Washington, D. C where he specified the radio equipment for Air Service Operations.

Fredk. A. Scheffler formerly with the Babcock & Wilcox Co., New

York has become associated with the Fuller Engineering Company of Allentown, Pa. Mr Scheffler is manager of the Department devoted to the application and introduction of pulverized coal equipment for steam power plants. His address will be Fuller Engineering Company, 50 Church St., New York City.

CAPTAIN EDWARD E. ASHLEY, JR., for many years Consulting Mechanical and Electrical Engineer for Starrett & Van Vleck, Architects, New York City, has resigned his commission in the Air Service of the U. S. Army, to accept appointment as Sales Engineer of the Mercury Mfg. Co., Chicago, Illinois. This company manufactures electrically driven tractors for use in connection with industrial haulage systems.

DONALD MC NICOL, who during the past ten years has been assistant electrical engineer of the Postal Telegraph Cable Company, New York, has become managing editor of *Telegraph and Telephone Age.* Mr. Mc Nicol is a Fellow of the Institute and is chairman of the committee on Telegraphy and Telephony.

OBITUARY

PROFESSOR R. C. CARPENTER of Cornell University died at his home in Ithaca on January 19. He was born in 1852 and graduated from Michigan University in 1877, and served for one year as assistant engineer of construction of the Detroit and Bay City R. R. He then became professor at Michigan Agricultural College and was in charge of the department of mathematics and civil engineering from 1878 to 1890 when he accepted the associate professorship of experimental engineering at Sibley College, Cornell. Prof. Carpenter also conducted a consulting engineering practise of considerable magnitude.

ROSSITER W. RAYMOND, Ph. D., LL. D., mining engineer, metallurgist, lawyer and author died on December 31, 1918. He was born in Cincinnati, Ohio, April 27, 1840 and received his early education in the schools of Syracuse. He graduated from the Brooklyn Polytechnic Institute in 1858 and spent the next three years at universities in Germany. Returning to the United States in August, 1861, he entered the Federal Army and was later commended for gallant conduct. From 1864 to 1868 he practised as a consulting mining engineer and metallurgist and in the latter year was appointed U. S. Commissioner of Mining Statistics which position he held until 1876. From 1870 to 1882 he lectured on economic geology at Lafayette College. From 1875 to 1895 he was associated as consulting engineer, for prominent firms in the iron, steel and coal business. From 1885 to 1889 he was New York State Commissioner of Electric Subways for Brooklyn and in 1889 became consulting engineer for the New York and New Jersey Telephone Company. Dr. Raymond was admitted to the bar in 1898 and was connected with many cases involving mining and patent law, and in 1903 became lecturer on Mining Law at Columbia. He was an original member of the American Institute of Mining Engineers, vice-president in 1871, 1876 and 1877, president from 1872 to 1875, secretary from 1884 to 1911, and Secretary Emeritus from 1911 until his death. Dr. Raymond was a member of the American Philosophical Society, an honorary member of the Society of Civil Engineers of France, the Iron and Steel Institute and the Institute of Mining and Metallurgy of Gt. Britain besides various other technical organizations. Dr. Raymond was a most prolific and interesting writer on a wide variety of subjects and an orator of great ability.

AN APPEAL

To the Membership of the Institute.

The Employment Bureau of the A. I. E. E. cooperating with the Engineering Societies Employment Bureau, as recently established under the Board of Management consisting of the Secretaries of the A. S. C.E., the A. I. M. E., the A. S. M. E. and the A. I. E. E. is feeling the heavy and daily growing demand for employment existing among the "Engineers". Men from the army, the navy, former civilian government employees and many others come to us for aid. They are of all types and grades from the clerk to the highly trained engineer executive.

We therefore urge you, if vacancies exist in your organization or if you come in contact with others seeking technically trained men, to speedily inform us of such opportunities giving the necessary qualifications for each position, that is, experience required, salary, location, etc. Such information will be brought to the attention of properly qualified men on our available files and will often lead to the prompt filling of the vacancy. If you so desire, announcements of vacancies may be published without charge in the monthly PROCEEDINGS.

Put us in touch with such information on opportunities as you may have and you will be aiding greatly in the readjustment of the labor situation in the engineering field.

Very truly yours,
F. L. HUTCHINSON
Secretary.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, as stated in the letter above, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in the BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office reference files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

OPPORTUNITIES FOR SERVICE

V-468. Wanted: Night supervisor for 30,000 Kw. turbine plant located in Southern New England. Requires man experienced along this line and with clean past record. Salary $2500. at start.

V-469. Man with practical experience in testing electrical motors and generators, not necessarily a technical man, but practical experience insisted on. Want a man experienced enough so that he can go into our shops and start immediately turning out motors and generators. Salary $130. to $140. per month.

V-470. Light and power company in Iowa, 50,000 Kw. plant, wants young technical man for boiler and turbine testing, efficiency determinations, etc. Must have had some practical experience along such lines. Salary $1800. to start. Good opportunity for advancement.

V-471. Mather & Platt Ltd., Park Works, Manchester, England, manufacturers of mechanical, textile, hydraulic and electrical plant, require a chief research engineer of British descent, to organize and take full charge of a works research department and laboratory. The highest qualifications and wide knowledge of such work are essential. Apply by letter with full details, stating how soon at liberty, to the above address.

V-472. Power company in Nebraska requires services of young engineer experienced in underground cables and structure. Alternating current. Salary to start about $115. per month. Give age, experience and references.

V-473. Wanted by electrical engineering journal, electrical or mechani graduate for assistant technical editor and aid to circulation manager. Should be familiar with cut making, have writing ability and be of good address. Opportunity to grow into good permanent position. Give age, experience and salary.

V-474. Electrical engineer wanted by firm manufacturing distribution specialties, for position of chief draftsman, designing and some shop supervision. Practical knowledge of distribution and technical education essential. Location Chicago. Salary $2000. to $2600.

V-475. Salesman, experienced in handling technical equipment. Should have a general knowledge of electricity and of manufacturing procedure. Moderate salary to start.

V-476. Wanted division superintendent of light and power company. Location Porto Rico. Applicant must be in thirties, have had thorough technical and practical training in central station business, energetic, optimistic and able to handle all grades of labor. He will supervise distribution, operation, maintenance, inspection, new business, contracts, investigation and design. Good opportunity for man who can take hold, reconstruct and develop. Excellent climate and living facilities. Give complete record, stating length of each employment. Furnish photo, references and salary expected.

V-477. Wanted engineer to take charge of steam plant and substations of light and power company in Porto Rico. Must have had good technical training, both electrical and mechanical and be experienced in handling men. Able to design or stand watch when necessary. He will be in charge of steam plant, substations, repair shop, meter dept., concrete pole manufacture, hydroelectric design, construction and operation. Excellent climate and living facilities. Give experience in detail age, references and salary expected.

V-478. Power and railway corporation, central New York, wants man experienced in electrical end of power house work. Salary approximately $100. per month.

V-479. We need a man who is familiar with switchboards, circuit breakers, and meters, who knows how to write. Technical graduate preferred.

V-480. Young engineer with some sales experience wanted, with knowledge of large steam and water valves and their application. Some knowledge of direct and alternating current motors essential.

V-481. Large firm, location France, wants electrical engineer thoroughly familiar with design of very high voltage transformers and equipment. Good position guaranteed to A-1 competent man. Give detailed experience, age and salary expected.

V-482. Large telephone company in Bell System operating in central and northern central states requires a number of men experienced in telephone inventory and valuation work. Has in view at present from one to three years of extensive work and can offer permanent positions to a limited number of men who prove themselves capable. Salaries $1500. to $1800. per annum, depending upon experience and ability, with opportunity for advancement.

V-483. Wanted: Technical graduate in electrical engineering. At least five years experience in the manufacturing of detail electrical apparatus. Salary about $200. per month. Location Pennsylvania.

SERVICES AVAILABLE

1129. Technical graduate with 22 months of G. E. testing experience, combined with additional engineering practice, desires to locate with an electric manufacturing company.

1130. At present on active duty in U. S. N. but expect to be released within the next few weeks. Desire a position preferably in sales department of electrical manufacturing company. Graduate electrical engineer. Have had some engineering experience, electrical and mechanical, and extensive experience in motor, dynamo and welder testing and repairing.

1131. Chemical and electrical engineer, age 26, graduate of Massachusetts Institute of Technology, returning from overseas, desires position, preferably with company employing electric power in chemical processes. Address Thos. C. Atchison, 45 Hillside Avenue, Lawrence, Mass.

1132. Electrical engineer, several years' experience as superintendent of equipment for a large electric railway system. Also capable of designing electrical machinery and making power house layouts. Production engineer. Can deal successfully with labor and secure efficient results. Thirty-eight years old. Married.

1133. Electrical engineer with strong technical qualifications (especially in alternating currents) and considerable executive ability, desires change of position. Would especially consider electrical testing organization offering responsible position with opportunities for new work or power and distribution. Experience in laboratories (testing and research), central station and distribution, railway and some industrial power. Salary neighborhood of $4000.

1134. Technical graduate, electrical, 26 years old, married. Two and one-half years' experience miscellaneous electrical, equipment as motors, generators, rectifiers and batteries.

1135. Electrical engineer, American, college education, married, age 32, fourteen years' experience, including six years in shops, desires position as electrical engineer, chief draftsman or chief electrician. Experienced in machinery, power, switchboard and lighting installations, their maintenance and repair. Six years with present employers. Salary $2400.

1136. Chief draftsman and designer, age 38, nine years sub and central station; eight years factory experience drafting, design, construction, research. Good organizer, producing results at minimum cost, trained for position from layoutman and designer to manager and engineer. Salary according to responsibility and local circumstances. Location New York, Brooklyn, Newark, New Jersey.

1137. Technical graduate 1916, age 28, wishes to locate with a light and power company as meter engineer. Two years with a large electrical manufacturing concern on test floor on latest type of measuring instruments. Available on short notice. Salary $1800.

1138. Commercial engineering, sales management. Will be free for engagement in early spring. At present Captain Ordnance U. S. Army. Graduate Cornell '09, degree M. E. Ten years with electrical manufacturer. Member A. I. E. E. Age 33. Salary $4000.

1139. Superintendent with fifteen years' experience in the construction and operation of large power developments and now with a large power company, desires to make change. Thoroughly experienced in central station, transmission and distribution. Would consider proposition with industrial company.

1140. Mechanical-hydraulic engineer, at present employed as chief draftsman important hydroelectric development, desires change. Fifteen years' experience draftsman, designer, chief draftsman, designing engineer and chief engineer in hydroelectric and industrial engineering. Would locate South or West or go abroad. Available in one month. Minimum salary $3000.

1141. Electrical engineer, age 30, year and half in ordnance work, assistant metallurgist and superintendent of electrical heat treating department. Experienced in design and estimating of power distribution. Inspector transmission line equipment. Twenty-six months G. E. test. Will consider engineering, manufacturing or sales in or near New York City.

1142. First Lieutenant Ordnance U. S. Army wants position as manager, new business department electric light and power company. Graduate Georgia Tech. E. E. 1909. A. I. E. E. Nine years engineering and sales experience. Thoroughly familiar with industrial power requirements, competent to get and hold business. Will be available March 1. Minimum salary $3,600.

1143. Electrical engineer, competent designer of direct and alternating current motors, generators and accessories with extended and valuable business experience in the up-to-date manufacture of same. At present in responsible position. Desirous of becoming associated with established manufacture, requiring man of executive ability who may acquire interest.

1144. Electrical engineer, graduate University of Illinois 1915, mechanical engineering experience in factory, production and plant design.

1145. Army Captain, electrical engineer, 37, college graduate, fourteen years' experience from electrician to position of large responsibility. Design, installation and operation of power plants, substations, distribution systems and industrial motor equipments, 1000 to 50,000 kva. Several years abroad. Now in charge of camp utilities after completing installation of same. Available in April.

1146. Chief electrician. Experienced on A-C. or D-C. work, industrial or power plant layout and maintenance work. Thoroughly acquainted with economical operation of storage batteries. Age 35. Married.

1147. Electrical engineer, graduate '14, Associate A. I. E. E., twelve years' experience; specialized in the installation and maintenance of oil engines, electric power and pumping station; have wide experience in designing special plants, specifications, estimates and mathematical calculations; can handle men. Will be available February 1. Age 33. Married.

1148. Electrical engineer, age 31, married, British nationality, technical graduate, eleven years' experience in U. S. A. and Canada on sales, construction and operation of hydroelectric equipment, also the industrial application of motors. Now manager in Canada for large European electrical manufacturing company. Present salary $3600. Will go to any healthy location.

1149. Electrical trained executive, now connected with the Bureau of Aircraft Production having business relations with many Government contractors, wishes to connect with an electrical manufacturer in a sales capacity. Good references, strong personality. Associate A. I. E. E., member Engineers Club of Philadelphia. Age 27. Married.

1150. Electrical engineer, age 32, married, desires position with light and power company as superintendent or assistant. College graduate. Over two years with General Electric Co. in testing department and in field locating power equipment trouble. Four years in electrical engineering department of large street railway company. Salary $1800-$2000.

1151. Have your business represented in Washington, Baltimore, and surrounding territory on a commission basis by an electrical-mechanical engineer. Age 28. Married. Associate A. I. E. E. Technical graduate with specialized experience in design, construction and operation of generating stations, substations and high tension transmission lines. Will handle exclusive agency only.

1152. Electrical and mechanical engineer, technical graduate, Member A. I. E. E., age 32, single, over ten years in design and construction of steam and hydroelectric power plants, transmission lines and substations. Until recently held commission in Ordnance Department, Engineering Division. Applicant desires location in executive position with growing concern, preferably in or near New York City.

1153. Technical graduate electrical engineer, Associate A. I. E. E., desires position where executive ability and tact is required. Eight years experience as consulting engineer and contractor in illuminating engineering, power distribution and control, both interior and exterior installations. Until recently with War Department, Washington, D. C., as consulting engineer on illumination, Available February 1.

1154. Electrical engineer, graduate, married, twenty years varied experience in design and construction, mill power and lighting, steam and hydroelectric power and sub-stations, transmission lines, distribution, shipyards, etc., valuation work. Good executive. Good references.

1155. Electrical engineer, graduate E.E., Member A. I. E. E., age 32, married desires a position as Associate Professor of E.E., or a responsible position in a research department. Nine years' experience as a professor of electrical engineering and as a consulting electrical engineer. Now Lieutenant in U. S. N. R. F. on active duty, for engineering duties only. Will be discharged after February 1 on application. References, former associates and employers.

1156. Technical graduate, age 37. Twenty years electrical experience construction, maintenance, designing, drafting, sale. Was employed eight years as chief electrician by large shipbuilding company in Denmark; eight months electrical designing in connection with ships for the Emergency Fleet Corp. Will go anywhere in U. S. A., Canada, Japan, China.

1157. Electrical graduate, 1903, member A. I. E. E., fourteen years' experience electrical and mechanical engineering, some civil engineering and construction work, with large manufacturing and power companies; principal experience hydroelectric plant and transmission design, age 38, married; excellent health, industrious and responsible; desires permanent position in Arizona or New Mexico. Minimum salary $2400.

1158. Lieutenant of Field Artillery with a master degree in electrical engineering, G. E. Test course and four years' experience as inspector of electrical machinery and materials, desires a permanent position with power company or industrial plant where this experience will be most valuable. Best of references. Age 28. Salary $175.

1159. Member A. I. E. E., twenty years' experience, electric light and power construction, operation, maintenance, stations, meters, relays. Thirteen years with one company as superintendent meters, chief electrician, electrical engineer. At present power specialist, industrial plants. Married, age 41. Salary $2500.

1160. Electrical engineer, technical graduate, wide experience in layouts and construction of industrial installations and power plants.

1161. Industrial Engineer. Now works engineer in a plant of 6,000 men. Experienced in the design of special industrial equipment and special machine tools. Specialized experience on A-C. and D-C. motors, automatic machine tool control and production records and schedules. Experienced in handling men. Salary $4000. Technical graduate. Age 32. Married.

1162. Electrical engineer, 34, having fourteen years broad electrical and mechanical experience with large industrial, railways, power and lighting companies, desires executive position of responsibility with established and reliable industrial or public utilities company. Construction or operation. Salary $4200.

1163. Backfrom France, Lieutenant, Corps of Engineers, offers his personal services. Electrical engineer, graduate of Massachusetts Institute of Technology, twenty-eight years of age. Experienced in steam-electric power plant design, construction and operation. $2500.

1164. Young technical man, 30, at present instructing in large eastern institution on electrical machinery, desires to connect permanently with electrical concern in South, far West, or, preferably, Alaska. Possibility of expansion main consideration. Present remuneration $2400.

1165. Electrical engineer, degree M.E., married. One year G. E. machine work; eight years central station testing, construction, installation; one year power and lighting layout. Some experience purchasing supplies. Desires position with industrial plant or central station.

1166. Ensign U. S. Naval Aviation, just released from active duty. Married. Age 27. Two years testing and three years engineering and manufacturing experience in transformer and motor design with the G. E. Co., five months power-house construction experience with Stone & Webster.

ACCESSIONS TO THE ENGINEERING SOCIETIES LIBRARY

(From December 1, 1919, to December 31, 1919)

Unless otherwise specified, books in this list have been presented by the publishers. The Societies do not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

THE A-B-C OF AVIATION.

A complete, practical Treatise outlining clearly the Elements of Aeronautical Engineering with special Reference to simplified Explanations of the Theory of Flight, Aerodynamics and Basic Principles underlying the Action of Balloons and Airplanes of all Types. A non-technical Manual for all Students of Aircraft. This Book includes Instructions for lining up and inspecting typical Airplanes before flight and also gives easily understood Rules for flying. By Victor W. Pagé. N. Y., The Norman W. Henley Publishing Co., 1918. 11 + 274 pp., 128 illus., 7 pl., 9x6 in., cloth, $2.50.

A companion volume to the author's "Aviation Engines", giving a simple account of the operation and repair of airplanes. Intended for use by prospective aviators and mechanics, not as a treatise for engineers and designers.

AEROBATICS.

By H. Barber. N. Y., Robert M. McBride and Co., 1918. 61 pp., 29 pl., 11 x 18 in., cloth, $3.

This book is an explanation of the general rules governing flying. The instruction is arranged in progressive form and is intended to convert the novice into an expert pilot in the shortest possible time, with the greatest possible degree of safety to himself and his machine.

AMERICAN ENGINEERS BEHIND THE BATTLE LINES IN FRANCE.

By Robert K. Tomlin, Jr. 1st edition. N. Y., published by Engineering News-Record. (McGraw-Hill Book Co., Inc., sole selling agents.) 1918. 91 pp., illus., 12 x 9 in., ¼ cloth, $2. (Gift from McGraw-Hill Book Co.)

These nineteen articles, reprinted from the McGraw-Hill periodicals of they ear, described various phases of the engineering work executed by the American Army. Gathered together, they form an interesting account of the problems and the methods used to solve them.

AMERICAN PROBLEMS OF RECONSTRUCTION.

A National Symposium on the Economic and Financial Aspects. Edited by Elisha M. Friedman, with a foreword by Franklin K. Lane. N. Y., E. P. Dutton and Co., 1918. 23 + 471 pp., 8 x 5 in., cloth, $5.

CONTENTS: Part I. A Perspective of the Question. Part II. Efficiency in Production. Part III. Adjustments in Trade and Finance. Part IV. Programs, Monetary and Fiscal.

The editor here presents the opinions of some twenty-eight prominent Americans, in the hope of stimulating thought on the subject. The specific points treated are the temporary effects of the war, the best methods of facilitating our readjustment to peace conditions, the permanent effects of the war, the changes that these will effect in our national life, and the national economic policy that should be adopted.

ANNUAL CHEMICAL DIRECTORY OF THE UNITED STATES.

2d Edition, 1918. Consulting Editor, B. F. Lovelace; Managing Editor, Charles C. Thomas. Baltimore, Williams and Wilkins Co., (copyright 1918) 534 pp., 9 x 6 in., cloth, $5.

This directory is intended as a comprehensive review of all matters relating to industrial, technical and scientific chemical development in the United States. It contains lists, classified by subject and location, of manufacturers and dealers in chemicals and allied products and in equipment; a geographical directory of industrial, institutional, federal, state, municipal and commercial laboratories; a list of technical and scientific societies of the world, and bibliographies of technical and scientific journals, and of the important new books of 1917-1918. A "News and Notes" section completes the work. This second issue is approximately twice as large as the first.

THE ATOMIC WEIGHTS OF BORON AND FLUORINE.

By Edgar F. Smith and Walter K. Van Haagen. Wash., Carnegie Institution, 1918. 65 pp., 4 illus., 4 tab., 10 x 7 in., paper, $1.

The authors describe in detail their work upon the atomic weight of boron and give a recalculation of that of fluorine, based upon their new value for boron. This latter value is considerably lower than that hitherto accepted.

ELECTRIC MOTORS AND CONTROL SYSTEMS.

A Treatise on Electric Traction Motors and their Control. By A. T. Dover. Lond., Sir Isaac Pitman and Sons, Ltd., 1918. 16 + 372 pp., 315 illus., 9 tab., 9 x 6 in., cloth, $6.

In this volume, which is an amplification of a portion of his work on "Electric Traction", the author treats of the application of electric motors to railways. The endeavor has been to meet the needs of engineers and advanced students of engineering, rather than those of specialists in elelctric railway equipment.

ELECTRICAL EQUIPMENT OF THE MOTOR CAR.

By David Penn Moreton and Darwin S. Hatch. N. Y., U. P. C. Book Co., Inc., 1918. 506 pp., 428 illus., 7 x 5 in., flexible cloth, $2.50.

This work is intended to give the lay reader sufficient knowledge of the electrical equipment of an automobile to enable him to operate it intelligently, and to make ordinary adjustments and repairs. It is compiled from a series of articles that appeared in Motor Age, with additions and emendations.

ELECTRICITY AND MAGNETISM FOR ENGINEERS.

Part I. Electrical and Magnetic Circuits. By Harold Pender. 1st Edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1918. 11 + 380 pp., 98 illus., 9 x 6 in., cloth, $3.

This volume covers substantially the same ground as that of the author's "Principles of Electrical Engineering." The method of treatment, however, is distinctly different. The various laws and relations are more fully discussed and a greater number of practical applications are given. Particular emphasis is laid upon exact quantitative statements of the fundamental laws.

GRAPHIC CHARTS FOR THE BUSINESS MAN.

By Stephen Gilman. Chic., La Salle Extension University, 1918, 62 pp., 56 illus., 9 x 6 in., paper.

A pamphlet showing the value of charts in presenting statistical data, and describing some of the varieties used in business.

HENDRICK'S COMMERCIAL REGISTER OF THE UNITED STATES FOR BUYERS AND SELLERS.

With which has been incorporated "The Assistant Buyer." Especially devoted to the Interests of the Electrical, Engineering, Hardware, Iron, Mechanical, Mill, Mining, Quarrying, Chemical, Railroad, Steel, Architectural Contracting and kindred Industries. A complete and reliable annual Register of Producers, Manufacturers, Dealers and Consumers connected with the aforesaid Industries. N. Y., S. E. Hendricks Co., Inc., (copyright 1918) 2381 pp., 10 x 8 in., cloth, $10.

This register of producers, manufacturers, dealers and consumers connected with the engineering and industrial activities of the country has been carefully revised and corrected. The firms included are listed alphabetically and also carefully classified. A section containing trade names and brands, with the names of manufacturers, forming a convenient ready reference list for purchasers, is a distinctive feature.

LOCOMOTIVE HAND-BOOK.

Compiled by American Locomotive Company. N. Y., 1917. 195 pp., 9 illus., 89 tab., 6 x 4 in., leather, 75 cents.

The compilers have arranged the tables, formulas and other information used by locomotive designers, in a convenient book of pocket size.

MILL AND CYANIDE HANDBOOK.

Comprising Tables, Formulas, Flow-sheets, and Report Forms, compiled and arranged for the use of Metallurgists, Mill-men and Cyanide Operators. By W. A. Allen. Lond., Charles Griffin and Co., Ltd.; Phila., J. B. Lippincott Co., 1918. 10 + 128 pp., 7 x 4 in., cloth, $2. (Gift from J. B. Lippincott Co.)

The author has tabulated the physical, chemical and mechanical data needed by mill-men, in volume of convenient size, well-indexed. A glossary of mill and cyanide terms is included.

MODERN SHIPBUILDING TERMS DEFINED AND ILLUSTRATED.

Including a Series of Photographs showing the Progressive Steps of Construction, together with an Appendix on Electric Welding. By F. Forrest Pease. Phila. and Lond., J. B. Lippincott Co., (copyright 1918). 143 pp., 68 pl., 8 x 5 in., cloth, $2.

This work contains a glossary of the more common words and phrases used in building a steel ship; a list of shipyard trades and the duties performed by each; a series of instruction charts on electric welding; a list of symbols used on plans and parts; a description of the Isherwood system of shipbuilding; directions for the use of acetylene, hydrogen and oxygen for cutting and welding; and a select list of books on ship construction and equipment. The plates illustrate the construction of a ship by the usual methods, the construction of the "fabricated" ship, and the tools, machines and installations.

OXWELDING AND CUTTING.

Manual of Instruction. (Compiled by the Oxweld Acetylene Company, Jersey City, N. J. 1st edition, (copyright 1918) 124 pp., illus., 8 x 5 in., paper.

The manual describes the apparatus, the methods of using it and gives a series of practice problems illustrating correct methods of meeting those that occur in shops where oxy-acetylene is used for cutting and welding.

PRACTICAL AVIATION.

An Understandable Presentation of Interesting and Essential Facts in Aeronautical Science. By Charles B. Hayward, 2nd edition. Chic., American Technical Society, 1919. 784 pp., illus., 8 x 6 in., flexible cloth, $3.75.

This volume treats of the theory, design and construction of airplanes and dirigible balloons, and their motors; and describes the types in use. Considerable space is given to the military uses of airplanes and to the methods of flying used by military aviators.

PRACTICAL AVIATION FOR MILITARY AIRMEN.

By Major J. Andrew White. N. Y., Wireless Press, (copyright 1918) 197 pp., illus., pl., 9 x 6 in., cloth, $1.75.

The author's aim has been to produce a text-book suited for intensive study by students of military aviation who wish to learn the essentials of flying in the shortest possible time. The reading matter has been condensed by eliminating everything but essentials, and providing a large number of drawings, conveniently arranged.

SCRAP METALS.

Study of Iron and Steel Old Material, Its Preparation and Markets. By George H. Manlove. The Old Metals, by Charles Vickers. Cleveland, The Penton Publishing Co., 1918. 278 pp., 8 x 6 in., cloth, $2.

The two monographs which compose this volume treat of the utilization of old metal. The first is restricted to scrap iron and steel, while the second discussed non-ferrous metals. The book is a pioneer attempt to present the scrap industry in print.

SIMPLIFIED NAVIGATION FOR SHIPS AND AIRCRAFT.

A Text Book based upon the Saint Hilaire Method. By Charles Lane Poor. N. Y., The Century Co., 1918. 17 + 126 pp., 10 illus., 7 charts, 4 tab., cloth, $1.50

This work is an attempt to explain in non-technical language and without the use of complicated mathematics the principles which form the basis of modern methods of navigation. Particular attention is given to aerial navigation.

A STUDY OF ENGINEERING EDUCATION.

Prepared for the Joint Committee on Engineering Education of the National Engineering Societies. By Charles Riborg Mann. (Carnegie Foundation for the Advancement of Teaching, Bulletin number 11.) N. Y., 1918. 11 + 139 pp., 10 x 8 in., paper.

The purpose of this report is to examine the fundamental question of the right methods of teaching and of the preparation of young men for the engineering professions. In the light of the fifty years of experience of the engineering colleges of the United States, an effort has been made to suggest the pedagogic basis of the course of study intended to prepare young men for the work demanded of the engineer to-day, without losing sight of the piont of view of the teacher, the engineer, the manufacturer and the employer. A limited number of typical schools were visited and studied by Professor Mann and the views of the whole engineering profession throughout the country were ascertained in the course of the investigation. It is the hope of the Committee that the report will awaken wide interest because of its applicability, and that its influence on engineering education will be beneficial.

SUCCESS IN THE SMALL SHOP.

By John H. Van Deventer. 2d edition. N. Y., published by American Machinist, (McGraw-Hill Book Co., Inc. sole selling agents) 1918. 137 pp., illus., 11 x 9 in., ¼ cloth, $1.75.

A series of articles, fifty in number, dealing with the problems of small machine shops, that appeared originally in the American Machinist. The articles discuss economic conditions, management, equipment, methods, etc., and are intended to be of practical help to owners and workmen.

TOPOGRAPHIC STADIA SURVEYING.

A Manual with Reduction Tables and a new Type of Reduction Diagram. By C. E. Grunsky. N. Y., D. Van Nostrand Co., 1917. 99 pp., 18 illus., 8 tab., folding diag. in cover pocket, 7 x 4 in., cloth, $2. (Gift from author.)

The author describes a method of surveying and a special type of diagram for the reduction of stadia notes, which has been found to be very satisfactory in practice.

OFFICERS AND BOARD OF DIRECTORS 1918-1919

President

Comfort A. Adams

Junior Past-Presidents

H. W. Buck
E. W. Rice Jr.

Vice-Presidents

W. B. Jackson
Raymond S. Kelsch
F. B. Jewett
John B. Taylor
A. H. Babcock
Harold Pender

Managers

C. E. Skinner
John B. Fisken
N. A. Carle
Charles S. Ruffner
Charles Robbins
E. H. Martindale

G. Faccioli
Frank D. Newbury

Treasurer

George A. Hamilton

Secretary

F. L. Hutchinson

*GENERAL STANDING COMMITTEES.

Chairmen

Executive, Comfort A. Adams
Finance, N. A. Carle
Meetings and Papers, W. I. Slichter
Editing, Henry H. Norris
Safety Codes, Farley Osgood
Board of Examiners, F. L. Rhodes
Sections, Walter A. Hall
Student Branches, C. Francis Harding
Membership, H. A. Pratt
Public Policy, Calvert Townley

Chairmen

Headquarters, N. A. Carle
Electrical Engineering Service, William A. Del Mar
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering
Standards, L. T. Robinson

*TECHNICAL COMMITTEES

Chairmen

Power Stations, Philip Torchio
Transmission and Distribution, Edward B. Meyer
Traction and Transportation, C. F. Uebelacker
Industrial and Domestic Power, A. G. Pierce
Lighting and Illumination, C. E. Clewell
Economics of Electric Service, William B. Jackson
Protective Devices, D. W. Roper

Chairmen

Electrochemistry and Metallurgy, Carl Hering
Electrophysics, F. W. Peek, Jr.
Telegraphy and Telephony, Donald McNicol
Marine, H. A. Hornor
Use of Electricity in Mines, K. A. Pauly
Iron and Steel Industry, Eugene Friedlaender
Electrical Machinery, Alexander M. Gray
Instruments and Measurements, S. G. Rhodes
Educational, V. Karapetoff

*INSTITUTE REPRESENTATION ON

Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education
Council of American Association for the Advancement of Science
Advisory Board of American Year-Book

Section II.—Papers and Reports

The General Equations of the Electric Circuits III. By Charles P. Steinmetz, New York, February 20, 1919 249
Fusion in Arc Welding. By O. H. Eschholz, New York, February 21, 1919 319
Welding as a Process in Ship Construction. By S. V. Goodall, New York, February 19, 1919 329
Radio Telephony. By E. B. Craft and E. H. Colpitts, New York, February 21, 1919 337
Telephone Circuits with Zero Mutual Induction. By William W. Crawford, New York, February 21, 1919 377
Theory of the Transient Oscillations of Electrical Net works and Transmission Systems. By John R. Carson, New York, February 21, 1919 407

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorised on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

Vol. XXXVIII MARCH, 1919 Number 3

MARCH INSTITUTE MEETING IN BOSTON

The 348th meeting of the American Institute of Electrical Engineers will be held in Boston, March 14, 1919. The headquarters of the Institute during the meeting will be at the Hotel Copley Plaza where all the technical sessions will be held.

The regular monthly meeting of the Board of Directors will be held at 2:30 p. m. in the Hotel Copley Plaza, and at 12:30 noon the members of the Board of Directors and guests will be entertained at luncheon by the Executive Committee of the Boston Section.

There will be morning, afternoon and evening technical sessions, and a subscription dinner will be given at the Hotel at 6:00 p. m.

The program will be as follows:

9:30 A. M.

Registration office opens.

10:00 A. M.

Railway Session

Addresses of welcome by His Excellency Governor Coolidge of Massachusetts and His Honor Mayor Peters of Boston.

1. *Some Possibilities of Steam Railroad Electrifiction as Affecting Future Policies*, by Calvert Townley.
   Discussions by W. S. Murray, Carl Schwartz, B. J. Arnold, George Gibbs, B. G. Lamme, H. B. Davis, P. M. Lincoln, E. W. Rice, Jr., E. M. Herr, W. B. Potter, N. W. Storer, and others.

12:30 P. M.

Luncheon given by members of the Executive Committee of Boston Section to members of Board of Directors and to guests.

2:00 P. M.

Telephone Session

2. *The Electromagnetic Theory of the Telephone Receiver with Special Reference to Motional Impedance*, by A. E. Kennelly and H. Nukiyama.
3. *On the Absolute Measurement of the Intensity of Sound*, by A. G. Webster.
   General discussion.

2:30 P. M.

Meeting of Board of Directors.

6:00 P. M.

Dinner at the Hotel Copley Plaza, $3.00 per plate.

7:45 P. M.

General Session

4. *University Training for Engineers*, by Charles W. Eliot.
5. *Science and the Engineer*, by Harry Clifford.
6. *Mathematics and the Engineer*, by E. B. Wilson.
7. *The Place of Science in Engineering*, by A. G. Webster.
8. *The Engineer and the University*, by B. G. Lamme.
9. *Our Mental Attitude Towards Scientific Investigation*, by Saul Dushman.
   General Discussion.

General Information

Hotels. Members from New York and the West arriving on the New York, New Haven and Hartford R. R., or the Boston and Albany R. R., should leave their trains at the Back Bay or Huntington Avenue Stations respectively.

Hotel reservations should be made in advance at the Copley Plaza at which all sessions will be held.

Other hotels are—The Vendome, Touraine, Somerset, Puritan, Parker House, Young's, Brunswick, Westminster. Rates from $2.00 to $5.00.

Dinner. Reservations for the dinner at 6:00 p. m. should be made as early as possible and should be addressed to Mr. B. A. Behrend, Chairman, Committee on Arrangements, John Hancock Building, Boston, Mass.

FUTURE A. I. E. E. MEETINGS

April Meeting.—The 349th meeting of the Institute will be held at Institute headquarters, 33 West 39th St., New York on April 11, 1919. This will be a joint meeting under the auspices of the Lighting and Illumination Committee and in conjunction with the Illuminating Engineering Society. Mr. George H. Stickney will present a paper for the A. I. E. E. on "The Present Status of Industrial Lighting Codes in the United States."

May Meeting.—The 350th meeting of the Institute will be the Annual Business Meeting held at Institute headquarters, New York, May 16, 1919. At this meeting the annual report of the Board of Directors will be presented and announcement made of the election of officers for the ensuing year. The feature of chief interest at this meeting will be the ceremonies in connection with the presentation of the Edison Medal.

Annual Convention.—It has been decided to hold the 35th Annual Convention of the American Institute of Electrical Engineers at the Lake Placid Club, Adirondacks, New York, during the week of June 23. Complete program and exact dates to be announced later.

FUTURE SECTION MEETINGS

Philadelphia.—March 10, 1919, Engineers' Club. Subject: The Power Situation.

Portland.—April 1, 1919. Subject: Concrete Ship Construction.

Schenectady.—March 7, 1919, Edison Club Hall. Subject: Soap Bubbles. Speaker: Dr. C. P. Steinmetz.

March 21, 1919, Edison Club Hall. Subject: The Education of Crippled Soldiers. Speaker: Prof. F. W. Sexton.

Washington.—March 11, [illegible] Subject: Economic Application [illegible] ity in the Industrial Plant [illegible] David B. Rushmore.

PLANS OF A. I. E. E. COMMITTEE ON DEVELOPMENT

To all Fellows, Members and Associates:

Your attention is earnestly invited to the two letters published below and relating to a newly created Committee on Development. This Committee will not succeed in its labors unless it can secure a clear composite of the views of the membership at large. A member of the Committee has been appointed or will be appointed from every Section. Every Institute member is earnestly urged to submit any suggestion he may have along the lines indicated or otherwise to his own Section member of the Committee on Development. Where a member is not affiliated with any Section, he is urged to send his suggestions direct to Secretary Hutchinson.

Very truly yours,
(Signed) CALVERT TOWNLEY
Chairman.

February 18, 1919

To Members of the Committee on Development.

Gentlemen:—

Pursuant to instructions contained in the resolutions of the Board of Directors, of which you were advised by the Secretary under date of January 27th, the Executive Committee of the Committee on Development held a meeting at Institute Headquarters on Feb. 4th, and following the line of procedure outlined by our President in his communication of January 27th, submits the following statement for your consideration:

The reconstruction or readjustment period following the close of the world war, and now upon us, has suggested to the four National Engineering Societies the advisability of a careful examination of their several organizations. The appointment, under one name or another, of committees similar to ours, evidences alertness to the situation and indicates a sincere desire that advantage shall be promptly taken to keep the national engineering organizations abreast, if not in advance of the world's march of progress. We understand it to be the duty and privilege of our committee to study the possibilities before our organization from every angle, and in due course to present any recommendations which commend themselves to us, whether they be fundamental on the one hand, or incidental on the other, or occupy any intermediate place between these two extremes.

The American Society of Civil Engineers has very well stated three major divisions into which the subjects which we are to consider may be separated, and we can perhaps do no better than to adopt these same divisions.

The Relations of the Institute to its Members

1. What, if anything, can properly be done to stimulate the interest of the individual member in the organization and to increase his participation in its activities?

(a) How can the Institute be made more useful to you, through its meetings, its PROCEEDINGS, or otherwise?

(b) In what way can you be more useful to the Institute?

2. Should the present method of holding stated and special meetings of the Institute and of its various Sections and Branches, at which technical papers are presented and discussed, be continued, either in its present form, or by either increased or diminished frequency of meetings, or under any change as to their scope and character?

3. Are there other forms of Institute activities in which we can engage with profit, either as substitutes for, or as supplementary to, our present activities?

4. What, if any, changes in the official organization and the method of conducting our affairs could be adopted to advantage? Can our present machinery for obtaining the collective views of our widely distributed membership be improved? If so, how?

The Relation of the Institute to Other Engineering Organizations

1. Is closer cooperation between the Institute and other engineering bodies, either local or national, desirable? If so, what is the best method in order to obtain the benefits of cooperation and at the same time to preserve the individuality of the bodies concerned?

2. Should the local sections of the national and perhaps other societies have joint local organizations or affiliations, and if so, to what extent should these be in addition to or substitutes for present practise?

3. Would it be desirable for the four national engineering societies, and perhaps others, to arrange to hold annual or less frequent coventions at the same time and place, so that what might be called an Engineering Congress could consider and pass upon the most important matters of common concern to engineers and upon those affecting public welfare?

Relation of the Institute to the Public

1. Should our organization become more active in the public affairs of the Cities, States, and Nation; and, if so, how can we most readily make our influence felt?

2. In what way, if any, can relations between engineers and the other professions be improved; also their relations with industry, finance, education, etc.?

3. In what other ways can the Institute take a useful part in connection with public affairs?

The foregoing questions are merely suggestive. It is not intended to exclude the consideration of any other matter. You are requested to give a most careful study to the various subjects before us and to stimulate discussion among your members. If possible appoint a local committee, and at your early convenience forward to the Executive Committee such suggestions as commend themselves to you. You are earnestly requested to make only concrete and constructive suggestions, and to specify as much in detail as possible how you think the suggestions can best be carried out.

Please give your attention to the matter of the cost of carrying out any plans which you may think desirable. Your attention is respectfully directed to the annual reports of the Treasurer as given in the TRANSACTIONS every year, and if you recommend any action requiring the expenditure of funds, please indicate how these are to be obtained, *i. e.*, whether by curtailment of any existing activities, and, if so, to what extent, or by the increase of our revenues, in which case from what sources the increases may be secured. It is, of course, obvious that the Institute has assumed certain duties and obligations in connection with the Engineering Societies Building, in which our headquarters are established, and it should be borne in mind that our organization with a membership of approximately 10,000 people, occupies an enviable position, not only in engineering, but in national affairs, which has been secured by consistently following a policy, the virtue of which has been demonstrated by its success and should therefore not be lightly modified or discarded. The task before us of keeping up with the times and at the same time of exercising a proper amount of conservatism can only be successfully accomplished if we all give it our best thought.

Very truly yours,
(Signed) CALVERT TOWNLEY,
Chairman.

January 27, 1919

To the Committee on Development of
American Institute of Electrical
Engineers.

On June 18th, 1918, the Board of Directors of the A. S. C. E. adopted resolutions directing the appointment of a Development Committee. These resolutions have been widely published and have doubtless come to your attention. Their substance was that in view of the changing social, economic, and industrial conditions in which the engineer has a large, if not a major, interest, it was well to take account of stock, in order to see whether or not a readjustment should be undertaken, such that the Society might "take its proper place in the larger sphere of influence and usefulness now opening to the profession."

The Development Committee of the A. S. C. E. consists of one representative from each local organization and seven members at large, and subjects proposed for its consideration are covered by three general heads: The Relations of the Society to Its Members; The Relation of the Society to Other Engineering Organizations; and the Relation of the Society to Public Affairs and Public Welfare.

This Committee has already held one meeting, divided up its work between several sub-committees, and adopted rules of procedure.

Later similar committees were appointed by the A. S. M. E. and the A. I. M. E.

The question of appointing a similar committee for the A. I. E. E. was very briefly considered at the meeting of the Board of Directors in August, 1918. It was pointed out, however, that a very similar purpose was served by our regular Section Delegates gathering at the Annual Convention, and no action was taken.

The question was again raised at the October meeting of the board, when the following resolution was passed:

RESOLVED, That a Committee on Development be appointed by the President to consider suggested or proposed modifications in the field and methods of work of the Institute, and to make recommendations to the Board of Directors concerning these matters.

The reasons for taking this action were two-fold.

First, it was realized on more careful consideration that our Section Delegates gatherings were chiefly devoted to the first of the three subjects assigned to the Development Committee of the A. S. C. E., namely, the relation of the Institute to its members, and that much good might be accomplished by a broader consideration of the purposes and scope of activities of the Institute, particularly when account is taken of the rapidly changing social, economic, and industrial conditions. Particular consideration may well be given to the part that the engineer should play in public affairs.

Second, that if all of the national engineering societies had similar committees dealing with the relations of these societies to each other, joint action of such committees would be not only desirable, but necessary, in order to secure results satisfactory to all.

Composition of the Development Committee of the A. I. E. E.

As it is of the utmost importance that the representation on such a committee be nation-wide, each Section has been asked to nominate a representative. Seven members at large have also been appointed by the President.

By authority of the Board of Directors, the President has also appointed an Executive Committee of seven members.

Suggested Procedure:

As it will be difficult to hold frequent meetings of such a widespread committee, even though the Institute were to defray the traveling expenses, which it is not now able to do, the following procedure is suggested:

(a) That the Executive Committee prepare a preliminary outline of the subjects to be considered, and such rules as may seem desirable for the efficient conduct of the work of the Committee, and distribute the same to all committee members.

(b) That each Section representative discuss the various subjects with his Section, or with the governing body thereof, and prepare such recommendations in relation thereto as may be agreed upon. These discussions should be thorough in character and thoroughly representative of the Section, since if any useful outcome of this movement is to be reached, the membership of the Institute must be aroused to its importance in the promotion of the interest of the profession and of the nation, and must be willing to give its time thereto.

(c) That the recommendations thus prepared be submitted to the Executive Committee for review, compilation, and reduction to their vital elements.

(d) That the resulting compilation in its simplest possible form be resubmitted to the Section representatives for further careful consideration by the Sections.

(e) That these further considerations be submitted to the Executive Committee for summarizing; and

(f) That this summary be submitted to the whole committee assembled at the Annual Convention of the Institute in June.

In this connection it is suggested that this meeting of the Development Committee in June replace the regular Section Delegates' meeting, or that the latter be transformed into a meeting of the Development Committee.

It should thus be possible to take some final action as to the recommendations of this Committee at the June Convention of 1919, and to submit to the Board of Directors at that time such recommendations.

If these recommendations should involve amendments to the Constitution, the machinery for such changes could be set in motion at once.

Finally, it is sincerely hoped and urged that this movement be given the serious consideration of the membership at large, and that each member of the Institute who has any suggestions submit them to his Section representative and take part when possible in the Section discussions.

Very truly yours,
(Signed.) C. A. Adams,
President.

A. I. E. E. MIDWINTER CONVENITON

The Seventh Annual Midwinter Convention of the American Institute of Electrical Engineers was held at Institute headquarters, New York, February 19 to 21, the total attendance of members and guests being about 1300.

Wednesday Afternoon

The opening session Wednesday afternoon was a joint session with the American Institute of Mining Engineers and was called to order by President C. A. Adams, who presided at this meeting. After a few words of welcome the Chairman introduced Mr. Leighton, the representative of the Engineering Council at Washington, who spoke briefly in regard to the past lack of activity of engineers in political affairs, and who outlined the plans of the Engineering Council which include a movement towards creation of a department of public works, a federal engineering department, under which all engineering activities of the government shall be correlated and presided over by a member of the engineering profession.

At the close of Mr. Leighton's address, Chairman Adams gave a brief explanation of the work of the Welding Committee, after which the five papers for the session were presented by their authors. This was followed by a spirited discussion by Messrs. W. H. Hill, H. A. Hornor, Captain Corbett, A. M. Candy, J. B. Murray, P. E. Hosegood, W. L. Merrill, Mr. Alexander, W. Spraragen, Mr. Hunter, and Commander Goodall.

Wednesday Evening

On Wednesday evening Dr. John A. Brashear delivered a lecture on "The New Astronomy" to an audience which completely filled the Auditorium. The lecture was accompanied by numerous lantern slides showing disturbances on the surface of the sun, which had never been shown before. This was followed by an exhibition of moving pictures accompanied by a brief address by Mr. Frank Lawton, Jr. These pictures illustrated the Operation of the Burroughs Adding Machine, the Telephone Receiver and Transmitter, and the Pneumatic Riveter. The last picture was of a humerous nature.

Thursday Morning

The second technical session was opened by President Adams at 10:30 A. M., who delivered an interesting address on various phases of standardization in engineering work. This address was followed by Dr. C. P. Steinmetz who presented in abstract his paper on "General Equations of the Electric Circuit," after which Mr. H. S. Osborne abstracted his paper on the subject of "Wave Shape Standard." The discussion which followed was participated in by J. B. Whitehead, C. R. Underhill, A. E. Kennelly, C. F. Scott, W. J. Foster, J. B. Taylor, J. J. Linebaugh, L. W. Chubb, and L. T. Robinson.

Thursday Afternoon

Thursday afternoon was set apart for technical excursions including inspection trips to the Brooklyn Navy Yard and to the Bell System Laboratories of the Western Electric Company. About 200 members and guests were transported from the Engineering Societies Building in busses to the foot of 23rd Street, where the Navy Department supplied large sea-going tugs to carry the party to the Navy Yard. The party spent an interesting afternoon inspecting the power plant, shops, drydocks, and various other features of the yard.

About 150 members and guests were taken from the Institute headquarters to the Western Electric Company's plant in cabs provided through the courtesy of the Company, and were divided into groups each of which under the leadership of a guide went through all of the Bell System Laboratories.

Thursday Evening

On Thursday evening at 7:00 p. m., 370 members and guests assembled at the Hotel Astor where a Dinner-Dance was held. This function, which in recent years has become a regular feature of the Midwinter Convention, was greatly enjoyed by all in attendance.

Friday Morning

By general agreement the sessions on Friday morning and afternoon were interchanged and at 10:30 o'clock President Adams called the meeting to order, after which Mr. Donald McNicol, Chairman of the Telegraphy and Telephony Committee took the chair. The Radio Telephony paper by Messrs. Craft and Colpitts was first presented followed by the paper on Transient Oscillations by Mr. Carson, and Telephone Circuits with Zero Mutual Induction by W. W. Crawford. The discussion was by George O. Squier, M. I. Pupin, Alfred H. Cowles and A. S. Dana.

Friday Afternoon

The final session of the convention was called together at 2:30 P. M. by President Adams, with Mr. F. W. Peek, Jr., Chairman of the Electrophysics Committee on the platform. The papers on Ionization of Occluded Gases in High-Tension Insulation by G. B. Shanklin and J. J. Matson, and Dielectric Strength of Air Films Entrapped in Solid Insulation by F. Dubsky, were presented in abstract and discussed by Messrs. H. G. Reist, L. W. Chubb, J. B. Whitehead, W. J. Foster, H. W. Fisher, R. E. Argersinger, F. W. Peek, Jr., C. Francis Harding, R. W. Atkinson, Delafield Du Bois, F. M. Farmer, and E. E. F. Creighton.

The last paper of the session on Abnormal Voltages in Transformers was then abstracted by Mr. L. F. Blume, and was discussed by E. E. F. Creighton, H. R. Summerhayes, G. Faccioli, F. Dubsky, L. W. Chubb, J. F. Peters, and F. W. Peek, Jr.

JOINT MEETING IN INDIA OF I. E. E. AND A. I. E. E. DECEMBER 30, 1918,- JANUARY 2-3, 1919

A three day joint meeting, the first of its kind in the annals of the Institute, and possibly the forerunner of similar annual meetings, was held in Calcutta, India, on December 30, 1918, and January 2 and 3, 1919, by local members of the British Institution of Electrical Engineers and the American Institute of Electrical Engineers. Papers were presented by N. N. Iengar, assistant to the chief electrical engineer, Government of Mysore, Dr. Alfred Hay of the Indian Institute of Science, Bangalore, and Mr. F. N. Mowdawalla.

The suggestion of inaugurating yearly joint meetings in India for the presentation and discussion of original papers, originated with Professor A. R. Nissar, of Bombay, in a letter to the Board of Directors of the A. I. E. E. Professor Nissar's communication was referred to the Institute's Local Honorary Secretary for India, Mr. Harry Parker Gibbs, who favored the idea, and after a conference by Mr. Gibbs with the Local Honorary Secretary of the Institution of Electrical Engineers, Mr. J. W. Meares, who also approved the suggestion, the meeting was arranged.

Mr. Gibbs presided at the meeting, and after preliminary opening remarks spoke in part as follows:

"We of the American group greatly appreciate the courtesy shown us on this occasion by our sister Institution, enabling us to participate with them in the privileges accorded to their own members, and I take this opportunity, for thanking their energetic Local Secretary, Mr. Hughman, for his good offices in connection with the provision of accommodation for our members while staying in this city for the purposes of this meeting. I sincerely hope that this our first joint meeting, may not be the last but may be followed by others and would say it is my personal feeling and opinion that it might with profit become an annual function.

"It will be in keeping with the occasion to make a few remarks concerning possibilities for the extended application of our electrical art in this great empire, followed by a few words regarding work on the western side of India in which I am most directly interested.

"I feel that India is essentially an agricultural country, and great wealth must accrue to the nation through extension and continued development of this great national asset, in connection with which our British and Indian engineers have set a mark and example for the rest of the world. Allied with such development various important industries must spring up, with which electrical engineering must play an important part. Among others which are now being investigated with intention of bringing into operation are the extraction of various oils, such as cocoanut, cotton, linseed, sandal; also sugar-making on a large scale, alcohol, acetone, scents, shipbuilding, bobbin making, and various other works. There are also to be exploited many important mineral deposits, and we shall have important industries in copper, aluminum, chemical fertilizers and so on, all requiring our assistance and cooperation in their development and transformation into the fabricated and marketable finished product useful in connection with our electrical engineering work.

"Now, once admitting that we as a body are destined to cooperate in such important national development, it seems to me to become with us an essential duty to individually try and impart uch special knowledge as we may possess to others round about us who are endeavoring to climb the ladder and achieve a position in our profession.

"With reference to our hydroelectric developments near Bombay in the Western Ghauts, I may say that, as a rule, the highest land is at the very edge of the ghauts having a rapid descent toward the west and a very gradual one toward the east. Near Lonavla it happens that this higher ground is broken away in such a manner that water impounded in lakes made by placing masonry dams across the lower ends of valleys could be led by open duct to a forebay from which the down-take pipes could be taken to the power house, approximately 1700 feet vertically below the forebay. This formed a natural type of development and the idea was conceived by the late Mr. Gostling, an architect and civil engineer of Bombay. This development comprising Lakes Gostling, Sydenham and Willingdon, is capable of supplying 50,000 electrical horse power or 135 million kilowatt-hours at the motor terminals in Bombay during 3600 hours per year.

"We soon realized that the original undertaking would be insufficient, and located the Andhra project, where the water is to be drawn off near the head of the valley through the scarp of the ghaut by means of a pressure tunnel with suitable surge chamber, the point of draw off being 115 feet vertical height above the lowest point in the river-bed at the site of the dam, so that the lake will impound 5000 millions of cubic feet of water below and 12,500 millions above draw off level, and supply 65,000 electrical horse power or 175.5 million kilowatt-hours at motor terminals. The Andhra development is well in hand the tunnel being three-fifths driven, while the foundations of the dam have been completed. The transmission distance to Bombay will be 56 miles.

"This investigation led to and was followed by that of the Nila Mula, which reservoir will be situated thirty miles west of Poona, where with a development similar in character to that of the Andhra, we can produce 150,000 electrical horsepower or 405 million kilowatt-hours per year. The surveys for this project are completed and the grant of the concession is now under consideration with the Government of Bombay. The transmission distance to Bombay will be 70 miles.

"Following the Andhra and the Nila

Mula explorations and based on similar methods of development came the great Koyna project further down the ghauts in a southerly direction, where it is estimated development is possible of such magnitude as to supply 300,000 electrical horse power day and night throughout the year. This project is now under survey, and we hope it will lead to the creation of a new and important industrial centre where electrochemical work on a large scale will be undertaken.

"In conclusion I wish to say that special thanks are due to members who have taken trouble to prepare and read papers, and we trust others hearing and seeing the same may be inspired to follow their example so that further gatherings will be arranged, and through them our members may become more generally acquainted with various works which are in operation and being undertaken."

DELEGATES TO FRANCE REPORT TO SOCIETIES

On the evening of February 10, 1919, a joint meeting of the four Founder Societies was held in the Engineering Societies Building, New York, for the purpose of hearing informal addresses by the delegates of these societies to the Engineering Congress held in Paris during December and January for the purpose of formulating plans for the restoration and development of French industry.

The delegation, as announced in the January PROCEEDINGS, sailed from New York December 5, 1918, and consisted of Messers. James F. Case, Chairman, George W. Fuller, A. M. Hunt, Nelson P. Lewis, Charles T. Main, E. Gybbon Spilsbury, Lewis B. Stillwell, George F. Swain, and George W. Tillson.

Col. Herbert S. Crocker, Vice-President, American Society of Civil Engineers, presided at the meeting, which was attended by about 500 members and guests of the Founder Societies.

The following is an abstract of the remarks made by the various delegates.

GEORGE F. SWAIN. In March, 1918, there was held a Congress of engineers in France, and this Congress is still in existence. It was gotten up and carried on by business men, manufacturers, public men, and engineers, to deal with problems of engineering. The Chairman was M. Millerand, who was Minister of War at the beginning of the war. One meeting of the Congress was presided over by M. Clementel, Minister of Commerce. They wanted to consult with American engineers on engineering problems of reconstruction. This does not mean the building up of the destroyed districts. Reconstruction has three stages in France: first, the conversion of industries from a war to a peace basis.

Then, second, would come the rebuilding of the devasted districts; and, third, would come the great engineering problems which face France. It was with the last of these problems that this commission had to do.

This Congress was divided into committees, and the committees were on ports, navigable waterways, roads, agriculture, rural sanitation and hygiene, water power, and technical education.

We arrived in France on December 16th, and sailed on January 18th. We went straight to Paris, and there had meetings with the various committees of the Congress; we met the Chairman and the engineers connected with those committees, and discussed the problems with them. We have still several reports to prepare and send back to them.

The French engineers are very anxious to cooperate with American engineers. They want to get American capital for France, and to learn American methods of work. They are very much surprised, I think, by the work that American engineers have done there; and they think that possibly by cooperating in the future, both countries will be benefited. I thoroughly believe that such is the case.

At the last meeting of the Congress, M. Millerand was very earnest in urging that a permanent Franco-American International Committee should be appointed. The Congress voted at its last meeting in favor of the appointment of such a committee, and appointed as the French members the Chairmen of all the various committees with whom we had been dealing—the very men with whom we had been in contact for a month in France.

Before leaving France we presented a preliminary report to the French engineers. This report answered questions they had asked, and expressed our views on the various resolutions which had been passed at the first meeting of the Congress in March last, all of which we had in our possession before we left here.

We are now preparing a report, which will be submitted to the four National Engineering Societies, describing our work in detail.

The French have great plans for internal navigation. They must develop their ports, if they are going to take care of the traffic which formerly went to North Sea ports, to Bremen and Hamburg, and which they hope will hereafter go through France. The French have been planning very great works of improvement for their ports, but, of course, they have to provide the transportation inland from them, and that can be either by rail or by waterway.

They seem to have a great idea of developing waterways. That was the only point, I think, in which the members of the delegation were not—and certainly I myself was not quite—in sympathy with the French engineers. We saw plans for spending large sums of money in building canals and making rivers navigable, but we saw not one study of the economies of any of those questions; no statistics of transportation, no study as to whether they could get any return on the expenditure.

One of our committees had to deal with technical education. Such education in France appears to have been very theoretical.

I think the French realize that, with them as with us, the events of the last few years ought to lead to changes in educational methods. One great thing is to have one nation learn from another; and the best time to learn is when a man is young. We emphasized at every opportunity the desirability of having Americans go to France to study and Frenchmen come to America to study.

G. W. TILLSON. The French gave us certain subjects which they wished us to consider. One subject was "Roads," to which Mr. Lewis and myself were specially assigned.

Our method of procedure over there, in general, was that our committees should meet with their committees on the same subject; and our Committee on Roads met the Committee on Roads of the Congress, which was headed by M. Heude, formerly Inspector General of the "Pontset Chaussées". The French understood from the severe traffic during the war that their old roads would not stand up under that which was to come, and also that, owing to the lack of attention given them during the war, there was a great deal of work to be done at this time.

The members of our committee urged the consideration of other types of roads, such as concrete and brick. We told them of the concrete roads which had been built in America during the past 10 years, and the good results that had been obtained, and that they could expect good results in France because their climate is more favorable, without the extremes of temperature which we have, and which cause cracks in the concrete.

They asked us specifically, "Will American contractors come over here and do road work, and take their pay in 15 annual installments?" We told them, "Yes, but you must understand this: First, they must have absolute and positive arrangements made for the payments, as to which there must be no question; and, secondly, if you pay them in that way, you will pay 60 or 75% more for the work than you would if you paid when it was completed."

That did not seem to appeal to them. We pointed out that if they were to issue serial bonds, say for 15 years, and pay the contractor in full when the work was done, the interest and principal sum would be much less.

E. Gybbon Spilsbury. A visit to the battlefronts and the devastated region in the northwest of France is still a matter of some difficulty, and can only be undertaken with the permission and under the auspices of the French Government.

We were specially favored as guests of the Government, and had attached to our party a Captain of the French Army, who had been engaged on that front during the war, and who made a splendid guide.

The Government also detailed Col. Cuvelet, the Chief Mining Engineer of the Lens Coal Mining District, to accompany us.

Of the town of Lens itself and the sixty or more mining shafts, not a building or a head-frame remains standing, everything is levelled with the ground. Yes, there is one eminence remaining, the pile of debris caused by the destruction of the Cathedral. Terrible as this is, however, it was the fate of war, but the destruction of the mines, with the view of crippling the whole of the French industrial life, is far worse than the mere razing of the houses.

In the Lens district, there were in all some sixty mines, large and small.

As there will be little or no coal available until the mines are de-watered, they propose running their pumping machinery by electricity.

It is estimated that it will take 30,000 h.p. for a full year and a half for this de-watering. They have a small surface coal deposit about 12 miles from Lens, where they are now building a power station from which to run the pumps.

It is expected that coal mining in the upper seams will probably begin in about a year.

One of the great difficulties will be the clearing away of the wreckage, owing to the habit the Germans had of connecting pieces of structural material with mines or explosives. The whole place is also full of unexploded shells and grenades. Hardly a day passes but some one is injured by these explosions.

There is one thing that I want to impress on you, and that is, that the French people are not lying down and waiting for the expected amounts that they will receive from Germany before starting to reconstruct the work upon these lands.

Another thing was very apparent to us, and that is that they are not seeking the help of any foreign engineers to aid in this work. They have plenty of talent of their own, and they are going to use it.

George W. Fuller. To France, the close of the war means the development of commercial and industrial procedures so that the annual budget, including its various political subdivisions, may be increased to a sum 10,000,000,000 francs in excess of what it was before the war.

Agriculture is one of the basic sources of wealth of the nation, and the agricultural section devoted much attention to discussion of improving banking facilities.

American customs as to handling meats in central slaughter houses, in conjunction with cold storage plants and refrigerator cars, could be adopted advantageously by the French. The same is true as regards the more general use of drying for the preservation of fruits.

Agricultural implements have disappeared from the devastated areas, and are greatly depleted throughout France. Munition factories will be converted to the manufacture of some lines. For some equipment the French would like to see Franco-American concerns established. Each proposition, from financial, commercial, and engineering standpoints, should be carefully investigated on its own merits.

Rural sanitation in France—as elsewhere—is largely a question of an effective campaign of education. The French members were interested to learn of steps taken in America to teach personal hygiene in the schools.

L. B. **Stillwell**. The Water Power Committee appointed by the delegation of American Engineers was composed of Mr. Hunt, Dr. Swain, Mr. Main, and myself. The Chairman of the Water Power Committee of the Congress was M. Blanchet, chief administrator of one of the important French railways, and a man who is exceedingly well informed as to the general problems of water power development.

The Committee, after having held several sessions in Paris on December 19th and 20th, arrived in Grenoble on January 5th, and a long session was held and several engineers described the projects for the development of water power particularly in the Valley of the Upper Rhône.

Following our return to Paris another session was held at which other projects were described.

The total horse-power of France, in round numbers, based on the estimate of French engineers as to what proportion of the power is, or will in the near future be, commercially developable, is from 5,000,000 to 6,000,000. I believe it would be safer to consider 4,500,000 h. p., as the total that may be commercially developed, and 9,000,000 h. p. as the total available for 6 months of the year.

The coal consumption in France in the average year immediately preceding the war was about 60,000,000—it was 62,000,000 tons in 1913. Of this total about two-thirds are produced by French mines and one-third is imported.

The average price prior to the war was from $5 to $6 a ton. The judgment of the engineers with whom I talked was that a considerable number of years would elapse, following the termination of the war, before the price of coal will be below $8 a ton. It is obvious, therefore, that there exists an extremely practical and cogent reason for the prompt development of French water powers as a substitute for the use of coal.

In the United States, as you know, the figure before the war representing the output of our industries was about $1500 per h. p. used by American mills and factories. If you could utilize even one-half the water powers of France, the immense value of the factories and mills which could be supplied with that power can be easily imagined, and the number of operatives required by these mills, according to the figures prevailing in the United States would approximate 500,000.

One thing that is notable over there in regard to their utilization of water powers in their tendency to take the industry to the water power. In the tributaries of the Rhône there are many plants; not many of them are large, but they are numerous, and the processes in electro-chemical work and metallurgical work are varied and extremely interesting. The ratio of installed capacity to the average low-water flow, is about 3.5, which indicates that they are in many cases using power for less than 12 months in the year, and find it advantageous to put in apparatus even where the water is not available all the time.

Apparently, they have not thus far given a great deal of attention to the combination of steam power with water power. There are considerable deposits of coal, but of very poor quality, in the immediate vicinity of water power.

In our preliminary report we called attention to the fact that the ultimate solution of their problem would probably be to connect some of their coal regions with their water powers, and utilize the steam plants to convert secondary power to primary power as the demand may grow.

We saw at Grenoble several of the sub-stations at which power was received by transmission from the Alps, and we were particularly interested in examining the famous Thury system, which has been in operation now for some 20 years. That plant, as you may remember, utilizes continuous current at a constant rate of about 130 amperes, the voltage varying from 40,000 to 65,000, depending on the load. The receiving apparatus consists of pairs of motors, each motor having a potential of 3500 volts across its commutator, a number of these pairs being connected in series. At low loads the efficiency of the system must be far from satisfactory, but the plant has been constructed with very great care and skill, as shown by the fact that in all these years they have had only one fatal accident in handling their high potential.

I noted, however, on the same pole line which carries the direct current, that there are conductors for the alternating current system, and they are now using six conductors, two 3-wire circuits for alternating current at 45,000 volts, through which they are transmitting 15,000 kw. as compared with 10,000 kw. for the direct current, showing that, having tried the direct current, they have swung over to the alternating three-phase current, as generally used in America.

As regards the electrification of railways, the French have not done a great deal, although they were among the first to apply electricity to railway operation. M. Sabouret, Chief Engineer of the Paris and Orleans Railway, read an admirable, brief paper describing the present condition of the electrification of the railways. I was interested to note that the history of the application of electricity to haulage in France illustrates in a striking way the old adage that "a prophet is not without honor, save in his own country." The electric locomotives for the operation of the Baltimore Tunnel of the Baltimore and Ohio Railroad were introduced about 1898, certainly prior to 1900. The French company sent engineers over here to examine the operation of the railroads, and they reported that the solution of the problem of the haulage of trains from the Austerlitz station to the Quay D'Orsay was perfectly clear, that the electric locomotive should be used, and since 1900 they have been operating trains between those two points in that way.

During later years, when the Pennsylvania Railroad was considering the electrification of its terminal in New York City, the Vice-President, knowing that Mr. Cassatt, the President, was in France, cabled him that the French were using electricity to haul trains on the Orleans Railway, and Mr. Cassatt examined it and reported back that the problem was solved.

Prior to the war, the French engineers were making careful study of the problems of electrifying the Midi Railway, and contemplated some elaborate tests. The war stopped all that, but they still have it in mind, and engineers representing three of the French railways expect to come here soon to see what we have been doing since they last examined the work in America. They do not expect to electrify their entire systems, of course, but there are certain sections of France, where the roads are within reach of water powers, and other sections where the traffic is dense, which they think it will pay to electrify.

As regards the laws under which water powers are utilized, the French are in very much the same position as we are. They are seeking for a general law governing water power relations. The power developments heretofore have been made either under authorizations which are revocable or under special concessions which are not always easily obtained. They now have in the House of Deputies a bill to establish a general law of concessions under which it is hoped that capital will be attracted to the development of their water powers, as they have not heretofore been developed on a scale commensurate with their possibilities.

A. M. HUNT. Owing to the absence of Major J. F. Case, who was Chairman of the Committee on Ports, I have been asked to comment on this subject.

The French authorities have distinctly in view an effort to make their ports serve, not only the needs of France, but to make them ports of entry for middle Europe. To accomplish this, they contemplate an east and west railroad line from one or more of their Atlantic ports, over which freight arriving at such ports can be expeditiously and economically carried across France to some point in Switzerland, for instance Basle, and from such point to destination.

An ambitious project is being talked of, which contemplates making St. Nazaire the port of entry, from which place a very easy grade up the Loire River and to Basle can be followed. By utilizing existing railway lines, this route could be established in a minimum of time.

The French engineers realize that if they are to capture this trade, which before the war went through German ports, they must act promptly. To this end, this project contemplates taking over the plant which our Army has been constructing near St. Nazaire to supplement the previously existing facilities at that port.

The range of tides at the Atlantic ports of France is from 6 to 8 m., or 19 to 26 ft. For handling vessels and discharging them, the French engineers have in most cases limited themselves to wet basins with locks.

The French engineers requested a report on the subject, with data as to the handling methods at American ports having extreme ranges of tide, and such a report will be sent them by members of our delegation.

Our Committee made the following recommendation in our written report to the Congrès du Génie Civil:

"The Committee believes that the Congress would do well to study the methods in use in America for loading and unloading facilities alongside the wharves, even where there is a considerable range of tide, without the use of enclosed basins entered through locks. Experience in our ports and at Panama has demonstrated that locks are not necessary even when the range of tide is very considerable. If the docks are equipped with proper mechanical devices for loading and unloading it makes little difference whether the vessel stands high or low at the dock. The Committee will not attempt to fix the limit of tide above which locks should be used, but at some American ports they have not been found necessary with a range of tide of 6 or 7 m."

The French engineers also desired specific information regarding floating docks. Information as to our practise in this line is being secured and will be sent to them.

Nelson P. Lewis. I was asked to say something of the visit to the Marne Valley and Chateau-Thierry. We followed the direct road to Meaux, one of the main roads of France, the trees along which had been cut down in order that they might not furnish a target for hostile air raiders, but new trees have already been planted.

Now, a few words on general impressions: First, let me speak of the social conditions which have been caused by the War. The most conspicuous of these, perhaps, is the separation of families. The entire Northern war zone is depopulated; the able-bodied men were in the army and all the others have gone elsewhere, most of them to Southern France, where they have been employed in war industries, earning more money than they ever dreamed of before, and living in a more equable climate. The great problem is whether they will want to go back.

In talking about the social conditions, we must take into account the change which has come over the women of France. They have been wonderfully brave and loyal, and it was pathetic to us at first to see them doing the hard, rough work of porters at the railway stations, but they looked well and well-nourished, and it does not seem to have disagreed with them.

There will scarcely be an immediate revival of the fine art manufactures and the production of luxuries for which France was famous before the war, but they must turn their attention to the essential things that France needs in order to live and to recover its prosperity.

There is, then, an unbalanced industrial country; a part of it almost depopulated, the other part developed with a series of industries new to France and not now needed; and these must be replaced by others.

As to the extent of the damages to industry, we were furnished some figures, and I have taken only those which were most conservative. Some of the estimates are far higher. The devastated area covered 6000 sq. miles, and in that district it is estimated that 500,000 buildings were damaged; one-half of which were totally destroyed. It is estimated that 500,000 men of the building trades would be continuously employed for 15 years in restoring these buildings.

Reduced to money, the estimated damages are about as follows:

Buildings destroyed or damaged.	$ 4,000,000,000
Furniture destroyed or stolen....	1,000,000,000
Public works wrecked..........	2,000,000,000
Farm lands damaged...........	800,000,000
Live stock, agricultural implements, and forests..........	1,200,000,000
Mines and steel works..........	700,000,000
Miscellaneous industrial machinery and raw material destroyed or stolen........	4,000,000,000
Total...............	$13,700,000,000

This does not include Belgium, and we must not forget Belgium.

Now, is this amount, representing, not the cost of the war to France, but simply the physical damage sustained by her, to be paid by Germany? It should be paid to the last dollar; notwithstanding the whine we hear from the other side of the Rhine.

INSTITUTE OF RADIO ENGINEERS

A joint meeting of The Institute of Radio Engineers and The New York Electrical Society will be held on the evening of Wednesday, March 5, 1919, 8:15 P. M., in the Assembly Room No. 2 of the Engineering Societies Building, 29 West 39th Street, New York.

A paper will be presented on "Reception Through Strays and Interference" by Mr. Roy A. Weagant, Chief Engineer of the Marconi Wireless Telegraph Company of America. In view of the great importance of the elimination of strays in radio, this paper will be of great practical interest.

Members of the A. I. E. E. and others interested are cordially invited to attend.

DISMISSAL OF PUBLIC SERVICE COMMISSION ENGINEERS IN NEW YORK CITY

January 6, 1919, an urgent meeting of the Executive Committee of Engineering Council was called to determine what action it could take concerning the sudden dismissal, by the Public Service Commission for the First District of New York, of approximately 350 engineers and assistants engaged on subway construction. This dismissal was forced by action of the Board of Estimate and Apportionment of the City in the adoption of a segregated line budget. It was decided that a hearing should be held, if suitable requests therefor were made. Communications having been received from the Acting-Chairman of the Public Service Commission, American Society of Civil Engineers, Brooklyn Engineer's Club, The Municipal Engineers of the City of New York, also a petition signed by more than fifty engineers, a special committee was appointed and a hearing held in Engineering Societies Building January 14. The members of this committee were Harold W. Buck, Chairman, C. A. Adams, C. W. Baker, N. A. Carle, George J. Foran, Allen Hazen, Clemens Herschel, Alex. C. Humphreys, D. S. Jacobus, J. F. Sanborn, J. Waldo Smith and Herman Aaron, Counsel. To this hearing were invited the City authorities, engineers and civic associations interested. There was an attendance of about 50 persons, and the facts of the case were well presented. A printed statement of the findings was sent to the Board of Estimate, the Public Service Commission and its engineers, the Governor, more than 100 civic and trade associations in New York, many engineering societies throughout the country, daily newspapers, and the technical journals, as well as the representatives on Engineering Council. At the end of January, the City authorities made provision for restoring most of the engineers to their positions and continuing the subway construction. Some of the dismissed engineers, it is reported, will receive pay also for January. Letters recently received from the Acting Chairman, the Chief Engineer and the Engineer of Subway Construction of the Public Service Commission expressed appreciation of Council's efforts, and stated that they had been effective.

PAST SECTION MEETINGS

Baltimore.—Belvedere Hotel, December 18, 1918. Illustrated lecture by Mr. H. L. Hess on "Electric Furnace as Applied to Steel Making". Joint meeting with local section of A. S. M. E. Attendance 70.

January 31, 1919, City Club. Illustrated address by Colonel William H. Walker on "The Manufacture and Use of Toxic Gases". Joint meeting with Maryland Section of American Chemical Society. Attendance 125.

Boston.—February 4, 1919, Engineers Club. Illustrated lecture by Dr. A. E. Kennelly on "Some Features of Electrical Engineering in the War." Attendance 100.

Chicago.—January 27, 1919, Western Society of Engineers Rooms. Paper: "The American Beet Sugar Industry" by M. J. Kermer. The paper was illustrated by lantern slides and moving pictures. Joint meeting with Western Society of Engineers, and local sections of American Society of Mechanical Engineers and American Society of Chemical Engineers. Attendance 175.

Cleveland.—January 20, 1919, Electrical League. Illustrated address by Mr. A. H. Rudd on Railway Signals." Attendance 85.

Denver.—January 18, 1919, Denver Athletic Club. Address by Mr. Franklin P. Wood on "The Future of Public Utilities as Affected by the War." Attendance 68.

February 15, 1919, Denver Athletic Club. Illustrated address by Mr. G. N. Robinson on "Electric Welding." Attendance 50.

Detroit-Ann Arbor.—January 31, 1919, Detroit Board of Commerce. Paper: "Direct-Current Generators" by Prof. H. H. Higbie. Attendance 65.

February 14, 1919, Detroit Board of Commerce. Paper: "Automatic Control of Railway Substations" by Cassius Davis. Attendance 68

Erie.—February 11, 1919, Board of Commerce Rooms. Paper: "Electric Welding in Shipbuilding" by Comfort A. Adams. Attendance 250.

Fort Wayne.—January 23, 1919, Building 16-2, General Electric Company. Short address by Captain Walter Kent, followed by motion pictures showing Submarines, Destroyers, Fire and Gas, supplied by courtesy of Committee on Public Information. Motion picture was also shown illustrating manufacture of electrical porcelain at the Schenectady Works of the General Electric Company. Attendance 22.

February 20, 1919, Building 16-2, General Electric Company. Address by Mr. E. A. Barnes on "The Industrial Derelict." Attendance 36.

Indianapolis-Lafayette.—January 23-24-25, 1919, Claypool Hotel. Papers: (1) "Public Utilities in the War Period" by H. O. Garman; (2) "Psychological Methods of Selection of Soldiers, Officers and Employees" by C. F. Harding; (3) "Efficiency Engineering in Industrial Plants" by J. E. Hannum; (4) "Some Recent Technical Developments in Telephony" by R. V. Achatz; (5) "Electrical Pumps in Municipal Water Works" by D. D. Ewing; (6) "The Decimal Versus the Dozen System of Writing Numbers" by John D. Riggs. Annual meeting of Indiana Engineering

Society in which Indianapolis-Lafayette Section participated. Attendance 40.

Lynn.—January 22, 1919, General Electrical Hall. Address by Rear Admiral John R. Edwards, U. S. N. (Retired) on the "Industrial Features of the Modern Navy." Attendance 176.

February 12, 1919, General Electric Hall. Illustrated address by Mr. C. A. Kelsey on "The Sugar Industry." Attendance 210.

Madison.—January 10, 1919, Engineering Building, University of Wisconsin. Discussion of Losses in the Low Radio Antenna by Professors Edward Bennett and E. M. Terry, and Mr. H. M. Crothers. Attendance 27.

February 11, 1919, Physics Building. Paper: "Bulbs and Their Uses in Radio Telephony" by E. M. Terry. Attendance 90.

Panama.—December 22, 1919, Balboa Heights. Paper: "The Influence of Modern Illuminants upon Industrial Economy and Efficiency" by L. W. Lewis. Attendance 32.

Philadelphia.—January 13, 1919, Engineers' Club. Paper: "Lighting in War Time" by Preston S. Millar. Joint meeting with Philadelphia Section of Illuminating Engineering Society. Attendance 89.

Pittsburgh.—January 14, 1919, Chamber of Commerce Auditorium. Paper: "Passenger Transportation Problems during the War" by J. W. Welsh. Attendance 85.

February 11, 1919, Chamber of Commerce Auditorium. Paper: "Some Problems in Parallel Operation of Power Plants" by C. E. Stone. Attendance 95.

Pittsfield.—January 9, 1919, High School Auditorium. Illustrated Lecture by Colonel R. H. C. Kelton on "The Situation at Chateau Thierry." Attendance 650.

January 23, 1919, New American Hotel. Illustrated lecture by Mr. Langdon Gibson on "The First Peary Expedition of 1891". Attendance 175.

Portland.—January 7, 1919. Lecture by Dr. Morgan on "Chemistry of the War." Attendance 105.

February 4, 1919. Paper: "Laying a Deep Water Submarine Telephone Cable" by H. J. Sheppard. Paper was illustrated by lantern slides and moving pictures. Attendance 55.

St. Louis.—January 28, 1919, American Hotel Annex. Address by Dr. J. J. Kessler on "Materials of Machine Insulation." Election of officers as follows—chairman, J. L. Hamilton; secretary-treasurer, H. G. Hake. Attendance 38.

San Francisco.—January 24, 1919, Engineers Club. Subject: A Symposium on Engineering Education. Speakers: Drs. C. L. Cory and C. D. Marx, and Messrs. J. W. Beckman, John A. Britton, and T. A. Rickard. Joint meeting of San Francisco Sections of A. S. M. E., A. S. C. E., A. I. M. E., A. C. S., and A. I. E. E. Attendance 200.

Schenectady.—January 16, 1919, Edison Club Hall. Paper: "Turners Falls Power and Electric Company System" by F. L. Hunt. Paper was illustrated by lantern slides. Attendance 175.

February 7, 1919, Edison Club Hall. Address by Dr. Frank R. Rutter on "Our Foreign Commercial Relations." Attendance 250.

Seattle.—January 21, 1919, Arctic Club Building. Illustrated address by Mr. Norwood W. Brockett on "Experiences during the Last Year of the War in France." Attendance 47.

Spokane.—January 17, 1919, Chamber of Commerce. Paper: "Big Bend Irrigation Project" by J. C. Ralston. Joint meeting with local sections of A. I. M. E., A. S. C. E., and Spokane Engineering and Technical Association. Attendance 51.

Toronto.—January 17, 1919, Engineers' Club. Illustrated lecture by Mr. R. C. Harris on "The Bloor Street Viaduct." Attendance 50.

January 31, 1919, Toronto University. Illustrated address by Mr. J. F. Heffron on "Recent Advances in Illumination." Attendance 80.

February 7, 1919, Engineers' Club. Paper: "The Manufacture of Electrical Porcelain" by Hugo J. Lundgren. Attendance 60.

Washington.—February 11, 1919, Cosmos Club. Illustrated lecture by Mr. H. A. Hornor on "Electric Welding in the Ship Industry." Attendance 250.

PAST BRANCH MEETINGS

University of Arkansas.—January 30, 1919. Election of officers as follows—chairman, William L. Teague; vice-chairman, J. C. Black; secretary-treasurer, B. R. Askew.

February 6, 1919. Address by Prof. F. G. Baender on "The Making of a Successful Engineer." Attendance 30.

University of Maine.—January 6, 1919. Election of officers as follows—president, Ray C. Hopkins; vice-president, Lester C. Swicker; treasurer, Frank A. Tracy; secretary, Lloyd R. Douglass. Addresses as follows—(1) "Advantages of Electric Traction" by Prof. Hills; (2) "The Prospects of the Electrical Engineering Profession" by Prof. Barrows. Attendance 30.

February 6, 1919, Lord Hall. Illustrated lectures as follows—(1) "The Panama Canal" by W. C. Ellsworth; (2) "Electricity on the Farm" by Mr. Hopkins. Attendance 25.

University of Michigan.—January 28, 1919, Engineering Building. Address by Prof. J. C. Parker on "The Engineer in the Future." Attendance 54.

Michigan Agricultural College.—February 13, 1919. Paper: "High-Frequency Current and Its Applications". by Mr. Andres. Election of officers as follows—chairman, R. A. Shenefiel; secretary-treasurer, W. A. Siefert; executive committee, M. M. Cory, W. E. Thomas, R. W. Noddins; program committee, H. G. Carrow, A. P. Bock, and R. B. Kling. Attendance 17.

University of Missouri.—February 3, 1919, Engineering Building. Papers: (1) "Experiences with Public Utilities" by B. J. George; (2) "Experiences with Manufacturing Company" by W. D. Virture; (3) "Experiences with Telephone Utilities" by L. F. Remley. Attendance 23.

Montana State College.—January 29, 1919, Electric Building. Address by Mr. Carl Ladenburg on "The Westinghouse Student Course." Attendance 24.

University of North Carolina.—January 30, 1919, Chapel Hill. Address by Prof. P. H. Daggett on "Electrical Engineering, Yesterday, To-Day, and To-Morrow." Attendance 26.

Ohio Northern University.—January 15, 1919, Dukes' Memorial. Address by Mr. D. C. Jackson on "The Production of Crude Oil." Attendance 14.

January 29, 1919, Dukes Memorial. Papers: (1) "Radio Work in the U. S. Army" by Morris Elder; (2) "Mines and Mining in British Columbia and Montana" by Frank Davidson. Attendance 15.

Purdue University.—January 21, 1919. Address by Prof. C. F. Harding on "Aims and Purposes of A. I. E. E." Moving picture film "The Electrical Giant" through courtesy of General Electric Company. Attendance 150.

February 4, 1919. Paper: "Service at Cost" by R. W. Lovering. Election of officers as follows—vice-president, M. V. Merriman; treasurer, E. V. Emery. Attendance 70.

A. & M. College of Texas.—January 22, 1919. Election of officers as follows: —chairman, F. Murrah; secretary-treasurer, C. R. Drake. Attendance 36.

Virginia Polytechnic Institute.—January 28, 1919. Moving picture entitled "The Life and Work of Thomas A. Edison," by courtesy of General Electric Company. Attendance 341.

February 11, 1919. Moving picture entitled "The Electrification of the Panama Canal" by courtesy of General Electric Company. Attendance 291.

University of Washington.—February 4, 1919, Forestry Hall. Paper:

"Wave Form" by L. F. Curtis. Attendance 13.

State College of Washington.—January 24, 1919, Mechanic Arts Building. Address by Dean H. V. Carpenter on "The Question of Heating by Electricity in Idaho." Attendance 21.

February 14, 1919. Address by Prof. O. L. Waller on "How You Expect to Sell Your Services." Attendance 16.

Washington University.—January 24, 1919. Paper: "Electric Equipment for Automobiles" by Mr. Weichsel. Attendance 25.

ASSOCIATES ELECTED FEBRUARY 19, 1919

*Abbot, George, Cable Tester, American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

*Abrahams, Alfred A., Telephone Engineer, Bell Telephone Co. of Pa.; res., 3726 N. 19th St., Philadelphia, Pa.

Adams, Royce Elmer, Electrical Gunner, U. S. N. R. F., Commonwealth Pier, Boston; res., 47 Wilbur St., Everett, Mass.

*Addy, John G., Jr., Asst. Inspector of Engineering Material, U. S. N.; res., 298 St. Johns Place, Brooklyn, N. Y.

*Allwein, Aloysius Francis, Electrical Engineer, General Electric Co.; res., 866 Union St., Schenectady, N.Y.

*Ambrose, George, Foreman, Power House Construction, Goodyear Tire & Rubber Co.; res., 1458 Malasia Road, Akron, Ohio.

*Anderson, Joel E., 2nd Lieut., Chemical Warfare Service, U. S. Army; res., 150 Comstock St., Joliet, Ill.

*Anderson, Squire Hamilton, Machinery Switchboard Branch, Western Electric Co., 463 West St.; res., 116 W. 13th St., New York, N. Y.

Arany, Leo, Radio Installation Engineer, Kilbourne & Clark Mfg. Co., 149 Broadway; res., 548 East 183rd St., New York, N. Y.

*Arlin, Harold Wampler, Statistician, Employment Dept., Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.

Graham, Frank Orrin, Detroit Shell Co.; res., 520-25th St., Detroit, Mich.

Grugel, Herbert William, Telephone Equipment Engineer, Automatic Electric Co.; res., 4212 W. 21st Place, Chicago, Ill.

***Haig, Alfred Leslie**, 2nd Lieutenant, Infantry, U. S. Army; res., 1220 S. 53rd St., Philadelphia, Pa.

***Hall, Horton Warner**, Laboratory Assistant, Experimental Laboratory, General Electric Co., West Lynn, Mass.

***Hall, James Doyle**, Mechanical & Electrical Inspector, The Panama Canal; res., 1213 E. Capitol St., Washington, D. C.

Hamer, Fred C., Electrical Draftsman, Sargent & Lundy, 72 W. Adams St.; res., 1107 N. Dearborn St., Chicago, Ill.

***Haselton, Merton Luther**, Captain, Coast Artillery Corps, U. S. Army, Fort Totten, N. Y.

Henriques, Jacob C., Asst. to Chief Inspector, U. S. Government Explosives Plant, "C", 16 E. 42nd St., New York; res., 1793 West 9th St., Brooklyn, N. Y.

Hetznecker, William Henry, Jr., Apparatus Salesman, Rochester Electric Supply. Co., 90 Main St., Bradford; res., 123 Haines St., Kane, Pa.

***Hoerath, Julius J.**, Asst. Foreman, Turbine Testing Section, General Electric Company, Schenectady, N.Y.

Holcomb, Robert D., Supt., Electrical Construction & Operation, American International Shipbuilding Corp., Hog Island, Pa.

Hood, Clyde, Inspector, U. S. Navy, 938 Edison Bldg.; res., 2110 Prairie Ave., Chicago, Ill.

Horning, Harry H., Electrical Engineer, Cutler-Hammer Mfg. Co.; res., 493 20th Ave., Milwaukee, Wis.

Howard, John Gardner, Engineer, Electrical Dept., The Koppers Co.; res., 5513 Phillips Ave., Pittsburgh, Pa.

Hughes, Richard James, Sales Engineer, Westinghouse Elec. & Mfg. Co.; res., 1537 East 32nd St., Minneapolis, Minn.

***Huntington, Maurice Burt**, Asst. Engineer, Rochester Railway & Light Co.; res., 121 North Fitzhugh St., Rochester, N. Y.

Johnson, Alek, Elec. Tester, Transit Development Co.; res., 828, 49th St., Brooklyn, N. Y.

Johnson, Alvin W., Electrical Engineer, General Electric Co., Chicago; res., 544 Sherman Ave., Evanston, Ill.

*__Johnson, Emroy Theodore__, Switchboard Engg. Div., Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., Westinghouse Club, Wilkinsburg, Pa.

*__Junken, Lawrence Howland__, Pittsboro, Indiana.

*__Keller, Frederick Rowe__, Instructor in Electrical Engineering, Columbia University; res., 105 Manhattan Ave., New York, N. Y.

Kellogg, Charles Wetmore, Manager, Mississippi River Power Co.; res., 633 Grand Ave., Keokuk, Iowa.

Kennedy, Jefferson Byron, Electrical Draftsman, G. M. Standifer Construction Corp., Vancouver, Wash.; res., 584 E. 9th St., Portland, Ore.

King, Frank C., Manager, Export Department, Stromberg-Carlson Tel. Mfg. Co.; res., 409 Normandie Apts., Rochester, N. Y.

Kirke, Wallace Bryant, Consulting Engg. Dept., General Electric Co.; res., 217 Seward Place, Schenectady, N. Y.

*__Kneale, Ralph Martin__, Corporal, Signal Corps, U. S. A.; res., 3121 Berkshire Road, Cleveland Heights, Ohio.

*__Kniskern, Floyd B.__, Edgineer, Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., 309 Barnes St., Wilkinsburg, Pa.

Knowles, Leonard, Cedar Rapids Power Plant; res., Club House, Cedar, Quebec.

*__Koch, James Richard__, Draftsman, Electrical Dept., Cambria Steel Co.; res., 414 Locust St., Johnstown, Pa.

Koelbel, Frank Delany, Application Engineer, Westinghouse Elec. & Mfg. Co., 1205 Dime Bank Bldg., Detroit, Mich.

Kramer, Russell Stewart, Power Equipment Engineer, Bell Tel. Co. of Pa., 1230 Arch Street, Philadelphia, Pa.

*__Krotzer, J. Earl__, 2nd Lieut. Engineers, U. S. A.; res., 7591 Kelly St., Pittsburgh, Pa.

*__Kusner, Louis__, Electrical Draughtsman, Philadelphia Electric Co.; res., 213 So. 53rd St., Philadelphia, Pa.

Landers, Frank C., Asst. Supt., Western Div., Niagara, Lockport & Ontario Power Co.; res., 8 Beverly Ave., Lockport, N. Y

*__Landman, Sebastian Joseph__, Electrician, Mississippi River Power Co.; res., 1417 Ridge St., Keokuk, Iowa.

Lang, Eugene C., Engineer, The Arnold Company; res., 3623 Pine Grove Avenue, Chicago, Ill.

*__Lang, Louis Arthur__, Electrician, Portland Railway, Light & Power Co.; res., 949 Commercial St., Portland, Ore.

Larson, David C., Engineer, Otis Elevator Co., 250-11th Avenue, New York; res., 112 Elliott Ave., Yonkers, N. Y.

*__Laurer, George A., Jr.__, Electrical Draftsman, Machinery Div., Brooklyn Navy Yard, New York; res., 600 Park Ave., Syracuse, N. Y.

*__Leech, Vernon Everett__, Laboratory Instructor & Student, Univ. of Southern California; res., 1170 W. 37th Place, Los Angeles, Cal.

*__Leeds, Josiah Lippincott__, Electrical Draftsman, Pusey & Jones Company, Gloucester; res., 257 E. 3rd Street, Moorestown, N. J.

Lindeman, Joseph, Construction & Operating Depts., Metropolitan St. Rys. Co., N. Y. Rys. Co., & Interborough Rapid Transit Co., New York, N. Y.

*__Line, John Donald__, Process Foreman, Insulating Dept., Westinghouse Elec. & Mfg. Co., 609 Ecker Way, Wilkinsburg, Pa.

Lloyd, John H., Electrical Engineer, Government of Panama, Panama, R. P.

Loomis, Emery W., Westinghouse Elec. & Mfg. Co., 165 Broadway, New York, N. Y.; res., 85 Berwyn St., Orange, N. J.

*Lu, Cheng-Chih, Electrical Engineer, Packard Electric Co.; res., 306 E. Atlantic St., Warren, Ohio.

Lusk, Ward W., 2nd Lieut., Engineering Div., Ordnance Dept., U. S. A., Washington, D. C.; res., 839 N. Center St., Reno, Nevada.

Mansfield, Ralph G., Electrical Engineer, Union Carbide Co., Niagara Falls; res., La Salle, N. Y.

Mason, Karl Carson, Asst. Elec. Engineer, Edison Elec. Ill. Co. of Brockton, 76 School St., Brockton; res., E. Bridgewater, Mass.

Massel, Julian S., Electrician, National City Bank, 55 Wall St., New York; res., 149 Ridgewood Avenue, Brooklyn, N. Y.

*Maxstadt, Francis William, Asst. Engineer, Interborough Rapid Transit Co., 621 Broadway, New York, N. Y.; res., 170 William St., Newark, N. J.

McCabe, George Curtin, Electrical Inspector, Navy Yard; res., 1378 E. Capitol St., Washington, D. C.

McCanne, W. Roy, Treasurer and Gen. Manager, Stromberg-Carlson Telephone Mfg. Co.; res., 225 Barrington St., Rochester, N. Y.

McGill, C. S., Supervising Electrician, The Foundation Co.; res., 1033 Lincoln St., Portland, Ore.

McGown, Dudley Brooke, Asst. U. S. Naval Radio Inspector, 435 Mission Street, San Francisco, Cal.

McVittie, F., Electrical Engineer, New York State Railways, 267 State St., Rochester, N. Y.

Meeker, Arthur Manning, Engineering Dept., Public Service Electric Co.; res., 196 North 3rd St., Newark, N. J.

*Melby, Einar C., Manager, Machinery Equipment & Supply Dept., Harper, Marshall & Thompson Co., Inc.; res., 520 W. 129th St., New York, N. Y.

Mell, Frederick, Electrical Foreman, Westinghouse, Church, Kerr & Co., New York, N. Y.; res., 63 Tonnelle Ave., Jersey City, N. J.

*Mellen, Earl Rufus, Correspondent Engineer, Weston Electrical Instrument Co., Waverley Park; res., 32 Treacy Ave., Newark, N. J.

*Menke, O. H., Habart Bros. Co.; res., 23 South Mulberry St., Troy, Ohio.

Meyer, David, Second Switchboard Man, Interborough Rapid Transit Co.; res., 730 East 182nd St., New York, N. Y.

*Meyer, Grover C., Industrial Engineer, Kansas City Light & Power Co.; res., 3940 Broadway, Kansas City, Mo.

*Meyer, Harry Pendleton, General Electric Co.; res., 5 Henry Street, Schenectady, N. Y.

*Mickey, Bruce D., Student Engr., Testing Dept., General Electric Co.; res., 104 S. Jay St., Schenectady, N.Y.

*Miller, Clarence E., Asst. Equipment Engineer (Telephone), Central Union Telephone Co.; res., 1725 Wilson Ave., Chicago, Ill.

Miller, Edward John, Electrical Foreman. Westinghouse, Church, Kerr & Co. Inc., New York; res., 1601 Moltke Ave., Scranton, Pa.

*Miller, Herman Potts, Jr., Electrical Engineer, Federal Telegraph Co., 400 Homer Bldg., Washington, D. C.

Mills, Ralph Harold, Electrical Engineer, Western Electric Co., 463 West St., New York, N. Y.; res., 12 Byron Ave., Natick, Mass.

Mishler, E. W., New York Shipbuilding Corp.; res., 319 North 2nd St., Camden, N. J.

*Monroe, Wendell Potter, Student Engineer, General Electric Co.; res., 710 South Ave., Schenectady, N. Y.

Morton, Albert B., Manager, Rome Gas, Electric Light and Power Company, 139 N. James St., Rome, N. Y.

Moses, William H., 7 Joe St., Niagara Falls, Ontario, Can.

Moulton, Orin Lawrence, Supt., Interior Lighting & Power Construction, Cheyenne Light, Fuel & Power Co.; res., 217 E. 20th St., Cheyenne, Wyo.

*__Moyer, Howard Rollin__, Engineering Assistant, Transmission Engg. Dept., The Bell Telephone Co., Pittsburgh; res., 1425 Cresson St., Wilkinsburg, Pa.

Murphy, Albert J. J., Senior Inside Man, N. Y. Telephone Co., 15 Dey St., New York; res., 7504 Sixth Ave., Brooklyn, N. Y.

*__O'Daniel, Clarence__, Industrial Engineer, Century Electric Co., 506 Rockefeller Bldg., Cleveland, Ohio.

*__Oswald, Arthur A.__, Radio Research Laboratory, Western Electric Co., New York; res., 174 N. Grove St., E. Orange, N. J.

Otaka, Tokuju, Engineer, Oana Elec. & Mfg. Co., Tamahime-cho, Asakusa, Tokyo, Japan.

Palmer, Jacob Long, General Electrical Foreman, Westinghouse, Church, Kerr & Co., Inc., 37 Wall St., New York, N. Y.; res., Keezletown, Va.

Parker, Heckert L., Vice-President & Secretary, Conneaut Metal Works Co.; res., 374 Liberty St., Conneaut, Ohio.

*__Perry, Gardner Darling__, Telephone Equipment Man, American Tel. & Tel. Company; res., 786 Third Avenue, North Troy, N. Y.

*__Peterson, Elmer Gustav__, Engineering Dept., The Cutler-Hammer Mfg. Co.; res., 1321 Cedar St., Milwaukee, Wis.

*__Piercy, Carl Albert__, Engineer, Wire & Cable Dept., General Electric Company; res., 523 Rugby Road, Schenectady, N. Y.

Pierson, Raymond Townsend, Sales Engineer, Stromberg-Carlson Tel. Mfg. Co.; res., 271 University Avenue, Rochester, N. Y.

*__Poole, Fred L.__, Consulting Engineering Dept., General Electric Co.; res., 203 Seward Place, Schenectady, N. Y.

Pope, Floyd Raymond,, District Manager, Century Electric Company, 1017 Bessemer Bldg.; res., 904 Peebles Street, Pittsburgh, Pa.

Popkin, Martin E., Department of Labor, 469 Fifth Ave.; res., 600 W. 187th St., New York, N.Y.

*__Price, George Francois__, Engineering Dept., Peet & Powers, 70 E. 45th St.; res., 18 West 30thSt.,New York, N.Y.

Putman, Omer E., Electrical Cable System Operation, Interborough Rapid Transit Co., 621 Broadway, New York, N. Y.

*__Putnam, Ralph E. A.__, Engineering Department, Western Electric Company; res., 53 Manhattan Avenue, New York, N. Y.

Ray, Arthur William, Acting Chief Engineer, Reliance Electric and Engineering Co.; res., 14607 Orinoco Ave., E. Cleveland, Ohio.

Reese, Claude Earnest, Assistant Engineer, Illinois Public Utilities Comm.; res., 846 S. Douglas Street, Springfield, Ill.

*__Renfro, Charles Harold__, 1st Lieut. of Engineers, U. S. A.; res., 1428 Columbia Road, N. W., Washington, D. C.

Reynolds, Chester H., Electrical Engineer, Supervising Architect's Office, Treasury Bldg.; res., 212, 7th St. S. W., Washington, D. C.

*__Reynolds, Harold Vernan__, Load Dispatcher, San Joaquin Light & Power Corp.; res., 3740 Iowa Ave., Fresno, Cal.

*__Reynolds, John Paul__, Load Dispatcher, West Penn Power Co., Pittsburgh; res., 110 Atlantic Ave., McKeesport, Pa.

*__Rhoads, Charles Stanley, Jr.__, Regional Tel. & Tel. Engineer, U. S. R. R. Administration, Grand Central Terminal, New York, N. Y.

*__Richardson, Chester Northup__, 2nd Lieut., Chemical Warfare Service, U. S. A.; res., 2709 Wisconsin Ave., Washington, D. C.

Roeser, Edward A., Industrial Engineer, Rochester Railway & Light Co., 34 N. Clinton Ave., Rochester, N. Y.

*__Sakuma, Fumiya__, Supervisor of Electrical Work, Nielsen & Kittle Canning Co., Ltd., Terminal, Cal.

Sampson, Clarence Newton, Sales Dept., U. S. Steel Products Co.; res., 45 Rose Friend Apts., Portland, Ore.

Sanderson, David G. P., Charge Engineer, Hydro-Electric Plant, Dryden Pulp & Paper Mills; res., Duke St., Dryden, Ont.

***Sarvas, Otto**, Owner, Efficient Service Co., 220 W. 42nd St.; res., 721 E. 166th St., New York, N. Y.

Schlick, Frank Lewis, Chief Inspector, Shepard Electric Crane & Hoist Co., Montour Falls, N. Y.

Schmitt, Rudolph F., Asst. Engineer, Cleveland Elec. Ill. Co.; res., 1845 E. 75th St., Cleveland, Ohio.

Shaw, Archibald Livingston, Purchasing Dept., Splitdorf Electric Co.; res., No. 1 Alpine St., Newark, N. J.

Sherwin, Arthur J., Inspector, Interborough Rapid Transit Co., 621 Broadway; res., 515 W. 143rd St., New York, N. Y.

***Siefert, Paul H.**, Electrical Engineer, Industrial Controller Co.; res., 644 Jefferson St., Milwaukee, Wis.

Skinner, Don Reynolds, Asst. Chief Operator, Western Union Tel. Co.; res., 5415 W. Ohio St., Chicago, Ill.

Skinner, Stanley I., Plant Engineer, Kansas City Home Tel. Co., 800 Orear-Leslie Bldg., Kansas City, Mo.

Skone, Robert Conrad, Foreman of Inside Constructors, City Light Steam Plant, Eastlake & Nelson Place, Seattle, Wash.

***Skutecki, Joseph W.**, Designer, The B. F. Goodrich Co.; res., 174 W. Chestnut St., Akron, Ohio.

Slocum, Hiram Ray, Foreman, Switchboard Dept., Sperry Gyroscope Co.; res., 145 Powers St., Brooklyn, N. Y.

Smith, John A., Electrical Engineer: National Electric Co., Christchurch, res., 20 Crohane St., Addington, N. Z.

***Smith, Walter Robert**, Erecting Engineer, Canadian Westinghouse Co., 24 Canada Life Bldg., Calgary, Alta, Canada.

Snedeker, Clarence Felter, Motive Power Dept., Interborough Rapid Transit Company, New York; res., 67 Beechwood Avenue, Bogota, N. J.

Sprado, Hugh Randolph, 1st Lieut., Signal Corps, U. S. A., Department Signal Office, Fort Sam Houston, Texas.

***Steinmayer, Alvin Gustave**, Private, U. S. A., Government Chemical Plant No. 4, Saltville, Va.; res., La Salle, Ill.

***Steven, Harry Misener**, Student Engineer, General Electric Co.; res., 45 Front St., Schenectady, N. Y.

Stinson, William L., 230 Liberty St., Schenectady, N. Y.

***Stone, Harry E.**, Engineer, Service Dept., West Penn Power Co., Pittsburgh; res., 405 Biddle Ave., Wilkinsburg, Pa.

***Stoos, Frank Albert**, Construction Foreman, Engg. Dept., General Electric Co.; res., Y. M. C. A., Cincinnati, Ohio.

Sugden, Henry, Engineer, Roller-Smith Company; res., 23 S. 10th Avenue, Bethlehem, Pa.

Sutherland, Harry Thomas, Jr., Asst. to Engineer, Lewis H. Woods Construction Co., 2355 Jerome Ave., New York; res., Woodhaven, N. Y.

***Swett, Lewis Wentworth**, Technical Correspondent, Domestic Engineering Co.; res., No. 3 Normandie Apts., Dayton, Ohio.

***Sykes, Clifford B.**, Lighting Dept., General Electric Co.; res., 303 Parkwood Blvd., Schenectady, N. Y.

***Thomas, Beverly, Jr.**, Asst. Electrical Engineer, Westinghouse, Church, Kerr & Company, 37 Wall St.; res., 92 Grove St., New York, N. Y.

Thomas, Herman, Chief Electrician, Electrical Dept., American Manganese Steel Co.; res., 148 East 4th St., New Castle, Del.

Thomas, Howard Waring, Bureau of Steam Engineering, Navy Dept.; res., 717 10th St., N. W., Washington, D.C.

***Tompkins, Eugene Randolph**, 566 Ninth Ave., S. W., Roanoke, Va.

***Trevor, Karl Robert**, Thomas Morse Aircraft Corp.; res., 4 The Circle, Ithaca, N. Y.

Vernon, William Somerville, Lecturer of Physics, University College, Auckland, N. Z.

Wagner, Arthur J., Assistant Manager, Recorder Department, Taylor Instrument Company; res., 85 Seneca Parkway, Rochester, N. Y.

Wantz, J. B., Vice-President, Victor Electric Corp., 236 South Robey St., Chicago; res., Oak Park, Ill.

***Warner, Russell Gillette**, Instructor in Elec. Engg., Sheffield Scientific School; res., 350 Yale Ave., New Haven, Conn.

Waters, Frederick Elmer, Construction Inspector, Bell Telephone Co. of Pa.; res., 5219 Pine St., Philadelphia, Pa.

***Weppler, Harvey Stanley**, Meter Inspector, The Hydro-Electric Power Comm. of Ontario, Toronto; res., Hanover, Ontario, Canada.

***White, William R.**, Electrical Engineer, Philadelphia Electric Co.; res., 406 West Chelton Ave., Philadelphia, Pa.

Whitney, Charles A., Engineer, National Board of Fire Underwriters, 76 William St., New York, N. Y.

***Williams, Raymond Cabot**, Construction Foreman, General Electric Co., Philadelphia; res., 355 Bridge St., Spring City, Pa.

Williams, William Allyn, Motor Test Dept., General Electric Co.; res., 1 Classical Terrace, Lynn, Mass.

***Williamson, Claude A.**, Engineer, Mechanical & Electrical Dept., Youngstown Sheet & Tube Co., 1744 South Heights Ave., Youngstown, Ohio.

Winterer, Horace Kenneth, Commercial Engineer, General Electric Co.; res., 1411 Arthur Ave., Chicago, Ill.

***Wood, Winthrop Chace**, Industrial Engineer, Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.; res., 145 Osborn Street, Fall River, Mass.

Wronker, Ralph, Private, Signal Corps, U. S. Army; res., 5240 Indiana Ave., Chicago, Ill.

Total 212

ASSOCIATES REELECTED FEBRUARY 19, 1919

Cooper, Leo. H., District Manager, Frank Adam Electric Co., 200 Builders Exchange, Minneapolis, Minn.

Dubilier, William, Consulting Engineer, 217 Center St.; res., 124 West 72nd St., New York, N. Y.

Ferrey, Fred G., Turners Falls Power and Electric Co., Greenfield, Mass.

Flansburg, P. LeRoy, Safety & Efficiency Engineer, E. I. du Pont de Nemours & Co., Haskell, N. J.

Merrill, Josiah Leverett, Public Utilities Comm. of Ohio; res., 459 6th Ave., Columbus, Ohio.

Platt, Frederick, Mechanical & Shop Engineer, General Electric Co., W. Lynn; res., 37 Mt. Vernon St., Cliftondale, Mass.

Stevens, Henry R., Electrical Engineer, Stone & Webster, 868 Stuart Bldg., Seattle, Wash.

MEMBERS ELECTED FEBRUARY 19, 1919

Butler, Earnest L., Supt. of Light & Water Department, 306 N. Pine St.; res., Antlers Hotel, Ellensburg, Wash.

Carr, Walter R., Editor, *Electrical News*, 347 Adelaide St. W.; res., 289 Inglewood Drive, Toronto, Ont., Canada.

Iler, George Arthur, Supt. of Operation, Georgia Railway & Power Co.; res., 311 W. Peachtree St., Atlanta, Ga.

McInnerney, Benjamin, Vice-Pres. & Manager, Kimball Bros. Company; res., 208 Tenth Ave., Council Bluffs, Iowa.

Roberts, William, Manager, Callenders Cable & Construction Co. Ltd., Killick Bldg.; res., Pedder Road, Cunballa Hill, Bombay, India.

Rudd, Frederick Jett, Electrical Engineer, General Electric Co., W. Lynn; res., 312 Humphrey St., Swampscott, Mass.

Semrad, C. A., General Manager, The Western Light & Power Co.; res., 537 Pine St., Boulder, Colo.

Tappan, Frank Girard, Acting Director of School of Elec. Engg., Supervisor of Vocational Training, Univ. of Oklahoma, Norman, Okla.

Yarnall, Joseph Henry, Asst. Engineer, Elec. Engg., Dept., Boston Elevated Railway Co., Boston; res., 55 Dakota St., Dorchester, Mass.

TRANSFERRED TO THE GRADE OF FELLOW FEBRUARY 19, 1919

Magalhaes, Frank V., Superintendent of Test Dept., N. Y. Edison Co., New York, N. Y.

Wyman, Walter Scott, Treasurer & General Manager, Central Maine Power Co., General Manager, Adirondack Electric Power Corp., Augusta, Me.

TRANSFERRED TO THE GRADE OF MEMBER FEBRUARY 19, 1919

Berger, Julius G., Chief Engineer, Wm. Gordon Corp., Philadelphia, Pa.

Clarke, H. O., Jr., Captain, Quartermaster Corps, Construction Div., Camp Logan, Tex.

Harden, William H., Engineering Dept., American Telephone & Telegraph Co., New York, N. Y.

Lustig, Leo, Electrical and Mechanical Engineer, Ciego de Avila Water Supply & Electric Corp., Ciego de Avila, Cuba.

Sakai, Yasudiro, Chief Engineer, Yasukawa Electric Mfg. Co., Kuro-Fsaki, ukuoka-ken, Japan.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting held on February 19, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Addicks, Lawrence, Consulting Engineer, New York, N. Y.

To Grade of Member

Cooper, Leo H., District Manager, Frank Adam Electric Co., Minneapolis, Minn.

Langworthy, R. A., Engineer, Stone & Webster, Boston, Mass.

Pratt, Harlan A., Manager, Industrial Division, Westinghouse Electric & Mfg. Co., New York, N. Y.

Rice, Martin P., Electrical Engineer, General Electric Co., Schenectady, N. Y.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before March 31, 1919.

Adams, Q., (Member), Washington, D. C.
Aik, E. H., Milwaukee, Wis.
Alden, F. N., Fort Sam Houston, Texas
Allen, E. S., Brooklyn, N. Y.
Alexander, C. F., New York, N. Y.
Alexander, D. M., Spokane, Wash.
Ammen, J. N., Washington, D. C.
Angel, C. W., New York, N. Y.
Baerresen, A. W., Denver, Colo.
Banan, H. F., E. Pittsburgh, Pa.
Baring, J. W., Chicago, Ill.

Barnett, D. A., Muscle Shoals, Ala.
Baunach, R. P., Jr., New York, N. Y.
Beckmann, J. E., San Francisco, Cal.
Bellerjeau, W. Y., New York, N. Y.
Bennington, E. T., Cleveland, Ohio.
Berkshire, W. T., Schenectady, N. Y.
Bertolacci, R. L., San Francisco, Cal.
Blattner, D. C., New York, N. Y.
Blumer, C. A., E. Pittsburgh, Pa.
Blythe, F. W., Toronto, Ont.
Bohe, C. P., St. Louis, Mo.
Brennan, J. A., Jersey City, N. J.
Brockman, C., Bay City, Mich.
Bronson, C. D., Oakland, Cal.

STUDENTS ENROLLED FEBRUARY 19, 1919

9839 McElwell, J. M., Montana State Coll.
9840 Hoeft, E. W., School of Engg. of Milwaukee.
9841 Collins, C. H., Univ. of Wis.
9842 von Normann, A. G., Univ. of Wash.
9843 Hartman, Zoltan, Cooper Union.
9844 Sheer, Joe Robert, Univ. of Wis.
9845 Hoffman, Andrew J., Tri-State Coll.
9846 Day, John F., Univ. of Penn.
9847 Dickerson, Edwin S., Jr., Drexel Inst.
9848 Cartlett, James T., Univ. of Wash.
9849 St. Clair, Harry P., Throop Coll. of Tech.
9850 Housell, Theron C., Throop Coll. of Tech.
9851 Coops, Herbert S., Throop Coll. of Tech.
9852 Hopper, Francis L., Throop Coll. of Tech.
9853 Glasby, Whitman K., Throop Coll. of Tech.
9854 Duguid, Russell H., Throop Coll. of Tech.
9855 Cory, George L., Throop Coll. of Tech.
9856 Sawyer, Mark A., Throop Coll. of Tech.
9857 Knapp, Robert T., Throop Coll. of Tech.
9858 Smith, Donald D., Throop Coll. of Tech.
9859 Otis, Russell M., Throop Coll. of Tech.

9860 Hounsell, Edward V., Throop Coll. of Tech.
9861 Crosby, Paul N., Throop Coll. of Tech.
9862 De Nunzio, S., N. Y. Elec. School.
9863 Stoker, R. J., West Va. Univ.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

Edward de A. Braga
(former address)
2-4 Stone St.,
New York, N. Y.

Howard K. Cook
(former address)
Counties Gas & Elec. Co.,
Norristown, Pa.

F. C. Dieterich
(former address)
17 Watertown Ave.,
Waterbury, Conn.

Nils Erricksson
(former address)
198 Baverly St.,
Toronto, Canada.

George Goldman
(former address)
6229 Rhodes Avenue,
Chicago, Ill.

A. Guerra
(former address)
Mexican Light & Power Company,
Mexico City, Mex.

H. S. Logan,
(former address)
214 15th Ave.,
Seattle, Wash.

Louis F. Nosek,
(former address)
2245 E. 82nd St.,
Cleveland, Ohio.

J. E. Penn,
(former address)
322 Champlain Ave.,
Cleveland, Ohio.

PERSONAL

Major William J. Hammer, who in civilian life is a consulting electrical engineer with offices at 55 Liberty St., New York City and who for some time past has served the War Department in the War Plans Division, was on December 13 appointed a member of the General Staff Corps.

Lewis S. Maxfield, until recently mechanical engineer for the Carver & Nate Company, Engineering Contractors, has accepted the position of Assistant to the Secretary of the Heating and Piping Contractors, National Association.

H. H. Clark, formerly Electrical Engineer of the U. S. Bureau of Mines, and during the war, Major in Chemical Warfare Service, has returned to civilian life as Chief Engineer of the Witherbee Igniter Company of Springfield, Mass.

F. L. Gilman resigned his position as Works Manager of the National Conduit and Cable Company last November and leaves for abroad in February, where he will take a position as European General Superintendent for the Western Electric Company, in charge of that Company's manufacturing plants in England and on the Continent.

E. H. Martindale who entered the service as Captain of Engineers Sept. 25, 1917 sailed for France February 1, 1918 and returned to the U. S. January 24, 1919. He was stationed in Angers, Tours, Paris and Nevers. At Angers he received additional training. At Tours he served in the electrical section of the Dept. of Construction and Forestry. At Paris he served with the Technical Board. At Nevers he was Engineer Officer in charge of construction of a 15,000-volt 35-mile transmission line for Mars and Mesves hospitals. He has returned to his former positions as Pres. and Gen. Mgr. of The Handy Supply Co., and as Sales Engineer of National Carbon Co. both of Cleveland, Ohio.

Leon W. Rosenthal formerly a consulting electrical engineer and patent solicitor of New York City, was elected a Vice-President of the American Bosch Magneto Corporation which, upon the sale by the Alien Property Custodian, acquired the interests of the Bosch Magneto Company. Mr. Rosenthal will make his headquarters at the factory in Springfield, Mass., but will also have an office in New York City at 223 West 46th St.

C. L. Clary has been made District Manager in charge of the St. Louis office of the Chuse Engine & Manufacturing Company. Mr. Clary has for the past five years been connected with the P-K Engineers of St. Louis.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in the BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office reference files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

OPPORTUNITIES FOR SERVICE

V-484. Public utility in the Middle West requires the services of a graduate electrical engineer who is interested in economic research relating to valuation, appraisal and profit sharing problems. State training, experience and salary desired.

V-485. Wanted—Electrical engineer who has had experience in designing alternating current generators and synchronous motors. Correspondence confidential. Answer to include age, experience, history of employment, salary expected.

V-486. Wanted—Technical man in the operation of ice making and refrigerating plants, of both absorption and compression systems, especially as regards to economical operation, also boiler and engine testing, efficiency determinations, etc. Must have practical experience along such lines. Reply by letter giving salary expected at start, and full details of experience and references. Location in the Middle West. The highest qualifications and broad knowledge of such work is essential. Good opportunity for young man of required experience and advancement assured in a permanent position. State how soon at liberty.

V-487. Technical graduate for position of assistant to general manager of 15,000 kw. central station in W. Va. Practical experience with power house switchboard and electrical apparatus, also operation. Must be able to analyze power house costs and carry on maintenance work of all equipment. Give experience, age and salary expected.

V-488. Stock room keeper. Man experienced in keeping stock of electrical motors and generators. Salary about $30. per week. Location Chicago.

V-489. Motor manufacturer, location New Jersey, wants one layout man and detailer, one detailer and tracer, and one designing draftsman familiar with A. C. and D. C. motors and generators.

V-490. Technical graduate, experienced in testing A. C. and D. C. motors. Man able to check tests. Salary $100. to $125. per month.

V-491. Wanted—A man to take charge of engine and boiler house of an industrial plant in Middle Western City as chief engineer. Applicant must be experienced, thoroughly capable of handling modern steam turbine generating station of 6000 kv-a. capacity and boiler plant of 5000 rated h.p. consisting of chain grate and Taylor stokers. Must have a thorough working knowledge of boiler and engine room practice, including the use of modern boiler efficiency instruments and methods and be a first-class mechanic capable of handling men. Replies should give complete education and experience of applicant, together with age, reference, salary expected, etc.

V-492. Technical graduate to eventually act as distribution engineer for power company. Location Nebraska. Three-phase, 4-wire, 2300-4000 volt system. Operating experience essential. Salary $130. up depending on experience.

V-493. Young man with sales ability. Must be experienced in the operation of motors and generators. State experience and salary expected to start. Excellent opportunity for advancement for the right man.

SERVICES AVAILABLE

1167. Manufacturing executive. Mechanical, electrical and some chemical manufacturing experience. Thoroughly familiar with organization necessary to secure quality and quantity production. Has been successful in reorganizing non-producing plants and securing production with reduced costs. Forty-six years of age, married. Now officer in U. S. service. Desires permanent connections.

1168. Engineering executive. Technical graduate. Experienced in isolated and central station power plants and central station heating plants. Chief executive three years of electric public utility and central station heating plant. Desires permanent connection where advancement is limited only by ability. Prefer East. Good personality, married, highest references. Salary $6000.

1169. Captain of Engineers, U. S· Army, graduate electrical engineer· seventeen years' experience including hydraulic, electrical and irrigation engineering and teaching, desires engineering or executive position with progressive electric utility, far west preferred.

1170. College graduate in electrical and mechanical engineering, University of Toronto, twenty-six years of age, married, Student Member of A. I. E. E. One year's experience on long distance telephone transmission. One year's experience on air compressors and hammer drills. One year's experience on steel treatment. Specialized in efficiency engineering during my last year in college. Available on two week's notice. Salary $150. per month.

1171. Wants position where experience as electric cable engineer will benefit. Twenty-eight years of age, married. Technical graduate in electrical engineering. Past eight years specialized in design, manufacture and testing of all types insulated conductors. Have made comprehensive study of theoretical and practical cable field. Experienced in estimating and planning improvements on manufacturing propositions. Minimum salary $1800. per year. Available two weeks' notice.

1172. Electrical and steam engineer, technical man with broad experience and knowledge of efficient methods of power production, desires position as manager of power company or railway company, or as power superintendent in an industrial plant. At present employed as advisory engineer. Prefer middle west location. Salary $5000.

1173. Engineer-Physicist. Graduate University of Chicago, Physics; graduate University of Wisconsin, electrical engineering; General Electric testing experience; six years teaching physics and electrical engineering; desires position in experimental or development work. Thirteen years laboratory training, high scholastic record, excellent health and very temperate habits. Age 32. Salary dependent upon opportunities.

1175. Assistant professor of mechanical and electrical engineering, with both practical and teaching experience, desires advancement to department head or other position of responsibility. Especially experienced in laboratory and lecture in gas engines and power plant practice, both mechanical and electrical.

1176. Graduate electrical engineer, three years' experience in maintenance and construction of substations for large power company, two years general engineering experience in the U. S. Navy in the application of Diesel engines; now commissioned in the Naval Reserve Force. Desires position with power company or manufacturing company. Available about the first of May.

1177. Lieutenant U. S. Army, graduate electrical engineer, desires position with electrical power or construction company in the East. Experience: one year graduate work and laboratory assistant, Yale University; three months high tension power transmission line design and construction; one and one-half years central station construction; fifteen months electrical work U. S. Army. Available April 1st. Salary $175. per month.

1178. Electrical engineer, college graduate, age 26, single, experienced in substation design, two years Westinghouse test and as assistant to the plant superintendent of a large steam generating plant, desires position requiring executive and technical ability. Canada or Eastern States preferred. Services available on month's notice. Salary $175. per month.

1179. 1913 technical graduate in electrical engineering wants a $200. job. Six years varied central station experience; sub-station construction, overhead and underground distribution, consulting engineer's office, power plant design. Twenty-eight years old, married. Available on two weeks' notice to present employer.

1180. Head of department of electricity and telephony at a well-known correspondence school desires position as assistant professor of electrical engineering, physics or mechanical engineering. Technical graduate 1910, degree M.E., four and one-half years practical experience in electrical and mechanical engineering. In present position nearly five years. Age 34. Married. Available on one month's notice.

1181. Young electrical engineering graduate with two years general engineering experience and one year specialized switchboard design experience desires to locate with live, moderate sized central station. Combination of commercial and engineering work preferred. At present in Signal Corps, with prospect of early discharge. Best of references.

1182. Engineer and executive. Technical graduate with nine years varied experience along electrical engineering and administrative lines. Want position as power salesman, efficiency engineer, or manager of power company in town of about 20,000. Age 31, married. Available on short notice.

1183. College graduate, keen, broad minded, desires to work for live firm (or individual). Has electrical and mechanical training. Not afraid of work and will consider any line in which capable work will bring advancement.

1184. Electrical and mechanical engineer, technical graduate, age 28, now engaged in development and design work in engineering department of large electrical manufacturing concern, wishes to take up similar work with opportunities for advancement. $1800.—$2200.

1185. Engineer of broad experience desires position, executive. Would be valuable to financial interests, holding company or consulting engineer to make thorough commercially practical examination and report on public utility properties. (rates, condition of physical property, earnings, etc.) or other technical enterprise. Could adapt self to your particular requirements for a general superintendent or chief engineer and deliver the goods. Initial salary $4500.

1186. Technical graduate 1910, age 30. Six years street lighting and distribution; six years meter and instrument testing and design, heating and miscellaneous apparatus. Desires position with growing concern. Salary $2400. Location near New York City.

1187. Electrical engineer, graduate, Associate A. I. E. E., age 32, single, six years' experience general electrical engineering, installation, maintenance and repairs of electrical power house equipment, high tension apparatus, meters, and power distribution. Considerable experience with internal combustion engines. Desire position with good engineering company or will accept temporary position as assistant superintendent in large capacity turbo-steam plant.

1188. Professor of electrical engineering in an eastern university desires to make a change at the end of the college year. Author of a text-book. Practical experience. Age 40. Will be in New York City for interview the latter part of March.

1189. Position wanted by mechanical and civil engineer. Experience four years on railroad, highway and building construction; one year as machinist apprentice; one year in banking buisness; two years obtaining practical experience in power station operation; one year efficiency engineer on power station work; one year as M.E. on appraisal of power plants; six months as M.E. in charge of shop erection and design for a super-heating concern. Just returned from fourteen months service overseas as Captain Engineers. Graduate C.E. and M.E. Married, age 35. Available April 1.

1190. Electrical engineer age 28, married, desires position as road salesman with electrical supply house. Fifteen years practical experience, also some road experience.

1191. Graduate electrical engineer with ten years practical and executive experience in research and development with large electrical manufacturer, desires position as assistant to manager or assistant to chief engineer of company manufacturing electrical apparatus.

1192. Position offering problems and investigations desired, where the following experience would be of service: electrical manufacturing company, assembly and tests, three years; operating company, switchboard design, five years; State University, electrical engineering laboratory instruction, four years: with consulting engineer, present employer, three years. Available April 1. Salary $2400.

1193. Electrical designer in charge of men on large power stations. Experience: college, two years shop practice and twelve years electrical and mechanical design. Twice chief draftsman. Last three years with present consulting engineers. Available on month's notice.

Best references. Prefer position as construction engineer. Age 35. Married. Associate A. I. E. E.

1194. Graduate electrical engineer, two years' experience in erecting and operating electric furnaces, desires a position as melter and electrical engineer. Salary $2400. a year.

1195. Graduate electrical engineer 1907, age 36 years, at present with consulting engineering company. Desires to make a change. Seven years in charge of power house and substation construction for light and power company. Also considerable maintenance experience. Can give references and additional information. Salary expected $3600.

1196. Captain of Engineers, served one year in France, Member A. I. E. E., President and General Manager of a small supply company doing a good business on a limited line is looking for agencies for electrical supplies to be sold to present trade throughout the country or for exclusive agencies for Cleveland or Northern Ohio. Let a good live organization help keep your factory busy.

1197. Ensign, U. S. Naval Aviation. Executive, electrical engineer, just returned service abroad. Ignition and storage battery specialist. Education; Massachusetts Institute of Technology and in plants abroad. Desire position as sales engineer for big manufacturer where there is opportunity to expand. Minimum salary $5200. per annum.

1198. Electrical engineer. Married, age 26, just returned from foreign service. Desires position with public utility company. Graduate University of Illinois, 1915, graduate Chicago Central Station Institute, 1916, having spent half-time for eleven months in the operating, voltage regulation, estimating, power sales, lighting sales and other departments of the Commonwealth Edison Company. Ten months' experience in the Contract Department of the Commonwealth Edison Company.

1199. Engineer executive, who can organize and direct industrial power work, consulting or managing capacity. Graduate electrical engineer, G.E. test, unusually broad experience industrial motor application, selection, layout, purchase and maintenance power equipment, with particular reference to factory production. Expert on heavy currents. Captain in charge important Government production division. Available immediately. Age thirty-two.

1200. Technical graduate electrical engineer, Associate A. I. E. E., desires position where executive ability and tact is required. Eight years experience as consulting engineer and contractor in illuminating engineering, power distribution and control, both interior and exterior installation. Until recently with War Department, Washington, D. C., as consulting engineer on illumination.

1201. Position as industrial manager or shop superintendent sought by Lieutenant, U. S. N. R. F., to technical graduate, age 32. Ten years' experience in the design, manufacture, installation and operation of electrical machinery; generating, a. c. and d. c., sub-station operation, high and low tension distribution. Minimum salary $4000.

1202. Advertising man, technical graduate, three years' experience in publicity department of large electrical manufacturing company, seeks position as advertising manager, or assistant manager, with manufacturer of technical product, or merchandising and publicity manager of central station. Awaiting early discharge from U. S. Army.

ACCESSIONS TO THE ENGINEERING SOCIETIES LIBRARY

(From January 1st to January 31, 1919)

Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All books listed may be consulted in the Engineering Societies Library.

AMERICAN HIGHWAY ENGINEERS, HANDBOOK:

Editor-in-chief, Arthur H. Blanchard, 1st ed. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 1658 pp., illus., tab., 7 x 4 in., flexible cloth, $5.

The task undertaken has been the compilation of a reference book which would include reliable and comprehensive information on all branches of highway engineering and related subjects, including organization and administration of highway departments, financing of improvements, highway design, paving, testing, costs, etc. These questions are discussed in twenty-nine sections, each of which has been edited by an authority. Bibliographies for each section and an extensive index have been provided.

AMERICAN METHODS IN FOREIGN TRADE:

A Guide to Export Selling Policy. By George C. Vedder. 1st ed., N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 204 pp., 8 x 6 in., cloth, $2.00.

The author of this volume is a believer in the soundness of the distinctively American methods of developing an export trade which have hitherto been adopted by our most efficient world traders. He attempts in the volume before us to explain how these firms have achieved success and to outline the proper policy to be adopted by those interested in entering foreign markets.

CHILTON TRACTOR INDEX:

Published semi-annually by the Chilton Co., Phila., Jan., 1919. 464 pp., 10 x 7 in., paper. $1.00.

The Tractor Index is a directory of the manufacturers of tractors, tractor parts and accessories, and power farming machinery in the United States. It also includes an illustrated list of American tractors, in which brief specifications for each tractor are given, a table giving complete specifications for one hundred ninety-eight tractors, and a similar table of specifications for power farm machinery. A collection of articles on tractors and farm machinery complete the work.

CHLORINATION OF WATER:

By Joseph Race. 1st ed. N. Y., John Wiley and Sons, Inc., 1918. 158 pp., 8 x 5 in., cloth, $1.50.

CONTENTS: Historical, Modus Operandi, Dosage, Bacteria Surviving Chlorination, Complaints, Bleach Treatment, Liquid Chlorine, Electrolytic Chlorine and Hypochlorites, Chloramine, Results Obtained, Appendix.

The author has collected and correlated the scattered information in print on the purification of water by chlorine, and presents a systematic account of the theory, practical application and results. Numerous references to the original publications are given.

CLASSROOM LECTURE NOTES:

Automotive Starting, Lighting and Ignition. By R. C. Fryer. 2d ed., N. Y., John Wiley and Sons, Inc.; Lond. Chapman and Hall, Ltd., 1918. 210 pp., diag. 8 x 5 in., cloth, $1.25.

The author provides a general, concise, series of notes, including the essential knowledge needed by the student, but requiring enlargement by the instructor. Eighty-eight pages of wiring diagrams are given.

THE FUNDAMENTAL EQUATION OF DYNAMICS:

And Its Main Coordinate Systems Vectorially Treated And Illustrated From Rigid Dynamics. By Frederick Slate—Berkeley University of California Press, 1918. 233 pp., 8 x 6 in., cloth, $2.

The author of this volume feels that the extensiveness of the field of dynamics has necessitated such compression in the general surveys of its principles that the usual treatment leans too heavily on mathematics. His desire has been to prepare a supplement to such standard works which will direct attention to the physical aspects, and to experimental reasoning, by offering a flexible continuation of an elementary stage with unsettled achievement. The book forms part two of "Principles of Mechanics" (Part one, Macmillan Co., 1900).

A HANDBOOK OF PHYSICS MEASUREMENTS:

Vol. I. Fundamental Measurements, Properties of Matter, and Optics. Vol. II., Vibratory Motion, Sound, Heat, Electricity and Magnetism. By Ervin S. Ferry, in collaboration with O. W. Silvey, G. W. Sherman, Jr., and D. C. Duncan. 1st ed., N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1918, 251 + 233 pp., illus., tab., 8 x 5 in., cloth, $2 a volume.

The aim of this work is to furnish the student of pure or applied science with a self-contained manual of the theory and manipulation of those measurements in physics which bear most directly upon his subsequent work in other departments of study and upon his future professional career. The experiments have been selected with regard to the particular determinations now demanded by science and industry and so grouped as to segregate those of value for students of the various branches of engineering.

MAKING THE SMALL SHOP PROFITABLE:

By John H. Van Deventer. 1st ed. N. Y., published by The American Machinist. (McGraw-Hill Book Co., sole selling agents), 1918. 113 pp., illus., 12 x 9 in., 1/4 cloth, $1.75.

This book contains a series of articles on important phases of the activities of small machine shops, proper methods of working, cost-keeping etc., and also illustrations of many handy devices for facilitating work, particularly in shops with limited equipment. It is a continuation of the author's "Success in the Small Shop". The articles first appeared in the American Machinist.

PRACTICAL OIL GEOLOGY:

The Application of Geology to Oil Field Problems. By Dorsey Hager. 3rd ed., N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Pub. Co., Ltd., 1919. 253 pp., 126 illus., 37 tab., 7 x 5 in., flexible cloth. $2.50.

The author of this handbook has aimed to provide a clear, concise and practical work on the occurrence of oil and its geology, based on American practise. The present edition, the third in four years, has been thoroughly revised, enlarged and reset.

THE SILK DIRECTORY:

Davison's Silk Trade. Office edition. A Directory of the Silk Manufacturers of the United States and Canada including Silk Dyers, Finishers and Printers; Manufacturers' Agents; City Offices and Salesrooms of Silk Mills; Dealers in Raw, Thrown, Spun and Artificial Silk; Waste; Cotton, Tinsel and Worsted Yarns; Silk Jobbers and Retailers and a Classified Directory of All Manufacturers of Silk Goods. 23rd annual edition. 1918. N. Y., Davison Publishing Co., (copyright 1918), 778 pp., 8 x 6 in., cloth, $3.50.

The directory includes dyers, finishers, printers, manufacturers' agents, city offices and salesrooms of mills, dealers, jobbers, retailers and manufacturers. These are given in lists classified primarily by occupation and secondarily by location. The lists have been carefully revised and enlarged by the addition of new establishments.

STEAM ENGINES:

Prepared in the Extension Division of the University of Wisconsin by E. M. Shealy. (Engineering Education Series.) 1st ed., N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 290 pp., 173 illus., 9 x 6 in., cloth $2.50.

This is the third of a series of three text books of steam engineering, prepared for correspondence students in the University of Wisconsin Estension Division. The aim in this volume is to teach the fundamental principles underlying the operation of the steam engine, in as simple and non-mathematical a manner as possible. Particular attention is given to valve gears.

THE THEORY OF ELECTRICITY:

By G. H. Livens. Cambridge, Eng. The University Press, 1918. 717 pp., 11 x 7 in., cloth, $8.25. (Gift of G. P. Putnam's Sons.)

Dissatisfaction with the treatment of this subject in standard textbooks, which the author believes to be incomplete, often inconvincing and sometimes erroneous, leads him to offer this work as a general textbook on the mathematical aspects of modern electrical theory in which an attempt is made to present the complete subject in a consistent form.

Although his exposition is essentially a mathematical one, much of the purely analytical mathematics usually associated with the subject has been omitted. Particular attention has, however, been given to the rigorous formulation of underlying physical principles and to their translation into a mathematical theory. The dynamical aspects of the subject have been specially emphasized throughout.

OFFICERS AND BOARD OF DIRECTORS 1918-1919

President

Comfort A. Adams

Junior Past-Presidents

H. W. Buck
E. W. Rice Jr.

Vice-Presidents

W. B. Jackson
Raymond S. Kellsch
F. B. Jewett
John B. Taylor
A. H. Babcock
Harold Pender

Managers

C. E. Skinner
John B. Fisken
N. A. Carle
Charles S. Ruffner
Charles Robbins
E. H. Martindale
Walter A. Hall
William A. Del Mar
Wilfred Sykes
Walter I. Slichter
G. Faccioli
Frank D. Newbury

Treasurer

George A. Hamilton

Secretary

F. L. Hutchinson

*GENERAL STANDING COMMITTEES.

Chairmen

Executive, Comfort A. Adams
Finance, N. A. Carle
Meetings and Papers, W. I. Slichter
Editing, Henry H. Norris
Safety Codes, Farley Osgood
Board of Examiners, F. L. Rhodes
Sections, Walter A. Hall
Student Branches, C. Francis Harding
Membership, H. A. Pratt
Public Policy, Calvert Townley

Chairmen

Headquarters, N. A. Carle
Electrical Engineering Service, William A. Del Mar
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering
Standards, L. T. Robinson

*TECHNICAL COMMITTEES

Chairmen

Power Stations, Philip Torchio
Transmission and Distribution, Edward B. Meyer
Traction and Transportation, C. F. Uebelacker
Industrial and Domestic Power, A. G. Pierce
Lighting and Illumination, C. E. Clewell
Economics of Electric Service, William B. Jackson
Protective Devices, D. W. Roper

Chairmen

Electrochemistry and Metallurgy, Carl Hering
Electrophysics, F. W. Peek, Jr.
Telegraphy and Telephony, Donald McNicol
Marine, H. A. Hornor
Use of Electricity in Mines, K. A. Pauly
Iron and Steel Industry, Eugene Friedlaender
Electrical Machinery, Alexander M. Gray
Instruments and Measurements, S. G. Rhodes
Educational, V. Karapetoff

*INSTITUTE REPRESENTATION ON

Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education
Council of American Association for the Advancement of Science
Advisory Board of American Year-Book
U. S. National Committee of the International Illumination Commission
National Joint Committee on Overhead and Underground Line Construction
American Committee on Electrolysis
Engineering Council
Electrical Engineering Section of Engineering Division, National Research Council
Engineering Foundation Board
Naval Consulting Board
American Engineering Standards
Commission of Washington Award
Pan-American Engineering Committee

---

*A complete list of the officers, committees and representatives of the Institute will be found in the January, 1919, issue of the Proceedings.

LIST OF SECTIONS

Chairmen and Secretaries

A. E. F. (France).
Atlanta, A. M. Schoen, Thomas C. Taliaferro
Baltimore, J. B. Whitehead, L. M. Potts
Boston, Ira M. Cushing, Ira M. Cushing,
Chicago, C. A. Keller, A. F. Riggs
Cleveland, C. S. Ripley, R. W. Knowles
Denver, Fred J. Rankin, Robert B. Bonney
Detroit-Ann Arbor, George E. Lewis, A. S. Albright
Erie, Clayton P. Yoder, Scott S. Hill
Fort Wayne, P. C. Morganthaler, O. B. Rinehart
Indianapolis-Lafayette, G. B. Schley, William H. Beck
Ithaca, Alexander M. Gray, John G. Pertsch, Jr.
Kansas City, Mo., W. F. Barnes, W. F. Barnes
Los Angeles, J. H. Cunningham, Clem A. Copeland
Lynn, L. E. Underwood, Fred E. Ewart
Madison, James W. Watson, L. E. A. Kelso

Chairmen and Secretaries

Milwaukee, F. A. Coffin, F. J. Mayer
Minnesota, Meyer Barnert, J. D. Marshall
Panama, W. L. Hersch, M. P. Benninger
Philadelphia, W. F. James, E. B. Tuttle
Pittsburgh, W. R. Work, J. G. Carroll
Pittsfield, Neil Currie, Jr., N. F. Hanley
Portland, Ore., R. M. Boykin, W. D. Scott
Rochester, R. H. Manson, W. C. Freeman
St. Louis, J. L. Hamilton, H. G. Hake
San Francisco, J. C. Clark, A. G. Jones
Schenectady, K. A. Pauly, L. F. Millham
Seattle, J. Harisberger, T. C. Smith
Spokane, George Nixon, G. H. Hoppin
Toledo, W. A. Hill, Max Neuber
Toronto, A. H. Hull, Ernest V. Pannell
Utah, A. S. Peters, H. T. Plumb
Urbana, A. R. Knight, E. H. Waldo
Vancouver, R. F. Hayward, T. H. Crosby
Washington, D. C., J. E. Smith, Milton Flanders

LIST OF BRANCHES

Chairmen and Secretaries

*Agricultural and Mech. College of Texas
Alabama Poly. Inst.
*Alabama, Univ. of
Arkansas, Univ. of, Wm. L. Teague, B.R.Askew
Armour Institute, Edwin H. Arnold, Marion F. Bacon
Brooklyn Poly. Inst., E. A. Demonet, Jr., Thomas C. Schwab,

PROCEEDINGS

OF THE

American Institute of Electrical Engineers

Vol. XXXVIII
Number 4

APRIL, 1919

Per Copy $1.00
Per Year $10.00

TABLE OF CONTENTS

Section I.—Institute Affairs

Joint A. I. E. E. and I. E. S. Meeting in New York, April 11, 1919 127
Future A. I. E. E. Meetings 127
Report of Committee of Tellers on Nomination Ballots 128
Meeting of Radio Engineers 128
The Boston Meeting 129
Exhibit of Army Personnel Work 130
The J. E. Aldred Lectures on Engineering Practise 130
United Engineering Society. Extracts form Treasurer's Annual Report for Year Ending Dec. 31, 1918 131
Engineering Foundation. Abstract of Annual Report for Year Ending Feb. 20, 1919 132
Engineering Council. Extracts from Annual Report for Year Ending Feb. 20, 1919 134
United Engineering Societies Library Report 138
Past Sections Meetings 140
Past Branch Meetings 142
Associates Elected March 14, 1919 143
Associates Re-elected March 14, 1919 148
Members Elected March 14, 1919 148
Transferred to Grade of Fellow March 14, 1919 149
Transferred to Grade of Member March 14, 1919 149
Transferred to Grade of Member February 19, 1919. Correction 149
Recommended for Transfer 149
Applications for Election 149
Students Enrolled March 14, 1919 152
Personal 153
Obituary 154
Engineering Service Bulletin 154
Accessions to Engineering Societies Library 158

Section II.—Papers and Reports

Electromagnetic Theory of the Telephone Receiver. By A. E. Kennelly and H. Nukiyama, Boston, Mass., March 14, 1919 491
Some Possibilities of Steam Railroad Electrification as Affecting Future Policies. By Calvert Townley, Boston, Mass., March 14, 1919 541
Engineering and Industrial Standardization. By C. A. Adams, New York, February 20, 1919 549
Welding Mild Steel. By H. M. Hobart, New York, February 20, 1919 561
Present Status of Industrial Lighting Codes. By G. H. Stickney, New York, April 11, 1919 611

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917 authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII APRIL, 1919 Number 4

JOINT A. I. E. E. AND I. E. S. MEETING IN NEW YORK APRIL 11, 1919

The 349th meeting of the American Institute of Electrical Engineers will be held in New York, April 11th, 1919, at 8:15 p. m. in the Auditorium of the Engineering Societies' Building, 33 West 39th Street, New York.

The meeting will be held under the auspices of the Lighting and Illumination Committee and will be a joint meeting with the Illuminating Engineering Society.

A paper will be presented entitled *Present Status of Industrial Lighting Codes* which has been prepared by Mr. G. H. Stickney on behalf of both the Illuminating Engineering Society, and the Lighting and Illumination Committee of the Institute, which will give an outline of the necessity and scope of such codes together with an analysis of the specifications of such items as the intensity, limits of glare and distribution of illumination as related to modern industrial lighting.

The paper will include references to the adoption of lighting codes by the Departments of Labor in such states as Pennsylvania, New Jersey, New York and Wisconsin with a reference to the cooperative work which has been done between the Committee on Labor, Council of National Defense, and the Illuminating Engineering Society in placing adequate industrial lighting regulations before the state authorities generally throughout the country.

A large number of engineers engaged in the applications of electric lamps and auxiliaries to the industries, works managers, and also prominent members of state labor departments have been invited to contribute to the discussion.

FUTURE A. I. E. E. MEETINGS

May Meeting: The 350th meeting of the Institute will be the Annual Business Meeting held at Institute headquarters, New York, May 16, 1919. At this meeting the annual report of the Board of Directors will be presented and announcement made of the election of officers for the ensuing year. The feature of chief interest at this meeting will be the ceremonies in connection with the presentation of the Edison Medal.

Annual Convention: As previously announced, the Annual Convention of the Institute this year will take place at the Lake Placid Club, Adirondacks, New York, on June 24 to 27, inclusive. As it is expected that a considerable amount of time will be devoted this year to the consideration and discussion of Institute affairs and policies as outlined in the communications from the Committee on Development in the March PROCEEDINGS, the usual number of technical sessions has been curtailed with a view to leaving ample time for carrying out the program of the Committee on Development as well as for social and entertainment features which the Lake Placid Club affords. The detailed program is under consideration by the Meetings and Papers Committee and the Convention Committee and will be published in the May issue. The members of the Convention Committee are—Messrs. Farley Osgood, Chairman N. A. Carle; Walter A. Hall, Edward Kilburn, W. L. Merrill, George F. Sever, W. I. Slichter and C. W. Stone.

REPORT OF COMMITTEE OF TELLERS ON NOMINATION BALLOTS

March 6, 1919

To the Board of Directors, American Institute of Electrical Engineers.

Gentlemen: This Committee has counted and canvassed, in accordance with Article VI of the Constitution, the nomination ballots received for officers of the Institute for 1919-1920. The result is as follows:

Total number of envelopes said to contain ballots, received from the Secretary		1249
Rejected on account of bearing no identifying name on outer envelope	70	
Rejected on account of having reached Secretary's office after Feb. 28	34	
Envelopes received containing no ballots	26	130
Leaving as valid ballots		1119

These valid ballots were counted and the result is shown below:

FOR PRESIDENT

Calvert Townley	1008
*J. Franklin Stevens	46
Scattering and blank	65
Total	1119

*Candidate had requested, prior to balloting, that his name be withdrawn.

(The scattering vote was divided among 11 candidates, each of whom received less than 3% of the total vote. Detailed distribution of these votes is shown on the original tally sheets filed in the Institute offices.)

FOR VICE-PRESIDENTS

C. E. Skinner	978
John B. Fisken	964
N. A. Carle	952
J. B. Whitehead	869
L. R. Jorgensen	827
Wills Maclachlan	817
A. M. Schoen	770
Scattering and blank	537
Total	6714

(The scattering vote was divided among 59 candidates, each of whom received less than 3% of the total vote. Detailed distribution of these votes is shown on the original tally sheets filed in the Institute offices.)

FOR MANAGERS

L. E. Imlay	1034
L. F. Morehouse	1031
F. F. Fowle	1018
Scattering and blank	274
Total	3357

(The scattering vote was divided among 36 candidates, each of whom received less than 3% of the total vote. Detailed distribution of these votes is shown on the original tally sheets filed in the Institute offices.)

FOR TREASURER

George A. Hamilton	1015
Scattering and blank	104
Total	1119

Respectfully submitted,
HENRY C. CLEMENT, *chairman*
CHAS. M. LEE,
I. W. EDWARDS,
P. C. PAQUETTE,
JAMES GOLDSBOROUGH.
Committee of Tellers.

MEETING OF RADIO ENGINEERS

The next meeting of The Institute of Radio Engineers will be held on Wednesday evening, April 2nd, 8:15 p. m., in Room 2, on the Fifth Floor of the Engineering Societies Building, 33 West 39th Street, New York City.

A paper will presented by Mr. E. F. W. Alexanderson of the General Electric Company on "Simultaneous Sending and Receiving." Some highly interesting results relative to duplex radio telegraph and radio telephone operation are given, together with highly selective and stray reducing receivers.

Members of the A. I. E. E. are cordially invited to attend, and those who desire to receive notices of future meetings may have their names placed upon the mailing list of the Institute of Radio Engineers upon request to the Secretary, Prof. A. N. Goldsmith, College of the City of New York, New York.

THE BOSTON MEETING

The 348th meeting of the Institute was held at the Copley-Plaza Hotel, Boston, Mass., March 14, 1919. This meeting was somewhat of an innovation as it provided for morning, afternoon and evening sessions and presented a number of papers and addresses on widely divergent subjects. The meeting proved to be an unusually successful one and the attendance was so large as to tax the capacity of the meeting rooms at all the sessions.

The morning session was called to order promptly at 10 o'clock by President Comfort A. Adams who introduced Governor Calvin Coolidge of Massachusetts. After brief addresses of welcome by Governor Coolidge and President Adams, Mr. Calvert Townley presented his paper on "Some Possibilities of Steam Railroad Electrification as Affecting Future Policies." Mr. Townley's paper, which is published in this issue of the PROCEEDINGS, drew forth an interesting discussion covering the future possibilities of electrification of steam railroads and the closely related subject of coal and oil fuel conservation. Among those taking part in the discussion were F. H. Shepard, W. S. Murray, Carl Schwartz, N. W. Storer W. B. Potter, George F. Sever, A. G. Webster, Charles F. Scott, John Murphy and George Gibbs.

At 12:30, after the close of the morning session, the Board of Directors and a number of other guests were entertained at luncheon by the Executive Committee of the Boston Section.

The afternoon session was devoted to the subject of Telephony and was called to order by President Adams at 2:00 p. m. After calling the meeting to order President Adams turned it over to Mr. Ira M. Cushing, Chairman of the Boston Section, who presided during this session. The first paper of the afternoon was entitled "Electromagnetic Theory of the Telephone Receiver with Special Reference to Motional Impedance" by A. E. Kennelly and H. Nukiyama. The paper was abstracted by Dr. Kennelly. The next paper was by Prof. A. G. Webster on "The Absolute Measurement of the Intensity of Sound." Prof. Webster described in detail several instruments which he had devised, and illustrated his remarks with numerous lantern slides and also exhibited his instruments. The discussion which followed was by John B. Taylor, T. E. Shea, B. A. Behrend, R. L. Jones and Harold S. Osborne.

At 2:30 p. m. the Board of Directors held its regular monthly meeting, and at 6:00 p. m. a subscription dinner which was largely attended was served. After dinner a number of very interesting addresses were made on the general subject of engineering education, the speakers being Prof. Harry C. Clifford, Prof. E. B. Wilson, Dr. Charles W. Eliot, Dr. A. G. Webster, and Dr. Saul Dushman.

At the Board of Directors meeting held in the afternoon of March 14, the following resolution was adopted:

> RESOLVED, that the Board of Directors of the American Institute of Electrical Engineers hereby expresses its hearty appreciation of the services rendered by the officers and committees of the Boston Section in making and carrying out with gratifying success, the plans for the Institute meeting held in Boston, March 14, 1919.

The members of the Executive Committee of the Boston Section are—Messrs. Ira M. Cushing, Chairman, W. H. Timbie, Vice-Chairman, Harry M. Hope, Retiring Chairman, H. M. Myers, Assistant Secretary, B. A. Behrend, R. A. Langworthy, R. R. Lawrence, Edward T. Foote, and C L. Kasson. The members of the Committee on Arrangements are—Messrs. B. A. Behrend, Chairman, Dr. A. E.

Kennelly, Prof. W. S. Franklin, and the members of the Executive Committee.

EXHIBIT OF ARMY PERSONNEL WORK

Members of the Institute and others interested in personnel work will have an opportunity to examine the methods developed by the Committee on Classification of Personnel in the Army at an exhibit to be shown on the auditorium (third) floor of the Engineering Societies Building 33 West 39th Street, New York City, April 1st to 12th, 1919. The exhibit consists of a collection of wall charts, forms, photographs and models showing how the Army finds out what men can do best and how it uses that information; how soldiers are trade tested, and how officers are rated and fitted into place; how the work is checked and supervised, and its results in the war.

The collection is being shown under the auspices of the National Association of Corporation Schools and several national engineering societies, including the Institute. It was on exhibition for several weeks at Washington, where it excited so much interest that in response to many requests the Adjutant General consented to its display in other cities. Two commissioned officers accompany the exhibit to explain its various features.

THE J. E. ALDRED LECTURES ON ENGINEERING PRACTISE

Through the generosity of Mr. J. E. Aldred there has been founded in the Department of Engineering, Johns Hopkins University, Baltimore, Md., a course of lectures on Engineering Practise. The course of lectures is one feature of a general plan for furthering and improving undergraduate instruction in the methods and problems of the practise of engineering.

The lectures will deal, therefore, with the practical phases of engineering problems, rather than with theory. They are not expected to discuss new and striking applications, as much as to deal with every-day working methods of design, construction and operation.

Since the lectures are planned especially for undergraduate students, they will presuppose an elementary rather than an extensive knowledge of underlying theory, and will lay special stress on the tangible and obvious features and principles of practical engineering of the present day.

During the year 1918-1919 three lectures each will be given in the general subjects, Civil, Electrical, and Mechanical Engineering. They will be given on Wednesday afternoons at 4.45 o'clock, on the dates shown on the accompanying list, in the auditorium of the Mechanical and Electrical Engineering Building of the University, at Homewood.

The requisite number of seats in the lecture hall will be reserved for the student body. There will, however, be ample additional space, and engineers or others who may be interested will be welcomed. The lectures are open to the general public, and tickets of admission are not required.

April 2nd "The Modern Steel Freight Ship". Mr. D. D. Thomas, Chief Engineer, Baltimore Dry Docks & Shipbuilding Company, Baltimore, Md.

April 9th "The Duties of the Young Engineer on the Construction of a Hydro-Electric Plant." Mr. H. S. Slocum, Consulting Engineer, of New York City.

April 30th "The Production of 50% Ferro-Silicon in the Electric Furnace." Mr. P. H. Falter, Shawinigan Electro Products Company, Baltimore, Md.

May 7th "Ore Docks on the Great Lakes". Mr. John E. Greiner, Consulting Engineer, of Baltimore, Md.

May 14th "Disturbing Currents in Telephone Systems." Mr. John B. Taylor, Consulting Engineer, General Electric Company, Schenectady, N. Y.

UNITED ENGINEERING SOCIETY

Extracts from Treasurer's Annual Report for Year Ending December 31, 1918

The Surplus Account on December 31, 1917, showed a balance of $8,116.10. This amount has been increased by the surplus from the operating accounts during the year of $5,417.33, making a total on December 31, 1918, of $13,533.43. Of this amount $8,000.00 has been transferred to Depreciation and Renewal Fund, leaving a balance in Surplus Account of $5,533.43.

The *Gross Operating* Expenses for the year 1918 were $66,505.57.

The *General Operating* Expenses during the year 1917 were $53,791.97, showing an increase for the year 1918 of $12,713.60, partly due to the three additional stories first occupied in October 1917.

The funds available for the Library Board, and spent under their direction during the year, amounted to $28,740.29

The *General Reserve Fund* of $10,000 created by the Board of Trustees at a meeting held November 18, 1914, to be available to take care of unforeseen fluctuations of income and outlay, has been preserved intact there arising no calls on this fund during the year 1918.

The *Depreciation and Renewal Fund* at the beginning of the year 1918 amounted to $75,037.41. During the year this fund has been increased by the sum of $3,126.37 for interest earned by the investments for this fund during the year and accruals, and by $8,000.00 added from the surplus at the end of the year, making a total of $86,163.78 on December 31, 1918.

In accordance with the authorization of the Board of Trustees September 26, 1918, the sum of $10,000 was invested in 4th Liberty Loan Gold Bonds 4¼%.

The following summary shows the amounts of the funds held by U. E. S. as of December 31, 1918.

Depreciation and Renewal Fund Dec. 31, 1917....	$75,037.41
Interest on invested funds during the year 1918...	3,126.37
Transfer for the year 1918	8,000.00
Total..............	$86,163.78
General Reserve Fund...	10,000.00
Engineering Foundation Fund................	303,374.80
Library Endowment Fund	102,559.70

ASSETS AND LIABILITIES

December 31, 1918

Assets

Real Estate	$1,947,171.16
Investments Engineering Foundation Fund	303,321.25
Investments Library Endowment Fund	102,297.50
Investments General Fund...............	85,725.00
Cash	12,869.60
Petty Cash............	100.00
Unexpired Insurance ...	5,958.76
Accrued Interest Receivable	2,392.02
Accounts Receivable General.............	542.58
Bills Receivable........	12,500.00
	$2,472,877.87

Liabilities

Founders Equity in Property................	1,947,171.16
Due the General Reserve Fund...............	10,000.00
Due the Depreciation and Renewal Fund...	86,163.78
Due the Library Endowment Fund..........	102,559.70
Due the Engineering Foundation Fund	303,374.80
Due for notes payable A. S. M. E.	12,500.00
Due for Accounts Payable	2,090.24
Due for Library 1918 unexpended Balance....	274.26
Due for Library Service Bureau 1918 Surplus.	800.29

Due for Engineering Council 1918 Unexpended Balance......	2,410.21
Surplus (Dec. 31, 1918).	5,533.43
	$2,472,877.87

ENGINEERING FOUNDATION

Abstract of Annual Report for Year Ending February 13, 1919

Most conspicuous among the year's events are Ambrose Swasey's additional gift of $100,000 for the Endowment Fund and the increase in the membership of the Board from eleven to sixteen by amending United Engineering Society's By-Laws April 25, 1918. By the same amendment an Executive Committee of five was provided for. The endowment now amounts to $303,374.80. Income from the addition runs from September 1, 1918. Total income for the calendar year 1918 was $10,929.67. Expenditures were:

Salaries	$5,588.00
Office Expenses	580.46
Traveling Expenses	177.33
Stationery and Printing	184.05
Furniture	74.68
Gear Tests	633.97
Investigation of Wireless Control	237.27
Petty Cash	15.00
Total	$7,490.76

The accumulated unexpended income balance January 1, 1919 was $30,253.88.

Appropriations have been authorized for the following items, on which expenditures may be made during the calendar year 1919:

Budget for Ordinary Expenditures...	$8,200.00
Gear Tests, unexpended balance.....	207.73
Investigation of Wireless Control, unexpended balance	262.73
Tests of Weirs for Measurement of Water	2,500.00
Research in Mental Abnormalities...	600.00
Total	$11,770.46

Anticipated income for 1919 is approximately $15,000. Adding this to the January 1 balance and deducting the total obligations already incurred, there remain available for appropriation during this year, in round numbers, $33,000.

During the year, the Board had four regular meetings, one special meeting May 28, to act upon cooperation with the National Research Council in promotion of industrial research, and one joint meeting with United Engineering Society, October 7, to receive Mr. Swasey's second gift. November 14, United Engineering Society gave a dinner to Mr. Swasey.

The Executive Committee was completed September 12, by the election of Charles Warren Hunt and Silas H. Woodard, who with the Chairman and the two Vice-Chairmen constitute that committee.

Cooperation with the National Research Council has been continued. Through the "Industrial Research Section" and in other ways Engineering Foundation has taken part in the preliminary steps toward the organization of a Refractories Research Corporation and an American Zinc Association. Engineering Foundation also collaborated with National Research Council in gathering information regarding Mexico and Russia for the Military Intelligence Division of the U. S. Army.

An important new industry which has been growing rapidly in recent years is that of welding. Engineering Foundation has been taking part, through Dr. Jacobus and its Secretary as special delegates, in the work of committees on the organization of the American Welding Society for the direction and support of research and the development of this art.

In May, an investigation of spray camouflage for ships was completed with the conclusion that it was not practical. Professors G. H. Marx and L. E. Cutter have continued under the auspices of the Foundation, their investigation of the wears of gears. In March an investigation of the secret selective control of wireless communication was undertaken under the direction of Dr. Pupin.

In December, an investigation of weirs for measurement of water was authorized to be conducted under the personal direction of Clemens Herschel. At the same time a preliminary investigation of mental abnormalities, especially among employees in engineering industries, was authorized to be conducted under the supervision of Dr. E. E. Southard, of the Massachusetts Commission on Mental Diseases. A committee of three appointed by the Executive Committee December 31, is making a preliminary inquiry into the advisability of promoting the establishment of a testing station for large water wheels and other large hydraulic equipment.

As an aid to promotion of industrial research, there was assigned to the Secretary the task of collecting information about laboratories connected with the industries, which devote some time to research. At the June, 1918 meetings of American Society for Testing Materials, the Secretary contributed a paper entitled, "Development of Existing Agencies" in which was given a list of 350 laboratories said to devote at least part-time to research. This inquiry has been pursued to the present time. Letters have been sent to 1603 laboratories. The useful data collected are being classified. To aid in this work, a simple classification was prepared with the assistance of members of Engineering Foundation and National Research Council.

May 2, in the Engineers' Club, New York, a dinner was given to Dr. George E. Hale, Chairman, National Research Council, by the Presidents and Secretaries of the four Founder Societies, at which were present also five representatives of that Council and representatives of Engineering Foundation. The relations of the National Research Council to the engineering societies were discussed. A large public meeting in the Auditorium of Engineering Societies Building was held May 28, under the auspices of Engineering Foundation, at which Dr. Hale delivered a most instructive address upon the origin and work of the National Research Council.

January 23, the Chairman and officers of the National Research Council gave a dinner at the University Club, New York, to some of the officers of the National engineering and other societies, at which relations of engineers and especially Engineering Foundation, with National Research Council, were again discussed. It was voted to be the sense of the meeting that "the present representatives of the National engineering societies and National Research Council should continue to serve as representing the National engineering societies and form the nucleus of the Engineering Division in the new organization of the Research Council."

In order to reduce to definite terms some of the suggestions made January 23, an informal committee meeting was called January 24 by the Chairman of the Foundation. It was the sense of this meeting that:

1. Engineering Foundation and the Engineering Division of National Research Council should be closely allied, but each should retain its identity;

2. Engineering Foundation should contribute definitely to the support of the Engineering Division, but should not become merely a disbursing agency for the Division;

3. Private financial support for the Engineering Division was much to be preferred to governmental appropriations;

4. The Engineering Division should be composed of;

(a) Three representatives apiece from the Civil, Mining, Mechanical and Electrical engineering societies and one each, from other national engineering societies admitted to membership in Engineering Council;

(b) About four members at large (one-fifth to one-quarter of the total membership of the Division) suggested by the Executive Board of the National Research Council;

(c) Three liaison members from other divisions having interlocking interests (physics and chemistry) with right to vote, except for chairman of Engineering Division;

5. The Engineering Division should have an executive committee of five members chosen by the Division;

6. The Engineering Division should organize itself into sections and committees, to include members outside the Division.

The year has been one of modest activity and of constant search for the right fields for larger service. War's unsettling effects and enforced changes in the development of National Research Council have had an unescapable influence upon the Foundation's plans. Engineering Foundation is stronger than ever before, and ready for the large work just ahead.

ENGINEERING COUNCIL

Extracts from Annual Report for Year Ending February 20, 1919

Engineering Council has completed its second year. Notable in the year's history are: service to the Government in connection with the German war; creation of Engineering Societies Employment Bureau, establishment of a Washington office, appointment of a committee on Licensing of Engineers, and the admission of an additional member society. Through visits made by the Secretary mutually helpful relationships with engineering societies in twenty-five or more localities were established.

Engineering Council held six regular meetings beginning with the Annual meeting February 21, 1918, and one special meeting on November 21, all in Engineering Societies Building, New York. There was no change in the officers as elected at the beginning of the year: J. Parke Channing, Chairman, Harold W. Buck, 1st Vice-Chairman, George F. Swain, 2nd Vice-Chairman, Alfred D. Flinn, Secretary. For the year's expenses the sum of $16,000 was provided, and there remained unexpended January 1, $2,400.

Executive Committee: Eight meetings were held. The principal business of most of these meetings was the preliminary study of matters to be brought before Engineering Council so as to economize time at Council meetings.

January 6, 1919, an urgent meeting was called to determine what action Engineering Council could take concerning the sudden dismissal, by the Public Service Commission for the first District of New York, of approximately 350 engineers and assistants engaged on subway construction. (see March PROCEEDINGS).

January 28 a meeting was held to instruct Council's Washington representative as to his course of action before committees of Congress on matters demanding immediate attention, especially propositions relating to a National Department of Public Works.

Rules Committee: Prepared and submitted for adoption at the February meeting, 1918. "Rules for Guidance of Business" and "Rules for Admission of Additional Societies to Membership in Engineering Council." The latter rules were subsequently duly aproved by United Engineering Society and the four Founder Societies. A tentative list of societies eligible for membership was prepared and sent to all representatives. From this list six societies were selected for immediate consideration and three ultimately elected, subject to approval by United Engineering Society and the Founder Societies. These approvals were all received by December 1918.

Public Affairs Committee: This committee made preliminary investigations which led to the appointment of a Patents Committee and a Committee on Licensing of Engineers. It presented a resolution to the December meeting of Council, requesting favorable attention of Congress to land reclamation on a large scale as a "reconstruction" measure under thorough engineering supervision. This resolution was adopted by Council and later followed up by the Washington representative. The committee also reported upon the allocation of labor and equipment for production of war materials, an "Institute for

History of Science" as a branch of the Patent Office, engineering experiment stations at Land Grant Colleges, assistance to members of faculties of colleges of pure and applied science engaged on war work by relieving them of certain routine duties; no activity was undertaken by Council in any of these matters.

American Engineering Service: Devoted its energies and those of its small staff, almost exclusively to aiding governmental departments in procuring technical men for war service. With the assistance of the four Founder Societies and other engineering societies, classified records of many thousands of engineers were assembled and from these, in response chiefly to more than two hundred requisitions from thirty principal and subordinate governmental departments, names of approximately four thousand engineers were supplied, all carefully selected. Many interviews between Army and Navy officers and candidates were arranged and other services rendered. Besides, a number of engineers were assisted in finding engagements in civilian work and several offices were aided in obtaining engineers. This committee was disbanded at the end of November on account of the armistice and was succeeded by Engineering Societies Employment Bureau.

War Committee of Technical Societies: The committee had 22 members representing 11 societies. Financial support was provided by Engineering Council. The Naval Consulting Board provided offices in New York, and for the last few months also in Washington, together with frank for mail and other assistance. This committee was closely allied with the Naval Consulting Board, and, beginning in the summer of 1918, also with the Inventions Section of the Army General Staff: the latter provided the services of Capt. Scott as secretary. On account of the armistice, this committee ceased to exist December 31. During the year this committee aided the Army and Navy in examining 135,000 inventions and suggestions for war devices. To stimulate intelligent solution of war problems, the committee with the naval Consulting Board issued two pamphlets, the first entitled "The Enemy Submarine" and the second "Problems of Airplane Improvement." Before the bulletins were issued 0.4 per cent only of suggestions received had any value; afterwards 4.7 per cent. One of the most important services rendered was to demonstrate to the War and Navy Departments how the civilian engineers of the country could be mobilized for the aid of the Government in war, and to establish direct communication for this purpose between the departments named and the engineering societies.

Fuel Conservation Committee: This committee has collaborated with the Bureau of Mines and the Fuel Administration, one of its members being Advisory Engineer to the latter, and its Secretary, Chief Mechanical Engineer to the former. This committee also cooperated with committees of various engineering societies, working along similar lines in many parts of the country. Its work will be continued.

Patents Committee: Appointed so that Engineering Council might have a share in endeavors to improve Patent law practise and the organization of the Patent Office. This committee interlocked with a similar committee of National Research Council and accepted the able report of the latter. This report, recently made public, proposes the following changes in the Patent system:

1. Establishment of a single Court of Patent Appeals;
2. Separation of Patent Office from Department of Interior;
3. Increase in force and salaries of Patent Office;
4. Modification of that section of the law granting compensation for infringment of patents.

Water Conservation Committee: Was created to deal with questions concerning the utilization and control of water for various purposes in all parts of the country. It has defined its general policies and is prepared to furnish broad information on large problems, particularly to committees of Congress, to State Legislatures, or to governmental departments. The committee proposes to deal with those facts of engineering which are beyond reasonable controversy.

Engineering Societies Employment Bureau: Following the termination of hostilities, Engineering Council at its special meeting November 21, established an Employment Bureau with the secretaries of the Founder Societies as a Board of Directors. The Bureau took over the staff and equipment of American Engineering Service at the end of November. From the beginning of its work to February 15, it has received applications for positions from 1375 engineers in all branches of the profession. For a total of 200 applicants, employment has been found. The services of the Bureau are not restricted to members of the engineering societies represented in Engineering Council, but non-members are expected to present letters of introduction from a member. Extensive efforts have been made to inform employers of engineers of the Bureau's resources for serving them. No charge is made for services.

Reconstruction Committee: At the November meeting of Council, in order to deal with several matters falling under the head of "reconstruction" and especially to work out the details of the organization and personnel of the proposed National Service Committee, the Reconstruction Committee was appointed. At meetings held November 29 and December 16, 1918, it selected the personnel of the National Service Committee and determined sufficient elements in its organization to permit that committee to begin work before the end of the year. It was understood that the chairman should be the executive head of the National Service Committee with reasonable independence in action for the effective performance of his duties, and that the other members of the committee would be expected to serve principally in the capacity of an advisory board to the chairman. January 28, the Reconstruction Committee held a joint meeting with members of the Public Affairs and National Service Committees to discuss the establishment of a National Department of Public Works.

National Service Committee: At the November meeting of Council, representative Philip N. Moore presented a communication entitled "Representation of Engineers at National Capital." From this proposal grew the National Service Committee with a permanent representative and office in Washington which was established through the agency of the Reconstruction Committee. The office is Room 502, McLachlen Bldg., 10th and G. Streets, Washington, D. C. The committee has taken up a number of subjects with committees of Congress and the departments. Most important among these have been (1) Land Reclamation, following resolution adopted by Council November 21, (Byrnes Bill S. 13651, proposing an appropriation of $100,000,000 for reclamation of arid, swamp and stump lands); (2) National Public Works Department in connection with Kenyon Bill, S. 5397, and hearings before Committee on Education and Labor to which this bill was referred, and the Committee on Public Buildings and Grounds which was investigating certain work of the Army Construction Division.

License Committee: There is active interest in several states in proposed legislation relating to the licensing of engineers, and a number of inquiries from engineering societies have been referred to this committee. The License Committee is endeavoring to coordinate and direct these activities.

Americanization Committee: Is prepared to co-operate with the Division of Americanization in the Department of Interior, and with the National Americanization Committee. Since engineers have more or less direct contact with large bodies of foreign born employees, it is expected that they will render substantial help in this important work. An instructive report has been written by the committee summarizing the present status of Americanization activities.

Publicity Committee: Is a committee of volunteers to help the Secretary in some of the publicity work, principally in preparing and distributing material for publication in technical journals and daily newspapers after authorization by Council. Besides this New York committee, there are twenty-six correspondents in engineering centers scattered over the country to aid in the transmission of information between Engineering Council's office and local societies of engineers.

American Academy of Engineers: Organizers of the proposed Academy sought the support of Engineering Council in securing a charter from the Federal Government. After several conferences and mature deliberation, Engineering Council declined to support the bill before the House of Representatives

Classification and Compensation of Engineers in Railroad and Government Employment: A communication prepared by Engineering Council addressed to the Railroad Wage Commission was presented by the Secretary in person, to a meeting of that Commission in Washington, February 25, 1918. This matter was pursued from time to time, and with that of the compensation of engineers in Government employment is now in the hands of the Public Affairs Committee.

Reconstruction: Under date of November 15, a letter was sent to President Wilson regarding the appointment of engineers on the proposed Federal Reconstruction Commission. To this letter the President replied briefly under date of November 20, that existing instrumentalities were being utilized. Letters to the governors of all states, urging the inclusion of engineers in any reconstruction commissions which might be appointed, were sent out in February 1919.

Field of Activity of Engineering Council was outlined at the November meeting by carefully prepared preambles and resolutions which have been generally announced to engineering societies. (See January, 1919 PROCEEDINGS).

Information to Federal and State Authorities: At its November meeting, Engineering Council expressed its attitude in the following resolution: "That Engineering Council should be prepared to furnish to Federal and State authorities information regarding engineering and allied facts and opinions which are beyond the field of controversy, and shall take such steps as are consistent with the standing of the societies it represents to inform such Federal and State authorities of its willingness so to act."

Smith-Howard Bill for the establishment of engineering and industrial research stations at educational institutions in all the states was discussed at length. While favoring research when properly carried on, Engineering Council refrained from expressing opinion on the proposed legislation in the form in which it was brought to its attention. Council's Washington representatiye was directed to attend a meeting January 6, of delegates from organizations interested in re-drafting the Smith-Howard Bill; a report of this conference was submitted. The parties interested are still widely at variance and there is nothing further for Council to do at present.

Curricula of Engineering Schools. The subject of changes in curricula of engineering schools was discussed in a general way at more than one meeting. It was brought formally to the attention of Council by resolutions adopted by the War Committee of Technical Societies at its final meeting, suggesting that as a measure of future military preparedness engineer students in the large universities and colleges should receive instruction in the art of war. A committee was appointed December 19 to study this matter: This committee has reported.

Council's second year has been one of creditable activity and achievement and it enters its third year stronger and better prepared for larger service.

UNITED ENGINEERING SOCIETIES' LIBRARY REPORT FOR 1918

The annual report of the Library Board of the Engineering Societies' Library for 1918 has recently been issued, from which the following items have been abstracted.

Books: During 1918 the library received by gift 16,258 books and pamphlets, and by purchase 663 books and pamphlets, making on December 31, 1918, the total resources of the library 157,795 publications of which, 135,829 were accessioned, and 21,903 unaccessioned, the latter item including duplicates and unexamined publications.

The most notable of these gifts have been described in the PROCEEDINGS for July, 1918.

At the beginning of the year, the Library Board, in order to distribute the expense for current periodicals equitably among the Founder Societies, adopted the plan of reimbursing each of them at a uniform price, for copies of its publications sent in exchange for the benefit of the Library.

The purchases have consisted of these periodicals and those obtained by ordinary subscriptions, foreign books and some domestic books which could not be obtained as gifts.

Every effort has been made to obtain, by gift or purchase, all important new publications in America, and also to cover the foreign field as thoroughly as the remaining funds and war conditions would permit. The current trade bibliographies of America, England and France have been examined regularly, and the book reviews in current magazines have also been watched. It is believed that no books of importance, published in these countries during the year, have escaped consideration in the selection of the works to be added to the collection.

GENERAL WORK WITH THE PUBLIC

Attendance and Use of Books: The number of visitors during the year was 15,063 and the following figures show the comparative attendance in other years: 1915—12,820, 1916—13,848, 1917—11,371.

The library was open 302 days, and the average daily attendance was 50 persons. The attendance after six o'clock was 19 per cent of the total. The usual hours were from nine a. m. to ten p. m., but an exception was made during July and August, when the Library was closed at six p. m.

Telephone Service: As indicating the demands made by non-visitors, an incomplete record of telephone inquiries shows that over 1500 inquiries have been received in this way. Each of these required attention by an assistant and, in most cases, the consultation of the catalog or of books. The total time spent in attending to these queries is sufficient to call for consideration in estimating the duties performed by the reference attendants, while the persons who receive help in this way form an important addition to those who visit the reading room.

Mail Service: In addition to the mail handled through the Service Bureau, the Library is constantly in receipt of letters asking for information that can be given without extensive investigation No accurate record is kept of these inquiries, several of which arrive each day. During the year approximately 900 have been answered.

SERVICE BUREAU

The most important item to report is that the earnings of the Bureau for the year exceeded its expenses. The work billed to clients amounted to $9,722.46, the expense for labor and supplies to $8,013.14. The net cash receipts during the year were $8,599 66, of which $8,217.96 was for work done during 1918. In addition the Bureau gave to the National Research Council, the Naval Consulting Board and various other organizations assisting the military activities of the country, work which would have cost several hundred dollars, had it been charged at current rates.

The total number of searches made was 508. To an even greater extent than in 1917, the work of the Bureau dealt with the war activities of the country. Work was done for almost every technical bureau of the government, and the Bureau has also been used by the representatives of many of the Allies.

Seventy-eight translations, amounting to 258,080 words, were made, the figures for 1917 being 59 translations of 349,320 words.

Orders for photographic copies, 1150 in number, called for 6306 prints. This is a decided increase over 1917, when 791 orders for 1342 prints were received.

There has been little change in the subscriptions for current card reference service. The number at the end of the year was 53.

A circular describing briefly the assistance offered through the Bureau was printed at the beginning of the year. Over 30,000 copies have been distributed to members of the Founder Societies.

TECHNICAL WORK AND PROCESSES

The work of accessioning and cataloging the Library has been hampered by a number of unavoidable causes. In addition to the fact that the number of employees has been too small to attend the reference desk and have sufficient time left to carry on the other library work properly, there have been frequent interruptions to the regular progress of affairs through the resignation of employees.

As it has not been possible to catalog all the accessions of the year, the books of greatest importance and those most in demand have been given the preference. All of these have been cared for. It is to be regretted however, that it has not been feasible to undertake a thorough revision of the entire catalog. Such a revision would establish the library upon a firm foundation, improve the service, and reduce the cost of attending to readers by lessening the time and individual attention which must be given to them. We hope that sufficient funds for this work may be provided within the near future.

By using cards printed by the Library of Congress, thus utilizing the expert bibliographic skill of its staff, the labor of our catalogers have been conserved for work on our special problems.

PHYSICAL CHANGES

The fourteenth floor was ready for use at the beginning of the year, and was occupied at once, the periodicals and the library of the American Society of Civil Engineers being transferred to it. This left approximately one-half of the twelfth floor vacant, and this vacant space was delivered to the Founder Societies for store rooms.

Although it has been expected that the shelving provided would meet the needs for four or five years, the unusual gifts have absorbed it rapidly, and the provision of more shelving must soon be undertaken. Sufficient space for this is available.

No additions have been made to the furniture of the Library, it having seemed best to postpone purchases until business conditions were more favorable.

STAFF

The staff at the end of the year numbers 16, exclusive of the Director. There have been a number of changes during the year, several members having resigned to accept better paid positions, and two having been inducted into the army.

The present staff is giving intelligent, conscientious service of a high character, to which it is a pleasure to call attention.

ENGINEERING INDEX

Among the plans for increasing the usefulness of the Library, the publication of an index to current literature has always been foremost. Unfortunately, the Founder Societies again feel unable to contribute the necessary funds for this purpose, and it will be impossible to proceed upon a systematic plan during 1919, unless the expenses can be met from some source as yet unknown.

Although we have been unable to undertake the work, its importance has not been forgotten. The subject has been discussed frequently at meetings and has been considered by a committee appointed for the purpose.

Three Founder Societies are now publishing indexes, viz; The American Society of Civil Engineers, The American Institute of Mining Engineers and The American Society of Mechanical Engineers. The first and last of these are compiled by the respective societies, the remaining one by the Service Bureau. A committee is now considering the possibility of consolidating the preparation of two or more of these, under the direction of the Library. Such a consolidation of effort would permit the field to be covered more carefully without increased expense, would tend to standardize the methods used and would form an important step toward the realization of a complete, permanently established index. By some such arrangement it is hoped that the time until the Library is able to have a definite budget for indexing can be tided over without failing to make use of its great possibilities in this direction. The need is one universally recognized by engineers.

FINANCIAL STATEMENT 1918

LIBRARY MAINTENANCE

REVENUE		
Founder Society Contributions	$16,000.00	
Library endowment income	5,000.00	
Total Library appropriation		$21,000.00
EXPENDITURES		
Salaries	$15,137.59	
Books and binding	3,906.13	
Supplies and Misc. expenditures	1,505.78	
Equipment	120.00	
Total expenditures		$20,669.50
Excess of appropriation over expenditures		$330.50

SERVICE BUREAU

EARNINGS		
Cash received	$8,217.96	
Outstanding bills	1,504.50	
Total gross earnings as charged on books		$9,722.45
EXPENDITURES		
Salaries	$6,575.24	
Supplies	1,437.90	
Total expenditures		$8,013.14
Net Earnings		$1,709.32
CASH STATEMENT		
Cash received		$8,813.30
On account due depositors		213.64
Net cash receipts		$8,599.66

PAST SECTION MEETINGS

Baltimore.—February 14, 1919, Engineers' Club. Paper: "Electrical Communications in War Times" by E. B. Craft. Paper illustrated with lantern slides. Joint meeting with local sections of Civil, Mechanical and Chemical Engineers, and the Engineers' Club. Attendance 110.

Chicago.—February 24, 1919, Western Society of Engineers' Rooms. Illustrated address by Mr. John B. Taylor on "Accoustical Engineering." Attendance 200.

March 14, 1919. Special meeting to discuss various problems to be taken up by Committee on Development. Attendance 35.

Cleveland.—February 17, 1919, Electrical League. Illustrated address by Mr. H. L. Bradley on "The Development of Carbon Pile Rheostat for Battery Charging and Motor Control." Attendance 49.

Detroit—Ann Arbor.—February 28, 1919, Detroit Board of Commerce. Paper: "Alternating Current Generators" by Prof. John C. Parker. Attendance 61.

Fort Wayne.—March 7, 1919, G. E. Assembly Room. Lecture by Major Darnell on "The X-Ray and Its Application to War Uses." Attendance 125.

Indianapolis —Lafayette.— February 11, 1919, Athenaeum. Papers: (1) "Trench Warfare Ammunition" by Lieut. B. P. Lyons; (2) "Development in Signal Corps Apparatus during the War" by Emerson Pugh. Attendance 42.

Ithaca.—February 7, 1919, Franklin Hall, Cornell University. Illustrated lectures as follows— (1) "Airplane Performance" by Prof. Frederick Bedell; (2) "Some Recent Developments in Radio Communication" by Prof. W. C. Ballard. Attendance 200.

Los Angeles.—February 25, 1919, Edison Assembly Hall. Papers by Messrs. J. N. Kelman and Carl Johnson on "The Future of Electrical Manufacturing in Southern California." Brief address by Mr. Paul M. Lincoln on "The Work of the Development Committee." Attendance 39.

Lynn.—March 5, 1919, General Electric Hall. Illustrated lecture by Mr. L. E. Underwood on "Machine Guns and Their Development." Attendance 165.

Milwaukee.—February 19, 1919, Milwaukee Athletic Club. Addresses as follows—"Activity of the Engineer in Civic Affairs" by William Bruce; "The Method of Assembling Steel Ships" by George Newton. Attendance 135.

Minnesota.—January 30, 1919, University of Minnesota. Paper: "Electric Furnaces" by L. H. Berry. Attendance 115.

Panama.—January 26, 1919, Balboa Heights. Paper: "The Uses of the Telephone Repeater in Long Distance Transmission" by J. T. Thibault. Attendance 32.

February 22nd, 1919. Annual outing and beach party at Taboga Island, and dinner at Hotel Aspinwall. Attendance 60.

Philadelphia.—February 10, 1919, Engineers' Club. Illustrated lecture by Dr. Joseph W. Richards on "The Importance of the Electrochemical Industry." Attendance 90.

March 10, 1919, Engineers' Club. Illustrated lecture by Lieut. Col. J. W. Hubbell on "Field Communication, 1st Army Corps, A. E. F." Attendance 190.

Pittsfield.—February 14, 1919, New American Hotel. Illustrated lecture by Dr. Ellwood B. Spear on "Problems of Gas Warfare." Attendance 125.

February 27, 1919, Masonic Temple. "A Trip to California," lecture and pictures by Mr. John B. Crum of U. S. Railroad Administration. Attendance 675.

Saint Louis.—February 26, 1919, Engineers' Club. Paper: The Development of the Electric Furnace" by W. E. Moore, presented by Mr. G. A. Waters. Attendance 72.

San Francisco.—February 7, 1919, Engineers' Club. Paper: "Unification of Manual and Automatic Telephone Systems at Los Angeles" by B. E. Wiseman. Attendance 65.

Schenectady.—February 28, 1919, Edison Club Hall. Subject: "Automatic Generating Stations and Substations." Speakers: Messrs. H. R. Summerhayes, C. M. Davis, L. B. Bonnett, A. G. Darling, C. M. Hackett. Attendance 300.

March 7, 1919, Edison Club Hall. Illustrated lecture by Dr. C. P. Steinmetz on "Soap Bubbles." Attendance 294.

Seattle.—February 18, 1919, Arctic Club. Paper: "The X-Ray" by Mr. Coward. Discussion by Dr. C. E. Magnusson, and Messrs. G. E. Quinan and J. D. Ross. Attendance 30.

Spokane.—February 21, 1919, Chamber of Commerce. Paper: "A Plan for the Development of Our National Power Resources" by C. E. Magnusson. Attendance 49.

Toronto.—February 21, 1919, Engineers' Club. Paper: "The Business Relations of the Engineer" by Frank R. Ewart. Attendance 50.

March 7, 1919, Engineers' Club. There was a general discussion on "The Future Organization of Electrical Engineers in Canada." Attendance 45.

Urbana.—February 26, 1919, University of Illinois. Paper: "The Measurement of Small Alternating Current by Means of an Acoustical Resonator" by Dr. F. R. Watson. Attendance 25.

Washington.—March 11, 1919, Cosmos Club. Illustrated address by Mr. C. A. Kelsey on "The Manufacture of Sugar." Attendance 142.

PAST BRANCH MEETINGS

University of Arkansas.—March 6, 1919. Address by Dr. Harrison Hale on "The Opportunities of the Engineer of Today." Attendance 32.

Armour Institute.—February 20, 1919, Electrical Lecture Room. Illustrated lecture by Mr. Charles H. Jones on "Automatic Substations." Attendance 30.

March 13, 1919. Illustrated lecture on "The Message of the Curtis Steam Turbine." Attendance 24.

Carnegie Institute of Technology.—March 12, 1919, Machinery Hall. Illustrated address as follows—(1) "Glimpses of France from the Airplane" by Lieut. G. L. Tillbrook; (2) "In France with the Engineers" by Lieut. J. H. Waxman. Election of Mr. H. C. Nordfeldt as secretary to fill vacancy caused by resignation of Mr. E. F. Shumway. Attendance 30.

University of Cincinnati.—February 28, 1919, Engineering Building. Paper: "Automatic Fuse Testing at the National Cash Register Company's Plant" by Earl Flatt. Attendance 43.

March 13, 1919, Engineering Building. Address on "Some of the Work being done by Means of the Oscillograph at the University of Cincinnati." Attendance 41.

University of Colorado.—February 21, 1919. Mr. H. H. Kerr spoke on "The Construction of the Lacombe Plant of the Denver Gas and Electric Company." Attendance 25.

University of Maine.—March 5, 1919. Address by Mr. Davis on "The System of the Bangor Railway and Electric Company." Mr. F. A. Tracy gave a talk on his work during the summer. Attendance 36.

Massachusetts Institute of Technology.—January 22, 1919. Paper: "Mechanical Analogies of Electrical Phenomena" by Prof. W. S. Franklin. Attendance 70.

February 5, 1919. Paper: "Labor Conditions in America After the War" by N. H. Daniels. Attendance 100.

March 7, 1919. Illustrated lecture on the "Edison Distribution System" by L. L. Elden. Attendance 36.

University of Minnesota.—March 5, 1919, Engineering Auditorium. Addresses as follows—(1) "Illumination" by Prof. Shepardson; (2) "Manufacture of Incandescent Lamps" by Mr. Petty. Attendance 43.

University of Missouri.—February 17, 1919, Engineering Building. Paper: "Electrical Machinery for Coal Mines" by L. P. Van Houten. Attendance 23.

March 3, 1919, Engineering Building. Papers: (1) "Limitations of High Tension Transmission" by G. B. Cox; (2) "Water Power Conservation" by R. C. Morris. Attendance 20.

University of Nebraska.—March 6, 1919, Electrical Engineering Building. Illustrated address by Mr. O. P. Reed on "The Use of the Audion Tube in Radio Work." Attendance 48.

Ohio Northern University.—February 20, 1919, Dukes Memorial. Papers: (1) "High Voltage Transmission" by C. K. South; (2) "Telephones" by W. L. Lynde. Attendance 12.

Ohio State University.—February 21, 1919, Robinson Laboratory. Papers: (1) "Experiences in the Air Service and Light Artillery" by Lieut. C. E. Shilling; (2) "Automatic Substations and Their

Control" by H. E. Lockett. Attendance 15.

Purdue University.—February 18, 1919, Electrical Building. Illustrated address by Mr. K. B. McEachron on "The Experimental Laboratory Method to Meet the Demand of Nitrates Since the War." Attendance 85.

Throop College of Technology.—February 24, 1919. Address by Mr. Ford W. Harris on "Patents and Patent Laws." Attendance 200.

March 3, 1919. Address by Mr. Paul M. Lincoln on "Modern High Tension Transmission." Attendance 200.

State College of Washington.—March 7, 1919, Mechanic Arts Building. Paper: "The Nine Mile Power Plant" by G. Bodwell. Election of officers as follows—chairman, Joseph L. Williams; vice-chairman, Nelson E. Lytle; secretary, Glen G. Langdon; treasurer, H. C. Vance; reporter, I. W. Vander Heyden. Attendance 26.

University of Washington.—March 4, 1919, Forestry Building. Paper: "Commercial Radio Sets" by A. C. Miller. Attendance 12.

ASSOCIATES ELECTED MARCH 14, 1919

*ABBOTT, AMOS H., Staff Engineer, St. Paul Gas Light Co., St. Paul, Minn.

ABRAHAMS, SAMUEL LIONEL, Production Engineer, General Electric Co., Lynn; res., 223 Harvard Ave., Allston, Mass.

ALMQUIST, FRANK G., Vice-President & Treasurer, Lockwood & Almquist, Inc., 112 E. 19th St., New York, N.Y.

*BAKKE, THROAN T., Asst. Foreman, Testing Dept., General Electric Co., Schenectady, N. Y.

BARRETT, CHARLES F., Chief Electrical Inspector, U. S. A. Base, Q. M. C., 187 Waverly Ave., Brooklyn, N. Y.

BARROWS, L. DWIGHT, Engineering Dept., American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

*BEHR, HERBERT RICHARD, Testing Engineer, Commonwealth Edison Co.; res., 1622 Sherwin Avenue, Chicago, Ill.

BERGER, S. A., Manager, Meter Section, Supply Dept., Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.

BLIZIOTIS, GEORGE E., Radio Electrician, Westinghouse Elec. & Mfg. Co.; res., 58 Plane St., Newark, N. J.

BODDE, THEODORE, Electrical Engineer, General Electric Co., Lynn; res., Marblehead, Mass.

ASSOCIATES RE-ELECTED MARCH 14, 1919

BENSON, MELVIN BERNARD, Benson Electric Company, Superior, Wis.

DRESSNER, VICTOR D., Electrical Asst., Testing Bureau, Brooklyn Rapid Transit Co., 500 Kent Ave., Brooklyn, N. Y.

MAYNARD, CLOYD TABOR, Asst. Electrical Engineer, Rumford Falls Power Co., Rumford, Maine.

O'DONOHOE, JAMES P., Division Elec. Engineer, Postal Telegraph Co., 253 Broadway, New York, N. Y.; res., E. Orange, N. J.

OLNEY, WILLIAM M., Equipment Engineer, New York Telephone Co., Long Island Division; res., 409 Clinton St., Brooklyn, N. Y.

SHERWOOD, WILLIAM RAYMOND, Engineer, American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

MEMBERS ELECTED MARCH 14, 1919

BASCOM, HENRY MELVIN, Telephone Engineer, American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

*CLARK, ALVA BENSON, Engineering Dept., American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

CLARK, BRIGGS LYMAN, Electrical Division, Bethlehem Shipbuilding Corp.; res., 326 Elmwood Road, Bethlehem, Pa.

COURSER, CHARLES H., Chief Engineer, Texas Gas & Electric Co., 417 Commercial Natl. Bank Bldg., Houston, Texas.

DOHERTY, W. F., Chief Engineer of Generation, Tata Hydro-Electric Power Supply Co., Bombay, India.

FOLK, GEORGE E., General Patent Attorney, American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

*HOPKINS, RAYMOND A., Electrical Engineer, Stone & Webster, 147 Milk St., Boston, Mass.

Jacob, Arthur, Engineer, British Aluminum Co. Ltd., London; Director, London Aluminum Co. Ltd., Birmingham, England.

Klopsteg, Paul Ernest, Sales Dept., Leeds & Northrup Co., 4901 Stenton Ave., Philadelphia; res., Glenside, Pa.

Marshall, R. C., Jr., Brigadier-General, Chief of Construction Div., U. S. A.; res., The Farnsboro, Florida & Decatur Sts., N. W., Washington, D. C.

Mills, Nathaniel Child, Designing Engineer, Canadian General Electric Co.; res., 595 Chamberlin St., Peterboro, Ont.

Taylor, Alfred Mills, Major, Air Force, British Army, London, W. C.; res., Slade Lodge, Erdington, Birmingham, England.

TRANSFERRED TO GRADE OF FELLOW, MARCH 14, 1919

Frank, John J., Asst. Engineer, Transformer Dept., General Electric Co., Pittsfield, Mass.

TRANSFERRED TO GRADE OF MEMBER, MARCH 14, 1919

Bush, Vannevar, Consulting Engineer, American Radio & Research Corp., Medford Hillside, Mass.

Coates, William A., Chief Engineer, Detail Dept., British Westinghouse Electric & Mfg. Co. Ltd., Trafford Park, Manchester, England.

Dubilier, William, Consulting Engineer, New York, N. Y.

Harbin, George F., Electrical Engineer, Washington Terminal Co., Washington, D. C.

Scott, Carl F., Manager, Specialty Apparatus Sales, Sprague Electric Works, New York, N. Y.

Simon, Emil J., Radio Engineer, New York, N. Y.

CORRECTION
TRANSFERRED TO GRADE OF MEMBER FEBRUARY 19, 1919

Tappan, Frank Girard, Acting Director of School of Elec. Engg., Supervisor of Vocational Training, Univ. of Oklahoma, Norman, Okla., was transferred to Grade of Member on February 19, 1919 and not elected to that grade as indicated in the Proceedings of March, 1919.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on March 10, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Member

Dobson, William P., Laboratory Engineer, Hydro Electric Power Commission of Ontario, Toronto, Ont.

Merrill, J. L., Power Specialist, Division Ship Yard Plants, Emergency Fleet Corp., Philadelphia, Pa.

Slocum, Winthrop W., Pittsburgh, Pa.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before April 30, 1919.

PERSONAL

Ralph Elsman has just been elected Vice-President of the Kings County Lighting Company, Brooklyn, N. Y. Mr. Elsman has been General Manager of the Company which office he still retains and his elevation to the Vice-Presidency comes as a recognition of his splendid service for the Company.

Barzillai G. Worth, Vice-President (and formerly electrical engineer) of Walter Kidde & Co., Inc., has been elected Treasurer of the Monmouth Chemical Company and will have charge of the manufacturing and research. This company produces potassium chlorate electrolytically, use-ing processes and apparatus developed by Mr. Worth.

D. W. **Blakeslee**, Electrical Engineer, formerly Asst. Supt. of the Penn. Elec. & Mfg. Co., has, after serving about two years as First Lieutenant, 56th Engineers, A. E. F., returned to his civil occupation with the Jones & Loughlin Steel Co., Pittsburgh, Pa. Mr. Blakeslee while in France did experimental and development work in connection with anti-aircraft searchlights and sound ranging applications. He now makes a speciality of mill and factory lighting and power applications.

OBITUARY

Archie Oakes, Electrical Engineer for the Schwarze Electric Company, Adrian, Michigan, was fatally injured in a street car collision in Detroit on February 25, 1919. Mr. Oakes became an Associate in the Institute in 1914.

Withold Lesniewski, Electrical Engineer, died of influenza at Pittsburgh on October 19, 1918. Mr. Lesniewski at the time of his death was connected with the Russian Mission of Ways of Communication, New York. He was formerly Assistant Power Expert with the Emergency Fleet Corporation at Philadelphia. He was elected an Associate in the Institute in 1918.

James M. Poyner, Electrical Engineer, for ten years connected with the Baltimore office of the General Electric Company died of influenza at Charleston, West Virginia on March 3, 1919. Mr. Poyner was a graduate of Auburn College of Alabama and was a member of the Engineer Club of Baltimore. He was elected an Associate in the Institute in 1916.

James A. MacQueen an associate member of the Institute died of influenza on February 23, 1919 at Winnipeg, Manitoba. At the time of his death Mr. MacQueen was with the Winnipeg Electric Railway Company as electrical draftsman and construction foreman.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in the Bulletin. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office reference files.

Note.—Copy for publication in the Bulletin should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

OPPORTUNITIES FOR SERVICE

V-494. Power company in Nebraska requires services of young engineer experienced in underground cables and structure. Alternating current. Salary to start about $115. per month. Give age, experience and references.

V-495. Wanted-Branch Sales Manager, thirty-five to forty-five years of age; aggressive, executive type, qualified to command attention of large interests; experienced in ball bearing, automobile or tractor fields. Duties: In charge of younger sales engineers; will visit the trade when necessary, keeping in touch with field conditions. Salary commensurate with ability; name what desired.

V-496. Electrical engineer, thirty to thirty-five, in rapidly growing company in Detroit, manufacturing electrical devices, to take full charge of engineering department, including development, design and drafting, production engineering and tool designing. Must be aggressive and able to get results. Experience in modern manufacturing methods and technical training essential. Three to four thousand per year, depending upon qualifications. State experience, education and salary wanted.

V-497: Wanted—A competent research engineer in problems relating to radio telegraphy. Must be technical graduate from engineering college and have had considerable practical experience in radio engineering problems after graduation. Send credentials and resume of technical experience.

V-498. Wanted—Salesman to sell small electric motors in Middle West. Also a salesman to sell motor-generators.

V-499. Technical graduate with sales ability. Should have experience in operation of direct current motors and generators. Excellent opportunity for advancement. State experience and salary expected. Location, Cleveland, Ohio.

V-500. Graduate electrical engineer, one or two years construction experience to supervise installation of oxy-hydrogen electrolytic plants and train operators. Part time on road, all expenses paid. Salary to start $100.-$125. per month. Headquarters near New York.

V-501. Electrical engineer for installation and maintenance, large manufacturer in Ohio. A-1 man, 30 to 35 years of age. Salary between $3000. and $5000. In reply give complete record of experience and salary desired.

Junior Electrical Engineer (male), ($1080.-$1200.), Bureau of Mines, Dept of Interior, for duty at Pittsburgh, Pa., or elsewhere. The United States Civil Service Commission announces open competitive examinations for this position and positions requiring similar qualifications. Examination May 7, June 4, and July 9, 1919. Applicants should at once apply for Form 1312, stating title of examination desired, to Civil Service Commission, Washington, D. C.

SERVICES AVAILABLE

1203. Electrical Engineer. Technical graduate, twenty-seven years old, married, four years' experience in charge of experimental laboratory in technical college and with large electrical company, desires responsible position with company offering wide experience in electrical engineering. At present in charge of developing and testing electrical apparatus. Salary $3000.

1204. Electrical engineer, university graduate, at present electrical officer in U. S. N. R. F., available for technical executive position on reasonable notice. Six years broad technical experience. Proven ability in inventive and development work. Age 28. Associate A. I. E. E. Excellent references regarding ability, fitness and character.

1205. Mechanical and electrical engineer wishes engagement by American corporation in reconstruction work in France. Forty-three years of age, married, four years steamship engineer experience, seven years superintendent of hydroelectric plant. Wide all-round practical experience. Speak and correspond English, French and Spanish. Engaged at present, but available May 1.

1206. Electrical engineer, married, age twenty-eight years. Eight years' experience as cable engineer in large electric cable manufacturing plant. Thoroughly familiar with construction methods of manufacture, design and testing of rubber, varnished cambric and paper insulated power cables, also submarine telephone and telegraph cables.

1207. Electrical graduate, G. E. test and commercial experience desires position as office assistant in commercial or engineering office of manufacture. Honorably discharged from Army.

1208. Practical engineer who has had complete charge of a 4000 H. P. aviation motor manufacturing plant during the war, wishes to get back into construction work. Ten years experience. Familiar with labor conditions. Will go anywhere. Has erected modern electric power apparatus of all kinds. Present salary $3300. per year.

1209. Electrical engineer returning to England in May. Thirteen years experience with design, construction and operation of A-C. and D-C. power plants and distribution systems, expert draftsman; five years shop experience; accustomed to handling men; desires position as operating engineer or superintendent of construction. Married, age 35, salary $2000.

1210. Mechanical and electrical engineer, age 34. Experienced in directing design and construction of power, mining and metallurgical plants in the

Southwest and Mexico. Available April 1. Salary $300. per month.

1211. Electrical engineer, eight years practical experience in constructing, operating and designing central stations and substations, high-tension equipment, etc. Seven years teacher of electrical subjects. Capable of taking charge of design of high-tension hydroelectric or steam driven plants. Salary $3500.

1212. Returning from France a Captain of Engineers. Associate A. I. E. E., member A. I. M. E. Thirty-five years old, unmarried, technical education. Last six years of civil life as chief electrician, master mechanic and superindendent of construction with two medium size mining companies. Immediately available.

1213. Executive Engineer. Extensive experience in construction and operation of power plants, high-tension work and power applications. Desire position where executive ability and engineering experience are required. Foreign position considered. Minimum salary $6000. per year.

1214. Member A. I. E. E., 28 years old, graduate (1914) of electrical engineering course, desires position, preferably power or construction work. Three years in testing department of large central station company, six months experimental work in electric welding, thirteen months electrical work in Navy as lieutenant (junior grade). Working knowledge of French.

1215. Graduate electrical engineer, four years telephone, one year radio work, 27 years of age, single, desires opportunity in manufacturing, installation or construction work requiring executive ability and handling of men. Minimum salary $2000.

1216. Captain United States Army expects early separation from the service. Technical graduate in electrical engineering with several years' experience in operating and commercial work with Public Service light and power corporation. Two years military service as personnel officer supervising selection of men and organization of the Army. Position desired as employment supervisor or commercial and sales engineer.

1217. Technical graduate, four years experience in electrical contracting as field and office engineer; on industrial light and power installations, desires permanent position where changes of advancement are unlimited. Have thorough business as well as electrical experience. Salary $1600.

1218. Electrical engineer, 31, college graduate 1911, 1st Lieut. S. C., just discharged after fourteen months in France, desires position. Expert on power transmission line, substation and distribution system design, construction, operation and maintenance. Other valuable engineering and business experience. Conversant with public utility operating methods. Minimum salary $2400.

1219. Executive Engineer or Assistant Manager. Graduate electrical and mechanical engineer, age 30, experienced in power plant and substation construction, operation and maintenance; organization; appraisal engineering; steel mill operation and machine shop practice. Executive ability and can handle men. Recently released, Lieutenant, U. S. N. Position as executive engineer or assistant manager with opportunity for advancement. Salary $3600. to $4000. Eastern location preferred.

1220. Graduate in electrical engineering, correspondence school course. Eight years in charge electrical construction for engineering firm; two years operating in substation; two years power plant operation. Desires position where past experience may be of service.

1221. Electrical engineer, age 32, technical graduate with degrees B. S. and M. S. Post graduate at Massachusetts Institute of Technology. Finished Westinghouse apprenticeship, then had six years experience in operating, inspecting, station and substation design with large operating company. Desires position in Philadelphia.

1222. Graduate electrical engineer, age 30, married, two years testing department, one year engineering department, General Electric Company. Three years engineering department large power company on transmission, substation and power engineering. At present professor of electrical engineering in recognized technical school. Wish position in engineering department of power or electric railway company.

1223. Electrical, mechanical engineer, ten years experience in research, design and testing of mechanical and electrical devices and machines, also wireless telegraphy experience and power plant, wants a responsible position in engineering department laboratory of factory organization. Speaks four languages.

1224. An electrical engineer experienced in the management of public utilities wishes to correspond with a company requiring a manager.

1225. Army Captain. Technical graduate having had twelve years of varied engineering and executive experience, desires to connect with manufacturing concern, financial institution, or technical publication. Would be particularly valuable to a concern interested in making engineering studies and reports regarding physical conditions and values of properties.

1226. Technical graduate, seven years practical experience, desires position upon release from duty. At present assistant inspector (electrical) in office of the Inspector of Engineering Material, U. S. N. Familiar with manufacture of cable, electrical machinery, measuring instruments, wireless apparatus and electrical material in general. Familiar methods of production and routing of material. Age 26. Married. Good personality, highest references. Minimum salary $1800.

1227. Technical graduate. Electrical engineer. Eight months with central station company, meter work, laboratory research. One year with electrical manufacture testing, inspection, experimental work. Graduate signal corps school for radio engineering, Yale University. Desires position with opportunity for advancement.

1228. Graduate electrical engineer, recently discharged from Army, one years' experience testing, general manufacturing and office work withWestinghouse Elec. & Mfg. Co. One year as engineer with Westinghouse and the Signal Corps. Age 26.

1229. Erecting engineer, technical graduate, married, age 28, available July 1st. At present Major, A. G. D., U. S. A., in charge of demobilization of fifteen states. Over 7 years practical experience as consulting construction engineer. Thoroughly familiar with lay-outs, right-of-ways, appraisals and reports, knowledge of French, Bohemian, Russian. American born. Desires position abroad as erecting engineer in power plants and high tension transmission lines. Minimum salary $5000.

1230. Live Wire—Electrical engineer and lawyer wants permanent position as executive engineer, manager or purchasing agent large corporation. Now Captain U. S. Army supervising construction and operation $100,000,000 war plants. Nine years experience power house and electrical railroad, design, construction and operation. Important investigation, contracts, specifications, purchases.

1231. Officer about to be discharged, experienced in induction motor installation, operation, emergency repair and maintenance. Three years experience in large industrial plant in charge of above work at entry in military service. Technical graduate, degree, age 26, unmarried, can go anywhere.

1232. Member A. I. E. E., Member A. S. M. E., age 39. Fifteen years experience covering all branches of electrical and mechanical engineering for industrial and power plants, electrical distribution systems, tests, investigations and reports. At present employed as electrical engineer in War Department. Can be released shortly.

1233. Superintendent of Power or Chief Engineer, twelve years experience with most complicated operating conditions of street railway, lighting and power, high tension transmission and steam heating; specialized in economic combustion of coal and boiler-room problems. Available June 1.

1234. Electrical and mechanical engineer, graduate, seven and one-half years practical experience from Westinghouse apprentice to assistant master mechanic and engineer of equipment interurban electric railway (four and one-half years) manufacturing own rolling stock; one and one-half years foreman electrical construction; Army engineer one year. Associate A. I. E. E. Experienced in handling men. Age 31. Married. Desires position as electrical engineer or chief electrician. Salary $175.

1235. Graduate electrical engineer desires opportunity in teaching or with firm of engineers. Has completed post graduate university course of three years, taught three years as a member of the electrical engineering faculty of large American university, practical engineering five years. Especially qualified to direct research, technical investigations and pioneer engineering. Mar gations and pioneer engineering. Marked success in handling men.

1236. Hydroelectric engineer, college graduate, Member A. I. E. E., Associate Member A. S. C. E., 37 years old. Wide experience in design and construction of medium and high head plants, including hydraulic and electrical features and electrical application to mines. South American experience; reports, estimates and tests. Salary $4000. in U. S. A.

1237. Electrical engineer, technical graduate, single, has eight years of power generation, control, distribution and illuminating engineering experience, desires permanent connection. Possess initiative and executive abilities. Until recent date with War Department, Construction Division, Washington, D. C. Associate A. I. E. E. and I. E. S.

ACCESSIONS TO THE ENGINEERING SOCIETIES LIBRARY

(From February 1st to February 28, 1919)

Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All books listed may be consulted in the Engineering Societies Library.

THE ELEMENTS OF WOODEN SHIP CONSTRUCTION.

By W. H. Curtis. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 223 pp., 199 illus., 9 x 6 in., cloth, $2.50.

A revised and enlarged edition of a course prepared for the Education and training Section of the Emergency Fleet Corporation. It is intended for the use of carpenters and others who, though skilled in their work, lack the detailed knowledge of shipbuilding necessary for efficiency.

FIGHTING THE BOCHE UNDERGROUND.

By H. D. Trounce. N. Y., Charles Scribner's Sons, 1918. 234 pp., 7pl., 1 por., 1 diag., 8 x 5 in., ¼ cloth, $1.50. (Gift of author).

Captain Trounce, an American mining engineer, enlisted in the Royal Engineers in 1915, and transferred to the Engineer Reserve Corps of the American army in 1917. His book is a description of the underground fighting in which he participated in Flanders, at Arras, Vimy Ridge and elsewhere.

INDUSTRY AND HUMANITY.

A Study in the Principles Underlying Industrial Reconstruction. By W. L. Mackenzie King. Boston and N. Y., Houghton Mifflin Company, 1918. 567 pp., 10 charts, 8 x 6 in., cloth, $3.

This volume by the former Minister of Labor of Canada is a statement of the underlying principles which are finding expression in the organization of industrial society and which should obtain in all efforts at reconstruction. The book is based on the author's twenty years of personal contact with labor problems, supplemented by a study of the literature of the subject.

INSTINCTS IN INDUSTRY.

A Study of Working-Class Psychology. By Ordway Tead. Boston and N. Y., Houghton Mifflin Company, 1918. 222 pp., 8 x 5 in., cloth, $1.40.

With the idea of contributing to a better understanding of people in their capacity as manual workers, Mr. Tead has analyzed in turn the ten basic instincts on which our life and conduct rest, has shown how each affects the worker's relation to his job, and how each must be studied and used in the task of attaining sound relations between the employer and the employed.

THE INSTRUCTOR, THE MAN AND THE JOB.

A Hand Book for Instructors of Industrial and Vocational Subjects. By Charles R. Allen. Phila. and Lond., J. B. Lippincott Co., (copyright 1919). 373 pp., 8 x 5 in., cloth, $1.50.

The author, who has been Agent for Industrial Training for the Massachusetts Board of Education, and Superintendent of Instructor Training for the Emergency Fleet Corporation, gives the result of his experience in this volume, which is intended as a handbook for instructors in industrial plants and as instruction notes in training courses for instructors.

JOHNSON'S MATERIALS OF CONSTRUCTION.

Rewritten by M. O. Withey and James Aston. Edited by F. E. Turneaure. 5th edition. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 840 pp., illus., 1 pl., 1 por., tab., 9 x 6 in., cloth, $6.

As the progress of the past twenty years in the knowledge of the properties of materials made Professor Johnson's book an inadequate account of the subject, it has been rewritten under the editorship of his successor at the University of Wisconsin.

The authors have aimed to retain the broad scope of the original work as a statement of the essential information concerning the sources, manufacture or fabrication of the principal materials, their more important mechanical and physical properties and the influences of various factors upon them, the causes of defects and variations, the methods of testing and their general uses.

The arrangement of the book is new and some changes have been made in its scope. Obsolete matter has been eliminated and modern data substituted. The volume is intended to serve both as a textbook and as a work of reference.

1919 RECORD OF AMERICAN AND FOREIGN SHIPPING, NEW YORK:

Published by the American Bureau of Shipping, "American Lloyds." N. Y., 1919. 1056 pp., 10 x 10 in., morocco.

The 1919 Record presents no change in form from previous years. It provides a record of American and foreign vessels, classified according to the rules of the Bureau, and is endorsed by the Navy Department and the boards of marine underwriters of New York, Boston and San Francisco.

In addition to the list of vessels, there are lists of owners, marine underwriters' representatives, surveyors, machinery constructors, dry docks, marine railways and ship builders. An index of changed names is also included.

OUR NATIONAL FORESTS:

A Short Popular Account of the Work of the United States Forest Service on the National Forests. By Richard H. Douai Boerker. N. Y., The Macmillan Company, 1919. 238 pp., 80 illus., 8 x 5 in., cloth, $2.50.

CONTENTS: The Creation and Organization of the National Forests; The Administration of the National Forests; The Protection of the National Forests; The Sale and Rental of National Forest Resources; Appendix:—Table of Land Areas within the National Forest Boundaries, June 30, 1917.

The author presents a well-illustrated account of our national forest problem and of the work of the Forest service. Written in popular form and based largely on his personal experience and observation.

PETROLEUM REFINING:

By Andrew Campbell, with a foreword by Sir Boverton Redwood. Lond. Charles Griffin and Co., Ltd., 1918. 277 pp., 138 illus., 29 folding pl., 3 diag., 11 tab., 9 x 6 in., cloth, $8.50.

This volume, the only book in English devoted soley to the subject, describes the ordinary methods used to prepare marketable products from petroleum, except "cracking" methods. The work is based on extended practical experience, is well supplied with illustrations and drawings and includes a bibliography.

PHYSICS FOR TECHNICAL STUDENTS. SOUND, LIGHT, ELECTRICITY AND MAGNETISM.

By William Ballantyne Anderson. 1st edition. N. Y., McGraw-Hill Book Company, Inc.; Lond., Hill Publishing Co., Ltd., 1919. 794 pp., 373 illus., 9 x 6 in., cloth, $3.

This book completes the author's textbook of physics. the first part of which has been published previously under the title: "Mechanics and Sound". The writer has aimed to produce a college text especially suitable for students of agriculture and engineering, in which particular attention is directed to practical applications of the subject.

PRACTICAL SHIP PRODUCTION:

By A. W. Carmichael. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 52 pp., 101 illus., 9 x 6 in., cloth, $3.

The purpose of this book is to serve as an introduction to the subject by presenting the most important general principles of ship design and describing the various processes of shipbuilding. The treatment is practical rather than theoretical and matters of construction are more fully considered than problems of design.

THE RUDDER DIRECTORY:

A Trade List of Shipbuilding and Marine Industries. Compiled and issued by The Rudder Publishing Company. N. Y., 1919. 332 pp., 1 pl., 9 x 6 in., cloth, $5.

Included in this directory are lists of the steel, wood, composite and concrete shipyards, with the names of their officers, ship and engine repair plants, dry docks and marine railways, owners and operating companies, marine insurance companies, boat builders, engine builders, ship chandlers and manufacturers of equipment, parts, etc. A supplement, revised to Feb. 6, 1919, brings the data concerning the U. S. Shipping Board and the Emergency Fleet corporation up to date.

THOMAS' REGISTER OF AMERICAN MANUFACTURERS AND FIRST HANDS IN ALL LINES:

N. Y., Thomas Publishing Co., (copyright 1919) 4200 pp., 12 x 10 in., cloth, $15.

The tenth edition of this well-known trade directory is dated "October" as usual, although corrections were made up to December twentieth. The directory is divided into various lists, the chief one being a carefully classified list of manufacturers in all lines, subclassed geographically and provided with an extensive index to the classification. Other lists are of representative banks, boards of trade, chambers of commerce, etc., trade papers, leading trade names and an alphabetical list of manufacturers. The volume contains 4200 pages of information, conveniently arranged for quick consultation.

OFFICERS AND BOARD OF DIRECTORS 1918-1919

President

Comfort A. Adams

Junior Past-Presidents

H. W. Buck
E. W. Rice Jr.

Vice-Presidents

W. B. Jackson
Raymond S. Kelsch
F. B. Jewett
John B. Taylor
A. H. Babcock
Harold Pender

Managers

C. E. Skinner
John B. Fisken
N. A. Carle
Charles S. Ruffner
Charles Robbins
E. H. Martindale
Walter A. Hall
William A. Del Mar
Wilfred Sykes
Walter I. Slichter
G. Faccioli
Frank D. Newbury

Treasurer

George A. Hamilton

Secretary

F. L. Hutchinson

*GENERAL STANDING COMMITTEES.

Chairmen

Executive, Comfort A. Adams
Finance, N. A. Carle
Meetings and Papers, W. I. Slichter
Editing, Henry H. Norris
Safety Codes, Farley Osgood
Board of Examiners, F. L. Rhodes
Sections, Walter A. Hall
Student Branches, C. Francis Harding
Membership, H. A. Pratt
Public Policy, Calvert Townley

Chairmen

Headquarters, N. A. Carle
Electrical Engineering Service, William A. Del Mar
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering
Standards, L. T. Robinson
Board's Committee on Technical Activities, Wilfred Sykes

*TECHNICAL COMMITTEES

Chairmen

Power Stations, Philip Torchio
Transmission and Distribution, Edward B. Meyer
Traction and Transportation, C. F. Uebelacker
Industrial and Domestic Power, A. G. Pierce
Lighting and Illumination, C. E. Clewell
Economics of Electric Service, William B. Jackson
Protective Devices, D. W. Roper

Chairmen

Electrochemistry and Metallurgy, Carl Hering
Electrophysics, F. W. Peek, Jr.
Telegraphy and Telephony, Donald McNicol
Marine, H. A. Hornor
Use of Electricity in Mines, K. A. Pauly
Iron and Steel Industry, Eugene Friedlaender
Electrical Machinery, Alexander M. Gray
Instruments and Measurements, S. G. Rhodes
Educational, V. Karapetoff

*INSTITUTE REPRESENTATION ON

Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education
Council of American Association for the Advancement of Science
Advisory Board of American Year-Book
U. S. National Committee of the International Illumination Commission
National Joint Committee on Overhead and Underground Line Construction
American Committee on Electrolysis
Engineering Council
Electrical Engineering Section of Engineering Division, National Research Council
Engineering Foundation Board
Naval Consulting Board
American Engineering Standards
Commission of Washington Award
Pan-American Engineering Committee

---

*A complete list of the officers, committees and representatives of the Institute will be found in the January, 1919, issue of the Proceedings.

LIST OF SECTIONS

Chairmen and Secretaries

A. E. F. (France).
Atlanta, A. M. Schoen, Thomas C. Taliaferro
Baltimore, J. B. Whitehead, L. M. Potts
Boston, Ira M. Cushing, Ira M. Cushing.

Per Year $10.00

TABLE OF CONTENTS

Section I.—Institute Affairs

Annual Meeting. Edison Medal Presentation 163
A. I. E. E. Annual Convention, June 24-27, 1919 163
Future Section Meetings 164
The New York A. I. E. E. Meeting, April 11, 1919 164
A. I. E. E. Directors' Meeting, New York, April 11, 1919 164
May Meeting of Radio Engineers 165
Reunion of Eighty-Niners 165
Engineering Council Announcement by National Service Committee 166
Classification and Compensation of Railroad Engineers 168
Smith-Howard Bill 170
The Engineer as a Citizen 173
Power Resources of North Atlantic States 174
Principles Underlying Radio Communication 174
Past Section Meetings 174
Past Branch Meetings 176
Associates Elected April 11, 1919 178
Associates Reelected April 11, 1919 186
Members Elected April 11, 1919 186
Transferred to the Grade of Member April 11, 1919 186
Transferred to the Grade of Fellow April 11, 1919 186
Recommended for Transfer 186
Applications for Election 187
Students Enrolled April 11, 1919 190
Personal 192
Obituary 192
Addresses Wanted 193
Engineering Service Bulletin 194
Accessions to the Engineering Societies Library 198

Section II.—Papers and Reports

Utilizing the Time Characteristics of Alternating Current. By Henry E. Warren, Boston, Mass., May 7, 1919 629

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII MAY, 1919 Number 5

ANNUAL MEETING, EDISON MEDAL PRESENTATION MAY 16, 1919

The annual business meeting of the A. I. E. E. will be held in the auditorium of the Engineering Societies Building, on Friday, May 16, 1919, at 8:30 p. m. The Board of Directors will present its annual report for the fiscal year ending April 30, 1919. This report contains a detailed statement of the finances of the Institute and a summary of the work of the various committees during the year.

The Committee of Tellers will present its report on the election of officers for the coming administrative year.

Announcement will be made regarding the Weaver Memorial Tablet which is to be erected in the headquarters of the Institute in acknowledgment of the services rendered to the Institute and to the electrical engineering profession by William D. Weaver. The tablet will be exhibited at this meeting.

Edison Medal Presentation

The presentation of the Edison Medal will follow immediately after the business of the annual meeting. The Ninth Edison Medal has been awarded to Benjamin G. Lamme by the Edison Medal Committee of the Institute "for invention and development of electrical machinery." In the absence of President Adams, Vice-President William B. Jackson will preside at the meeting. The program will be as follows:

1. The Edison Medal, by Carl Hering, Chairman, Edison Medal Committee.
2. Achievements of Benjamin G. Lamme, by B. A. Behrend.
3. Presentation of the Medal, by William B. Jackson.
4. Response, by Benjamin G. Lamme.

Ladies are cordially invited to attend this meeting.

A. I. E. E. ANNUAL CONVENTION JUNE 24-27, 1919.

As previously announced, the Annual Convention of the Institute will be held at the Lake Placid Club, Adirondacks, New York, June 24th to 27th, 1919.

The Convention Committee in conjunction with the Meetings and Papers Committee has practically completed the program for the Convention, the principal features of which may be announced as follows:

Tuesday Morning, June 24

1. President's Address, by C. A. Adams.
2. *Present Day Practise of Transmission and Tie Line Relay Protection*, by H. R. Woodrow, D. W. Roper, O. C. Traver, and P. Mac Gahan.
3. *Grounded Neutral*, (a) by H. R. Woodrow, (b) Wm. E. Richards.

Tuesday Evening

Informal Reception and Dance.

Wednesday Morning, June 25

4. Reports of Technical Committees.

Wednesday Noon

Conference of Committee on Development, Section Delegates and A. I. E. E. Officers, at luncheon.

Thursday Morning, June 26

Conference under auspices of Committee on Development, including Section Delegates and Institute Officers, open to all Institute members.

Friday Morning, June 27

5. *High-Tension Single Conductor Cables for Polyphase Systems*, by W. F. Clark and G. B. Shanklin.
6. *Electrostatic Field in Electric Power Cables*, by H. W. Fisher and R. W. Atkinson.
7. *Commercial Problems of 220-Kv. Power Transmission*, by A. E. Silver.
8. *The Effect of Transient Voltages on Dielectrics—II*, by F. W. Peek, Jr.

The committees have purposely left considerable time at the convention unassigned as it is expected that the conferences under the auspices of the Committee on Development will be one of the most important features of this convention and will undoubtedly occupy considerably more time than the sessions that have been scheduled. It is also the aim of the committees to leave plenty of time for social and recreation features including outdoor sports to which the location at Lake Placid is especially adapted.

A more complete program will be published in the June PROCEEDINGS.

FUTURE SECTION MEETINGS

Erie.—May 13, 1919, Erie Board of Commerce Rooms, 8 p. m. Subject: "Electro-Acoustic Shock Signalling." Speaker: Professor Vladimir Karapetoff. Lecture will be illustrated with working models, and lantern slides.

Rochester.—May 23, 1919. Subject: "Commercial Applications of Aluminum." Speaker: Mr. E. Blough.

THE NEW YORK A. I. E. E. MEETING APRIL 11, 1919

The 349th meeting of the Institute which was a joint meeting with the Illuminating Engineering Society was held in the auditorium of the Engineering Societies Building, Friday evening, April 11, 1919.

The meeting was called to order by Mr. George A. Hoadley, President of the Illuminating Engineering Society, who, after a few introductory remarks presented President Comfort A. Adams of the American Institute of Electrical Engineers.

President Adams briefly referred to the importance of the subject under consideration and introduced Mr. George H. Stickney, who read his paper on "Present Status of Industrial Lighting Codes."

The paper was discussed by Prof. C. E. Clewell, Chairman of the Lighting and Illumination Committee of the A. I. E. E., Dr. E. B. Rosa of the Bureau of Standards, C. B. Auel, of the Westinghouse Company, Dr. M. G. Lloyd of the Bureau of Standards, Ward Harrison; John Vogt, New York State Labor Department, W. P. Hurley of the Westinghouse Company, W. T. Blackwell, E. G. Perrot and Norman Macbeth. There were also communicated discussions by T. F. Foltz, Mechanical Engineer of the Pennsylvania Department of Labor and Industry, James R. Cravath, Electrical and Illuminating Engineer of Chicago, John A. Hoeveler and Dr. Louis Bell. After closure by Mr. Stickney the meeting adjourned.

A. I. E. E. DIRECTORS' MEETING NEW YORK, APRIL 11, 1919

The regular monthly meeting of the Board of Directors was held at Institute headquarters, New York, on Friday, April 11, 1919, at 2:30 p. m.

There were present: President C. A. Adams, Cambridge, Mass.; Past Presidents H. W. Buck, New York, E. W. Rice, Jr., Schenectady, N. Y.; Vice-Presidents John B. Taylor, Schenectady, Harold Pender, Philadelphia; Managers N. A. Carle, Newark, N. J., Charles S. Ruffner, St. Louis, Charles Robbins and Wilfred Sykes, Pittsburgh,

E. H. Martindale, Cleveland, Wm. A. Del Mar and W. I. Slichter, New York; Treasurer George A. Hamilton, Elizabeth, N. J., and Secretary F. L. Hutchinson, New York.

The following appointments by President Adams were announced: Dr. Frank B. Jewett and Dr. W. R. Whitney A. I. E. E. representatives on the Engineering Division of the National Research Council; Mr. W. L. Merrill, A. I. E. E. representative on the American Bureau of Welding.

The action of the Finance Committee in approving monthly bills amounting to $10,251.81, was ratified.

A Pacific Coast Convention was authorized, to be held in Los Angeles in September 1919, under the auspices of the Los Angeles Section.

In accordance with the recommendation of the Board of Examiners, the following action was taken upon pending applications: 113 Students were ordered enrolled; 236 applicants to the grade of Associate; 7 applicants were re-elected to the grade of Associate; 7 applicants were elected to the grade of Member; 5 applicants were transferred to the grade of Member; 1 applicant was transferred to the grade of Fellow.

The organization of Student Branches at Drexel Institute, Philadelphia, and the University of Pennsylvania, Philadelphia, was authorized.

A communication was presented from the Engineering Institute of Canada, to the effect that a committee of that Institute had been appointed to confer with the A. I. E. E. with the object of fostering the already cordial relations existing between the two organizations. The Board of Directors reciprocated by appointing a similar committee on cooperation with the Engineering Institute of Canada, consisting of Messrs. H. W. Buck, Chairman, W. A. Del Mar, and W. I. Slichter.

In addition to the above, many other matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration.

Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

MAY MEETING OF RADIO ENGINEERS

The next meeting of The Institute of Radio Engineers will be held on Wednesday Evening, May 7th, 8:15 p. m., in Room 2, on the Fifth Floor of the Engineering Societies Building, 29 West 39th Street, New York.

A paper on "The Detecting Efficiency of the Thermionic Detector" will be presented by Dr. H. J. van der Bijl of the Western Electric Company. This paper describes convenient methods for measuring absolutely, or by comparison, the true detecting efficiency of vacuum tubes.

Members of the A. I. E. E. are cordially invited to attend.

REUNION OF "EIGHTY-NINERS"

Thirty years ago a party of American engineers belonging to the four National Engineering Societies, sailed for Europe with members of their families, visiting England and the Paris Exposition of 1889, and being the recipients of many high courtesies, official, professional, and individual.

Plans have been made for a reunion dinner, to be held in New York City about May 27th, at which it is hoped that all the survivors, ladies as well as men, of that memorable trip may meet again. While the records of the various societies furnish an approximately complete list of the party, it is possible that some have been overlooked, or that addresses may require correction.

It is therefore urgently requested that anyone who was of that party communicate immediately with Mr. Jesse M. Smith, Secretary of the Committee, at the Engineers' Club, 32 West 40th St., New York, N. Y.

This information is desired from every

member of the party, whether attendance at the function is possible or not; those who cannot come will be heartily remembered when their letters are read.

It is hoped that the response to this request will be immediate and complete; the time is brief and the information important.

Announcement of the precise date and place, and full details, will be sent to every individual who can be reached; send in your name now, and resolve to come to meet your travelling companions of thirty years ago!

ENGINEERING COUNCIL

Announcements by National Service Committee

TOPOGRAPHIC MAPPING

Engineering Council through its National Service Committee, is advocating the rapid completion of a topographic map of the United States, and in furtherance of this object has addressed a letter to the Secretary of the Interior urging an increase in the next Federal appropriation for the Geological Survey. The following is an abstract of the communication to Secretary Lane:

It has become apparent to engineers and others engaged in development work that the Geological Survey should be granted a more liberal appropriation for topographic mapping.

It would require much space to review the needs for and the uses of a complete topographic map. We mention merely a few. It is obvious that the maps are essential as a basis for National defense, and hardly second in importance is their need in connection with the enormous road building program upon which the government has entered. The Federal policy of arid-land and swamp-land reclamation is also responsible for increased map necessities, and not less important is the matter of power supply. The Boston-Washington power survey is merely one of many examples where a complete topographical map becomes a fundamental necessity. In the fields of mining and geology and in the development and extension of railway systems, the topographic map has also become a necessity.

There are trained topographers available to accomplish topographic work during the next fiscal year equivalent to the expenditure of **$1,000,000**. It is believed that the several states can be induced to make appropriations aggregating **$500,000** for the next fiscal year. This would leave the sum of **$500,000** to be appropriated by Congress. It seems to us reasonable and wise to advocate such an appropriation for the next fiscal year.

If you find it possible to recommend to the 66th Congress an appropriation of $500,000 for the above recommended work in the next fiscal year, you will have the support of practically all American engineers and others who are well informed as to the necessities.

THE SIXTY-FIFTH CONGRESS

Engineers have reason for sorrow over the engineering legislation that died in the Sixty-Fifth Congress merely because there was no opportunity for a vote. The bills in which engineers are most concerned usually fail to become laws, not because of adverse votes on the merits, but because of no votes.

Legislative measures do not succeed in Congress merely by reason of merit. Congress is deluged with bills. Under such conditions the legislation must be the result of interested work by persistent advocates. Engineering legislation usually fails because there are no engineers in Congress to become its champions.

The big engineering measures, with one exception, arrived at the point of final vote at the 11th hour, were caught in the jam of filibuster, and died. There was one engineering measure that passed, namely, the appropriation for public highways, but this was a rider on the Post Office appropriation bill.

GOOD ROADS LEGISLATION

The Government is embarked on a road making policy which is the biggest and most costly internal improvement program ever known in our history. The Federal Road Act, approved July 11, 1916, provides for an appropriation as follows:

Year ending	June	30th,	1917	......	$5,000,000
"	"	"	"	1918	10,000,000
"	"	"	"	1919	15,000,000
"	"	"	"	1920	20,000,000
"	"	"	"	1921	25,000,000
Total				....	$75,000,000

This sum is to be expended for the construction and improvement of highways under the direction of the Secretary of Agriculture. Each state receiving benefits must secure approval of the Secretary of Agriculture to the road projects that it is desired to build, and the Federal appropriation is then made available for construction in an amount not exceeding 50 per cent of the total cost. The state must appropriate and use an amount of money equivalent to that made available from the Federal treasury, so that there became available for road building purposes the sum of $150,000,000 from Federal and state sources during the five years ending June 30th, 1921. This is not all.

The Post Office appropriation bill passed by the last Congress increased the statutory limit of unit cost of highways built under its provisions from $10,000 to $20,000 per mile and appropriated in addition to the sums above mentioned a further sum of $50,000,000 for the fiscal year ending June 30th, 1919, and $75,000,000 for each of the two following years. Thus we have a total of Federal and State moneys available to June 30th, 1921 of $550,000,000, to which may be added an additional $10,000,000 appropriated by Congress for roads and trails in the National Forest.

The problem of transportation in all its manifold aspects must be considered by the next Congress. It is estimated that about 90 per cent of our internal commerce is hauled over the highways of the country. Therefore the Federal highway policy must come up for review as an important factor in transportation. As it is essentially an engineering problem, great burdens will fall upon engineers if the correct solution is to be reached.

MINERAL LANDS BILL

The mineral resources of the public lands of the United States are, except the precious metals, locked away from development. For more than eight years there has been an attempt by both the Executive and Legislative departments of the nation to secure legislation which, under proper conditions and without detriment to the public interest, will open up these lands for development. Suffice it to state that after eight years of study, argument, conciliation, and compromise Congress agreed in conference of the two Houses upon a measure satisfactory to it and to the Executive Department. The final draft was passed by the House of Representatives, but in the Senate it was talked to death by Senator LaFollette of Wisconsin. The intention is to reintroduce the bill into the 66th Congress, where it is hoped it will be regarded in the nature of unfinished business and thus receive early consideration and passage.

THE WATER POWER BILL

The fate of this bill was the same as that of the mineral lands bill above described. This subject has been before Congress for ten years and is without question one of the most important economic matters on the Congressional calendar. The trouble with present water power laws is that they do not confer on developers of water power any title which can be used as a basis of credit. This condition had brought water power development to a virtual standstill in all situations in which the Federal Government has jurisdiction. The difficulties have at last been adjusted, and the bill agreed to in conference and adopted by the House is what engineers would call a pretty good measure.

It is the intention to introduce this bill at an early date in the 66th Congress, and if it can be considered as unfinished business, there is no reason why there should not be speedy passage.

Engineering Council Announces a National Legislative and Departmental Information Service for Engineers in all Branches of the Profession

This service has been placed under engineering direction, so that responses to inquiries will be specific and suitable for engineering use. Engineering Council has established this service in response to frequent expressions of need. Its continuance will depend largely on its use by the engineers of the country. No charge will be made for such services as the committee can render.

The Statistical, Research and Construction bureaus of the Government have become valuable sources of engineering information, but have not been used by engineers to the extent merited by the character of their material. Many matters before Congress involve engineering considerations, of which members of the Profession should be aware.

Set forth in specific language the kind of information wanted.

Address the National Service Committee, M. O. Leighton, Chairman, 502 McLachlen Building, Washington, D. C.

CLASSIFICATION AND COMPENSATION OF RAILROAD ENGINEERS

This subject held the attention of the Railroad Administration's Board on Wages and Working Conditions for three days, during which time it heard representatives of Engineering Council and the American Association of Engineers. Prior to meeting the Railroad Administration's Board, Engineering Council had studied the subject through its Committee on Classification and Compensation of Engineers. Representatives of Council and the Association also planned a program based on the results of a meeting of railroad engineers on March 17, 1919, called by the American Association of Engineers for the purpose of getting exact data and tentative instructions.

Mr. Stuart opened the hearing for the Council by reviewing existing conditions, explaining the field covered by those organizations and introducing the representatives of the American Association of Engineers. Brief of his statements follow:

The Engineering Council through this Committee desires to express to your Board its belief that it is to the best interest both for the social and economic welfare of the Railroad Professional Engineers of the United States that the case of these younger engineers or engineers holding these subordinate positions be further considered.

Before the war the compensation of the engineers was notably inadequate and the increases which have been granted the men in the subordinate positions do not seem to them sufficient. Engineering Council, through its Committee, asks that employees of the Engineering Departments, civil, mechanical, electrical and signal, who were not considered in the Officer or Supervisory force but who will, from their technical education or training at some later date occupy the higher positions in these departments, be given a classification and the titles of these positions standardized, and a proper remuneration be given them in order that their physical welfare and mental interest may be provided for so as to insure efficient service to the public.

The members of the founder societies of Engineering Council have occupied these identical positions in their day and hence speak to you from experience, but we recognize that Engineering Council has not the direct touch with these younger engineers employed by the railroads of the country, to handle the details of the matter in the way you may desire and we are therefore further requesting that your Board have the necessary data collected and considered so that it may be certain that this particular class of employe has been treated with justice comparable with other classes of employes who have been given separate classification in the railroad service.

Associated with Engineering Council in this hearing is the American Association of Engineers, a National engineering organization which includes in its membership a large proportion of the younger engineers in railway service who occupy subordinate positions. The American Association of Engineers has held a conference of railway engineers to consider wage matters, and comes before you with the direct support of the larger proportion of railway engineers in the country.

Representatives of this organization are present and we urge that you give their views due consideration. Engineering Council is anxious and willing to give you any advice or assistance they can in the matter.

Mr. Drayer, Secretary of the American Association of Engineers, gave an account of the origin and character of his association. He then presented a wage schedule for subordinate engineers as it had been approved by the Railroad Engineers' Convention in Chicago on March 17, 1919. His explanation was followed by a detailed account of the preparation required for a railroad engineer. Mr. W. C. Bolin, Chief of the Sub-Committee on Railway Wages, covered this subject and estimated that the education required to fill an average railway engineer's place represented a capital of $10,000.00. At the present scale of wages, he declared it impossible for the engineer, except under unusual circumstances, to recover his $10,000.00 investment in education. The apprentice in the mechanical department, he told the Board, is better off than the boy who enters school to take an engineering course. The apprentice earns money while the other boy is spending money for education, and under the existing rate scale, the former would continue to get more money throughout his career.

It was further shown that on some railroads, the tape men in the engineering organization get as little as $55.00 per month and the work is exceedingly responsible—tape measurements must be exact. A case was cited in which a bridge was thrown out of line six feet because an engineering party was obliged to use an inferior tape man.

To substantiate this evidence and to emphasize the need of increased compensation, Mr. Beahan cited the result of his long experience in railroad work. He explained the education required preparatory to various railroad positions. Up to quite recently, men would put in their summer vacations to get practical experience in railroad work and would then go with the company at comparatively small pay at the time they graduated. Under existing rates of pay, there is no inducement for a college man to enter this service and the old railway engineering recruiting plan will fail if present rates are maintained. The result is that good men will not be available for the higher positions in railroad work. It is Mr. Beahan's opinion that labor unions are not appropriate organizations for engineers to bond themselves together under—first, because engineers' work is not such that it requires extended organization; second, that any such organization would invariably create trouble. Statistics brought out the fact that the cost of living for railroad engineers had increased at least 50 per cent, whereas the average increase in compensation for this same class of employes had been only 35 per cent. Mr. Beahan's experience taught him that it was best to pay men in this kind of work all you can afford and continually hold an incentative for advancement before them. The classification of railroad engineers has gotten into the rut and muddle that now exists, because they were all directly under the Chief Engineer who generally had to give final approval to recommendations for raises in pay or change in classification.

Five railway engineers from the various fields of railroad work were then called before the Board to testify as to the relative value of various positions coming under them. The field of the junior civil engineer, the electrical engineer and the inspector was covered with the intention of drawing parallel lines through the various positions so that definite classification could be recommended. The testimony showed that there was a good chance for this classification under existing conditions and this will probably be one of the first steps in arranging for increased compensation.

The full Board was present at the hearing and manifested unusual interest in the entire proceedings. They took extensive notes, asked pertinent and important questions and indicated that they realized the importance of the subject and was well disposed toward the contentions made by the Council and American Association as representatives of the railroad engineers.

Following this hearing, it is contemplated that substantial increases in salaries for the junior technical engineers on railroad work is in sight and will very probably be a reality as soon as the Board can get additional data and information required to complete its work.

SMITH-HOWARD BILL

Engineering Experiment Station Legislation

Statement by Author

To the Editor, A. I. E. E. Proceedings:

The wording of a statement in the February PROCEEDINGS page 130, Sec. II, and that of another statement in the April PROCEEDINGS, page 137, Sec. I, has caused some misunderstanding relative to the Smith-Howard bill proposing the establishing of Engineering Experiment Stations in each State and Territory to perform work in Engineering and Industrial Research for the benefit of American industry and commerce, corresponding to the work of the Agricultural Experiment Stations in the interest of American agriculture.

One statement makes it appear that the author has endorsed another and radically different form of legislation, and the other also unintentionally gives the impression that those supporting this legislation are far from united. This statement is intended to correct these erroneous impressions if by chance they have been formed in the minds of the readers of the PROCEEDINGS as is known to be the case in several instances.

Dr. Richard C. Maclaurin, Chairman of the National Committee on Engineering Experiment Station Legislation called a meeting of this Committee in Washington, Dec. 9, 1918. A motion was carried establishing as the sense of that meeting two fundamental principles as expressed by Dr. Maclaurin and put into a motion by Dr. K. G. Matheson: first, the principle of federal support in equal amounts to each State, as proposed by the Smith-Howard bill for the promotion of engineering and industrial research; second—the principle of distributing that support to institutions, not to individuals.

Later in the discussion, which was very pronounced, favoring the establishing of Engineering Experiment stations, the writer made the motion which was carried unanimously that "The Chairman, Dr. Maclaurin, be authorized to appoint a committee on the bill for the purpose of receiving written statements from organizations and individuals as to the improvement or modification of the bill which had been accepted by Dr. W. M. Riggs, President of the Land Grant College Engineering Association and his Executive Committee as the instrument of procedure for the National Committee."

Eight national organizations were invited to send delegates to a meeting of the National Committee in Washington Jan. 6, 1919, and submit their opinions or recommendations officially. These included the Engineering Council and the National Research Council. The Engineering Council requested its Washington representative to attend the meeting and report on the discussion but without power to act. It should be remembered that this meeting was for the purpose of receiving in writing recommendations for modifications of the Smith-Howard bill and to hear the discussion on the same. Since many prominent national organizations were represented it was natural that a considerable variety of opinions was expressed.

The National Committee and all the

Land Grant Colleges were unanimously in accord with the principle of establishing the Engineering Experiment Stations in each State and Territory for the promotion of engineering and industrial research which will substantially fulfill the long needed completion of the Land Grant College System. This most wisely conceived and developed system incorporates two fundamental divisions—1. Agriculture, 2. Engineering, (called "Mechanic Arts" in the Act of Congress; 862 providing for the establishment of the so-called Land Grant Colleges).

In agriculture, Congress now provides for three important activities, *i. e.*, 1. Education in Agricultural Arts, 2. Agricultural Research in the Agricultural Experiment Stations provided for by Congress. (H. R. 345. approved March 16, 1906) and established by the State Legislature of each State in connection with that institution or institutions, (either the Land Grant College or a separate institution) which in its judgment would best serve the purposes of that Act. 3. Extension, or the systematic distribution of such available agricultural information as will promote the most efficient, economical and productive methods in American agriculture.

With such a system it was easy and very profitable for the United States to feed itself and a very large part of the world with comparatively little disturbance during five years of a world war that was more terrible and widespread than any one thought possible. Bright as it is, the record of our war achievements would have been vastly more creditable to America and hundreds of millions of dollars would not have been wasted in the necessarily hurried and frantic engineering, industrial, military and naval research and, of most importance, hundreds if not thousands of lives might have been saved had the needed Engineering Experiment Stations been established by Congress ten years or more ago instead of waiting for the stern lesson of this war to impress the need, wisdom and justice of such preparedness. Our salvation is credited largely to the already established Research Bureaus of the several Departments of the Administration, aided by civilian and privately supported organizations.

In engineering, Congress now provides in the Land Grant Colleges, only for Education in the "Mechanic Arts." To complete the system, the activities of Engineering and Industrial Research and Extension are now provided for in the Smith-Howard Bill, to properly and necessarily correspond to similar activities in the various fields of Agriculture in its broadest interpretation.

The Engineering Council, the Engineering Foundation and the National Research Council were extended special invitations by the writer, the author of the Smith-Howard bill, to give their support, in some proper way to this legislation which is non-partisan politically, professionally or educationally. On December 4, 1918, prior to the above mentioned meetings, a special committee of the National Research Council met in Washington to consider this bill and by invitation the writer attended this meeting and took part in the discussion.

This committee unanimously recommended to the National Research Council the principle of equal federal grants to each State and Territory for the support of scientific and industrial research. It was further recommended for the consideration of the Council, though not unanimously approved by individual members of the committee, that the funds appropriated by Congress be allocated to various institutions and individuals from year to year by state boards under the supervision of a federal agency, (such as the National Research Council).

When called upon to discuss the propositions before the committee, including that to do away with the system of Engineering Experiment Stations as provided in the Smith-Howard bill and endorsed by the Land Grant Colleges, the writer earnestly reiterated his conviction that the well defined objects and results as proposed by the Smith-Howard bill could best be secured by means of a permanent and thoroughly responsible system of State Engineering Experiment Stations directly related to the Department of Commerce, one of the executive branches of the United States Government, in which is the United States Bureau of Standards engaged in doing for the federal government substantially what is proposed that each Engineering Experiment Station shall do for its respective State.

The writer appreciates the excellent work that has been done by the National Research Council in the three formative years of its existence. The provisions of the Smith-Howard bill are such as to warrant the earnest support of the Council under its purposes and duties. In the last mentioned Washington meeting of the committee of the Council the writer expressed his earnest desire to see the work of the Council in some way related to this system of State Engineering Experiment Stations and made well defined suggestions as to how such a relation might be established which would meet with the approval of the large majority of colleges and individuals who were giving their support to this legislation in Congress.

On the same day the writer was requested to serve on a committee with four members of the Council to draft a revised form of the Smith-Howard bill incorporating the principle of state boards, for the purpose of submitting these suggestions to those supporting the bill and the system of Engineering Experiment Stations. While serving on this committee and making suggestions relative to the wording of some of the provisions of the proposed revision it was well understood by the Committee and the Council that the writer did not sponsor these radical changes but was glad to convey the statement of them to the friends of the Smith-Howard bill for consideration.

Later a member of the Council expressed the opinion that Congress would require that, as in former and similar legislation, the proposed system of Engineering Experiment Stations be related definitely with the proper administrative department of the government, such as the Department of Commerce. This principle is now universally accepted by the National Committee, including members of the Council and the Land Grant Colleges.

At the annual meeting of the Land Grant College Engineering Association January 8th, 1919, in Baltimore, attended by the representatives of nearly every Land Grant College, the proposed substitutes and compromises were rejected and the meeting declared unanimously in favor of the principle of completing the Land Grant College System by the establishing with federal aid and by Act of Congress an Engineering Experiment Station in each State and Territory with such provisions as to insure the establishment of the Station at that Land Grant College or constituent college of the Land Grant Institution established or which may be established by the Legislature in any state, which is best organized and equipped to carry on the proposed engineering and industrial research.

The revised form of the Smith-Howard bill prepared by the committee of the Land Grant College Engineering Association does not differ fundamentally from the form advocated by the National Committee. The difference of opinion relative to the method of legislative appointment is the principal and only real question to be decided by the Congressional Committee in charge of the bill. The National Committee will cooperate with the Land Grant College Engineering Association and other engineering scientific, industrial and commercial organizations and individuals in the effort to secure the early consideration of this long needed legislation in the interest of American industry and commerce. It is hoped and expected that the Engineering Council, the National Research Council and the individual National Engineering and Scientific bodies will lend their friendly influence to this specific legislation with the assurance that the several State Engineering Experiment Stations, and the great engineering schools and universities with which these stations may be connected and finally the Land Grant College Engineering Association will be found ready, at all times, to cooperate in promoting the highest interests of research, engineering and industry, the training of the young Americans for such activities and in supporting progressive federal and state legislation toward these aims.

The encouragement of American industry and commerce by means of the proposed system of Engineering Experiment Stations is highly endorsed by Secretary of Commerce Redfield and Dr. S. W. Stratton, Director of the U. S. Bureau of Standards and a member of the National Research Council by Dr. P. P. Claxton, commissioner of Education and other administration officials. Those interested in this bill are referred to the paper of Dr. W. R. Whitney, also a member of the Council, which will be found on page 115 of the February, 1919, PROCEEDINGS of the A. I. E. E., a masterpiece on American Engineering Research, and also the paper following by Dr. R. A. Millikan an able plea for research but which contains in its unrevised form the unintentionally misleading statement relative to the Smith-Howard bill.

PHINEHAS V. STEPHENS.
April 23, 1919.

THE ENGINEER AS A CITIZEN

On March 26th a symposium on the above subject was held in the Engineering Societies Building, under the auspices of the local sections of the American Institute of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers and the Society of Automotive Engineers. Invitations to participate in the meeting were extended to fifteen other engineering societies, including the A. I. E. E.

Gano Dunn presided and addresses were given by Philip N. Moore, Calvert Townley, Nelson P. Lewis, Spencer Miller and C. A. Adams.

Philip N. Moore, past president of the A. I. M. E. spoke on the "Civic Responsibility of the Engineer, and pointed out that heretofore the engineer has been politically impotent because he has not made any effort towards civic activities and his reward in public esteem is proportional to his efforts. Since the war he has awakened to a new sense of responsibility as there has never been a time when the clear reasoning and exact knowledge of the engineer been more in demand.

Calvert Townley, past vice-president of the A. I. E. E. spoke on "The Relation of the Engineer to Legislation" and reviewed some of the ways engineers had attempted to influence legislation. He considered that any such attempt to be effective, should be concentrated on certain subjects which the public recognizes engineers as qualified to speak upon with authority.

Nelson P. Lewis, vice-president of the A. S. C. E. discussed the "Relation of the Engineer to Administration," stating that the engineer has formerly been excluded almost completely from the administrative business of the city and state by executives who felt that they could buy all the technical advice they needed at the prevailing rate. Lately there has been a growing appreciation of the importance of Engineering advice in public business. It is noteworthy that out of 88 cities that have adopted the City Manager plan 50 cities have selected professional engineers as chief executives.

Spencer Miller, vice-president of the A. S. M. E. spoke on the "Relation of the Engineer to Public Opinion" and pointed out that the engineer is assuming an ever larger position in public life and he should therefore make every possible effort to mould public opinion in the right direction. The speaker advocated the adoption of a thoroughly considered code of ethics to become the moral platform for all engineers.

C. A. Adams, president of the A. I. E. E. discussed the "Relation of the Engineer to Production and Distribution" which he stated was so much the normal work of the engineer that it would seem disconnected from his responsibilities as a citizen. One of the most important faults of our present methods is our terrifically expensive system of competition. Cooperation offers a means of elimination of wastefulness to an almost unbelievable extent and is a step towards the solution of the great problems that face the world.

A lengthy discussion followed the addresses, most of which centered on the organization of engineering societies. A resolution was passed urging the organization of a New York local engineering society. Resolutions were also passed requesting all engineering societies to appoint "committees on development" and also to appoint a joint conference committee to formulate a standard code of ethics.

POWER RESOURCES OF NORTH ATLANTIC STATES

At a technical session of the Institute held in Boston on the morning of March 14, a resolution was adopted endorsing the proposed investigation of the power resources and requirements of the north Atlantic coast region which is advocated by Secretary Lane, and suggesting to the Board of Directors of the Institute that the facilities of the Institute be offered to Secretary Lane in support of the project.

In accordance with this action and with the approval of the Board of Directors, the following resolution was transmitted to Secretary Lane:

> **RESOLVED, that the American Institute of Electrical Engineers hereby heartily endorses the proposed investigation of the power resources and requirements of the north Atlantic coast region, and hereby offers to Honorable Franklin K. Lane, Secretary of the Interior, who is advocating this investigation, the facilities and hearty cooperation of the Institute in support of the project.**

In acknowledging receipt of this resolution under date of April 3, Secretary Lane said: "I greatly appreciate the interest which the Institute has shown in this project, and its support, both in obtaining the necessary authority from Congress for the investigation and in prosecuting the investigation thereafter, will be most helpful. I propose to present the matter again at the new session of Congress and trust that the investigation may be authorized at that time."

PRINCIPLES UNDERLYING RADIO COMMUNICATION

The above is the title of a text book which has been prepared by the Bureau of Standards under the direction of the Office of the Chief Signal Officer of the U. S. Army, Training Section. The book contains about 350 pages, and starting with the elementary principles of electricity takes the student through a complete course on radio communication. The book has been designed for students with very little mathematical preparation and presents the subject with the use of only the most elementary mathematics. References to standard works are given for further study. Address, Supt. of Documents, Government Printing Office, Washington D. C.

PAST SECTION MEETINGS

Baltimore.—March 14, 1919, Engineers Club. Illustrated address by Mr. R. H. McLain on "Terminal Facilities." Attendance 60.

Boston.—April 9, 1919, Engineers Club. Subject: "Power Factor Correction." Speakers: H. R. Summerhayes, D. C. Jones and A. W. Copley. Attendance 85.

Chicago.—March 24, 1919, Western Society of Engineers Rooms. Address by Mr. A. H. Young on "Industrial Personnel Relations." Attendance 300.

Cleveland.—March 17, 1919, Electrical League Rooms. Paper: "Electrolysis in Underground Construction" by W. W. Walsh. Joint meeting with Assoc. of Iron and Steel Electrical Engineers. Attendance 96.

Denver.—March 15, 1919, Denver Athletic Club. Paper: "Building Lighting" by W. H. Bullock. Attendance 30.

April 9, 1919, Denver Athletic Club. Illustrated lecture by Lieut. Colonel H. S. Crocker on "Construction of Army Supply Base at Brooklyn, New York." Joint meeting with local association of A. S. C. E. Attendance 85.

Detroit-Ann Arbor.—March 21, 1919, Ann Arbor, University of Michigan. Illustrated lecture by Dr. Saul Dushman on "Modern Applications of the Electron Theory." Attendance 300.

April 11th, 1919, Detroit Board of Commerce. Paper: "Direct Current Motors" by John C. Parker. Attendance 42.

Fort Wayne.—March 20, 1919, G. E. Assembly Room. Paper: "Some Electrical Developments Brought about by the War," by C. I. Hall. Attendance 27.

Indianapolis—Lafayette.—March 3, 4 and 5, 1919, Purdue University. Addresses as follows—1. "Systems of Handling and Recording Trouble" by V. N. Gregg; 2. "Maintenance of Central Office Equipment" by Frank X. Staub; 3. "Maintenance of Outside Plant" by F. M. Hodgson; 4. "The Engineering Department of the Public Service Commission" by H. O. Garman; 5. "Recent Developments in Central Office Equipment" by C. A. Breese; 6. "Some Experiences in Cutting Over a Large Manual to Automatic Plant" by H. W. Munsell; 7. "Electrolysis" by L. G. Bischoff; 8. "Cable Construction" by W. M. Van Nostran; 9. "Types of Construction for Rural Lines" by L. W. Connarroe. Attendance 125.

March 21, 1919, Athenaeum of Indianapolis. Subject: "Nitric Acid from the Air." Speakers: Profs. C. Francis Harding, F. O. Anderegg and K. B. McEachron. Attendance 45.

Ithaca.—March 14, 1919, Franklin Hall, Cornell University. Paper: "Problems in High-Tension Power Transmission with Special Reference to Conditions in Ontario" by W. P. Dobson. Attendance 68.

Lynn.—March 26, 1919, G. E. Hall. Lecture by Mr. E. F. W. Alexanderson on "Trans-Oceanic Radio Communication." Attendance 175.

Madison.—April 10, 1919, Auditorium, Engineering Building. Papers: "Recent Developments in Electric Lighting" by W. M. Skiff; "The Industrial Lighting Code of Wisconsin" by John A. Hoeveler. Attendance 55.

Milwaukee.—March 19, 1919, Athletic Club. Addresses by Mr. Duncan Watson, Alderman of London, England, on "Electrical Problems Confronting the Authorities at London," and by Mr. J. R. Watson on "Synchronous Motors." Attendance 160.

Pittsburgh.—March 11, 1919, Chamber of Commerce Auditorium. Paper: "Electric Furnace Application and Control" by J. A. Seede. Attendance 126.

April 8, 1919, Chamber of Commerce Auditorium. Paper: "The New Pittsburgh Office of the Western Union Telegraph Company" by G. H. Kendrick. Attendance 130.

Pittsfield.—March 12, 1919, New American Hotel. Lecture by Dr. C. P. Steinmetz on "Soap Bubbles." Attendance 175.

March 27, 1919, New American Hotel. Paper: "Trans-Oceanic Radio Communication" by E. F. W. Alexanderson. Attendance 125.

Rochester.—February 28, 1919, Rochester Engineering Society Rooms. Paper: "Heat Treatment of Steel" by Samuel W. Miller. Paper illustrated by lantern slides. Attendance 58.

March 28, 1919, Rochester Engineering Society Rooms. Paper: "Electric Furnaces and Electric Welding" by H. A. Winne. Attendance 76.

San Francisco.—March 28, 1919, Engineers Club. Paper: "Mountain Railroad Electrification in California" by W. F. Dietrich. Attendance 70.

Schenectady.—March 21, 1919, Edison Club Hall. Illustrated lecture by Prof. F. H. Sexton on "Industrial Reestablishment of War Cripples." Attendance 165.

April 4, 1919, Edison Club Hall. Address by Col. Jas. M. Andrews on "Overseas Service with the 105th." Attendance 625.

Spokane.—March 21, 1919, Chamber of Commerce. Paper: "Magnesite, Its Geology, Products and Their Uses" by C. D. Dolman. Attendance 37.

St. Louis.—March 26, 1919, Union Electric Building. Address by the Hon. Selden P. Spencer, U. S. Senator from Missouri, on "The League of Nations." Attendance 125.

Toledo.—February 27, 1919, Park Exchange, Ohio State Tel. Co. Address by Mr. E. H. Brown on "The Growth and Development of the Park Exchange." Attendance 21.

March 27, 1919. Toledo Commerce Club. Address by Mr. E. B. Thurston on "The General Operation of Electric Elevators." Attendance 19.

Toronto.—March 21, 1919, Engineers Club Paper: "Storage Batteries" by J. Lester Woodbridge. Paper illustrated by lantern slides. Attendance 85.

April 4, 1919, Engineers Club. Address by Mr. G. D. Leacock on "Early Experiences in the Electrical Business in Canada." Attendance 95.

April 11, 1919, Westinghouse Auditorium, Hamilton, Ontario. Paper: "The Development of the Electric Drive in Steel Mills" by G. E. Stoltz. Joint meeting with Hamilton Branch of Engineering Institute of Canada. Attendance 175.

Washington.—April 8, 1919, Cosmos Club. Illustrated address by Mr. W. D. Ryan on "Illumination, Ancient and Modern." Attendance 139.

PAST BRANCH MEETINGS

University of Cincinnati.—March 27, 1919, Engineering Building. Paper: "Fire Control in the U. S. Coast Artillery" by F. W. Huss. Attendance 45.

Georgia School of Technology.—March 5, 1919, Chapel. Motion pictures showing the production in the various shops of the General Electric Company. The pictures were explained by Mr. G. H. Pfeif. Attendance 55.

March 13, 1919.—Chapel. Address by Mr. E. F. McLaughlin on "Railway Electrification." Motion picture "The King of the Rails." Attendance 65.

University of Kentucky.—March 26, 1919, Mechanical Hall. Addresses on Aeronautics by Messrs. J. E. McClellan and R. S. Arnold. Attendance 24.

Massachusetts Institute of Technology.—April 10, 1919. Paper: "High-Frequency Oscillations" by Prof. G. W. Pierce. Attendance 115.

University of Missouri.—March 24, 1919, Engineering Building. Paper: 1. "Rates and Rate Making" by F. Shelton; 2. "Radio Development During the War" by F. Leach. Attendance 19.

April 7, 1919, Engineering Building. Papers: 1. "Insulation of High-Tension Transformers" by B. H. Wigbels, Jr.; 2. "Use of Electricity in Irrigation" by B. Fleshman. Election of officers as follows—chairman, A. C. Lanier; vice-chairman, J. H. Koester; asst. secretary, W. L. Jones, corresponding secretary, W. H. Moore; Treasurer, B. Fleshman. Attendance 20.

Montana State College.—March 19, 1919, Electric Building. Lecture by Mr. F. M. Redman on "The Use of Electricity in Ship Building." Election of officers as follows—chairman, Jas. M. McElwee; Secretary, J. A. Thaler. Attendance 24.

April 3, 1919, Physics Lecture Room. Illustrated address by Mr. W. F. Coors on "Electrification of The Milwaukee Railroad." Attendance 31.

University of Nebraska.—April 3, 1919. Paper: "Practical Electrical Problems" by L. W. Anderson. Attendance 14.

April 10, 1919, Mechanical Engineering Building. Addresses as follows—1. "Engineering as a Business" by J. E.

Harsh; 2. "The Electrification of the Panama Canal" by F. H. McKinney. Attendance 39.

University of North Carolina.—April 8, 1919, Chapel Hill. Papers: 1. "Corporation vs. Partnership" by J. H. Mustard; 2. "Service" by H. B. Shaw. Attendance 36.

North Carolina State College.—February 17, 1919. Illustrated lecture by Mr. A. L. Humphrey on "The Operation and Adjustment of Commercial Watt-Hour Meters."

Ohio Northern University.—March 19, 1919, Dukes Memorial. Address by Prof. F. L. Berger on "The Ideal Student of Engineering." Attendance 13.

April 3, 1919, Dukes Memorial Papers: 1. "Transportation in New York City" by Monroe Zimmerman; 2. "Opportunities for Electrical Development in South America" by O. Towares. Attendance 16.

Ohio State University.—March 21, 1919, Robinson Laboratory. Lecture by Prof. C. A. Wright on "Character Analysis as Applied to the Engineer." Attendance 26.

April 2, 1919. Demonstrations of (a) Shaffer Prone and Pressure Method of Resuscitation from Electrical Shock, and (b) Lungmotor as Used in Resuscitation." Attendance 41.

Pennsylvania State College.—March 10, 1919. Addresses as follows—1. "Electric Headlights for Locomotives" by G. E. Schweitzer; 2. "Illumination" by D. L. Markle. Election of officers as follows—president, E. W. Taylor; vice-president, C. A. Nelson; secretary, C. K. Mast; treasurer, J. L. Weaver; assistant treasurer, E. L. Schlotters; sergeant at arms, C. M. Skooglund.

March 24, 1919. Illustrated lecture on "Remote Control" by Dr. Woodruff.

April 7, 1919. Addresses as follows—1. "Hydro-Electric Plants" by Dean Sackett; 2. "Illumination" by D. L. Markle.

University of Pittsburgh.—March 14, 1919. Address by Mr. N. E. Bonn on "The Measurement of Very Short Intervals of Time by Electricity." Attendance 19.

March 28, 1919. Illustrated address by Mr. G. M. Hiles on "The Methods of Balancing of Rotors." Attendance 14.

Purdue University.—March 18, 1919, Electrical Building. Addresses as follows—1. "Experiences in Training Camp and the Trip to France" by Lieut. C. P. Boggs; 2. "Gossport System of Instruction for Aviation" by Lieut. E. K. Goss; 3. "System of Instruction in Flying as Given in France and England" by Lieut. Bernard Schultz. Attendance 70.

Rensselaer Polytechnic Institute.—March 11, 1919, Sage Laboratory. Address by Dr. M. A. Hunter on "The Chemistry of Gas Warfare." Election of officers as follows—chairman, W. J. Williams; secretary, L. B. Raynor. Attendance 75.

April 15, 1919. Paper: "Electricity in Shipbuilding" by Dr. W. L. Robb. Attendance 76.

Throop College of Technology.—March 13, 1919. Address by Mr. A. L. Klein on "Aeroplane Engines, with Special Reference to Liberty Engine." Attendance 25.

University of Virginia.—March 28, 1919, Electrical Laboratory. Papers: 1. "Uses of Electricity" by W. W. Boyd 2. "Automatic Stokers" by W. McN. Gilchrist; 3. "Paper Mill Machinery" by P. B. Bass. Attendance 18.

April 16, 1919, Peabody Hall. Motion pictures as follows—1. "Sugar Industry in Cuba;" 2. "Electrical Giant;" 3. Fairy Magic;" 4. "Electrification of Steam Railways." Attendance 78.

Virginia Polytechnic Institute.—March 12, 1919. Illustrated lecture by Mr. A. W. Fairer on "The Electrification of Steam Railroads." Attendance 37.

April 8, 1919. Motion pictures on "Cane Sugar Production in Cuba", and "The Construction of the Largest Alternator in the World." Attendance 52.

Washington University.—February 25, 1919. Paper: "Electric Control Apparatus" by G. W. Pickson. Attendance 29.

ASSOCIATES ELECTED APRIL 11, 1919

Alden, Fred N., Lieutenant, Department Signal Office, U. S. Army, Fort Sam Houston, Texas.

***Alexander, Clarence F.**, Engineer, Western Electric Company, Inc., 463 West St., New York, N. Y.

Alexander, Don M., Manager, Alexander Electric Co., 108 S. Howard St., Spokane, Wash.

ASSOCIATES RE-ELECTED APRIL 11, 1919

ENDICOTT, T. H., Manager, Metal Cutting Dept., E. C. Atkins & Co., 402 S. Illinois St., Indianapolis, Ind.

GRANT, HARRY L., Manager, Government Dept., Western Electric Co., 463 West St., New York, N. Y.

HOLCOMBE, ERNEST S., Electrical Construction Engineer, Interborough Rapid Transit Co., 621 Broadway, New York, N. Y.

LINDRIDGE, CHARLES D., Engineer, Western Electric Co., New York, N. Y.; res., 55 Church St., Montclair, N. J.

PHINNEY, EDWARD A., President, The Jefferson County Power & Light Co., Golden, Colo.

TATE, ALFRED O., Vice-President, Tate Electro Waterproofing Corp., 120 Broadway, New York, N. Y.

TIBBALS, EMERSON C., Electrical Engineer, Atlantic Loading Co., Amatol, N. J.; res., 11 Spencer Place, Brooklyn, N. Y.

MEMBERS ELECTED APRIL 11, 1919

ADAMS, QUINTON, Commercial Engineer, Westinghouse Elec. & Mfg. Co., 803 Hibbs Bldg., Washington, D. C.

COMSTOCK, HARRY, Gen. Supt., Witherbee, Sherman & Co., Inc., Mineville, N. Y.

FALTER, PHILIP HENRY, General Manager, Shawinigan Electro Products Co., 1606 Lexington Bldg., Baltimore, Md.

HOLSLAG, CLAUDE JOSEPH, Chief Engineer, Electric Arc Cutting & Welding Co., 222 Halsey St., Newark, N. J.

HUNTER, HARRY ERNEST, Sales Engineer, Canadian General Electric Co., Toronto, Ontario.

ROBBINS, CHARLES W., Asst. Supt. of Inspection, Western Electric Co., Inc., Hawthorne Station, Chicago, Ill.

VINAL, GEORGE W., Associate Physicist; Chief, Section of Electro Chemistry, Bureau of Standards, Washington, D. C.

TRANSFERRED TO THE GRADE OF MEMBER APRIL 11, 1919

CALMAN, CECIL G., Engineer, Wm. Adams & Co., Ltd., Sydney, Australia.

COOPER, LEO H., District Manager, Frank Adam Electric Co., Minneapolis, Minn.

LANGWORTHY, R. A., D. P. Robinson & Co., Inc., New York, N. Y.

PRATT, HARLAN A., Manager, Industrial Division, Westinghouse Electric & Mfg. Co., New York, N. Y.

RICE, MARTIN P., Electrical Engineer, General Electric Co., Schenectady, N. Y.

TRANSFERRED TO THE GRADE OF FELLOW APRIL 11, 1919

ADDICKS, LAWRENCE, Consulting Engineer, New York, N. Y.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on April 7, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

BODLER, OSCAR W., Electrical Engineer, Eastman Kodak Co., Rochester, N. Y

SQUIER, GEORGE O., Major-General, Chief Signal Officer, War Department Washington, D. C.

To Grade of Member

BORDEN, PERRY A., Instrument Engineer, Hydro-Electric Laboratories, Toronto, Ont.

Brooks, Henry W., Senior Lieut., U. S. N. R., Chief, Machinery Section, Bureau of Ordnance, Navy Dept., Washington, D. C.

Brooks, Herbert B., Physicist, Bureau of Standards, Washington, D. C.

Coors, William F., Sales Engineer, General Electric Co., Butte, Mont.

Ewart, Frank R., Construction Engineer, Ewart & Jacob, Toronto, Ont.

Holcombe, Ernest S., Electrical Construction Engineer, Interborough Rapid Transit Co., New York, N. Y.

Josephs, Lyman C. **Jr.**, Engineer, International Motor Co., New York, N. Y.

Mullergren, Arthur L., Sec'y & Treasurer, Benham Engineering Co., Oklahoma City, Okla.

Tibbals, Emerson C., Electrical Engineer, Atlantic Loading Co., New York, N. Y.

Westbrook, Francis A., Engineering Dept., Habirshaw Electric Cable Co., New York, N. Y.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before May 31, 1919.

PERSONAL

P. LE ROY FLANSBURG, electrical engineer, formerly with the E. I. du Pont de Nemours and Company in charge of the Safety and Efficiency departments at their Haskell, N. J. plant has just accepted a similar position with the Benjamin Eastwood Company of Paterson, N. J.

IRVING SAMUELS has established offices in the Hunsicker Bldg., Allentown, Pa., as an Electrical and Mechanical Sales Engineer and Manufacturers' Agent. Mr. Samuels served as efficiency engineer for the Lehigh Valley Transit Co., in 1913 became distribution engineer for the Lehigh Valley Light and Power Co. and in July, 1918 accepted a position as electrical engineer for the Air Nitrates Corporation in New York.

J. M. SMITH has resigned the position of Managing Engineer of the Triumph Electrical Company of Cincinnati to accept an important post with the Texas Company.

OBITUARY

HARRY LE ROY CURTIS chief electrical engineer of the International Paper Company recently died. Mr. Curtis was a graduate of Cornell, class 1907. He immediately entered the testing department of the G. E. Co. where he remained one year and then became associated with the Minnesota and Ontario Power Co. at International Falls, Minn. In 1910 he entered the employ of the International Paper Co. and remained with them until September 1917 at which time he went to Washington as trade adviser to the War Trade Board in charge of paper mill and electrical engineering matters. When this body disbanded he returned to the International Paper Co. Mr. Curtis became an Associate in the Institute in 1909.

CAPTAIN STUART THOMSON died on March 23, 1919 of pneumonia. Captain Thomson, son of Dr. Elihu Thomson, after graduating from Harvard in 1908 took special work at M. I. T. and in 1909 entered the employ of the G. E. Co. with whom he remained until he entered the Army in the Ordnance Dept. He became an Associate in the Institute in 1912.

GEORGE E. CLAFLIN, Vice-President of the Electric Bond and Share Company died suddenly on April 18, 1919 at Atlantic City. Mr. Claflin was one of the pioneer electrical engineers of the country. He entered the employ of the Westinghouse E. & M. Co. in 1888 and installed some of the earliest electric generating stations in the country. The Franklin Electric Co. of Kansas City, Mo. was one of Mr. Claflin's early ventures, later he entered consulting engineering. In 1904 he became associated with the United Electric Securities Co. of Boston and in 1912 became Vice President of the Electric Bond and Share Co. Mr. Claflin became an Associate in the Institute in 1905 and was transferred to Member in 1909.

LIEUTENANT EARL G. ANDERSON'S death has just been confirmed by the War Dept. He died on July 15, 1918 in a hospital in France as a result of wounds. Lieut. Anderson at the time of entering the Army was a cadet engineer with H. L. Doherty & Co. He became an Associate in the Institute in 1916.

LIEUTENANT R. M. WILSON, 7th Engineers, A. E. F., formerly with the Puget Sound Traction, Light & Power Co. was killed in France as described in the following extract of a letter from his commanding officer, Major Hoge to his mother.

"It was the morning of the 14th of October that your son was wounded. This division was attacking that day on the Argonne front between Cunel and Romagne, Dept. of the Meuse. Richard had been given command of F Company of this regiment only a week or so previous to this. His company was ordered to go "over the top" with the first wave of the infantry. They were carrying small footbridges which were to be used in crossing a stream in their front. It was while leading his men on this mission that your son was struck in the stomach by a machine gun bullet. He was taken to a first aid station at La Ferme de Madeleine as soon as possible and died at that place shortly afterwards. He was buried in the Soldiers' Cemetery at this place by the Chaplain of the Sixth Infantry."

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

L. A. Carbo
(former address)
1614 Eye St. N. W.,
Washington, D. C.

O. A. Darnell
(former address)
412 E. 5th St.,
Los Angeles, Cal.

D. G. Davis
(former address)
55 Hanson Place,
Brooklyn, N. Y.

George H. Groce
(former address)
2857-59 S. Halsted St.,
Chicago, Ill.

J. E. Penn
(former address)
322 Champlain Ave.,
Cleveland, Ohio.

Geo. B. Pulham
(former address)
General Post Office
San Francisco, Cal.

Arthur P. Stephens
(former address)
Floral Park,
Wilkinsburg, Pa.

L. L. Summers
(former address)
1520-18th St.,
Washington, D. C.

E. W. Sundberg
(former address)
6912 Page Ave.,
St. Louis, Mo.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bur eau.

OPPORTUNITIES FOR SERVICE

V-502. Draftsman. Draftsman on household electrical appliances and farm power and lighting outfits. Preferably with some practical shop experience. Salary $30. to $35. per week. Write W. E. B. Room 2502, 110 West 40th St., New York City.

V-503. Tool Designer with about five years experience in punch and die, jig and fixture work. Salary $30. to $40. per week. Write W. E. B., Room 2502, 110 West 40th St., New York City.

V-504. Designer of mechanical-electrical-apparatus, who is thoroughly familiar with design of small intricate mechanisms and their manufacture on a large scale. Must be technically trained and have had responsible design experience. Salary from $2,000. to $3,000. per annum. Organization is long established and is expanding its normal activities after a period of war work. To receive consideration a full chronological statement of experience and training is required. Write W. E. B., Room 2502, 110 West 40th St., New York City.

V-505. Capable and experienced armature winder thoroughly competent to take charge of repair department in an established electrical contracting and supply house in Western Pennsylvania.

V-506. Company in New York City manufacturing electrical appliances has vacancy in its engineering department for young man, technical graduate, capable of making tests upon and aiding in development of new apparatus.

V-507. College located on Pacific Coast, expecting expansion, wishes to add a high grade man who can soon qualify as a Professor of Electrical Engineering. Give record in detail, salary desired, etc.

V-508. Electrical Sales Engineer wanted as partner to establish business, and agencies, for new electrical devices with promising future. Requires some investment. State full particulars and if willing to work on West Coast.

V-509. Wanted Sales Engineer. Elevator safety field in New York and vicinity. Man must have wide acquaintanceship among architects and engineers in the building construction and equipment field. Man requiring breaking-in not acceptable. Strong personality; 28 to 38 years old. Salary and commission basis.

V-510. Engineer, preferably British, with long experience of heavy electric traction control, wanted to take full charge of designing and drafting departments for this class of work, in large English manufacturing concern. Give full details of design and manufacturing experience, technical and practical training and date services are available. Salary £500 to £650 according to qualifications.

V-511. Instructor wanted by technical school in Brooklyn for electrical laboratory and class-room work. Duties will include responsibility for an elementary electrical course, and assistance in a more advanced course. Must be an engineering school graduate and have had a few years practical experience. Previous teaching experience desirable but not absolutely necessary. Beginning salary $1500. to $1800. per year, depending upon individual. Apply by letter stating age, religious affiliation, education and experience, and enclose recent photograph if available.

SERVICES AVAILABLE

1238. College graduate in electrical and mechanical engineering, thirty-one years of age, Associate Member of

A. I. E. E. (Machinist by trade four years), three years Westinghouse test and service, three years sales engineer large oil company. Available on three weeks' notice to present employer.

1239. Electrical Engineer; graduate E. E., Associate A. I. E. E., age 27, single; four years shop and repair electrical work; two years testing; two years construction and engineering; experience with mining and mill electrical work. At present engineering office in U. S. N. Available upon application; references former employers; willing to go anywhere.

1240. Graduate electrical engineers (32) desires position with large concern charge of maintenance department. Several years experience in armature winding, dynamo, motor and welder repair and mechanical design. Considerable testing experience A. C. and D. C. machines. Will be released from U. S. N. R. F. by May 1.

1241. Electrical Engineer, age 34, discharged from service. Associate A. I. E. E. Ten years' experience with all kinds of electrical construction, operation and repairs. Formerly with Westinghouse. Understand steam and refrigeration, also machine shop experience. Desire executive position with industrial concern or power company. Will go anywhere.

1242. Electrical Engineer, with about fifteen years practical and executive experience along electrical and mechanical lines, such as motors, generators, watthour meters, transformers and testing, also street railways, wishes position as master mechanic, chief electrician, or charge of meter department or other electrical department. Located in South. Prefer small city. Married, age 34. Best references; $180. per month to start.

1243. Technical graduate, age 27, single, healthy, two years General Electric test, one year construction foreman, one year second lieutenant signal corps. Desires position as works electrical engineer or connection with industrial engineering firm. Salary $2500.

1244. Electrical and mechanical engineer, eight years' experience responsible charge of construction and operating work, with sales experience electrical apparatus, also twenty-two months experience in Engineers, U. S. Army; also graduate of technical college. Desires position. (Salary expected not less than $2000.)

1245. Position as manager or superintendent, twenty years experience as manager and engineer of hydroelectric company; has managed and designed hydroelectric and steam plants; can give best of references.

1246. Major, Statistics Branch, General Staff, U. S. Army, electrical and mechanical engineer, experienced in construction and operation of electric railways, engineering and military statistics, valuation of railroads. Prefer position as electrical engineer with railroad, but would consider any position for which qualified. Minimum salary $4000.

1247. An electric cable engineer thoroughly familiar with the design and manufacture of every commercial type of cable in use, backed by eight years executive experience in some of the largest cable companies. Have had considerable experience in solving problems in connection with industrial engineering and cost accounting. Willing to tackle anything. Minimum salary $3000.

1248. Teaching position desired by practical and theoretical electrical engineer. Graduate M. I. T. One year research and teaching under Dr. Kennelly; three years engineering and research with large and prominent telegraph and telephone companies. Unusually broad fund of information; available in Fall. Desire for more pleasant residential city cause for considering another position. Married.

1249. Electrical construction or maintenance foreman, practical experience of more than ten years, industrial electrical expert, known as A-1 man. Technical graduate. References of the best. Salary $2500. per year.

1250. Mechanical, electrical engineer, soon to be released from the Army. Have had eleven years' practical experience in the manufacture of electrical apparatus. Special experience in handling of labor. Technical graduate, thirty-four years of age.

1251. Executive mechanical and electrical engineer, age 35, married, technical graduate, member A. S. M. E., Associate A. I. E. E., desires position requiring tact and executive ability. Experienced in construction, operation and maintenance of stokers, boilers, hydraulic equipment, air compressors, electric generation, transmission, industrial lighting, heating, ventilation and refrigeration. Specialist in power production. Would take charge of power proposition for large industrial concern. Eastern location desired.

1252. Electrical graduate, Associate A. I. E. E., age 27, three years' experience in electrical testing department of large communication company, desires position as signal engineer with railroad or signal manufacturing company, or in testing department of power company. References furnished. Salary $2000.

1253. Graduate electrical and mechanical engineer, several years' experience on installation, building and repair work, wishes to locate in South America with company operating or planning operations in that territory. Age 23, available July 1.

1254. Electrical and mechanical engineer, graduate of M. I. T. Lieutenant in Naval Reserve Force. Available for position requiring engineering and business ability. Married, age 35, eight years' experience consulting mechanical and electrical engineer, two years general manager traction company, two years production engineer for large company. Highest references. No objection to foreign service. Salary commensurate with position, minimum in U. S. $5,000.

1255. Electrical Engineer, university graduate (1913), honorably discharged from U. S. Army. Age 28, Single. G. E. testing experience, electrical construction, maintenance and operation of power equipment and machinery around coal mines. Salary desired $225.-$275. per month. Available immediately.

1256. Technical graduate, single, age 22. Nine months with central station organization in meter work, inspector of services. One year with consulting engineering company on industrial light and power installations. Desires a permanent position with opportunity for advancement. New England preferred; other location considered. Salary $1300.

1257. Assistant Manager or Executive Engineer. Graduate electrical and mechanical engineer, age 30. Experienced in power plant and substation construction, operation and maintenance; organization; appraisal engineering; steel-mill operation and machine shop practice. Recently Lieutenant U. S. N., engineer officer in the battleship fleet. Desires permanent connection with opportunity for advancement. Salary $3600. to $4000., New York or Eastern location preferred.

1258. Class of 1919. Graduate electrical engineer from recognized technical college, is seeking a position with a firm that appreciates hard work, honesty, ability, and where men are advanced on their merits only. Have some experience in general engineering lines. Am foreign born and would develop into an excellent foreign representative. Available June 1.

1259. Executive engineer desires engagement with industrial, public utility or banking corporation. Industrial investigations, engineering, organization, management, public utility appraisals, railway engineering, construction, operation, transmission lines. Valuable to any manufacturer in determining best production and organization methods or to a banker in making reports and acting as advisor to his clients. E. E., age 40. Salary $6000.

1260. Electrical and mechanical engineer desires position as chief of design and development, with a concern manufacturing electrical apparatus. Thirteen years shop, laboratory and designing experience; two years departmental management. Familiar with measuring instruments, wireless apparatus and small machines. Foreign and domestic training. Age 30. Salary $3500.

1261. Junior electrical engineer and draftsman. M. I. T. graduate, age 26, single. One year experience in design and layout of substation equipment and active electrical construction work. Desires position offering broad opportunity.

1262. Electrical engineer or chief electrician in industrial plant. Age 35, married, technical education. Eighteen years broad electrical and mechanical experience in laying out, installation and maintenance of industrial lighting, motors, generators, etc. Ability to organize and handle men.

1263. Graduate (1915) of evening electrical engineering course, Associate A. I. E. E., recently released engineer officer U. S. N. R. F. Ten years' experience on the manufacturing, testing, inspection and installation of electrical and mechanical apparatus. Desires position on manufacturing, installation or tests. Single, age 27. Immediately available. Excellent references regarding ability, fitness and character.

1264. Experienced electrical mechanical engineer; college graduate; at present Engineer Officer, Naval Reserve, desires position, if sufficiently attractive, in Central American countries, Cuba, or Porto Rico. Thirty years old; married; both speak Spanish. Services available after two weeks notice.

1265. Electrical and mechanical engineer, age 34, desires position as electrical or maintenance engineer of industrial plant, preferably in the East. Ten years' experience with design and construction of power plants, distribution, lighting systems, and industrial motor application. At present engaged as electrical engineer of industrial plant.

1266. Graduate electrical engineer, age 35, married, eleven years' practical experience. Three years G. E. test and engineering department; three years central station operation and distribution; two years industrial installation and maintenance; three years power plant and substation design and construction foreman. References as to ability and character.

1267. Radio Engineer desires position as experimenter, research engineer, or instructor in radio theory at technical school. Technical graduate, electrical officer U. S. Navy. Married. Age 27.

1268. Available at once. What have you to offer electrical engineer, 30 years of age, and married? Past two years as testing and inspecting engineer motors, generators and mechanical equipment; six years practical experience in substation and powerhouse construction. Maintenance position desired.

1269. Completing work as U. S. Government electrical engineer on large port terminal. College graduate with fourteen years' experience in electrical power station installation and design, including high voltage transmission. Some knowledge of steam end of central station work and sales. Available about June 1. Salary $3000.

1270. Electrical engineer, ten years construction, operation and maintenance. Last thirteen months U. S. Army Engineer, France and Germany. Associate A. I. E. E. Age 27. Desires position with large manufacturing or power company. Minimum salary $2400.

1271. Telephone traffic engineer, age, 38, fifteen years' experience. Thoroughly familiar with Bell practices. At present General Traffic Superintendent. Salary $5000.

1272. Superintendent of electrical construction with twelve years' experience in switchboards, substations, underground cables, high and low tension work and general wiring of light and power. Have just completed one of the largest jobs in U. S. Desires position with good construction company. Age 36, married. Can furnish the best of reference.

1273. Executive, graduate engineer, 34, traveled extensively, well informed on big engineering projects. Now completing an investigation on proposed large public works. Available on short notice; vicinity of N. Y. C. preferred. Minimum salary $5000.

1274. Electrical Engineer desires position in construction department of large organization. Five years apprenticeship machine and erection shop. Four years with British War Mission, Inspection Department, steel and mechanical testing, electric wire and cable equipment. Unmarried, 27 years old. Salary about $125. per month. Best of references.

1275. Former Captain United States Army, technical graduate in electrical engineering with several years' experience in operating and commercial work with Public Service light and power corporation. Two years military service as personnel officer supervising selection of men and organization of the Army. Position desired as employment supervisor or commercial and sales engineer.

ACCESSIONS TO THE ENGINEERING SOCIETIES LIBRARY

(From March 1st to March 31st, 1919)

Unless otherwise specified, books in this list have been presented by the publishers. The Library does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

AERONAUTICAL ENGINES:

A critical Survey of Current Practice with Special Reference to the Balancing of Inertia Forces.

By Francis John Kean, 2nd edition. New York, Spon & Chamberlain; Lond., E. & F. N. Spon, Ltd., 1918, 101 pp., 49 illus., 31 pl., 8x5 in. cloth, $2.50.

CONTENTS: The Nature of the Problems, Classification of Aeroplane Engines, Relative Advantages of Different Types of Aeroplane Engines, Choosing the Number of Cylinders, Balancing the Sliding Parts of the Engine, Carburation, Ignition, Typical Aeroplane Engines, and Appendix.

This book consists of a course of ten lectures given during 1915 to men of the Royal Naval Air Service and the Royal Flying Corps, designers and engineering students.

COMPRESSED AIR PLANT.

By Robert Peele. 3rd edition. N. Y. John Wiley & Sons, Inc., Lond., Chapman & Hall, Ltd., 1919. 485 pp., 246 illus. 54 tab., 9 x 6 in., cloth, $4.25.

This edition has undergone a thorough revising and a number of chapters have been rewritten and several have been expanded, while old material has been condensed or omitted. The volume describes current practice in the construction and operation of compressors and discusses the applications of compressed air drilling, pumping and hauling, with special reference to mine service.

COTTON FACTS (Edition of Oct. 1918).

Compilation from Official and Reliable Sources of the Crops, Receipts, Exports, Stocks, Home and Foreign Consumption, Visible Supply, Prices, and Acreage of Cotton in the United States and other countries for a series of years, also Cotton Mill Statistics of the United States, Europe, India, etc., the Reports of condition of growing cotton crops, issued by the U. S. Department of Agriculture, and the Cotton Acreage and Yield of each State and County in the South according to the U. S. Census. Edited by Carl Geller. N. Y. Shepperson Publishing Co., 1918. 240 pp., 1 por., 7 x 4 in., cloth, $1.00.

This volume is the forty-third annual issue. In a book of pocket size, it presents the statistics needed by cotton merchants, manufacturers and growers, as indicated in the title.

THE DESIGN AND CONSTRUCTION OF DAMS.

Including Masonry, Earth, Rock-fill Timber and Steel Structures, also the Principal Types of Movable Dams. By Edward Wegmann. 6th edition, revised and enlarged. 1918 reprint revised. N. Y., John Wiley & Sons, Inc., 1918, 529 pp., 198 illus., 157 pl., 24 tab. 12 x 9 in., cloth $6.00.

The present volume is a reprint, with revisions, of the sixth (1911) of this well-known and popular treatise. A special feature of the book is the detailed information given concerning important dams in all parts of the world.

GASOLINE AND KEROSENE CARBURETORS. Construction—Installation—Adjustment.

A simple, comprehensive Treatise for practical Men, explaining all Principles pertaining to Carburetors for all Types of Internal Combustion Engines intended to operate on Liquid Fuels such as Gasoline, Kerosene, Bensol and Alcohol. By Victor W. Pagè. New York, The Norman W. Henley Publishing Co., 1919. 219 pp., 89 illus., 8 x 5 in., cloth, $1.50.

A handbook for operators of internal combustion engines. Explains in non-technical language the principles of carburetors, the usual modern types and the method of adjusting and repairing them.

HANDBOOK OF CHEMISTRY AND PHYSICS.

Compiled by Charles D. Hodgman, assisted by Melville F. Coolbaugh and Cornelius E. Senseman. Cleveland, Ohio, The Chemical Rubber Co., 1918. 557 pp., 7 x 4 in., flexible cloth, $2.50.

This compilation is intended to present in one volume of convenient size a comparatively comprehensive reference book for the use of chemists and physicists. The seventh edition has been enlarged by one hundred pages, which contain a revision of a table of the physical constants of organic compounds. This table now includes about two thousand substances. Various minor additions and corrections have been made throughout the work.

HEATON'S ANNUAL.

15th year, 1919. Published by Heaton's Agency, Toronto, Canada. 512 pp., (including advertisements) 7 x 5 in., cloth, $1.50.

A handbook of condensed commercial and industrial information on Canada. Describes the natural and commercial resources of the provinces, and industrial opportunities in the towns and cities. Much general information of use to visitors and business men is included.

A MANUAL OF CHEMICAL NOMOGRAPHY:

NOMEN. A Calculating Chart.

By Horace G. Deming. Champaign, Illinois, The University Press, 1918. In 2 parts, text and tables. $1.25. (Gift of Miles & Parris).

The Nomon is a nomographic reckoner, devised by the author, for the graphic solution of various arithmetical problems. Multiplication, division, powers, roots and logarithms can be treated by the eighteen charts, with an average error of one part in four or five thousand.

The Manual describes the method of using the Nomon and gives specific examples of its application to the solution of chemical problems, and indicates the kinds of calculations in which it is most useful.

MODEL MAKING:

Including Workshop Practice, Design and Construction of Models. A Practical Treatise for the Amateur and Professional Mechanic—giving Instructions on the Various Processes and Operations Involved in Model Making and the Actual Construction of numerous Models, including Steam Engines, Speed Boats, Guns, Locomotives, Cranes, etc. Lathe Work, Pattern Work, Electroplating, Soft and Hard Soldering, Grinding, Drilling, etc. are also included. Edited by Raymond Francis Yates. N. Y., The Norman W. Henley Publishing Co., 1919. 390 pp., 303 illus., 1 pl., 9 x 6 in., cloth, $3.

The author hopes that his book will promote interest in model engineering in this country and will also give a correct impression of its value as a recreation.

NINETEENTH YEAR BOOK:

Of The Rubber Association of America, Inc. N. Y., 1918. 119 pp., 9 x 6 in., paper.

Contains list of members, constitution and annual report for 1918.

PUBLIC UTILITY RATE FIXING:

Comments on Current Problems Pertaining to Public Utilities and to Rate Fixing. By C. E. Grunsky. San Francisco, Technical Publishing Company, 1918. 169 pp., 5 charts, 2 pl., 9 x 6 in., cloth, $2.50.

A reprint of a number of articles originally contributed to the *Journal of Electricity*, written in the hope that they may prove helpful in determining fair rates for the output of public utilities and in prescribing methods of procedure when rates are to be fixed; and that they may assist in the solution of some of the economic problems, which arise in the readjustment to peace conditions.

RADIATION, LIGHT AND ILLUMINATION:

By Charles Proteus Steinmetz. Compiled and edited by Joseph LeRoy Hayden. 3rd edition, N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1918. 305 pp., 127 illus., 1 pl., 14 tab., 9x6in., cloth, $3.00.

A series of twelve experimental lectures, most of which were delivered in 1908-9, with the exception of two lectures on Light Flux and Distribution, and Light Intensity and Illumination, the treatment is non-mathematical, and discusses the subjects in plain language.

This edition is apparently a reprint of the preceding ones.

THE SHIPBUILDING INDUSTRY:

By Roy Wilmarth Kelly and Frederick J. Allen, with an Introduction by Charles M. Schwab. Boston & N. Y., Houghton Mifflin Company, 1918. 303 pp., 64 pl., 8 x 6 in., cloth, $3.00.

The primary purpose of this volume, as stated by the authors is to describe and interpret for the general public, as well as for those employed in the shipyards, our war emergency shipping programme and the task of the shipbuilders. It is also hoped that the book will help those who wish to prepare themselves for executive positions and those considering shipbuilding or naval architecture as a possible life calling.

STEAM ENGINE TROUBLES:

A Practical Treatise for the Engineer, telling how to locate and remedy troubles with a Steam Engine. Cylinders, Valves, Pistons, Frames, Pillow Blocks and other Bearings, Connecting Rods, Wristplates, Dashpots, Reach-rods, Valve Gears, Governors, Piping, Throttle and Emergency Valves, Safety Stops, Flywheels, Oilers, etc., are all treated. By H. Hamkens. N. Y., The Norman W. Henley Publishing Co., 1919. 284 pp., 276 illus., 8 x 5 in., cloth, $2.50.

A simple account of the troubles which may arise in steam engine operation, the causes and the proper remedies, intended for the power plant engineer. Based on a series of articles published in *Power*.

STRUCTURAL ENGINEERS' HANDBOOK:

Data for the Design and Construction of Steel Bridges and Buildings. By Milo S. Ketchum. 2nd edition, N. Y. & Lond., McGraw-Hill Book Co., Inc., 1918. 896 pp., 165 tab., 9 x 6 in., flexible cloth, $5.00.

In preparing the new edition of this working manual for engineers, draftsmen and students, the author has added details of steel windows and doors, data on cement and gypsum tile roofs, solutions for bending moments in mill building columns and stresses in stiff frames, has rewritten and enlarged the chapter on steel highway bridges, and has corrected all known errors.

OFFICERS AND BOARD OF DIRECTORS 1918-1919

President

Comfort A. Adams

Junior Past-Presidents

H. W. Buck
E. W. Rice Jr.

Vice-Presidents

W. B. Jackson
Raymond S. Kelsch
F. B. Jewett
John B. Taylor
A. H. Babcock
Harold Pender

Managers

C. E. Skinner
John B. Fisken
N. A. Carle
Charles S. Ruffner
Charles Robbins
E. H. Martindale
Walter A. Hall
William A. Del Mar
Wilfred Sykes
Walter I. Slichter
G. Faccioli
Frank D. Newbury

Treasurer

George A. Hamilton

Secretary

F. L. Hutchinson

*GENERAL STANDING COMMITTEES.

Chairmen

Executive, Comfort A. Adams
Finance, N. A. Carle

Editing, Henry H. Norris
Safety Codes, Farley Osgood
Board of Examiners, F. L. Rhodes
Sections, Walter A. Hall
Student Branches, C. Francis Harding
Membership, H. A. Pratt
Public Policy, Calvert Townley

Chairmen

Headquarters, N. A. Carle
Electrical Engineering Service, William A. Del Mar
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering
Standards, L. T. Robinson
Board's Committee on Technical Activities, Wilfred Sykes

*TECHNICAL COMMITTEES

Chairmen

Power Stations, Philip Torchio
Transmission and Distribution, Edward B. Meyer
Traction and Transportation, C. F. Uebelacker
Industrial and Domestic Power, A. G. Pierce
Lighting and Illumination, C. E. Clewell
Economics of Electric Service, William B. Jackson
Protective Devices, D. W. Roper

Chairmen

Electrochemistry and Metallurgy, Carl Hering
Electrophysics, F. W. Peek, Jr.
Telegraphy and Telephony, Donald McNicol
Marine, H. A. Hornor
Use of Electricity in Mines, K. A. Pauly
Iron and Steel Industry, Eugene Friedlaender
Electrical Machinery, Alexander M. Gray
Instruments and Measurements, S. G. Rhodes
Educational, V. Karapetoff

*INSTITUTE REPRESENTATION ON

Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education

PROCEEDINGS

Vol. XXXVIII JUNE, 1919 Number 6

35TH A. I. E. E. ANNUAL CONVENTION AT LAKE PLACID

The 35th Annual Convention of the American Institute of Electrical Engineers will be held at the Lake Placid Club, Essex County, New York, June 24-27, 1919.

The selection of the Lake Placid Club as the Convention meeting place this year is a most happy one as it insures unsurpassed opportunities for recreation and entertainment. Situated in the heart of the Adirondacks, the natural attractions of the region make it an ideal place for all kinds of outdoor life; and in addition, the excellent equipment of the Lake Placid Club provides opportunities for practically all kinds of indoor and outdoor sports and recreations.

The technical program has been somewhat curtailed in order to leave ample time for the consideration and discussion of Institute policies at conferences under the auspices of the Committee on Development. Numerous modifications of the Institute's activities are being suggested, which demand the attention and study of the entire membership. Every member who can attend and take part in this important convention will find the experience both profitable and enjoyable.

Convention Sessions

The Convention will be opened by the presentation of the Annual Presidential Address, by President C. A. Adams, followed by the introduction of President-elect Calvert Townley. The remainder of the session will be devoted to the presentation of three papers under the auspices of the Protective Devices Committee.

Tuesday evening will be devoted to an informal reception and dance.

On Wednesday morning a session will be held at which the Reports of the Technical Committees for 1919 will be presented and discussed. These reports cover the activities of the various committees for the past year and the advances in the state of the art in the fields covered by the committees. At luncheon on Wednesday there will be a conference of the Committee on Development, Section Delegates and Institute Officers.

Thursday morning's session will consist of an open conference under the auspices of the Committee on Development including Section Delegates and Institute officers, to which all interested members of the Institute are invited.

On Friday morning there will be a technical session under the auspices of the Transmission and Distribution Committee at which four papers will be presented.

It will be noted that no specific program has been scheduled for the afternoons and two evenings during the convention. It is believed that the conferences under the auspices of the Development Committee on Institute policies will occupy some of the unassigned periods, and the Convention Committee this year, taking advantage of the special facilities of the Lake Placid Club is arranging an unusually complete schedule of contests, games and other entertainments which will occupy all of the spare time available.

A schedule of entertainment features will be announced at the convention.

A meeting of the Board of Directors and various committee meetings will be held during the Convention, notices of which will be sent to all concerned.

PROGRAM OF TECHNICAL PAPERS

Tuesday Morning, June 24

1. *President's Address*, by C. A. Adams.
2. *Present Day Practise of Transmission and Tie Line Relay Protection*, by H. R. Woodrow, D. W. Roper, O. C. Traver, and P. MacGahan.
3. *Grounding the Neutral of Generating and Transmission Systems*, by H. R. Woodrow.
4. *Grounded Neutral*, by Wm. E. Richards.

Wednesday Morning, June 25

5. *Reports of Technical Committees.*

Friday Morning, June 27.

6. *High-Tension Single-Conductor Cables for Polyphase Systems*, by W. F. Clark and G. B. Shanklin.
7. *The Dielectric Field in Electric Power Cables*, by R. W. Atkinson.
8. *Commercial Problems of 220-Kv. Power Transmission*, by A. E. Silver.
9. *The Effect of Transient Voltages on Dielectrics—II*, by F. W. Peek, Jr.

Transportation

Members are advised to consult their local ticket agents relative to train schedules and fares to and from Lake Placid (R. R. Station) and particular emphasis is placed upon the necessity for engaging Parlor Car and Sleeping

	Except Sunday	Daily	
	51	55	
Lve. New York (N. Y. C.)	8.30 a. m.	7.10 p. m.	No. 51.—Empire State Express (Adk. Div. No. 3) Parlor and Dining Cars to Utica.
Lve. Albany	11.35 a. m.	11.00 p. m.	
Lve. Utica	1.30 p. m.	1.25 a. m.	No. 55.—Western Express (Adk. Div. No. 5.) Sleeping Cars N. Y. to Lake Placid.
Ar. Lake Placid	7.10 p. m.	7.25 a. m.	
	....	49	
Lve. Boston (B. & A.)	....	4.45 p. m.	No. 49.—Parlor cars to Albany. Passengers from Boston and other points in New England connect with sleeping car from New York at Albany, leaving that point at 11 p. m. for Lake Placid direct.
Ar. Albany	....	10.40 p. m.	
Lve. Albany (N. Y. C.)	....	11.00 p. m.	
Ar. Lake Placid	....	7.25 a. m.	
	....	30	
Lve. Buffalo (N. Y. C.)	....	8.00 p. m.	No. 30.—Sleeping cars, Buffalo to Lake Clear Junction. Change at that point to local train for Lake Placid.
Lve. Rochester	....	9.40 p. m.	
Lve. Syracuse	....	11.35 p. m.	
Lve. Utica	....	1.25 a. m.	
Ar. Lake Clear Junction	....	6.08 a. m.	Passengers from points north and west of Buffalo should make arrangements to take No. 30 at Buffalo.
Ar. Lake Placid	....	7.25 a. m.	

Car accommodations at the earliest convenient date, as correspondence with the U. S. Railroad Administration indicates that only limited service will be available. From information received the following schedule showing the best trains from New York, Boston and Buffalo has been compiled. Members from other points should arrange to connect with these trains.

Fares

To Lake Placid from	One way	Round trip
New York.........	$12.29	$22.13
Albany............	7.69	13.85
Boston............	13.54	24.39
Buffalo............	11.15	20.07
Cleveland..........	17.17	30.80
Chicago...........	26.63	50.63
Detroit............	20.13	36.40
St. Louis..........	32.39	60.54

These fares include War Tax.

Sleeper and Parlor Car charges are additional.

Transportation from Lake Placid station to the Club will be provided by Club omnibuses.

Rates at Lake Placid Club

Single rooms per day		Double rooms per day		Meals
Without bath	With bath	Without bath	With bath	Day per person
$1.10 and 2.20	$3.30 to 5.50	$4.40 and 5.50	$6.60 to 11.00	$3.85

Reservation of Accomodations

Accommodations at the Lake Placid Club should be reserved as early as possible, by writing or telegraphing directly to the Club. Note particularly that there is a telegraph and post office at the club and all communications should be addressed to: Lake Placid Club, Essex Co., New York.

An automobile road map with a schedule of routes to the Lake Placid Club has been published with a separate announcement of the convention already mailed to the membership of the Institute.

PACIFIC COAST CONVENTION

The Pacific Coast Convention of the Institute will be held September 18—20, 1919 under the auspices of the Los Angeles Section. The local Convention Committee will be as follows: Carl E. Johnson, chairman; Julian Adams, vice-chairman; J. E. Macdonald and J. H. Cunningham. Convention Finance Committee, E. R. Northmore, H. A. Barre and R. H. Manahan; San Francisco representative, Robert Sibley; Spokane representative, John B. Fisken.

ANNUAL CONVENTION OF A. S. C. E.

The Forty-Ninth Annual Convention of the American Society of Civil Engineers will be held at St. Paul and Minneapolis, Minn., June 17–20th, 1919. Society headquarters at Radisson Hotel. The first day of the convention will be occupied by the Opening Meeting, Business Meeting and a Reception. The last three days will be devoted to trips to points of engineering interest, including the Duluth and Missabe Range Iron Mines, and also to various features of entertainment.

SPRING MEETING OF A. S. M. E.

The Spring Meeting of the American Society of Mechanical Engineers will be held at the Hotel Statler, Detroit, June 16 to 19, 1919. Papers will be presented on the following topics: Industrial Research; Conditions Necessary for Industrial Peace; Oil Engines; Fuels. Entertainment features are also scheduled.

JUNE MEETING OF INSTITUTE OF RADIO ENGINEERS

The next meeting of The Institute of Radio Engineers will be held on Wednesday Evening, June 4th, 8:15 p. m., in the Auditorium of the Engineering Societies Building, 29 West 39th Street, New York.

A paper on "Naval Aircraft Radio" will be presented by Mr. T. Johnson, Jr., Expert Radio Aid of the Navy. This paper will cover recent remarkable radiophone developments for Naval aircraft and will be profusely illustrated. Institute members are cordially invited to attend.

ANNUAL MEETING OF SOCIETY FOR THE PROMOTION OF ENGINEERING EDUCATION,

The 27th Annual Meeting of the Society for the Promotion of Engineering Education will be held at the Johns Hopkins University, Baltimore, Md., June 25-28, 1919 inclusive. Many questions connected with men in government service are to be discussed as well as questions of policy which must be settled before the exact relation of engineering schools to the R. O. T. C. can be determined.

NATIONAL CONFERENCE ON COMMERCIAL AND ENGINEERING TRAINING

A call has been issued by the Commissioner of Education for a national public conference on business training for engineers and engineering training for students of business. This conference will be held in Washington on June 23rd and 24th, 1919 and will be fully representative of all interests; educational institutions, commercial organizations and educational and engineering societies will be given an opportunity to express their views.

The conference has been called on behalf of the Conference Committee on Commercial Engineering, composed of administrative professors in engineering and commerce from educational institutions and representatives from the A. S. C. E., A. I. M. M. E., A. S. M. E., A. I. E. E., and a Committee of Fifteen on Educational Preparation for Foreign Service.

The following major topics will be discussed: Business training for the engineer; Engineering training for commercial enterprises; Significance of the war experience for engineering education; Training of the engineer for foreign projects.

FIFTH NATIONAL EXPOSITION OF CHEMICAL INDUSTRIES

The Fifth Annual National Exposition of Chemical Industries will be held this year in Chicago at the Coliseum and First Regiment Armory during the week of September 22nd. In connection with the Exposition a program is in preparation which includes meetings of the American Electrochemical Society, the American Institute of Mining Engineers, the American Ceramic Society and others.

ANNUAL MEETING

The Annual Meeting of the A. I. E. E. was held at Institute headquarters, 33 West 39th St., New York on Friday evening May 16, 1919 at 8:30 p. m. The meeting was called to order by Vice-President W. B. Jackson who in a few preliminary remarks called attention to remarkable progress of the Institute during the past year as outlined in the Annual Report of the Board of Directors distributed at the meeting. He then presented the report of the Committee of Tellers and announced the following as duly elected officers and managers: President, Calvert Townley, New York, N. Y., Vice-Presidents, C. E. Skinner, Pittsburgh, Pa., John B. Fiskin, Spokane, Wash., N. A. Carle, Newark, N. J., L. R. Jorgensen, San Francisco, Cal., Wills Maclachlan, Toronto, Ont., A. M. Shoen, Atlanta, Ga.;

Managers, L. E. Imlay, Niagara Falls, N. Y., L. F. Morehouse, New York, N. Y., F. F. Fowle, Chicago, Ill., Treasurer, Geo. A. Hamilton, Elizabeth, N. J.

Vice-President Jackson then called upon President-elect Townley who expressed his appreciation of the honor conferred upon him and the conviction that the problem confronting engineers today is one of finding ever increasing means and spheres of service to profession, State and Nation and of proveing the Institute's right to be considered one of the permanent National bodies.

The business meeting was then followed by the unveiling of the Weaver Tablet and the presentation of the Edison Medal both of which ceremonies are described elsewhere in this issue.

WEAVER MEMORIAL TABLET

The ceremony of the presentation and unveiling of the Weaver Memorial Tablet directly followed the Annual Business Meeting of the Institute, May 16, 1919. This tablet was presented to the Institute, by a group of members, in commemoration of the services of William D. Weaver, now retired and residing at Charlottesville, Va.

Vice-President Jackson called upon Dr. A E. Kennelly to say a few words in appreciation of the work of Wm. D. Weaver and he spoke in part as follows:

"I have the high honor to present to you this evening the evidence of our consideration and regard for one of our honored members, William Dixon Weaver, Lieutenant in the American Navy, and also Volunteer Chief Engineer of the American Navy during the Spanish-American War.

He was on the first Greely Relief Expedition in 1883. He founded the *American Electrician*. He was an editor of the *Electrical World* from 1893 to 1905, and he established a very high record for electrical journalism in this country at the time when Mr. Martin and he were joint editors of the *Electrical World*.

How he was able to ferret out and discover electrical books, electrical writings and electrical writers, always passes my own comprehension. . . . Everyone who knew him will, I am sure, agree with me in the remarkable qualities that he possessed as a judge and a selector and an inciter and a stimulator of American engineering literature.

He took very active part in the organization and development of the International Electrical Congress of 1904 in St. Louis. . . . . If he had done nothing else but that, he would have been worthy of the highest praise.

He was also led by his great love of books and of literature to strive for a great library here of electrical literature, and he took a very prominent part with others in the establishment of our own great Engineering Library.

We owe this presentation in large measure to the work of past Vice President, B. A. Behrend. We are all proud of Mr. Weaver tonight, but proud of Mr. Behrend in having accomplished this result.

This man whom I have the honor to extol is an American author, an American engineer, an American journalist, and a patriot, and a sailor last but not least.

I have the honor to present to you this very fine bronze portrait of him, and I hope that for generations to come it will be found in this building as representing the lineaments of a man who always thought of others and served others, because he understood them.

EDISON MEDAL PRESENTATION

The ceremonies in connection with the presentation of the Edison Medal to Benjamin G. Lamme, "for invention and development of electrical machinery," took place at the Annual Meeting of the Institute, May 16, 1919 directly following the business meeting and Weaver Memorial Tablet presentation.

Vice-President Wm. B. Jackson called upon Dr. Carl Hering who gave an outline of the founding and meaning of the Edison Medal and a summary of the accomplishments of the various recipients.

The Chairman then called upon Mr. B. A. Behrend who gave a history of the accomplishments of Mr. Lamme. He spoke in part as follows:

In Clark County, Southern Ohio, between Dayton and Springfield, about two score and ten years ago Benjamin Garver Lamme was born. The life on that farm gave him the rugged constitution without which even his great talents would not have carried him through. . . . . . . The early morning hours in 1887 and 1888, we are told, were often spent in poring over the pages of Sylvanus P. Thompson's "Dynamo Electric Machinery." Ohio State University . . . . was Mr. Lamme's Alma Mater. After working on the flow of air and gas in pipes for the professor of geology, he boldly applied for a position to Mr. Westinghouse, who had then just organized the Philadelphia Company. . . . . . . After a few months, his employer, Mr. A. T. Gillespie, recommends him to the Electric Company, where we find him in 1889 in the testing department under Mr. Albert Schmid. . . . . . .

Soon he becomes foreman of the testing department, and within a year his mind begins to turn to inventions. From 1889, in increasing numbers from year to year, he applied for patents, at the rate of ten a year in 1898, and up to the present time reaching the surprising total of 153. . . . . . .

That he was early in this field is indicated by the fact that nearly all the patents taken out on rotary converters in those days were in his name. . . . .

When it comes to 60-cycle converters, he stood practically alone for many years, and his work has been instrumental in giving these machines the final high position which they now hold in the industry. . . . . .

Again, he can claim to have been the leader in the direct current railway motor development, as far as fixing types of apparatus is concerned. . . . .

In this work on rotary converters, railway motors, and D. C. generators, it can surely be said that he has had much to do with solving the problem of commutation, in the sense of determining the conditions which affect commutation and taking advantage of those characteristics and features which improve commutating conditions. . . . .

In the induction motor field, while he was not among the first to develop induction motors, yet his work began in the latter part of 1892, and he was the first to produce commercial motors for the Westinghouse Company, and was among the first in America. . . . . .

There are many other fields in which he has had a hand, but not as prominent as the above. In the single phase railway system, which he creates, he deserves much credit for the fact that he successfully commutated alternating currents, after it had been pretty definitely accepted as being one of the impracticable or impossible things. . . .

With the advent of the steam turbine, Mr. Lamme turned his universal genius to the development of a type of turbo-alternator known as the "parallel-slot" type. . . . . . .

Two years ago, when the Secretary of the United States Navy established the Naval Consulting Board, the Directors of the Am. Inst. of Electrical Engineers were requested to nominate, and to recommend to the Secretary of the Navy, two members of their great body. . . . . . . It was a great pleasure for the present speaker that he then had an opportunity to commend Mr. Lamme's name. The good work done by Mr. Lamme on the Naval Consulting Board in his capacity as Chairman of the Inventions Committee is yet too early to appraise.

In accepting the medal Mr. Lamme gave an address in part as follows:

My appreciation of the honor conferred on me in the award of the Edison Medal cannot readily be expressed. Looking back upon my earliest days in the electrical field, when the forces with which I was allied were in bitter rivalry with those, at the head of which was the man whose name this Medal bears, it is hard to conceive what a tremendous change has taken place in so few years. . . . . . . Now the rivalries in electrical industry are between organizations, the members of which may be the best of friends.

Most people are particularly interested in accounts of wonderful inventions or discoveries; and the cold-blooded methods of the engineer in driving through all obstacles to a desired result do not contain for them any especial elements of romance or excitement. They do not recognize that the work of the engineer carries responsibilities, which ofttimes is not the case with the inventor; moreover, they are not aware that the engineer in the manufacturing field, when he once embarks on a program, is obliged to see it through to the end, and that he must stand or fall by his results. To state it very briefly, the experimental attracts more attention than the analytical. The modern engineer, especially in the electrical field is largely an analytical man and his adventures in analysis do not appeal to the popular taste. . . . . . .

In an industrial organization, the engineering developments are almost always the result of co-operation of many trained minds, and in consequence, it is difficult to give any one man a large share of the credit. The work of such organization more resembles that of an army than of an individual. . . . . . . Many of the developments now being carried through in the engineering field so far exceed any individual capabilities, that only the united efforts of many brilliant minds can attain success; and he who does his part, can well take pride in the greater accomplishment, even if there may be less personal glory in it. . . . . . .

Without the backing of immense resources in capital, equipment, and experience, and without the greatest co-operation of many analytical minds, there could have been no such an accomplishment as the modern high speed, huge capacity turbo generator sets. . . . . . .

As another illustration, in the railway field the steam locomotive has been a long development, requiring the experience of years. . . . . . .

I will tell the story of one development, in which I have always had pride, which, however, is but little known because of lack of spectacular elements. This concerns the single-reduction-gear railway motor development, back in the Summer of 1890, just a little over a year after I entered the electrical business, and before the company with which I am connected had any organized Engineering Department.

Leading up to this, a little personal history is required. On May 1st, 1889, by an accidental circumstance, I was enabled to enter the employ of the Westinghouse Company at Pittsburgh, where I was placed in the test room by Mr. Albert Schmid, then Shop Superintendent. My college training had covered a purely Mechanical Engineering course, but I was more or less interested in electrical machinery from the construction standpoint. Some months after I had entered the company, Mr. Schmid spoke to me very pleasantly one evening in the test room, and a little later I received a message to call at his office the next morning. There, he said he had been told that I had had practice at "figuring things." I said that I had done some calculating on the flow of natural gases in long pipe lines for the State Geologist of Ohio, but had never figured on anything electrical. He said that made no difference as long as I could figure, and he wanted to try me on something. He then explained that he believed electrical machinery could be calculated. . . . . . . He wanted to try me out. I agreed, of course, to make the attempt and he then showed me a little pamphlet, written by an Englishman, in which there were certain crude methods of calculation worked out. He reviewed this very painstakingly with me and then asked me what I thought. I told him that I would like to try my hand at such calculation and so I was set to work on it using my spare time between tests, to see what I could do in the way of checking up the saturation curves on our existing alternating current machines. I soon found that I could get reasonably close approximations, in so far as our magnetic and electric data at that time would permit. . . . . . . This was really the beginning of the calculation of electrical machinery in the Westinghouse Company.

In the latter part of 1889, Mr. Westinghouse was planning to go into the railway equipment business and he asked Mr. Schmid to have a study made of the subject. Mr. Schmid then told me to get busy and first investigate the existing systems and then see what I could do toward *calculating* a suitable railway motor. In January, 1890, I prepared specifications, from calculations, for a double-reduction railway motor very much along the general lines of the then existing types. This was the first machine which the Westinghouse Company produced entirely from calculations, and when built, it was sufficiently close to the specifications to be put on the market as a commercial machine. This was known as the No. 1 Westinghouse double-reduction motor. I am telling this because it leads up to the development of the single-reduction-gear motor.

In August, 1890, during a strike at the company's plant, the test room was shut down completely, and to keep busy I took up the problem of the electrical design of a single-reduction-gear motor for railway work. . . . .

Right at the start, my rough figures indicated that such a machine should be of a 4-pole type in order to keep down the weight. With this as a starting point, I naturally turned toward the Westinghouse alternator type of field

construction with its internal, symmetrically spaced, poles. This appealed to me as presenting several great advantages for a railway motor construction, for the external yoke of the machine naturally formed an ironclad protection for the motor as a whole, and it would be a very easy matter to "house" the lower half to protect it against damage from below. So far, so good,—but when it came to the armature, I was fairly "stumped" for awhile. I first worked out a surface wound armature, such as was common practise on railway motors at that time, but found at once that, due to the large iron-to-iron gap, the construction was practically prohibitive with four poles. This apparently brought me up against a blank wall. However, various other possibilities were then considered, among them the "slotted" type of armature, such as was being used on small capacity machines by the United States Company, then a subsidiary of the Westinghouse. . . . . To my great pleasure, the first figures indicated that, from the magnetic standpoint, the slotted construction allowed a quite low speed motor of proportions permissible for a street car equipment. However, when it was attempted to work out the armature winding itself, another most serious difficulty appeared. Up to this time, the one type of winding considered practicable for four-pole machines was what is now known as the "parallel" type, with four circuits, and requiring four brush arms unless all the commutator bars were cross connected. This appeared to me to be impracticable for railway work, and we were faced by a most serious difficulty. . . . . . .
After two or three days' work, I found a winding which gave exactly what was desired and this was used in the construction of the first motors of the new type.

I then proposed machine wound coils, insulated before being put on the core. . . . . . . The foreman of our transformer winding department and myself, both of us with no previous experience as armature winders, then put the machine wound coils on these two slotted armatures, both of which stood the shop tests and both were sent out on the first car equipment. Even at that time, I considered this a most conclusive proof of the superiority of machine wound coils, in that two inexperienced men could make a success of this winding in their first attempts.

In the latter part of 1890, these two machines were put on test and checked quite closely with the calculations, and what was more important, the slotted armatures commutated better than we expected and the new type of armature proved to be thoroughly satisfactory.

. . . . . .

This single-reduction-gear motor should be looked upon as the direct "ancestor" of the modern universally adopted type of railway motor. . . .

So much for development,—now as to inventions; in my case, they could mostly be classed as *by-products*, as someone has aptly put it. In an engineering and manufacturing organization, the first efforts of the engineers are expended in obtaining certain desirable results in the most successful manner. Usually, if a result is one not accomplished before, or is an improvement over existing practice, then new and novel, and consequently patentable, ideas quite frequently are involved. The real engineer on this work usually does not set out to "invent something."

. . . . . .

From the standpoint of development and inventions, the past looms large, but how about the present and the future? In looking over the past history of electrical engineering, the engineer may be inclined to think that the golden age of development and invention is past, and that the future contains no corresponding promise of new and startling things. But I do not agree that this is so. The pioneering period may be over, but the true development age has possibly just begun. The work is growing more difficult year by year, as our accumulation of knowledge grows. We are working ahead of our data, just as we did twenty to thirty years ago. . . . . . .

A. I. E. E. DIRECTORS' MEETING, NEW YORK, MAY 16, 1919

The regular monthly meeting of the Board of Directors of the American Institute of Electrical Engineers was held at Institute headquarters, New York, on Friday, May 16, 1919, at 2:30 p. m.

There were present: Vice-Presidents W. B. Jackson, Pittsfield, Mass., and John B. Taylor, Schenectady, N. Y.; Managers C. E. Skinner, Wilfred Sykes, and F. D. Newbury, Pittsburgh, Pa., N. A. Carle, Newark, N. J., Charle S. Ruffner, St. Louis Mo. E. H. Martindale, Cleveland, O., Walter A. Hall, Lynn, Mass., W. A. Del Mar and W. I. Slichter, New York, G. Faccioli, Pittsfield, Mass.; Treasurer George A. Hamilton, Elizabeth, N. J.; Secretary F. L. Hutchinson, New York.

In the absence of President Adams, who is in Europe, Senior Vice-President Jackson presided.

The action of the Finance Committee in approving monthly bills amounting to $10,668.28, was ratified.

A request for an additional appropriation from each Founder Society for the continuation of the work of the Engineering Societies Employment Bureau through the present calenda year, was presented; and upon the recommendation of the Secretary and the Chairman of the Finance Committee, a resolution was adopted that the Board, concurring in the view that the present service of the Engineering Societies Employment Bureau should be continued, as a war activity, during the year 1919, with particular reference to the members of the Founder Societies and other technical men who are or have been in the service of the Army or Navy, authorizes the necessary appropriation.

The Meetings and Papers Committee recommended that the regular meeting for October be held under the auspices of the Electrophysics Committee in combination with the American Physical Society, in Philadelphia, at the usual time; that a joint meeting be held in New York, also in October, under the auspices of the Telegraphy and Telephony Committee and the Institute of Radio Engineers; that a meeting be held in New York in November under the auspices of the Power Stations Committee.

In accordance with the recommendation of the Board of Examiners, the following action was taken upon pending applications: 127 Students were ordered enrolled; 177 applicants were elected to the grade of Associate; 3 applicants were re-elected to the grade of Associate; 7 applicants were elected to the grade of Member; 4 applicants were transferred to the grade of Member.

The Annual Report of the Board of Directors for the fiscal year ending April 30, 1919, as prepared by the Secretary, was presented, approved and ordered presented at the Annual Business Meeting of the Institute to be held on the evening of May 16. (The Report appears elsewhere in this issue).

The Annual Report of the Treasurer for the fiscal year ending April 30, 1919, which agreed with the annual report of the auditors as embodied in the Board of Directors' report, was presented, accepted, and ordered filed.

Annual Reports of various standing committees were presented. These reports, which had been included in full or abstracted in the Board of Directors' report, were received and ordered filed for the use of incoming committees.

In accordance with Sec. 37 of the Constitution, the Board considered the appointment of a Secretary for the administrative year commencing August 1, 1919; and Secretary F. L. Hutchinson was reappointed.

A report from Mr. C. E. Skinner, Institute delegate to the Chicago Conference on Department of Public Works, under the auspices of the National Service Committee of Engineering Council, April 23-25, was presented, and accepted with an expression of appreciation of Mr. Skinner's service .

A report from the Standards Committee was presented, embodying a request for an extension of time of sixty days from May 16 for the completion of the year's work of the Committee, in order to finish the general revision of form of the Standardization Rules which had been undertaken; and submitting for the approval of the Board, a statement of the amendments and additions to the Standardization Rules which had been adopted by the Committee during the year. The Board granted the Committee's request for an extension of time and approved the proposed amendments and additions to the Rules.

In addition to the above, many other matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

REPORT OF COMMITTEE OF TELLERS ON ELECTION OF OFFICERS

To the President,
American Institute of Electrical Engineers.

DEAR SIR:—This committee has carefully canvassed the ballots cast for officers for the year 1919–1920. The result is as follows:

Total number of ballot envelopes received		2486
Rejected on account of bearing no identifying name on outer envelope, according to Art. VI., Sec. 34, of the Constitution	33	
Rejected on account of voter being in arrears for dues on May 1, 1919, as provided in the Constitution and By-laws	60	
Rejected on account of ballot not being enclosed in inner envelope, or on account of inner envelope bearing an identifying name, according to Art. VI, Sec. 34, of the Constitution	63	
Rejected on account of having reached the Secretary's office after May 1, according to Art. VI, Sec. 34, of the Constitution	4	
Rejected on account of improper marking of ballot	43	
Blank ballots	14	217
Leaving as valid ballots		2269

These 2269 valid ballots were counted and the result is shown as follows:

For President	
Calvert Townley, New York	2201
Scattering and blank	68
For Vice-Presidents	
C. E. Skinner, Pittsburg	2182
John B. Fisken, Spokane	2169
N. A. Carle, Newark	2139
L. R. Jorgensen, San Francisco	2122
Wills Maclachlan, Toronto	2074
A. M. Schoen, Atlanta	1887
J. B. Whitehead, Baltimore	762
Blank	279
For Managers	
L. E. Imlay, Niagara Falls	2227
L. F. Morehouse, New York	2217
F. F. Fowle, Chicago	2210
Blank	153
For Treasurer	
George A. Hamilton, Elizabeth, N. J.	2231
Blank	38

Respectfully submitted,
HENRY C. CLEMENT, *Chairman*
IRVING W. EDWARDS,
CHAS. W. LEE,
P. C. PAQUETTE,
JAMES GOLDSBOROUGH,
Committee of Tellers.

ENGINEERING STANDARDIZATION CONFERENCES IN FRANCE AND ENGLAND

Professor Comfort A. Adams, President of the Institute, and Mr. H. M. Hobart sailed for Europe April 18, 1919, to attend conferences in France and England on engineering standardization.

At Paris they were to be joined by Dr. C. O. Mailloux, and these three, as a delegation representing the U. S. National Committee of the International Electrotechnical Commission, were to attend a meeting of the Special Committee on Rating of the I. E. C., at Paris, May 5 to 7, 1919. This Committee includes representatives from Belgium, France, Great Britain, Italy, Sweden, Switzerland, and the United States.

It is believed that the Conventions of the I. E. C., which have been interrupted during the past four years by the war, will now be resumed.

Later the delegation planned to attend, as representatives of the American Engineering Standards Committee, a conference of the British Engineering Standards Association, in London, on Anglo-American cooperation in engineering standards, and to return to the United States about the middle of June.

THE AMERICAN ENGINEERING STANDARDS ASSOCIATION

Engineering standards are the forerunners of trade, as upon these standards are based the specifications which accompany inquiries for engineering materials and equipment. Many societies of high standing in the United States have issued standards which compare favorably with those issued by most authoritative European societies but they have not been available to foreign engineers due to the latter not being acquainted with the relative standing of the societies issuing them.

We now have the prospect of seeing an authoritative series of American standards bearing the stamp of approval of an organization which will have a recognized international standing, due to its affiliations with the great national engineering societies and government departments.

The American Engineering Standards Committee, at a meeting held May 17, approved a proposed revised constitution under which the Committee will be reorganized as "The American Engineering Standards Association." Under this new constitution the Association will assume its regular functions as soon as the parent societies, including the American Institute of Electrical Engineers, have voted their approval.

According to this constitution the purposes of the Association will be as follows:

1. To unify and simplify the methods of arriving at engineering standards, to secure co-operation between various organizations and to prevent duplication of work;

2. To promulgate rules for the development and approval of standards;

3. To receive and pass upon recommendations for standards submitted, as provided in the Rules of Procedure, but not to initiate, define, or develop the details of any particular standard;

4. To act as a means of intercommunication between the organizations and individuals interested in problems of standardization;

5. To co-operate with similar organizations in other countries and to promote international standardization;

6. To give an international status to approved American engineering standards.

7. To give an internationally recognizable standing to American Engineering Standards.

The Association will be composed of not more than three representatives from each of the principal engineering societies, government departments, and other organizations interested in the formulation of standards each such representative having one vote.

The affairs of the Association will be managed by a Board of Directors, which will consist of twelve members. This Board will have power to deal with all affairs of the Association, except the approval of standards.

The Association will pass upon engineering standards and classify them as "Recommended Practise," "Tentative Standards" or "Standard," the advance of status to "Standard" requiring an affirmative vote of ninety per cent of the association.

Each organization appointing representatives of the Association will pay annual dues of five hundred dollars for each representative and other funds may be obtained in any manner approved by the Association.

The constitution, which appears to have finally met with the informal approval of the participating organizations, is the result of many months of hard work in reconciling the divergent views of the individual founders. The members of the Association are to be congratulated on the successful completion of their labors. It s the patriotic duty of every American to lend his earnest support to the American Engineering Standards Association to the end that American Engineering Standards may receive the world-wide recognition, which is their due.

SCIENTIFIC AND TECHNICAL EMPLOYEES OF THE GOVERNMENT IN WASHINGTON ORGANIZED

The first steps toward permanent organization or unionization of technical and scientific men was taken recently when on May 8, 1919 the scientific and technical employees of Government departments and agencies in Washington, D. C., got together at a mass meeting. The subject of organization had previously been widely discussed but was finally brought to a head by the action of the Joint Congressional Reclassification Commission in stating that they wished to deal with employees only through organizations.

The principal advantages to be derived from such an organization were pointed out by Rodney H. True, Dept. of Agriculture, the Acting Chairman, as follows: Improvement of conditions and facilities for more effective scientific and technical work; Adequate presentation of the needs and results of such work to the public and to legislative and administrative officers; Greater freedom in both official and non-official activities; Just and reasonable salaries based on service performed and economic and social conditions which prevail; Greater public recognition of the aims and purposes of research; Advancement of service and technology as an essential element of national life.

Three plans of organization were offered, covering the fundamental principles government employees could utilize. The first was based on the plan adopted* in England and would have permitted the organization to operate only through existing scientific organizations.

Dr. Humphreys proposed the second plan under which an independent organization of federal employees engaged in scientific and technical work would be created. The objection to highly technical men becoming affiliated with unions was covered in detail.

The plan finally adopted by the conference was sponsored by Dr. Rosa, chief physicist of the Bureau of Standards. He pointed out the unfavorable conditions under which government scientists solving big problems are compelled to work and the certainty that the present service will become inefficient from loss of personnel due to insufficient compensation.

The following resolutions were adopted:

1. A scientific and technical branch of Federal Employees' Union No. 2, coordinate with the departmental branches. One could be a member of a departmental branch only, or of the scientific branch only, or *of both branches*. Double membership would *not* involve double dues.

2. It is suggested that, pending the completion of a permanent organization, the meeting proceed to a temporary organization comprising a chairman, secretary, and a general interim committee having executive powers.

3. The general committee to consist of the chairman, the secretary, and representatives from the bureaus, one for each 20 members or major fraction thereof. All bureaus of a department to elect representatives in common when desired.

4. It is suggested that the representatives of the several bureaus be elected at special meetings of local members (including new members) of the department of bureau branches to be held at the call of the central organization of the Federal Employees Union No. 2, not later than Monday, May 12, the general committee so constituted to meet at the call of the chairman.

5. The funds required to initiate work will be available at once from the union organization. The present annual dues of the Federal Employees Union are $4.00 (35c. per mo.). The admission fee is $1.00. Should the new branch decide to undertake extensive special work, a small addition to the dues might be necessary.

JOHN FRITZ MEDAL PRESENTATION

On the evening of May 22, 1919 at 8.30 p. m., the John Fritz Medal was presented to General George W. Goethals in the auditorium of the Engineering Societies Building, 33 West 39th St., New York.

The Board of Award formed of sixteen men, four representatives from each of the four National Societies of Civil, Mining, Mechanical and Electrical Engineers awarded the Medal to General Goethals for achievement as builder of the Panama Canal. He is the fifteenth recipient. This medal represents the highest honor which can be paid by the engineering profession of America.

Mr. Chas. F. Rand, Past President of the American Institute of Mining and Metallurgical Engineers presided. Addresses were delivered by W. L. Saunders, Past President, A. I. M. M. E., Hon. Henry L. Stimson, Ex-Secretary of War, Ambrose Swasey, Past President, A. S. M. E., and response by General Goethals.

THE ENGINEERING SOCIETIES TO ASSIST THE JOINT EMPLOYMENT SERVICE OF FEDERAL, STATE, AND CIVIC BODIES

During the war the Four National Societies of Civil, Mining, Mechanical and Electrical Engineers, under the auspices of the American Engineering Service Committee of Engineering Council rendered valuable aid to the Government, placing many technical men in the Army, Navy and industries of the country at a time when they were greatly needed. With the signing of the armistice the need for Government service naturally ended, but the greater problem of returning to civil employment the discharged soldier and sailor at once presented itself, and is daily becoming graver and more urgent. To meet this situation the Engineering Societies Employment Bureau of Engineering Council was organized with the Secretaries of the Societies of Civil, Mechanical, Mining and Electrical Engineers as Directors.

At the invitation of Colonel Arthur Woods, Special Assistant to the Secretary of War, the Engineering Societies have been requested to bring to the attention of all their members the availability of not only the professional men who are returning but also the supply of miners, mechanics and other skilled labor among the enlisted men and to emphasize that the Army discipline has not only made these men quicker thinkers but also more willing and obedient workers—that the whole result has been conducive to the regular habits and clean living, steadying these men and fitting them to quicker meet emergencies, and has instilled more loyalty to their superiors and to their jobs.

Further, the military instruction which they have received has increased the men's powers of concentration. The War Department believes the employers of skilled labor cannot be too strongly impressed with the fact that the employment of discharged soldiers will be advantageous to the employer and economically beneficial to the country.

The following is a list of the vocations of the men who are now returning:

Auto Mechanic
Blacksmith
Boilermaker
Bricklayer
Carpenter
Air, or Gas Compressor Operator
Concrete or Cement Worker
Construction Foreman or Supt.
Crane Operator
Draftsman
Electrician
Engineer
Engineman and Fireman
Foundryman
Gasoline Engineman or Repairman
Gas Plant Worker
Hydraulic Press Operator
Instrument Maker
Laborer (Classified)
Lineman and Cableman
Machinist and Mechanic
Metal Finisher
Millwright
Miner or Quarry Worker
Painter
Pipefitter

Photographer
Plasterer
Railroad Operating Man
Refrigeration Operator
Rigger and Cordage Worker
Sheet Metal Worker
Structural Steel Worker
Telegraph and Wireless Man
Transportation Man
Water Supply Man
Welder and Cutter.

To this end every member of the Institute is requested to take up the matter actively and to write to the Secretary or to Mr. W. V. Brown, Manager of the Engineering Societies Employment Bureau at 29 West 39th Street, New York, detailed opportunities for placing men in any of the industries in which they are acquainted.

PAST SECTION MEETINGS

Boston.—April 22, 1919, Engineers Club. Paper: "The Present Status of the Industrial Lighting Codes" by George H. Stickney. Joint meeting with New England Section of Illuminating Engineers. Attendance 35.

April 28, 1919, Engineers Club. Subject: Committee on Development of A. I. E. E. Discussion of points being considered by the Committee on Development.

May 6, 1919, Engineers Club. Paper: "Utilizing the Time Characteristics of Alternating Current" by Henry E. Warren. Paper was illustrated by exhibits and lantern slides. Election of officers as follows—chairman, I. E. Moultrop; vice-chairman, W. I. Middleton; secretary-treasurer, Ira Cushing. Attendance 65.

Chicago.—April 28, 1919, Western Society of Engineers Rooms. Paper: "Wireless Telephony and Telegraphy in War," by A. A. Oswald. Joint meeting with Electrical Section of Western Society of Engineers. Attendance 200.

Cleveland.—April 21, 1919, Hotel Statler. Subject: "Electricity vs. Air for Portable and Semi-Portable Tools." Speakers: E. L. Connell and B. W. Sweet. Capt. E. H. Martindale showed lantern slides of pictures taken by himself on the other side, and briefly explained same. Attendance 43

Denver.—April 19, 1919, Minnequa Club, Pueblo, Colorado. Paper: "History of Power Transmission," by Paul M. Lincoln. Automobile trip to Pueblo and inspection of steel plant of the Colorado Fuel and Iron Company. Attendance 105.

Detroit- Ann Arbor.—April 25, 1919, Detroit Board of Commerce. Paper: "Induction Motor Characteristics," by B. F. Bailey. Attendance 60.

May 1, 1919, Detroit Board of Commerce. Paper: "Wireless Telephony and Telegraphy in War," by A. A. Oswald. Joint meeting with Detroit Engineering Society. Attendance 200.

May 16, 1919, Detroit Board of Commerce. Subject: "The Influence of the War Upon Scientific and Engineering Developments in the United States." Speaker: Colonel R. A. Millikan.

Erie.—May 13, 1919, Board of Commerce Rooms. Subject: "Audible Electric Signaling in Industrial Plants, and Electro-Acoustic Engineering. Speaker: Prof. V. Karapetoff. Attendance 112.

Fort Wayne.—April 17, 1919. Subject: "An Engineering Discussion of Fractional Horsepower Motors." Speakers: E. B. George, Roy Young, E. A. Schaefer, and R. B. Roberts. Attendance 30.

Ithaca.—April 24, 1919, Franklin Hall, Cornell University. Subject: "Public Hearing on the Proposed Bill in the U. S. Senate to Change the Present English System of Weights and Measures to the Metric System in 1922. Brief speeches and remarks for and against the measure by Professors E.L. Nichols and A. E. Wells, and Messrs. H. Halperin, W. E. Voisinet, H. Caminez, K. Tennygold, H. Richards, Jr., and F. A. Halsey. Attendance 101.

Los Angeles.—March 25, 1919, Edison Hall. Illustrated address by Lieut. Ellery Stone, U. S. N., on "Radio Engineering." Attendance 30.

Lynn.—May 6, 1919, General Electric Hall. Illustrated lecture by Mr. C. E. Eveleth on "Submarine Detectors." Attendance 166.

Milwaukee.—April 16, 1919, Athletic Club. Illustrated address by Mr. George R. Lawrentz on "Aeroplane Construction." Attendance 410.

April 29, 1919, Athletic Club. Address by Mr. A. A. Oswald on "Wireless Telephony and Telegraphy." Address was illustrated with motion pictures, and a practical demonstration of radio telephony was given.

Minnesota.—April 15, 1919, Main Engineering Building, University of Minnesota. Paper: "The Street Railway Problem." by Horace Lowry. Attendance 100.

Panama.—March 30, 1919, Balboa Heights. Paper: "Testing of Hydraulic Turbines," by William T. O'Connell. Attendance 18.

Philadelphia.—April 14, 1919, Engineers Club. Discussion on points under consideration by Committee on Development. Addresses by Secretary F. L. Hutchinson, Dr. William McClellan and Mr. J. Franklin Stevens. Attendance 45.

Pittsburgh.—May 13, 1919, Chamber of Commerce. Paper: "Merchant Marine Electrical Auxiliaries," by W. E. Thau. Attendance 125.

Portland.—March 11, 1919. Address by Colonel Zinn of U. S. Engineers on "Work of the United States Engineers." Attendance 55.

April 7, 1919. Illustrated address by Mr. J. W. Sadler on "Concrete Ship Construction." Attendance 47.

Schenectady.—April 18, 1919, Edison Club Hall. Smoker was held in the Edison Club Hall. Refreshments were served followed by musical entertainment. Attendance 350.

April 23, 1919, Edison Club Hall. Discussion of points brought out by the Committee on Development. Attendance 95.

May 2, 1919, Edison Club Hall. Papers: (1) "Pliotron Vacuum Tubes and Their Application to Radio Apparatus," by W. C. White; (2) "Radio Apparatus for Aircraft and Ground Stations," by E. M. Kinney. Models of apparatus were exhibited and some demonstrations made.. Attendance 285.

Election of officers as follows—chairman, C. S. VanDyke; vice-chairman, C. M. Davis; J. L. Burnham and S. H. Blake; treasurer, H. P. Broderson; secretary, L. B. Bonnett.

Seattle.—March 29, 1919, Commercial Club. Address on "Power Transmission," by Mr. Paul M. Lincoln. Mr. John B. Fisken spoke on "The Engineer—His Composition, His Opportunities and His Duties." Attendance 60.

Spokane.—April 18, 1919, Chamber of Commerce. Paper: "City Transportation from an Engineer's Viewpoint," by T. E. Phipps. Joint meeting with A. S. C. E., A. I. M. E., and Spokane Engineering and Technical Association. Attendance 49.

St. Louis.—April 30, 1919, Engineers Club. Illustrated address by Mr. H. W. Eales on "Present Practise in Sub-Station Design." Discussion on points brought out by Committee on Development. Attendance 58.

Toronto.—April 25, 1919. Election of officers as follows—chairman, Ashton B. Cooper; secretary, Daniel M. Fraser; executive committee, L. B. Chubbuck, H. C. Don Carlos, F. R. Ewart, C. Sisson, W. Volkman, A. C. Johnston.

May 2, 1919. Engineers Club. Address by Professor Valdimir Karapetoff on "Fundamentals of the Magnetic Circuit." Attendance 65.

Washington.—May 13, 1919, Cosmos Club. Election of officers as follows—chairman, Milton M. Flanders; secretary, R. Karl Honaman; executive committee, J. E. Smith, Thos. McKavanaugh, Quinton Adams, R. J. Patterson, E. T. Walker. Motion pictures (1) "The King of the Rails," (2) "The Manufacture of Mazda Lamps," by courtesy of General Electric Company. Attendance 31.

PAST BRANCH MEETINGS

University of Arkansas.—May 14, 1919. Papers: (1) "Inventions of Nicola Tesla," by Ernest Hollabough; (2) "Transmission Lines" by J. C. Black; (3) "The Rogers Underground Wireless," by Chester Parker. Attendance 13.

Bucknell University.—April 14, 1919. East College. Address by Ensign L. H. Noll on 'The Advantages of Oil Over Coal a a Fuel." Attendance 18.

Carnegie Institute of Technology.—May 7, 1919. Papers (1) "Some Notes on Life in the Navy," by G. M. Porter; (2) "The Progress of the United States in Aeronautics," by H. L. Parker; (3) "The Use of the Radio in the War," by C. F. Sheakley. Attendance 24.

University of Cincinnati.—April 24, 1919, Engineering Building. Address by Lieut. Vernon Wiegand on "The Wireless Telephone Equipment on Airplanes." Attendance 40.

May 8, 1919, Engineering Building. Paper: "Shell Making at the American Rolling Mill," by A. A. Van Pel. Attendance 38.

Georgia School of Technology.—April 30, 1919, Y. M. C. A. Illustrated address by Prof. C. P. Eldred on "Iron and Steel Industries in the Birmingham District." Attendance 60.

May 8, 1919, Y. M. C. A. Paper: "Public Utilities," by Preston Arkwright. Attendance 85.

University of Maine.—April 23, 1919, Lord Hall. Addresses as follows—(1) "The Seniors' Inspection Trip," by Messrs. Farnum and Wade; (2) "New Western Union Office in Washington, D. C.," by Mr. Swicker; (3) "Summer Experiences with the Westinghouse Company," by Mr. Hopkins. Attendance 29.

Massachusetts Institute of Technology.—April 24, 1919. Address by Lieut. Colonel Pridgin on "The Signal Corps in France." Attendance 52.

April 29, 1919. Address by Sir Arthur Wright on "Commercial Aspects of Electrical Engineering." Attendance 62.

University of Michigan.—April 24, 1919, Engineering Building. Address by Mr. G. E. Lewis on "Hydroelectric Power Plants." Attendance 24.

University of Minnesota.—April 14, 1919, Engineering Auditorium. Lecture by Mr. L. T. Ferris on "Inductive Interference between Power and Telephone Lines." Attendance 28.

Ohio Northern University.—April 18, 1919, Dukes Memorial. Papers: (1) "International Gaps," by C. Nobrega; (2) "Oscillograph Demonstration," by F. F. Turner. Attendance 20.

May 1, 1919, Dukes Memorial. Addresses as follows—(1) "Manufacture of Transformers," by L. A. Trumble; (2) "Curves as Applied to Electrical Engineering," by Prof. F. W. Parsons.

Oregon Agricultural College.—May 15, 1919. Election of officers as follows—A. L. Manning, president; W. F. Lathrop, vice-president; Ray Avrit, secretary-treasurer. Attendance 14.

Pennsylvania State College.—May 5, 1919. Illustrated lecture by Prof. Stavely on "Spectacular Illumination at the Panama-Pacific Exposition." Attendance 43.

University of Pennsylvania.—April 30, 1919, Engineering Building. Election of officers as follows—chairman, W. H. J. McIntyre; vice-chairman, F. J. Haines; secretary, J. M. Ryan; treasurer, H. C. Fehr; asst. secretary, W. H. Whiting. Attendance 33.

University of Pittsburgh.—May 12, 1919. Address by Mr. H. Q. Chan on "The Methods of Testing Insulators on High-Tension Transmission Lines." Attendance 16.

Purdue University.—April 8, 1919, Electrical Building. Election of officers as follows—chairman, L. A. Malott; vice-chairman, G. W. Pilcher; secretary, T. K. Hartley; treasurer, A. R. Kaufman; executive board, R. A. Whitford; W. A. Clark, and E. A. Roth. Attendance 80.

May 6, 1919, Electrical Building. Address on "My Experience in a U. S.

Submarine," by R. A. Whitford. Attendance 40.

Throop College of Technology.—Address by Mr. C. O. Poole on "Some Special Problems of Hydroelectric Practise." Lecture illustrated by lantern slides. Attendance 200.

University of Washington.—April 8, 1919, Forestry Hall. Paper: "The Radio Field," by Dr. H. H. Lester. Attendance 17.

Washington State College.—April 11, 1919. Address on "What is Electricity" by Prof. B. L. Steel. Attendance 19.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-512. Salesman, age 30 to 40 years, personally acquainted with large jobbers and manufacturers of bicycles and bicycle accessories. To represent prominent accessory manufacturer. Must be alive to the importance of cycle industry, capable of meeting the big men and a good judge of human nature. State salary desired.

V-513. Young technical graduate preferably having test experience with manufacturing company or central station. State age, experience, references, and salary expected. Box 1095 E. E., Kansas City, Mo.

V-514. A large manufacturing firm in the Middle West would like to get in touch with young men who are just finishing university courses in electrical or mechanical engineering, or who left their university courses to enter Army or Navy service and are now looking for employment. Good opportunities will be open for the right men in sales, engineering, design and research work. In answer please state educational training and experience.

V-515. Wanted a high grade electrical engineering draftsman. Prefer man who has had at least seven to ten years practical experience, in which work he had to make own measurements in field for necessary alterations in wiring layouts, low-tension bus bar equipment, etc. Graduate of recognized school of electrical engineering. Man of type able to exercise good judgment in making small alterations to wiring layouts and location of electrical equipment. Location northern New York.

V-516. Wanted graduate in engineering who wishes to teach physics and mechanics in an engineering college. The salary would probably begin at about $1700. Location New York State.

V-517. Several opportunities for high grade men to connect with the marketing and exploitation of an electrical device for the publicity field. Men capable of promoting local companies. Those with facilities to influence capital will receive preference.

V-518. Wanted. Assistant professor, electrical engineering, by engineering college in Ohio. Must be graduate of an engineering college. Practical and teaching experience desired. Salary $2000. Apply giving education, experience, age, references and photograph.

V-519. Instructor in electrical engineering by Ohio engineering College. Technical graduate with practical experience, teaching experience desirable. Application should state education, experience, age, references, and enclose photograph. Salary $1500.

V-520. Dutch export house in New York wants an electrical engineer preferably Hollander and Delft graduate, with experience in the purchase of electrical and other machinery. Give experience, age and salary required.

V-521. Teacher. Assistant professor of electrical engineering in state institution in the middle Mississippi valley. $1700. to $1800. for nine months work.

V-522. Man with technical education in electrical engineering and some experience in telephone or telegraph work to teach those subjects in large educational institution. Location Pennsylvania. Salary $1500. to $1800.

SERVICES AVAILABLE

1276. Associate professor of electrical engineering wishes position in practice, during year's leave of absence from teaching, with possibility of permanence. Extensive research experience in high-voltage, radio, electrolysis and other problems. Nine years' experience teaching, four engineering practice. Good worker, executive, technical writer. Age 37, married, excellent health. Willing to travel or reside anywhere. Available August 1.

1277. Electrical engineer, teacher. Practical and educational experience includes successful administration of department in state university, specialized educational war service, charge of large construction for Government. Active, constructive, tactful. Now assistant professor in large university; seeks broader responsibility.

1278. Electrical engineer, university graduate, Member A. I. E. E., desires position as electrical engineer of an industrial plant. Seven years' experience in installation and operation in large manufacturing plants and mines. Age 32. Salary $3000.

1279. An assistant professor of electrical engineering in a large eastern university would like a position for the Summer months; wide practical experience; locality no object.

1280. Electrical engineer, Swede, 30 years old and married, wants position with power company offering good future prospects. Ten years' experience in a wide field of electrical engineering, especially hydro-electric development and transmission line design, construction and calculation.

1281. Electrical engineer, technical graduate, two years' experience operation and maintenance of power plants. Lieutenant Signal Corps. In charge of construction of two temporary wireless receiving and sending stations for instruction purposes. Experienced in motor installations, telephone installation, line construction, operation and maintenance. Desires position as distribution engineer or power superintendent, $2000.

1282. Technical graduate, Associate member A. I. E. E., wishes position with medium sized electrical industry or in power distribution. Have had experience on turbines, generators, motors, transformers, etc., also business experience. Have had two years G. E. test experience. Minimum salary $2500. Position preferred in eastern Massachusetts.

1283. Electrical engineer, university graduate, 12 years' experience in central station design, construction and operation, also commercial engineering (rates). Author of technical press articles, papers and books on central station subjects, collaborator of N. E. L. A. committees. Desires suitable position in central station or manufacturing concern. Best references.

1284. Engineer, age 36, university education, now in charge of department of a public utilities commission and fully experienced in financial, executive, accounting, operating, construction, appraisal and rate-fixing phases of electric, water, gas and railway utilities, desires connection with organization where this broad executive and technical ability may have unlimited scope. Monthly salary at start $300.

1285. Summer work in electrical or mechanical engineering desired by assistant professor with four years practical engineering. Especially experienced in power plant practice and automobile design. Available June 15. Age 29.

1286. Electrical and mechanical engineer, graduate, seven and one-half years practical experience from Westinghouse apprentice to assistant master-mechanic and engineer of equipment interurban electric railway (four and one-half years) manufacturing own rolling stock; one and one-half years foreman electrical construction; Army engineer one year. Associate A. I. E. E. Experienced in handling men. Age 31. Married. Desires position as electrical engineer or chief electrician. Salary $175.

1287. Mature engineering executive. Member A. I. E. E. Age 35, experienced developing intricate mechanical electrical apparatus for quantity production. Will act as assistant to head of smaller manufacturing corporation. Handle commercial, efficiency and reconstruction studies, selection of personnel and routine management during absence. Salary $5000. or less with gradual acquirement of interest.

1288. Electrical engineer desires position as designing engineer on A-C. and D-C. generating equipment. Technical graduate with thorough practical experience on this work with large manufacturing concerns. Served one and one-half years in France as Captain of Engineers. Excellent references.

1289. A young active electrical engineer in Spain, who for five years has been holding responsible positions in a large power concern at Barcelona and who is familiar with the customs of the country, wishes to represent concerns manufacturing electrical and mechanical apparatus, transformers, rotating machinery, measuring instruments, etc.

1290. Graduate electrical engineer, eight years general construction and maintenance, G. E. test, Associate A. I. E. E., Member Am. Electrochemical Society, 30 years, married, desires position as research engineer in electricity or electrochemistry. Has private electrochemical laboratory. Would consider maintenance foreman or instructorship in large public utilities company. Salary $3000. Month's notice required. Present work not congenial.

1291. Electrical engineer, B. S. degree, desires position as instructor or with consulting engineer. Two years with public service corporation, one year instructor, one year artillery electrician, U. S. A. Experienced in motor testing, telephones, searchlights, and gas engines. Associate member A. I. E. E., Member N. E. L. A. Age 25. Best references.

1292. Graduate electrical engineer desires position with large possibilities for future, preferably in production work. One year inventory and appraisal experience; six months power plant and distribution system design; eighteen months maintenance and illumination engineering; one year as engineer officer, U. S. Navy. Available approximately July 1.

1293. Wanted executive position, New York City. Over ten years in engineering and commercial lines, including export. Thirty-four years old, married; now officer in Army. Can obtain release.

1294. Teaching position desired by an M. M. E., 32 years of age. Three years practical and five years teaching experience. At present with one of the large universities.

1295. Graduate electrical engineer, 35, with 10 years' experience in construction, operation and testing with G. E. and other large companies. Wishes position in charge of construction and maintenance with a progressive concern.

1296. Electrical engineer, now Lieutenant U. S. Navy, expects to be released July 1, desires position as chief electrician or engineer of large industrial plant. Graduate of technical university, 2 years small meters, 2 years G. E. Co. trouble work, 3 years assistant chief electrician large industrial plant, 1½ years steam turbine operation and manufacture in U. S. Navy. Age 30. Salary expected $250. per month.

1297. Superintendent of construction, electrical engineering graduate, recently released Army Officer. Eleven years' experience on steam and hydroelectric plants, substations, transmission lines and distribution systems. Willing to go anywhere. Available on short notice. Salary $3000.

1298. Have you opening for man 34 years old with technical training and experience in operation and construction of electric power equipments? Especially strong on industrial plants, high and low-tension apparatus, switchboard operation and installation, high-tension transformer stations. Economical handler of labor and material, executive ability and energy. Location no object. Make offer.

1299. Graduate electrical engineer, Associate Member of A. I. E. E., age 31, six years' practical and four years' teaching experience desires to re-enter the practical field as electrical engineer or chief electrician in industrial plant. Westinghouse testing experience, electrical construction, steel mill maintenance and operation and substation operation. Minimum salary $185. per month.

1300. Superintendent of Power or chief electrician, age 30, married, 13 years' experience high-tension construction and maintenance, repair and application of electric power to industrial machinery. Released from Army, wants connection with construction or operating company, or large industrial company using electrical power. Minimum salary $1800.

1301. Graduate (1918) of five year course in electrical engineering desires position as instructor in engineering institute. One year experience with Westinghouse Electric & Mfg. Co. Acted as assistant to professor of mechanical drawing for one year. Tutored a class of fifty Freshmen for two years in elementary physics.

1302. Welding executive, nine years' practical experience. Formerly assistant head electric welding Emergency Fleet Corporation. Shipbuilding experience; conducted research and development all branches of electric spot and arc welding, also gas welding. Can handle men to paying advantage. At liberty after June 15. Age 30 years, married.

1303. Electrical engineer, university graduate, age 35, at present Lieutenant in U. S. Navy, desires position with shipbuilding or operating company. Over 8 years' experience in design and maintenance of direct-current motors and generators; 1½ years supervision of installation of complete electrical equipment on shipboard. Available on reasonable notice.

1304. Engineer, mechanical or electrical, 23 years of age, experienced in testing; one year's experience as design and development engineer of D-C. machines and nautical instruments. Prefer position as design and development engineer, but will consider any position for which qualified. Minimum salary $2000. per year. Available at once.

1305. Assistant manager or engineer, now assistant electrical engineer, public utility. Age 27. M. I. T. 1915. Honorable discharge Engineer Corps, U. S. A. Experience central station design, office records and data. Excellent personality, energetic, resourceful, initiative. Production man, not a salesman. Salary $2500.

1306. Technically trained electrical engineer, who has had three years' experience teaching and assisting in laying out courses in large eastern university. Past three years laboratory director for large gas and electric company. Experience includes electrolysis investigation and prevention; high voltage tests. Salary expected $2400. to $3000.

1307. Factory Executive, now employed as factory manager of a well known manufacturing firm in the Central States, desires position with progressive firm, manufacturing high grade machinery or electrical apparatus; broad experience in the design and manufacture of electrical and electrical-mechanical apparatus and factory supervision; wide-awake and energetic; maximum production guaranteed; highest credentials.

1308. Electrical engineer, 31, graduate of a European college in 1913. Experience in projecting construction and operation of electrical power plants and systems; has general knowledge of European practice; speaks several modern languages. Minimum salary $3600. Married.

1309. Electrical and mechanical engineer, 34, acting as consulting engineer to British Admiralty on questions of design, manufacture, inspection of naval ordnance stores, desires engagement in America or Canada as technical engineer, assistant to managing director, works manager, or chief draftsman. Held responsible appointments in England. Experienced in design, manufacture, test, erection dynamo electric machinery. Can handle labor efficiently. Salary $3500. to $4000.

1310. Manager. An assistant manager of electric property in city of 20,000 desires larger field. Age 34. Salary $3600. to $4000.

1311. Graduate mechanical electrical engineer, Toronto 1911, desires position with larger future than present location. Experienced in design and construction of steam electric power plants, heating, industrial plant engineering. At present employed in electro-chemical plant in charge of instruments and tests of electrical equipment, boilers, turbines, pumps, etc. Salary $3000.

1312. Electrical engineer, engaged in hydro-electric design, construction and operation in South America, will consider change to company where free hand is given. Technical training with fifteen years' experience in hydro-electric field. Available early next year. Might arrange to leave in three months. Salary $6000. in Latin America, Spain or the Phillippines, or in U. S. A. $4500.

1313. Electrical and mechanical engineer. Accustomed to positions demanding broad engineering knowledge and executive ability. Expert in power plant operation, construction and design. Thoroughly familiar with modern shipyard plants including construction, machinery, installation and maintenance, operation, etc. Graduate of Massachusetts of Technology. Services available immediately. No restrictions as to location. Present salary $4200.

1314. Captain, O. R. C., U. S. Army, wants executive position with electric light and power company. Graduate engineer, nine years' experience electrical and mechanical. Capable of getting new business and holding same. Best references. Minimum salary $3600. per year. Available immediately.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is 'ocated on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains the general reference books of the allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and pound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Photostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who may desire it will be kept info med regarding current publications on any engineering subject.

The library is conducted as a f ee public library of reference. It is open to the public from 9 a. m. to 10 p. m. on all week days except holidays.

Accessions.—(April 1–April 30, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Institute does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

AEROPLANE CONSTRUCTION AND ASSEMBLY:

By J. T. King and N. W. Les ie. Minneapolis. Press of The William Hood Dunwoody Industrial Institute. 115 pp., 77 illus., 5 pl., 9 x 6 in., cloth, $1.50.

This work is intended as a practical manual for mechanics engaged in constructing and rigging airplanes and as a guide to instructors. Airplane assembly, construction and materials, and the theory of flight are discussed.

INDUSTRIAL GOODWILL:

By John R. Commons. N. Y. McGraw-Hill Co., Inc.; Lond., Hill publishing Co., Ltd., 1919. 213 pp., 3 charts, 8 x 6 in., cloth, $2.00.

CONTENTS: Commodity, Machinery, Goodwill, The Public, Democracy, Solidarity, Theory and Practice, Security, Labor Market, Insurance, Health, The Shop, Education, Loyalty, Personality, Depression, The World.

The author discusses the present day problems of labor and capital, and their relations to each

other, and the method of solving them, which have been practiced or proposed.

IRON AND STEEL:

(A Pocket Encyclopedia) Including Allied Industries and Sciences. By Hugh P. Tiemann. With an Introduction by Henry Marion Howe. 2nd edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 514 pp., 7 x 4 in., flexible cloth, $4.00.

In a volume of pocket size, the author provides a combination of dictionary, encyclopedia and handbook of the iron and steel industries, intended for the metallurgist. The number of terms, and the text also, have been increased about one-half, the chief additions being more extended discussions of heat treatment, physical properties and testing, and of metallographic subjects.

THE MINERAL DEPOSITS OF SOUTH AMERICA:

By Benjamin L. Miller and Joseph T. Singewald. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 598 pp., illus., maps, 9 x 6 in., cloth, $5.00.

An account of the economic geology of the countries of South America, based on an extended visit by the authors in 1915, and a study of the literature. It forms a digest of the available information on the mineral deposits of the continent. Selected bibliographies are appended to each chapter, and an adequate index is provided.

MINING PRACTICES:

Compiled from the Engineering and Mining Journal by the Editorial Staff. N. Y., McGraw-Hill Book Co., Inc., sole selling agents, 1919. 105 pp., 56 illus., 11 tables, 12 x 9 in., cloth, $1.50.

These articles have been selected to illustrate the range in conditions that must be met in mining operations and to indicate in both a general and a specific way how mining practices are developing.

OFFICE ADMINISTRATION:

By J. William Schulze 1st edition, 2nd impression. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 295 pp., illus., folded cha t, 8 x 5 in., cloth, $3.00.

Written to present a thorough discussion of the principles and methods which underlie efficient and economical management, for use by executives and students of business. It embodies the author's added experience and observation and is intended to replace his earlier book, "The American Office."

OFFICE MANAGEMENT:

Its Principles and Practice cov ring Organization, Arrangement, and Operation with Special Consideration of the employment, Training, and Payment of Office Workers.

By Lee Galloway. 2nd printing. N. Y., The Ronald Press Co., 1919. 701 pp., 97 illus., 1 pl., 9 x 6 in., flexible leather. $6. (delivered).

This book is intended as an exposition of the basic principles of office administration in its widest sense, with adequate illustration by examples of successful practice.

PHYSICS AND CHEMISTRY OF MINE VENTILATION:

A Practical Handbook for vocational schools, and for those qualifying for mine foreman and mine inspector certificates.

By Joseph J. Walsh. 2nd edition. N. Y., D. Van Nostrand Co., 1918. 219 pp., illus., tables, 8 x 5 in., cloth, $2.

A textbook of theory and practice for students with limited mathematical knowledge. This edition has been thoroughly revised and a chapter on the sampling and analysis of mine gases has been added.

PRINCIPLES OF RADIOTELEGRAPHY:

Prepared in the Extension Division of the University of Wisconsin by Cyril M. Jansky. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd. 1919. (Engineering Education Series) 242 pp., 179 illus., 9 x 6 in., cloth, $2.00.

A textbook in which the use of mathematical expressions is used, while an attempt has been made to explain the principles involved so fully that a reader unable to follow the mathematical demonstrations may still acquire some understanding of the subject.

A considerable part of the book is devoted to a discussion of electromagnetic theory and apparatus in order that the student may acquire an intelligent idea of the principles of the operation of radiotelegraphic apparatus.

PUNCHES AND DIES:

Layout, Construction and Use. By Frank A. Stanley. 1st edition. N. Y. McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 434 pp., 618 illus., 9 x 6 in., cloth, $4.00.

This book has been written to provide die-makers, tool-makers and tool draftsmen with certain definite information heretofore not available as a whole. Almost ninety per cent of the material, the author states, has not been published before.

Quantitative Analysis:

By Edward G. Mahin. 2nd edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 605 pp., 122 illus., tables, 8 x 5 in., cloth $3.50.

The author has endeavored to produce a volume that would occupy a position between the complete reference work and the bare outline of laboratory exercises. It covers the material that he wishes to take up in his college courses, and at the same time presents a theoretical and practical discussion of the subject. In addition to the presentation of the general subject, a section on the analysis of industrial products and raw materials is included.

This edition has been carefully revised and partly rewritten, and new material has been added.

Sewage Disposal:

By Leonard P. Kinnicutt, C. E. A. Winslow, and R. Winthrop Pratt. 2nd edition rewritten. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 547 pp., 141 illus., 136 tables, 9 x 6 in., cloth, $4.

This volume offers a general survey of the problem from the various viewpoints of the chemist, the sanitary biologist and the engineer, with particular reference to the conditions of American practice. The aim has been to discuss rather fully the fundamental principles of chemistry and bacteriology which are involved and to include the more important aspects of the engineering works designed to carry them into operation. This edition has been completely rewritten so as to bring in new data and recent viewpoints on all the topics treated. Several chapters have been much enlarged and several new ones have been added.

ASSOCIATES ELECTED MAY 16,1919

Aik, Earl Henry, Asst. Electrical Engineer, Pawling & Harnischfeger; res., 143 Fourth St., Milwaukee, Wis.

Ammen, James Neville, Jr., Engineer, Potomac Electric Power Co.; res., 1109 K. St., N. W., Washington, D.C.

Anson, Robert Austin, Supt., Mech. Dept., Canadian General Electric Co.; res., Empress Hotel, Peterboro, Ontario.

Applegate, Ray Hugh, National Carbon Company, 30 East 42nd St., New York, N. Y.

*__Arnold, Ernest C.__, Capt., U. S. Army; res., Cottonwood Falls, Kans.

Barnes, Harold Butler, Elec. Engineer, H. B. Barnes & F. S. Youtsey, 814 Foster Bldg., Denver, Colo.

Barto, Leighton W., Electrician, New York Shipbuilding Corp.; res., 433 Chambers Ave., Camden, N. J.

Bauhan, Oscar, Electrician, Public Service Electric Co., 15th St. & Mickel Ave., Camden, N. J.

Bawden, Clarence C., Sales Engineer, Westinghouse Elec. & Mfg. Co., 165 Broadway, New York, N. Y.

Beckman, John Emil, Chief Operator, Bryant St. Substation, U. R. R. of San Francisco, Alameda & Bryant Sts., San Francisco, Cal.

Bell, Earle C., Salesman, Gee Electric Company, Wheeling; res., 123 Ave. B., Elm Grove, W. Va.

Bellinger, William F., Asst. Supt. of Operation, Georgia Railway & Power Co., 24 E. Alabama St., Atlanta, Ga.

Beyerle, W. P., Dist. Supt., Consolidated Gas, Elec. Light & Power Co.; res., 4008 Brookline Ave., Baltimore, Md.

Bezirjin, Vahan H., Switchboard Engineering Dept., General Electric Co., Schenectady, N. Y.

*__Biedler, William Thomas__, Supt., Elec. Const. Dept., Consolidated Gas, Electric Light & Power Co.; res., 2802 N. Calvert St., Baltimore, Md.

Bowne, Garrett D., Jr., Commercial Engr., Westinghouse Elec. & Mfg. Co., 10 High St., Boston, Mass.

*__Boyer, J. Milton__, Engineering Dept., The Chesapeake & Potomac Telephone Co.; res., 2601 Roslyn Ave., Baltimore, Md.

Brier,* Wallace, Batteryman, Puget Sound Traction, Light & Power Co.; res., 1242 16th Ave. N., Seattle, Wash.

Buck, Nelson E., Supt., Underground Cable Work, Commonwealth Edison Co., 72 West Adams St., Chicago, Ill.

*Burke, Edmund C., Testing Dept., General Electric Co., Schenectady, N. Y.; res., 2914 Holmes St., Kansas City, Mo.

Burley, Walter B., Electrician, Charles L. Pillsbury Engineering Co., 813 Metropolitan Life Bldg., Minneapolis, Minn.

Cameron, Duncan H., Asst. Supt. & Station Electrician, Western Union Cable Station; res., Archibald Ave., N. Sydney, Nova Scotia, Canada.

Checco, Conrad H., Electrical Draftsman, The Koppers Co., Union Arcade Bldg.; res., 163 Reiter St., Pittsburgh, Pa.

Chessin, Isadore I., Electrical Tester, Testing Bureau, Brooklyn Rapid Transit Co.; res, 173 Amboy St., Brooklyn, N.Y.

Clark, John Alexander, Sales Engineer, Weston Electrical Instrument Co., Newark, N. J.

Clem, Joseph Earl, Trans. Engg. Dept., General Electric Co.; res., 92 Lenox Ave., Pittsfield, Mass.

Clements, L. J., Electrical Supt., Grant Smith Porter Ship Co.; res., 469 Magnolia Ave., Portland, Ore.

Cobb, Dean B., Head of Drafting Dept., Boardman Trade School; res., 7 Norton St., New Haven, Conn.

Coelho, Romeo, Tester, New York Edison Co., 92 Vandam St., New York, N. Y.

Cole, Harry T., Estimating Engineer, Lord Electric Co., 112 Water St., Boston, Mass.

Cole, Orange Reece, Div. Supt. of Construction, The Pacific Tel. & Tel. Co., 835 Howard St., San Francisco, Cal.

Collins, E. W., Supt. of Production, Century Electric Co.; res., 5033 Cabanne Ave., St. Louis, Mo.

Connolly, Leopold Patrick, Load Dispatcher, Union Electric Light & Power Co., 315 N. 12th St., St. Louis, Mo.

Conover, John Woodhull, Electrical Designer of Power & Lighting Systems, Navy Dept., Bureau of Yards & Docks, Washington, D. C.

*Cooley, Clark H., Electrical Engineer, Bethlehem Steel Co.; res., 112 Hamilton Ave., Bethlehem, Pa.

Coutant, George Curtis, Equipment Engineer, New York Telephone Co.; res., 177 St. Marks Ave., Brooklyn, N. Y.

*Cravens, William H., Salesman, Electric Storage Battery Co., 1823 L St. N. W., Washington, D. C.

Crowther, Cole W. W., Asst. Supt., Canadian Electrode Co.; Chemist, Canada Carbide Co., Ltd., Shawinigan Falls, Que.

Crumley, Thomas R., Chief Engineer, General Engineering & Management Corp., 141 Broadway, New York, N. Y.

Culliford, Sydney, Instructor, Wentworth Institute, Boston; res., 7 Vernon St., Bradford, Mass.

Davis, Arthur P., Chief Engineer, Arma Engineering Co., 252 W. 29th St., New York, N. Y.

Davis, George Coryell, Gen. Foreman, Elec. Dept., Braden Copper Co., Rancagua, Chile, S. A.

Day, Charles Mortimer, Chief Draftsman, Elec. Div., U. S. Reclamation Service, 408 Tramway Bldg., Denver, Colo.

*Dickinson, Charles Richard, Valuation Dept., H. L. Doherty & Co., New York; res., 1704 Jefferson St., Toledo, Ohio.

Dickinson, James P., Electrical Engineer, Stow Manufacturing Co., 443 State St., Binghamton, N. Y.

Dowling, Harry O., Testing Dept., Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., 920 Ross Ave., Wilkinsburg, Pa.

Drumm, Robert E., Engg. Asst., The Bell Telephone of Pa.; res., 1224 N. 42nd St., Philadelphia, Pa.

Dunlap, Edward F., Salesman, Economy Fuse & Mfg. Co. of Chicago, Portland, Oregon.

Easter, James W., Engineer, Mt. Vernon Woodberry Mills, Inc., 618 Continental Bldg., Baltimore, Md.

Eaton, Walter R., Electrical Engineer, Cambridge Electric Light Co.; res., 25 Whitney Ave., Cambridge, Mass.

Edson, Walter E., Engineering Asst., C. & P. Telephone Co.; res., 3708 Springdale Ave., Baltimore, Md.

Eisenhofer, Stanley L., Asst. Engineer, Hydro-Electric Power Comm.; res., 413 Sherbourne St., Toronto, Ont.

Fielder, Alfred Harold, Foreman, Testing Dept., Canadian General Electric Co.; res., 742 George St., Peterborough, Ont.

Foote, B. R., Electrical Engineer, Hartford Electric Light Co., Hartford; res., Wilson, Conn.

Freeman, Hadley F., Patent Attorney, with Emery, Varney, Blair & Houget, 149 Broadway, New York, N. Y.

Funk, William Henry, Chief Electrician, New York Tribune, Inc., 154 Nassau St., New York, N. Y.

***Gentsch, Horace S.**, Engineer, Bell Telephone Co.; res., 1259 No. 15th St., Philadelphia, Pa.

Gilman, George W., Production Manager, Canadian General Electric Co., Ltd., Peterboro, Ont.

Goad, Charles Ernest, Managing Partner, Charles E. Goad Engineering Co., 105 Bond St., Toronto, Ont.

Gray, William H., Chief Electrician, Trenton Power Station, Public Service Electric Co., 19 Chauncey St., Trenton, N. J.

Griffen, Ellwood B., Engineer, American Tel. & Tel. Co., 195 Broadway, New York, N. Y.

***Griffeth, Clarence Lee**, Testing Dept., General Electric Co.; res., 26 Arthur St., Schenectady, N. Y.

Grimes, William F., U. S. Naval Radio Laboratory, Bureau of Standards, Washington, D. C.

***Haas, Paul G.**, Ensign, U. S. N. R. F.; res., 10 North St., Medway, Mass.

Hafemeister, Fred F., Supt., The Cleveland Switchboard Co., 2925 E. 79th St., Cleveland, Ohio.

Hansen, Harry, Gen. Supt., Lord Electric Company, 105 W. 40th St.; res., 4176 Laconia Ave., New York, N. Y.

Harada, Koichiro, Electrical Dept., Mitsbuishi Dockyard & Engine Works, Kobe, Japan.

***Harbecke, Herman Henry**, Electrical Designer, The Steel & Tube Co. of America, Indiana Harbor, Ind.; res., 7351 Blackstone Ave., Chicago, Ill.

Hasler, John Francis, Construction Foreman, J. G. White Engg. Corp.; res., Taftville, Conn.

Hattrick, Ernest, Asst. Elec. Engr., M. S. T. & T. Co., 217 Wyoming Bldg., Denver, Colo.

Heller, John Edward, Engineer on Transmission Work, The Pacific Tel. & Tel. Co., 508 Sheldon Bldg., San Francisco, Cal.

Henderson, George, Designer, Messrs. Bruce, Peebles & Co., Ltd.; res., 18 Brandon Terrace, Edinburgh, Scotland.

Henkle, Joseph C., Supt., Service Dept., Portland Railway, Light & Power Co., Hawthorne Bldg., Portland, Ore.

Hensgen, Walter O., Standardizing Laboratory, General Electric Co., Schenectady, N. Y.

Hinson, Noel Bertram, Engineer, Distribution Dept., Southern California Edison Co.; res., 931 Bernal Ave., Los Angeles, Cal.

Holmgren, Eric L., Testing Dept., Canadian General Electric Co.; res., 275 John St., Peterboro, Ont.

Houck, Roy Lester, Testing Dept., Portland Railway, Light & Power Co., Portland, Oregon.

Howard, Arthur S., U. S. Naval Radio Laboratory, Bureau of Standards, Washington, D. C.

Hubbard, Ferdie, Electrician, Standard Elec. & Elev. Co., Inc.; res., 1806 N. Milton Ave., Baltimore, Md.

***Hultgren, Carl D.**, Asst. Engineer, Southwestern Bell Tel. Co.; res., 1217 West 1st St., Topeka, Kansas.

Hunt, J. V., Asst. Buyer, Purchasing Dept., Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., 527 Monroe Ave., Bellevue, Pa.

Hussey, Rowland Mansfield, Asst. Supt., Electrical Dept., Jones & Laughlin Steel Co., Aliquippa Works, Woodlawn, Pa.

Ivanchenko, Andrei I., Design Engineer, Hydro-Electric Development, Penna. Water & Power Co., Baltimore, Md.

Jacob, Harry G., Consulting Engineer, Ewart & Jacob, 206 Excelsior Life Bldg., Toronto, Ont.

*Jolliffe, Oliver P., Testing Dept., General Electric Co.; res., 789 State St., Schenectady, N. Y.

Jones, Senter M., Vice-President, Century Electric Company, 19th & Pine St., St. Louis, Mo.

Karuven, Muliyil, Testing Dept., Bruce, Peebles & Co., Ltd., Edinburgh, Scotland; res., Cannanore, Malabar, S. India, Asia.

Keeler, Otis Edward, Switchboard Engineer, Westinghouse Elec. & Mfg. Co., New York; res., 1270 Ocean Ave., Brooklyn, N. Y.

*Keesling, Homer G., Asst. to Supt. of Elec. Distribution, Pacific Gas & Electric Co., Oakland, Cal.

Koch, Robert William, Manager, Electrical Dept., The Flint Elec. & Mfg. Co.; res., 505 Marion St., Denver, Colo.

Korik, Charles, Electrical Draftsman, Bethlehem Shipbuilding Corp.; res., 452 Carlton Ave., So. Bethlehem, Pa.

Kreger, Charles H., Chief Draftsman, Elec. Engg., Public Service Company of Northern Illinois, 72 W. Adams St., Chicago, Ill.

Kuehn, Charles A., Dist. Sales Manager, The Ideal Electric & Mfg. Co. of Mansfield, 602 Swetland Bldg., Cleveland, Ohio.

Laine, Franck, Sales Engineer, Westinghouse Elec. & Mfg. Co., San Francisco; res., 1115 Washington St., Santa Clara, Cal.

*Lankford, Charles Hugo, Industrial Engineer, Century Electric Co., 1827 Pine St., St. Louis, Mo.

Lee, Samuel Thomas, Manager, Yankton Light, Heat & Power Co., Yankton, So. Dakota.

Leibing, Joseph K., Engineer of Magnetic Materials, Splitdorf Electrical Co., 98 Warren St., Newark, N. J.

Lewis, Luther Edgar, Gen. Foreman Substation No. 3, Alabama Power Co., Muscle Shoals, Ala.

Lowe, Herbert C., Foreman Wireman, Barnes-Pope Elec. Co., Boston; res., 307 Belmont St., Wollaston, Mass.

Lucas, Russell A., Gen. Foreman, Elec. Construction, American International Shipbuilding Corp., Philadelphia, Pa.

Lynch, Adolph W., Substation Foreman, Philadelphia Electric Co.; res., 6012 North 11th St., Philadelphia, Pa.

Mack, Carl Theodore, Junior Engineer, Henry L. Doherty; Toledo Railways & Light Co., Toledo, Ohio.

Mac Laren, Fred B., Electrical Engineer, Marlin-Rockwell Corp.; res., 2509 S. Garnet St., Philadelphia, Pa.

Mahard, Edwin P.,20 Pitts St., Natick, Mass.

Mann, Joseph F. T., Sales Engineer, Westinghouse Elec. & Mfg. Co., New York, N. Y.; res., 7 Wilson St., Glen Rock, N. J.

Marino, Raphael, Asst. Elec. Engineer, Western Electric Co.; res., 360 E. 113th St., New York, N. Y.

McCarthy, C. Carroll, Commercial Engineer, Westinghouse Elec. & Mfg. Co., 803 Hibbs Bldg., Washington, D. C.

McClung, Donald R., Designing Draftsman, Pacific Power & Light Co., Portland, Ore.

McDonnell, John H., Foreman of Construction, J. G. White Engg. Corp., Muscle Shoals, Ala.

McElroy, George, Elec. Engineer, Service Dept., Westinghouse Elec. & Mfg. Co., 467 Tenth Ave., New York, N. Y.

McGloin, William John, Substation Foreman, Interborough Rapid Transit Co., 150 E. 57th St., New York, N. Y.

Meyer, Henry C. A., Engineer, The Bartlett Hayward Co., Baltimore, Md.

Mills, Thomas C., Maintenance Dept., Miss. River Power Co.; res., 823 Franklin St., Keokuk, Iowa.

***Minard, Clarence W.**, Electrical Engineer, King Ferry, N. Y.

Mitchell, Lequin C., Electrician, Washington Terminal Co., 1334 E. Capitol St., Washington, D. C.

Nagasaki, T., Electrical Engineer, Mitsubishi Dockyard & Engine Works, Kobe, Japan.

Nakashima, Sukeyuki, Electrical Engineer, Mitsubishi Dockyard & Engine Works, Kobe, Japan.

Nakazawa, Rokuzo, Electrical Dept., Mitsubishi Dockyard & Engine Works, Kobe, Japan.

***Newcomb, Theodore**, Graduate Student, Rensselaer Polytechnic Institute, 2160 13th St., Troy, N. Y.

Noble, Kenneth John, Commercial Engineer, The British Thomson-Houston Co., Ltd., Rugby, England.

Noss, Marsena A., Engineer, Telepost Co., 395 Broadway, New York, N. Y.

Nosworthy, Frank. Switchboard Engineer, Pacific Gas & Tel. Co.; res., 1644 Taylor St., San Francisco, Cal.

Oseroff, David M., Checker, Electrical Drafting Room, American International Shipbuilding Corp., Hog Island, Pa.

Patterson, Robert Booker, Supt., Engineering Dept., Potomac Electric Power Co.; res., 3207 38th St., N. W., Washington, D. C.

Pease, Webster F., Manager, Lowell Light & Power Co., Lowell, Wis.

Peterman, L. C., Distribution Engineer, Cleveland Electric Illuminating Co., 308 Illuminating Bldg., Cleveland, Ohio.

Pfisterer, Frank M., Industrial Power Specialist, Cons. Gas., Elec. Lt. & Pr. Co.; res., 3414 Park Heights Ave., Baltimore, Md.

Power, Harold James, Vice-Pres. & Gen. Manager, American Radio & Research Corp., Medford Hillside, Mass.

Pumphrey, Elwood L., Elec. Draftsman, Bureau of Steam Engineering, Navy Dept.; res., 304 R. St., N. W., Washington, D. C.

Putnam, Kearney C., Chief Electrician, United States Navy, 280 Broadway, New York; res., 49 Hatfield Place, Port Richmond, S. I., N. Y.

Redsell, James, Construction Foreman, Toronto Hydro-Electric System, 23 Hallam St., Toronto, Ont.

Reich, Roland R., 1081 Lincoln St., Easton, Pa.

***Reid, Ernest A.**, Instructor in Electrical Engineering, Univ. of Illinois, Urbana, Ill.

Richards, Harold A., Asst. Engineer, Century Electric Co., 1827 Pine St., St. Louis, Mo.

Robinson, Wilber H., Electrician, Sunset Motor Co.; res., Marlboro Apt., Spokane, Wash.

Ross, Samuel William, First Class Draftsman, New York & Queens Elec. Light & Power Co., Long Island City; res., 1848 Monroe Ave., New York, N. Y.

Russell, Charles Herbert, Commercial Engineer, Westinghouse Electric & Mfg. Co.; res., 416 Franklin St., E. Pittsburgh, Pa.

Russell, R. J., Vice-Pres. & Secretary, Century Electric Co., 1827 Pine St., St. Louis, Mo.

Sakamoto, Tsuneki, Electrical Dept., Imperial Government Railways, Tokyo, Japan.

WALDINGER, HENRY, Chief Electrician, New York *World*, 63 Park Row, New York, N. Y.

WANG, KEUI LUNG, 68 West Woodruff Avenue, Columbus, Ohio.

WEAVER, LELAND EARLE, Operating Engineer, Portland Cement Co., Newaygo, Mich.

WEIDMAN, ANTON JOSEPH, Clerk, Potomac Electric Power Co.; res., 1733 9th St., N. W., Washington, D. C.

WELSH, JOHN THOMAS, Electrical Engineer, Emergency Fleet Corp.; res., 5150 Wayne Ave., Philadelphia, Pa.

*WEST, JOHN WALTER, JR., Asst. Engineer, State Corp. Commission of Virginia, 511 Lyric Bldg., Richmond, Va.

WHITRIGHT, ROY S., Secretary & Treasurer, The Electric Motor & Repair Co., 60 Iron St., Akron, Ohio.

WILBRAHAM, FREDERICK M., Supt. of Power, The Hartford Electric Light Co., 266 Pearl St., Hartford, Conn.

WILLIAMS, FRANCIS A., Secretary & Chief Examiner, Dept. of University Extension, Mass. Board of Education, State House, Boston, Mass.

WINDERS, FRANK R., Engineering Dept., Railroad Commission of Wisconsin; res., 153 E. Gilman St., Madison, Wis.

Woodhull, S. Trubee, Engineering Manager, American Radio & Research Corp.; res., 38 Dearborn St., Medford, Mass.

Workman, Frank E., Asst. Purchasing Agent, National Carbon Co., Inc., 11700 Madison Ave., Cleveland, Ohio.

*Former Enrolled Students.

Total 177

ASSOCIATES RE-ELECTED MAY 16, 1919

Brandt, Albert U., Supt., Alameda Co. Dist., Pacific Gas & Elec. Co., 13th and Clay Sts., Oakland, Cal.

Hamilton, George Wellington, Engineer, Middle West Utilities Co., 1500 Edison Bldg., Chicago, Ill.

Maltman, J. Scott, Representative, American Electrical Works, New York, N. Y.; res., 2401 Garrison Bldg., Baltimore, Md.

MEMBERS ELECTED MAY 16, 1919

Deutsch, Edward I., Engineer, Cutler-Hammer Mfg. Co.; res., 2400 Grand Ave., Milwaukee, Wis.

***Farmer, Paul Melville**, Chief Engineer, Industrial Div., Klaxon Co.; res., 10 Washington Place, Newark, N. J.

Frantz, Louis T., Electrical Engineer, Sewerage & Water Board of New Orleans; res., 7816 Jeannette St., New Orleans, La.

Harrison, Lawrence S., Sales Engineer, P. & M. Dept., General Electric Co., New York; res., 3316 Glenwood Road, Brooklyn, N. Y.

Just, John Stephens, Engineer and Manager, City Electric Light Co., Ltd.; res., "Eruya" Simpson's Road, Paddington Heights, Brisbane, Queensland.

Sackett, Frank V., Engineer, General Fire Extinguisher Co., 1 Liberty St., New York, N. Y.

Stone, Edmund C., System Operator, Duquesne Light Co., 435 6th Ave., Pittsburgh, Pa.

TRANSFERRED TO THE GRADE OF MEMBER, MAY 16, 1919

Dobson, William P., Laboratory Engineer, Hydro Electric Power Commission of Ontario, Toronto, Ont.

Falkenburg, Eugene L., Supt. of Power, Riegos y Fuerza del Ebro, Barcelona, Spain.

Merrill, J. L., Power Specialist, Division Ship Yard Plants, Emergency Fleet Corp., Philadelphia, Pa.

Slocum, Winthrop W., Pittsburgh, Pa.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on May 12, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Andrus, Lucius B., Chief Engineer, American Public Utilities Co., Grand Rapids, Mich.

Sorensen, Royal W., Professor in Charge, Dept. of Electrical Engineering, Throop College of Technology, Pasadena, Cal.

Willis, Fred W., Deputy General Manager and Chief Engineer, Tata Hyd o-Electric Power Co. & Andhra Valley Powerr Supply Co., Bombay, India.

To Grade of Member

Lillibridge, Ray D., President, Ray D. Lillibridge, Inc., New York, N. Y.

Recommended for Transfer by the Board of Examiners, May 26, 1919

To Grade of Fellow

Rosenthal, Leon W., Vice-President, American Bosch Magneto Corp., Springfield, Mass.

To Grade of Member

Devereux, Washington, Chief of Electrical Dept., Philadelphia Fire Underwriters' Assn. Philadelphia, Pa.

Dickinson, Neville S., Electrical Engineer, Elevator Supplies Co., Hoboken; Consulting Electrical Engineer, Nairn Linoleum Co., Kearny, N. J.

Fox, Alfred C., General Superintendent, General Utilities Corp., St. Paul, Minn.

Hodge, George A., General Manager, Empreza Forca e Luz de Ribeirao Preto, Sao Paulo, Brazil.

Kleberg, Alfred L., Captain Q. M. C., Construction Division, Washington, D. C.

Kribs, Gordon, Assistant Engineer, Hydro Electric Power Commission of Ontario, Toronto, Ont.

Lindridge, Charles D., Engineer, Western Electric Co., New York, N. Y.

Muir, Roy C., Electrical Engineer, International General Electric Co., Schenectady, N. Y.

Rhodes, Sam R., Associate Professor Mechanical and Electrical Engineering, Clemson College, Clemson College, S. C.

Shoemaker, Richard W., Engineer of Distribution, Great Northern Power Co., San Francisco, Cal.

Stigant, Stanley A., Electrical Engineer, Merz & McLellan, Newcastle, England.

Tabossi, Hector, Commercial Engineer, British Thomson-Houston Co., Rugby, England.

Trust, Humphrey Gerrans, Capt. Royal Marine Engineers, Civil Engineer in Chief's Dept., Admiralty, London, England.

Turnbull, Thomas L., Consulting Engineer & General Manager, Bowness Improvement Co., Calgary, Alberta.

Vaniman, R. Lawrence, President, Produce Terminal Corp., Chicago, Ill.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before June 30, 1919.

PERSONAL

Mr. Earl Wheeler announces the establishment of the firm of Wheeler, Mechlin and Rhea with offices in West Street Bldg., New York. The firm conducts an advisory and purchasing engineering business and furnishes service to foreign and domestic clients purchasing machinery and engineering materials in the United States to be used to construct, maintain and operate properties.

J. C. **Hail**, for the last three years electrical-engineer-in-charge of the Bureau of Electrical Engineering of the Department of Gas and Electricity of the City of Chicago was given a farewell banquet by his co-workers in the department, on Thursday evening, April 24, at the Grand Pacific Hotel. Mr. Hail's activities for the last three years have been principally confined to the engineering supervision of the $3,750,000 addition to Chicago's electric street lighting system. Mr. Hail leaves the service of the City of Chicago to join the Pierce Electric Co. of Chicago, Contracting Electrical Engineers who are expanding their organization.

J. G. **Berger** will have under his direction the newly established office of L. K. Comstock & Co., at 518 Kinney Building, Broad and Market Sts., Newark, N. J. This office will engage in the sale of complete industrial and power equipments as well as construction service.

Geo. W. Cravens has left Gov't Service and will establish himself independently as a Consulting Engineer with headquarters in Westfield, New Jersey and a branch office in New York City. Mr. Cravens was Automotive Engineer in the Maintenance Division of the Motor Transport Corps, Washington, D. C., and has had a wide general experience along mechanical, electrical and automotive lines. Upon leaving the army he was granted a commission as Major in the Reserve Corps.

William S. Murray formerly of New Haven, Connecticut announces the removal of his offices to 165 Broadway, New York. Mr. Murray offers consultation on electrical generation and transmission, railroad electrification and conservation of natural resources.

William McClellan has been elected a Vice-President of the Cleveland Electric Illuminating Co. The enlarged activities of the company necessitated additional executive help and led to Mr. McClellan's election. He is a graduate of University of Pennsylvania has had a varied experience in all departments of engineering construction work for public utilities, was Chief of the Division of Light, Heat and Power of the Up-State Public Service Commission of New York for three years, and was dean of the Wharton School of Finance and Commerce, Univ. of Pennsylvania.

Major George F. Sever, Engineers, U. S. A., has been honorably discharged from the United States Army after a service of fifteen months and will make his headquarters in New York City for Consulting Engineer practise. Major Sever during his service made extensive and detailed investigations of the electric power conditions in New England as well as on the Pacific Coast from Seattle to Los Angeles. His investigations covered careful analyses of the production of power by coal, oil and water, and the comparisons of these different methods.

Frank F. Fowle, until recently one of the receivers of the Central Union Telephone Company and formerly consulting engineer, and James R. Cravath, consulting electrical and illuminating engineer of Chicago, have formed an engineering partnership under the firm name of Fowle and Cravath, with offices in the Monadnock Block, Chicago. The services of the firm will be devoted to investigations, research, design, supervision, management, appraisals and rate cases.

Ralph W. Krass, formerly with the National Conduit & Cable Company, has become associated with the Westinghouse Electric & Mfg. Co., Power Department, 165 Broadway, New York City.

Major Carl A. Heinze has just returned from France where he has been serving for the past year with the A. E. F. as Commanding Officer of the 2nd Battalion, 108th Engineers. He participated in the Somme offensive at Amiens while brigaded with the British, in the Meuse Argonne action with the French at Verdun, with the American forces in front of Metz and finally was stationed in Luxemburg as part of the Army of Occupation. Major Heinze will now resume his duties as Assistant Electrical Engineer, in charge of distribution, of the Bureau of Power & Light of the City of Los Angeles.

OBITUARY

George T. Hanchett for many years prominent as a consulting electrical engineer in New York died on May 6 after a considerable period of sickness. Mr. Hanchett was admitted to the Institute in 1896 and transferred to Fellow in 1913.

Captain Charles J. Moore, 7th Engineers, U. S. A. was mortally wounded on October 14, 1918 and died on October 16, 1918. He was buried just back of the lines at Fromerèville, four miles northwest of Verdun. Captain Moore was awarded the Distinguished Service Cross for gallantry in action the morning he was wounded. His company had laid bridges across Andon River under heavy fire, then attacking and completely routing the Prussian Guard.

Previous to entering army service Capt. Moore was an Instructor in the School of Engineering, Oklahoma A. & M. College. He was elected an Associate in the Institute in 1916.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

LOUIS A. FERGUSON, 1908-09.
LEWIS B. STILLWELL, 1909-10.
DUGALD C. JACKSON, 1910-11.
GANO DUNN, 1911-12.
RALPH D. MERSHON, 1912-13.
C. O. MAILLOUX, 1913-14.
PAUL M. LINCOLN, 1914-15.
JOHN J. CARTY, 1915-16.
H. W. BUCK, 1916-17
E. W. RICE, Jr. 1917-18.

*Deceased.

INSTITUTE COMMITTEES.

Revised to June 1, 1919.

GENERAL STANDING COMMITTEES.

EXECUTIVE COMMITTEE

Comfort A. Adams, Chairman,
33 West 39th Street, New York.
N. A. Carle, Harold Pender,
George A. Hamilton, C. E. Skinner,
F. B. Jewett, John B. Taylor.

FINANCE COMMITTEE.

N. A. Carle, Chairman,
Public Service Electric Company, Newark, N.J.
Walter A. Hall, Charles Robbins.

MEETINGS AND PAPERS COMMITTEE.

W. I. Slichter, Chairman,
Columbia University, New York.
L. W. Chubb, Secretary,
W. E. & M. Co., E. Pittsburgh, Pa.
B. A. Behrend, L. T. Robinson,
Harris J. Ryan,
and the chairmen of the technical committees.

EDITING COMMITTEE.

Henry H. Norris, Chairman,
Electric Railway Journal, 10th Ave. and 36th St., New York.
L. W. Chubb, L. T. Robinson,
M. G. Lloyd, W. I. Slichter.

COMMITTEE ON SAFETY CODES

Farley Osgood, Chairman,
80 Park Place, Newark, N. J.
J. C. Forsyth, Henry N. Muller,
H. B. Gear, H. R. Sargent,
H. O. Lacount, G. A. Sawin,
Johnston Livingston, A. M. Schoen,
M. G. Lloyd, George F. Sever,
R. W. E. Moore, H. S. Warren.

BOARD OF EXAMINERS.

F. L. Rhodes, Chairman,
A. T. & T. Co., 195 Broadway, New York.
H. N. Latey, Clayton H. Sharp,
H. H. Norris, H. S. Wynkoop.

SECTIONS COMMITTEE.

Walter A. Hall, Chairman,
General Electric Co., West Lynn, Mass.
C. Francis Harding, Vice-Chairman,
Purdue University, Lafayette, Ind.
L. T. Robinson, A. M. Schoen,
J. Lloyd Wayne.
and the chairmen of all Institute Sections, *ex-officio*.

COMMITTEE ON STUDENT BRANCHES.

(Sub-Committee of Sections Committee.)
C. Francis Harding, Chairman,
Purdue University, Lafayette, Ind.
P. H. Daggett, A. C. Lanier,
Alexander M. Gray, Charles F. Scott.

MEMBERSHIP COMMITTEE.

H. A. Pratt, Chairman,
W. E. & M. Co., 165 Broadway, New York.
H. C. Carpenter, Wills Maclachlan,
R. W. Krass, J. Franklin Stevens,
G. E. Stoltz,
and the chairmen of local membership committees

PUBLIC POLICY COMMITTEE.

Calvert Townley, Chairman,
W. E. & M. Co., 165 Broadway, New York.
H. W. Buck, John W. Lieb,
N. A. Carle, C. E. Skinner,
L. B. Stillwell.

HEADQUARTERS COMMITTEE.

N. A. Carle, Chairman,
Public Service Electric Company, Newark, N. J
William A. Del Mar, F. L. Hutchinson,

ELECTRICAL ENGINEERING SERVICE COMMITTEE

William A. Del Mar, Chairman,
10 East 43rd St., New York.
Walter A. Hall, G. L. Knight,
A. S. McAllister.

UNITED STATES NATIONAL COMMITTEE OF THE INTERNATIONAL ELECTROTECHNICAL COMMISSION.

C. O. Mailloux, President,
20 Nassau St., New York.
F. B. Crocker, Vice-President,
A. E. Kennelly, Secretary,
Harvard University, Cambridge, Mass.
Comfort A. Adams, A. S. McAllister,
B. A. Behrend, M. I. Pupin,
James Burke, E. B. Rosa,
John J. Carty, David B. Rushmore,
Gano Dunn, Charles F. Scott,
H. M. Hobart, Clayton H. Sharp,
Dugald C. Jackson, C. E. Skinner,
John W. Lieb, Elihu Thomson.

COMMITTEE ON CODE OF PRINCIPLES OF PROFESSIONAL CONDUCT.

George F. Sever, Chairman,
7 West 43d Street, New York, N. Y.
A. H. Babcock, A. S. McAllister,
Gano Dunn, Schuyler Skaats Wheeler

BOARD'S COMMITTEE ON TECHNICAL ACTIVITIES

Wilfred Sykes, Chairman,
W. E. & M. Co., E. Pittsburgh, Pa.
W. I. Slichter John B. Taylor

EDISON MEDAL COMMITTEE.

Appointed by the President for terms of five years.

Term expires July 31, 1919.
Charles F. Brush, C. C. Chesney,
N. W. Storer.

Term expires July 31, 1920.
Carl Hering, Chairman, Harris J. Ryan,
Robert Lindsay.

Term expires July 31, 1921.
W. C. L. Eglin, Bancroft Gherardi,
E. W. Rice, Jr.

Term expires July 31, 1922.
Comfort A. Adams, L. A. Ferguson,
S. W. Stratton.

Term expires July 31, 1923.
Frederick Bedell, L. T. Robinson,
Calvert Townley.

Elected by the Board of Directors from its own membership for terms of two years.

Term expires July 31, 1919.
F. B. Jewett, Harold Pender,
John B. Taylor.

Term expires July 31, 1920.
Charles Robbins, C. E. Skinner,
W. I. Slichter.

Ex-Officio

Comfort A. Adams, President,
George A. Hamilton, Treasurer,
F. L. Hutchinson, Secretary.

STANDARDS COMMITTEE.

L. T. Robinson, Chairman,
General Electric Co., Schenectady, N. Y.
E. J. Cheney, Secretary,
Public Service Commission, Albany, N. Y.
P. G. Agnew,
G. A. Anderegg,
Frederick Bedell,
Joseph Bijur,
L. F. Blume,
James Burke,
G. A. Burnham,
N. A. Carle,
P. H. Chase,
H. H. Clark,
F. P. Cox,
E. B. Craft
William A. Del Mar,
A. M. Dudley,
E. J. Edwards,
H. W. Fisher,
W. S. Gorsuch,
F. C. Hanker,
H. M. Hobart,
Henry D. James,
A. E. Kennelly,
G. L. Knight,
F. A. Laws,
C. O. Mailloux,
W. L. Merrill,
L. F. Morehouse,
Frank D. Newbury,
H. S. Osborne,
Harold Pender,
Charles Robbins,
Clayton H. Sharp.
C. E. Skinner,
Arthur B. Smith,
John B. Taylor,
R. B. Williamson.

SUB-COMMITTEES OF THE STANDARDS COMMITTEE

Rotating Machinery D. C.

James Burke, Chairman
F. C. Hanker
W. L. Merrill
R. H. Tapscott

Rotating Machinery A. C.

F. D. Newbury, Chairman
W. J. Foster,
J. B. Mahoney,
R. B. Williamson.

Electric Traction Excluding Automobiles

P. H. Chase, Chairman
A. M. Dudley,
J. J. Linebaugh

Lighting and Illumination

Clayton H. Sharp, Chairman
E. J. Edwards

Storage Batteries

Harold Pender, Chairman
J. Bijur,
A. Churchward,
G. M. W. Goettling,
Carl Hering,
J. L. Woodbridge.

Circuit Breakers and Switches

G. A. Burnham, Chairman
N. A. Carle,
H. D. James,
E. M. Hewlett,
J. B. Mac Neill
J. N. Mahoney.

Industrial Controllers

H. D. James, Chairman
J. Brobst,
T. E. Barnum,
G. A. Burnham,
E. Friedlaender.

Electrical Equipment for Automobiles

J. Bijur, Chairman
A. Churchward,
T. H. Schoepf.

Lightning Protection

P. H. Thomas, Chairman
G. A. Brackett,
H. R. Summerhayes

Stationary Induction Apparatus

G. L. Knight, Chairman
L. F. Blume,
N. A. Carle,
W. M. McConahey
T. O. Moloney,
John B. Taylor.

Telephony and Telegraphy Including Radio

A. E. Kennelly, Chairman
G. A. Anderegg,
O. B. Blackwell,
Guy Hill,
J. L. Hogan, Jr.,
Donald McNicol

Wires and Cables

W. A. Del Mar, Chairman
P. H. Chase,
LeRoy Clark,
Wallace Clark
M. W. Day,
W. C. L. Eglin,
L. L. Elden
H. W. Fisher,
R. W. Krass.
F. A. Laws,
C. B. Martin,
E. B. Meyer,
W. I. Middleton.
E. B. Rosa,
C. E. Skinner,
Wilfred Sykes,
P. Torchio.

Meters and Instruments

F. P. Cox, Chairman
W. Bradshaw,
F. A. Laws,
F. W. Roller,
Clayton H. Sharp,

Testing and Measurements

A. E. Kennelly, Chairman
P. G. Agnew,
P. H. Chase
J. D. Harnden,
F. A. Laws,
Clayton H. Sharp
C. E. Skinner
John B. Taylor
P. Torchio,
R. B. Williamson.

Wave Shape Standard

H. S. Osborne, Chairman
C. A. Adams
F. Bedell,
L. W. Chubb
A. W. Copley,
F. M. Farmer,
H. B. Gear.
L. T. Robinson
A. E. Silver.

Form but Not the Substance

W. A. Del Mar, Chairman
C. leMaistre
Charles Robbins,
Harold Pender.
R. B. Williamson,

Joint Committee on Metric System

A. E. Kennelly, Chairman
P. G. Agnew,
James Burke,
Clayton H. Sharp,
C. E. Skinner

Definitions, Nomenclature, and Symbols

P. G. Agnew, Chairman
F. Bedell
E. J. Cheney,
E. H. Colpitts,
A. E. Kennelly,
F. A. Laws.
W. L. Merrill,
Harold Pender.

French Translation

C. O. Mailloux, Chairman
A. E. Blondel
A. S. Garfield,
Marius C. A. Latour,
R. V. Picou

Representation on N. E. L. A. Committee on Terminology

N. A. Carle, Chairman
E. J. Cheney,
W. S. Gorsuch.

Class B Insulation and Internal Temperatures of Large Turbo-Alternators

C. E. Skinner, Chairman
N. A. Carle,
H. M. Hobart,
G. L. Knight,
E. F. Mueller,
P. Torchio,
R. B. Williamson.

Foreign Rules

C. E. Skinner, Chairman
H. M. Hobart,
C. O. Mailloux,
P. Torchio.

SPECIAL COMMITTEES

COMMITTEE ON PUBLICATIONS

W. I. Slichter, Chairman,
Columbia University, New York, N. Y.

N. A. Carle
W. A. Del Mar
F. L. Hutchinson
Harold Pender

COMMITTEE ON DEVELOPMENT

Calvert Townley, Chairman,
165 Broadway, New York, N. Y.

F. F. Brand, Pittsfield, Mass.
H. E. Bussey, Atlanta, Ga.
J. C. Clark, Stanford University, Cal.
Ira M. Cushing, Boston, Mass.
R. H. Dalgleish, Washington, D. C.
W. A. Del Mar, New York, N. Y.
F. G. Dustin, Minneapolis, Minn.
H. W. Eales, St. Louis, Mo.
H. S. Evans, Boulder, Colo.
F. R. Ewart, Toronto, Ont.
Baxter R. Grier, Gatun, C. Z.
W. A. Hall, W. Lynn, Mass.
John Harisberger, Seattle, Wash.
W. F. James, Philadelphia, Pa.
Leslie Killam, Milwaukee, Wis.
J. J. Kline, Fort Wayne, Ind.
P. M. Lincoln, Pittsburgh, Pa.
Chas. A. Lund, Spokane, Wash.
J. E. Macdonald, Los Angeles, Cal.
A. S. MacDowell, Rochester, N. Y.
John C. Parker, Ann Arbor, Mich.
J. G. Pertsch, Ithaca, N. Y.
H. T. Plumb, Salt Lake City, Utah.
L. T. Robinson, Schenectady, N. Y.
A. M. Schoen, Atlanta, Ga.
R. F. Schuchardt, Chicago, Ill.
C. H. Schum, Erie, Pa.
C. F. Scott, New Haven, Conn.
W. D. Scott, Portland, Ore.
Samuel Sheldon, Brooklyn, N. Y.
G. E. Snider, Toledo, O.
L. E. Underwood, W. Lynn, Mass.
H. L. Wallau, Cleveland, O.
J. W. Watson, Madison, Wis.
J. Lloyd Wayne, Indianapolis, Ind.
J. B. Whitehead, Baltimore, Md.

TECHNICAL COMMITTEES.

Revised to June 1, 1919.

POWER STATIONS

Philip Torchio, Chairman,
124 East 15th St., New York.

W. L. Bird,
N. A. Carle
W. L. R. Emmet,
W. S. Gorsuch,
F. C. Hanker,
James T. Lawson,
H. P. Liversidge,
S. A. Moss,
I. E. Moultrop,
Frank D. Newbury,
H. S. Putnam,
J. D. Ross,
F. A. Scheffler,
R. F. Schuchardt,
H. L. Wallau,
W. F. Wells.

TRANSMISSION AND DISTRIBUTION.

Edward B. Meyer, Chairman,
Public Service Electric Company, Newark, N. J
J. E. Woodbridge, Vice-Chairman,
58 Sutter Street, San Francisco, Cal.

A. O. Austin,
H. W. Buck,
Wallace S. Clark,
W. H. Cole,
A. W. Copley,
E. E. F. Creighton,
H. B. Dwight,
G. Faccioli,
H. W. Fisher,
L. C. Nicholson,
D. W. Roper,
Harris J. Ryan,
A. E. Silver
Paul Spencer,
Percy H. Thomas.

TRACTION AND TRANSPORTATION.

C. F. Uebelacker, Chairman,
Ford, Bacon & Davis, 115 Broadway, New York.

A. H. Armstrong,
A. H. Babcock,
Reinier Beeuwkes,
W. H. Blood, Jr.,
R. H. Dalgleish,
William A. Del Mar,
J. V. B. Duer,
W. G. Gordon,
John Murphy,
Ralph H. Rice,
Guy A. Richardson,
Charles F. Scott,
E. R. Shepard,
N. W. Storer,
H. M. Warren.

INDUSTRIAL AND DOMESTIC POWER.

A. G. Pierce, Chairman,
2003 Farmers Bank Building, Pittsburgh, Pa.

H. W. Cope,
James Dixon,
A. M. Dudley,
R. H. Goodwillie,
A. L. Hadley,
H. D. James,
W. C. Kalb,
E. H. Martindale,
W. L. Merrill,
S. D. Sprong,
L. E. Underwood,
H. Weichsel,
R. B. Williamson.

SUB-COMMITTEES OF INDUSTRIAL AND DOMESTIC POWER COMMITTEE.

Application of Machine Tools.

Henry D. James, Chairman,
T. E. Barnum,
R. H. Goodwillie,
W. T. Snyder,
W. C. Yates.

Application of Industrial Power to Cement Industry.

R. B. Williamson, Chairman,
A. M. Dudley,
H. Weichsel,
C. A. Kelsey,
Arthur Simon.

Motor Characteristics.

A. M Dudley, Chairman,
R. H. Tillman,
Wilfred Sykes,
A. C. Lanier,
John C. Parker.

Application of Power in Textile Industry

H. W. Cope, Chairman,
E. T. Foote,
C. T. Guildford
S. B. Paine,
D. H. Sadler.

Crane and Hoist Industry.

W. L. Merrill Chairman,
Eugene Friedlaender
H. W. Eastwood
R. H. McLain

Domestic Power Application.

H. Weichsel, Chairman,
James Dixon,
A. M. Harrelson,
C. L. Kennedy,
Bernard Lester,
A. F. Welch

LIGHTING AND ILLUMINATION.

C. E. Clewell, Chairman,
University of Pennsylvania, Philadelphia, Pa.

G. N. Chamberlin,
J. R. Cravath,
Bassett Jones,
P. G. Nutting,
R. C. Powell,
E. B. Rosa,
W. D'A. Ryan,
Clayton H. Sharp,
W. M. Skiff,
John B. Taylor.

ECONOMICS OF ELECTRIC SERVICE.

William B. Jackson, Chairman,
75 William St., Pittsfield, Mass.

Philander Betts,
H. V. Bozell,
C. L. Cory,
Leavitt L. Edgar,
W. S. Gorsuch,
Ralph G. Hudson,
A. H. Kruesi,
J. F. Meyer,
S. G. Rhodes,
Allard Smith.

PROTECTIVE DEVICES.

D. W. Roper, Chairman,
72 W. Adams Street, Chicago, Ill.

P. H. Chase,
W. H. Cole,
E. E. F. Creighton,
James C. Dow,
E. M. Hewlett,
P. MacGahan,
A. A. Meyer,
N. L. Pollard,
F. E. Ricketts,
R. F. Schuchardt,
Philip Torchio,
H. R. Woodrow.

ELECTROCHEMISTRY AND ELECTRO-METALLURGY.

Carl Hering, Chairman,
210 S. 13th St., Philadelphia, Pa.

E. R. Berry,
Joseph L. Dixon,
I. R. Edmands,
F. A. J. FitzGerald,
F. A. Lidbury,
J. A. Seede,
John B. Taylor,
W. R. Whitney,
J. L. Yardley

ELECTROPHYSICS.

F. W. Peek, Jr., Chairman,
General Electric Co., Pittsfield, Mass.

P. G. Agnew,
H. D. Arnold,
Frederick Bedell,
L. W. Chubb,
A. C. Crehore,
E. P. Hyde,
Chester W. Rice,
C. E. Skinner,
John B. Taylor.

TELEGRAPHY AND TELEPHONY.

Donald McNicol, Chairman,
253 Broadway, New York.

E. F. W. Alexanderson,
O. B. Blackwell,
R. E. Chetwood,
A. W. Copley,
E. B. Craft,
Charles E. Davies,
Louis M. Evans,
W. R. McGovern,
Kempster B. Miller,
Arthur B. Smith,
John Stone Stone,
John B. Taylor,
J. Lloyd Wayne,
F. A. Wolff.

MARINE.

H. A. Hornor, Chairman,
Minerva P. O., Essex Co., N. Y.
W. F. James, Secretary,
1442 Widener Building, Philadelphia, Pa.

J. H. Anderton,
R. H. Barclay,
H. H. Barter,
Eskil Berg,
L. C. Brooks,
A. M. Candy
A. R. Cheyney,
M. W. Day,
L. A. Doggett,
C. J. Dougherty,
G. E. Edgar,
W. L. R. Emmet,
R. H. Fenkhausen,
H. C. Ford,
R. E. Frickey,
W. R. Furlong,
E. G. Gallagher,
H. L. Hibbard,
Guy Hill,
M. G. Lloyd,
D. M. Mahood,
W. F. Meschenmoser,
I. H. Osborne,
H. W. Osgood,
Arthur Parker,
G. A. Pierce, Jr.,
J. B. Porter,
I. S. Schlesinger,
W. C. Schrader,
L. B. Sinclair,
H. M. Southgate,
Elmer A .Sperry,
Wilfred Sykes,
W. E. Thau,
Henry Thomas,
F. P. Townsend,
A. E. Waller,
F. W. Wood

USE OF ELECTRICITY IN MINES.

K. A. Pauly, Chairman,
General Electric Co., Schenectady, N. Y.

Frank H. Armstrong,
Graham Bright,
W. A. Chandler,
H. H. Clark,
L. C. Ilsley,
R. L. Kingsland,
A. B. Kiser,
Charles Legrand,
H. M. Warren,
E. B. Woodward.

IRON AND STEEL INDUSTRY.

Eugene Friedlaender, Chairman,
Carnegie Steel Co., Braddock, Pa.

Charles W. Burrows,
F. B. Crosby,
F. D. Egan,
E. S. Jefferies,
W. C. Kennedy,
D. M. Petty,
A. G. Pierce,
J. C. Reed,
William T. Snyder,
Wilfred Sykes,
R. B. Williamson,
J. H. Wilson,
J. D. Wright.

ELECTRICAL MACHINERY.

Alexander M. Gray, Chairman,
Cornell University, Ithaca, N. Y.

B. A. Behrend,
James Burke,
Alexander Churchward,
A. M. Dudley,
Charles Robbins,
H. R. Summerhayes,
R. B. Williamson.

INSTRUMENTS AND MEASUREMENTS.

S. G. Rhodes, Chairman,
104 East 32nd St., New York.

P. G. Agnew,
Charles W. Burrows,
F. P. Cox,
F. V. Magalhaes,
Harold Pender,
T. S. Perkins,
Clayton H. Sharp.

EDUCATIONAL.

V. Karapetoff, Chairman,
Cornell University, Ithaca, N. Y.

J. M. Bryant,
R. E. Doherty,
C. R. Dooley,
Charles S. Howe,
E. A. Loew,
C. E. Magnusson,
E. B. Merriam,
Chester W. Rice,
W. I. Slichter,
W. E. Wickenden.

INSTITUTE REPRESENTATIVES.

ON BOARD OF AWARD, JOHN FRITZ MEDAL.

H. W. Buck, John J. Carty,
E. W. Rice, Jr., Comfort A. Adams.

ON BOARD OF TRUSTEES, UNITED ENGINEERING SOCIETY.

Calvert Townley, L. T. Robinson,
Samuel Sheldon.

ON LIBRARY BOARD OF UNITED ENGINEERING SOCIETY.

Edward D. Adams, W. I. Slichter,
Samuel Sheldon Alfred W. Kiddle
F. L. Hutchinson.

ON ELECTRICAL COMMITTEE OF NATIONAL FIRE PROTECTION ASSOCIATION.

The chairman of the Institute's Committee on Safety Codes.

ON JOINT COMMITTEE ON ENGINEERING EDUCATION.

Charles F. Scott, Samuel Sheldon.

ON COUNCIL OF AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

W. S. Franklin, John B. Taylor.

ON ADVISORY BOARD OF AMERICAN YEAR-BOOK.

Edward Caldwell.

ON U.S. NATIONAL COMMITTEE OF THE INTERNATIONAL ILLUMINATION COMMISSION.

A. E. Kennelly, C. O. Mailloux,
Clayton H. Sharp.

ON PAN-AMERICAN ENGINEERING COMMITTEE.

Gano Dunn, William McClellan,
John H. Finney Charles W. Stone,
Calvert Townley.

ON NATIONAL JOINT COMMITTEE ON OVERHEAD AND UNDERGROUND LINE CONSTRUCTION.

Farley Osgood, Percy H. Thomas.

JOINT COMMITTEE ON STANDARD THREAD FOR INSULATORS AND INSULATOR PINS

J. T. Barron

AMERICAN COMMITTEE ON ELECTROLYSIS.

Bion J. Arnold, F. N. Waterman,
Paul Winsor.

ON ENGINEERING COUNCIL.

H. W. Buck, N. A. Carle,
E. W. Rice, Jr., Comfort A. Adams,
C. E. Skinner.

ENGINEERING DIVISION, NATIONAL RESEARCH COUNCIL.

Frank B. Jewett W. R. Whitney.

ON ENGINEERING FOUNDATION BOARD.

Frank B. Jewett, E. W. Rice, Jr.

ON NAVAL CONSULTING BOARD.

Benjamin G. Lamme, Frank J. Sprague

ON AMERICAN ENGINEERING STANDARDS.

Comfort A. Adams, N. A. Carle,
H. M. Hobart.

AMERICAN BUREAU OF WELDING

W. L. Merrill

COMMISSION OF WASHINGTON AWARD

Charles F. Scott John Price Jackson.

LOCAL HONORARY SECRETARIES.

Guido Semenza, N. 10 Via S. Radegonda, Milan, Italy.
Robert Julian Scott, Christchurch, New Zealand.
T. P. Strickland, 61 Hunter St., Sydney, N. S. W.
W. G. T. Goodman, Adelaide, South Australia.
James S. Fitzmaurice, Adelaide, South Australia.
L. A. Herdt, McGill Univ., Montreal, Que.
Henry Graftio, Ministry of Ways of Communication, Petrograd, Russia.
A. S. Garfield, 10 Rue de Londres, Paris, France.
Harry Parker Gibbs, Tata Hydroelectric Power Supply Co., Ltd., Bombay, India.
John W. Kirkland, Johannesburg, South Africa.

LIST OF SECTIONS

Revised to June 1, 1919

Name and when Organized	Chairman	Secretary
Atlanta...Jan. 19, '04	A. M. Schoen	Thomas C. Taliaferro, S. E. Underwriters Ass'n., Atlanta, Ga.
Baltimore...Dec. 16, '04	J. B. Whitehead	L.M.Potts,Industrial Bldg.,Baltimore,Md.
Boston...Feb. 13, '03	Ira M. Cushing	Ira M. Cushing, 84 State St.,Boston,Mass
Chicago...1893	C. A. Keller	A. P. Riggs, 1020 Monadnock Block, Chicago, Ill.
Cleveland...Sept. 27, '07	C. S. Ripley	R. W. Knowles, 1127 East 145th Street, Cleveland, Ohio.
Denver...May 18, '15	Robert B. Bonney	Norman Read, 828 Symes Bldg., Denver, Colo.
Detroit-Ann Arbor...Jan. 13, '11	George E. Lewis	A. S. Albright, Detroit Edison Company, Detroit, Mich.
Erie...Jan. 11, '18	J. C. Barry	P. B. Mansfield, Lawrence Park,.Erie, Pa.
Fort Wayne...Aug. 14, '08	P.C.Morganthaler	O. B. Rinehart, 1211 W. Jefferson Street, Fort Wayne, Ind.
Indianapolis-Lafayette .Jan. 12, '12	G. B. Schley	William H. Beck, Room 85, State House, Indianapolis, Ind.
Ithaca...Oct. 15, '02	Alexander M.Gray	John G. Pertsch, Jr., Cornell Univ.,Ithaca, N. Y.
Kansas City, Mo....Apr. 14, '16	W. P. Barnes	W. P. Barnes, 1012 Baltimore Ave., Kansas City, Mo.
Los Angeles...May 19, '08	J. H. Cunningham	Clem A. Copeland, Bureau of Power and Light, Los Angeles, Cal.
Lynn...Aug. 22, '11	L. E. Underwood	Fred E. Ewart, General Electric Company, West Lynn, Mass.
Madison...Jan. 8, '09	James W. Watson	L. E. A. Kelso, University of Wisconsin, Madison, Wis.
Milwaukee...Feb. 11, '10	F. A. Coffin	P. J. Mayer, Wisconsin Tel. Co., Milwaukee, Wisc.
Minnesota...Apr. 7, '02	Meyer Barnert	J. D. Marshall, 510-3rd Ave., So., Minneapolis, Minn.
Panama...Oct. 10, '13	W. L. Hersh	M. P. Benninger, Box 174, Balboa Heights, C. Z.
Philadelphia...Feb. 18, '03	W. P. James	E. B. Tuttle, Bell Tel. Co. of Pa., 1631 Arch St., Philadelphia, Pa.
Pittsburgh...Oct. 13, '02	W. R. Work	J. G. Carroll, General Engineering Division, W. E. & M. Co., Pittsburgh, Pa.
Pittsfield...Mar. 25, '04	Neil Currie, Jr.	N.F.Hanley,Gen.Elec.Co.,Pittsfield,Mass.
Portland, Ore....May 18, '09	R. M. Boykin	W. D. Scott, Pacific Tel. and Tel. Co., Portland, Oregon.
Rochester...Oct. 9, '14	R. H. Manson	W. C. Freeman, Stromberg Carlson Telephone, Mfg. Co., Rochester, N. Y.
St. Louis...Jan. 14, '03	J. L. Hamilton	H. G. Hake, Washington University, St. Louis, Mo.
San Francisco...Dec. 23, '04	J. C. Clark	A. G. Jones, 811 Rialto Building, San Francisco, Cal.
Schenectady...Jan. 26, '03	K. A. Pauly	L. F. Millham, General Electric Company, Schenectady, N. Y.
Seattle...Jan. 19, '04	J. Harisberger	T. C. Smith, Lighting Dept., Seattle, Wash.
Spokane...Feb. 14, '13	George Nixon	G. H. Hoppin, 1128 W. Kiernan Ave., Spokane, Wash.
Toledo...June 3, '07	W. A. Hill	Max Neuber, 1257 Fernwood Ave., Toledo, Ohio.
Toronto...Sept. 30, '03	A. H. Hull	Daniel M. Fraser, Canadian General Electric Co., Toronto, Ont.
Utah...Mar. 9, '17		H. T. Plumb, General Electric Co., Newhouse Bldg., Salt Lake City, Utah.
Urbana...Nov. 25, '02	A. R. Knight	E. H. Waldo, Univ. of Illinois, Urbana,Ill.

ANNNAL CONVENTION

Lake Placid Club, N. Y., June 24-27, 1919.

The 35th annual convention of the Institute which was held at the Lake Placid Club, June 24-27, 1919, was well attended and thoroughly enjoyed by the members and guests present. While the chief object of the convention was the presentation and discussion of engineering papers and consideration of Institute policies, the program this year differed from those of former years, in the fact that the business and entertainment features were about evenly balanced, and this innovation met with general approval. The location of the convention was an ideal one and the natural beauties of the Adirondacks in addition to the numerous amusement features at the Lake Placid Club afforded ideal conditions for recreation.

The technical sessions, while fewer in number than usual, included subjects of live engineering interest which elicited thorough discussions. The conferences on Institute policies, under the auspices of the Committee on Development were largely attended and the tentative report of the committee was discussed at considerable length.

The members and guests registered totaled 404 including 103 ladies, which is a record figure for a summer resort convention of the Institute. A complete list of members and guests in attendance is published elsewhere in this issue.

The Board of Directors of the Institute held its usual monthly meeting on Wednesday afternoon and considered many matters of importance.

The Meetings and Papers Committee held meetings on Thursday and Friday mornings for the purpose of formulating plans for future Institute meetings.

Members of several other committees of the Institute held numerous informal conferences during the Convention.

SECTION DELEGATES

Thirty of the Sections of the Institute were represented at the Convention by delegates, as provided in the Institute Constitution. The usual conferences of the delegates were, however, merged with conferences under the auspices of the Committee on Development of the Institute; and these conferences which constituted one of the most important features of the Convention, as affecting the future policies and activities of the Institute, are reported elsewhere in this issue.

TUESDAY

The opening session of the Convention was called to order by President Adams who, after a few words of welcome presented his presidential address on "Cooperation." The full text of this address is published in Section II of this issue of the PROCEEDINGS.

The next item on the program was the introduction of the President-elect, Calvert Townley by President Adams. In responding, Mr. Townley spoke briefly referring to the part engineers had played in the war, saying that if engineers could do enough towards destruction to win the war, what could they not do in the way of construction to make the world and its people better and happier? In conclusion he stated:

> There is no sweeter honor to any man than to be chosen a leader among his own kind, among his friends, among those who believe in what he believes in, who think as he does, who speak his language, and I would be lacking in appreciation and courtesy if I did not now try, lamely, to express to you the gratitude which I feel in having conferred upon me the great honor. But in this great Institute of ours, honor is an incident, and of very secondary importance. We don't exist to honor any man or to honor any set of men; we exist for a useful purpose and we have the most wonderful opportunity in the world to accomplish a useful purpose; standing as one of the foremost engineering organizations in the land, in a country which we believe stands at the head of the world, our opportunity for doing things is unequalled.
>
> Therefore, much as I prize the very great honor you have conferred on me, I value still more the opportunity which you have given me to help you do things and I want to leave that simple thought with you.

Mr. Farley Osgood, Chairman of the convention, next announced the program of sports and games, after which the presentation of the technical papers was taken up.

The first paper on the program, *Present Day Practise of Transmission and Tie Line Relay Protection*, by H. R. Woodrow, D. W. Roper, O. C. Traver and P. MacGahan, was abstracted by Mr. Woodrow, and as the two other papers scheduled for this session were upon allied subjects they were presented next, as follows: *Grounding the Neutral of Generating and Transmission Systems*, by H. R. Woodrow, read by the author, and *Grounded-Neutral Transmission Line*, by William E. Richards, which in the absence of the author was read from manuscript by O. C. Traver.

The discussion which followed occupied the balance of the morning session and was on motion, carried over to Wednesday morning. Those who took part in the discussion were: H. B. Vincent, J. R. Craighead, J. A. Johnson, A. H. Lawton, H. C. Albrecht, Philip Torchio, P. M. Lincoln, Charles P. Steinmetz, E. T. Moore, F. D. Newbury, W. deL. Carr, R. F. Schuchardt, E. E. F. Creighton, H. C. Don Carlos, E. H. McKenzie, R. R. Honaman, E. G. Merrick, D. W. Roper, P. H. Adams, A. E. Silver, F. C. Hanker, J. C. Parker, O. C. Traver and H. R. Woodrow.

Tuesday afternoon was devoted to outdoor sports, automobile rides for the ladies and other amusements, and in the evening a reception by the President and other officers of the Institute was followed by dancing until a late hour.

WEDNESDAY

The technical program for Wednesday was confined to the presentation of the Annual Report of the Technical Committees. Before taking up these reports however the postponed discussion on "relay practise" and the "grounded neutral" was opened and considerable additional discussion of Tuesday's paper was offered. The balance of the session was devoted to the presentation and discussion of the Committee Reports which are printed in full elsewhere in this issue, and to a general discussion on the duties and functions of the technical committees. The consensus of opinion seemed to be that the technical committees should not confine their activities to procuring papers but should collect and correlate data, formulate rules and present extensive reviews of the developments in their respective fields. To assure continuity of this work it was suggested that active committee men be continued in office longer and that chairmen be selected from members of the previous committee.

THURSDAY

The Thursday morning session was devoted to a general conference under the auspices of the Development Committee as reported elsewhere in this issue.

FRIDAY

The technical session Friday morning was opened with the presentation of a paper by W. S. Clark and G. B. Shanklin on *High-Tension Single-Conductor Cable for Polyphase Systems*, which was followed by a paper by R. W. Atkinson on *The Dielectric Field in an Electric Power Cable*, also paper by A. E. Silver on *Problems of 220-Kilovolt Power Transmission*, and one by F. W. Peek, Jr., on *The Effect of Transient Voltages on Dielectrics-II*.

The two cable papers were discussed together. Among those who took part were H. W. Fisher, W. A. Del Mar, D. W. Roper, Philip Torchio, H. L. Wallau, W. S. Clark and G. B. Shanklin.

The paper on 220-Kilovolt Transmission was discussed by W. S. Murray, Philip Torchio, A. F. Bang, J. C. Clark, S. W. Mauger, R. M. Spurck, F. W. Peek, F. C. Hanker, G. I. Gilchrest, R. P. Jackson, H. B. Dwight, J. F. Peters, C. F. Harding, and F. F. Brand.

ENTERTAINMENT

A large part of the credit for the generally satisfactory convention was due to the excellent work of the Committee of Arrangements consisting of Messrs. Farley Osgood, Chairman, N.A. Carle, Walter A. Hall, Edward Kilburn, W. L. Merrill, A. M. Schoen, George F. Sever, W. I. Slichter, and Charles W. Stone. The committee not only made highly satisfactory plans for the comfort and entertainment of the members and guests in attendance, but was actively employed during the Convention in carrying out these plans. In addition to the events specially referred to elsewhere, there was informal dancing each evening, and there were facilities for boat trips on Lake Placid and various automobile trips for the ladies.

At a meeting of the Board of Directors held during the Convention, the following resolutions were unanimously adopted:

RESOLVED: that the Board of Directors of the American Institute of Electrical Engineers hereby expresses its hearty appreciation of the services rendered by the members of the Convention Committee in making and carrying out with gratifying success, the plans for the thirty-fifth Annual Convention, at Lake Placid Club, N. Y., June 24–27, 1919.

RESOLVED: that the Board of Directors of the American Institute of Electrical Engineers hereby expresses its hearty appreciation of the effective cooperation of the management of the Lake Placid Club, in providing for the comfort and pleasure of the members and guests in attendance at the thirty-fifth Annual Convention of the Institute, held at the Lake Placid Club, June 24-27, 1919.

On Tuesday and Friday afternoons Professor Vladimir Karapetoff, of Cornell University, favored the Institute by rendering exceedingly enjoyable piano recitals, which were highly appreciated by the members and their friends as well as by many of the other guests of the Lake Placid Club.

A feature of the Convention which was greatly enjoyed by all present was the selections rendered by the G. E. Office and Laboratory Liberty Loan Scrub Band of Schenectady, N. Y., of which Mr. John B. Taylor is leader. Twenty-two members of this band, most of them members of the Institute were present at the Convention and contributed greatly to the occasion by rendering appropriate music prior to the beginning of many of the important events. The band led the procession of members and guests from the Lake Placid Club to the baseball grounds on Thursday afternoon.

BASEBALL

The annual baseball game was scheduled for Thursday afternoon, June 26, between the "Neverwases," Captain, Farley Osgood and the "Hasbeens," Captain, Walter A. Hall. Rain stopped the game at the end of the fourth inning, at which time the score was 8 to 4 in favor of the Has Beens. Although the game could not be finished, a large and enthusiastic audience was well repaid for its attendance, as many of the plays were new to the art of baseball and consequently could not have been witnessed elsewhere. Captain Hall distinguished himself by making a home run on the first ball pitched in the game. The teams were made up as follows:

NEVERWASES

Farley Osgood, Captain, Newark, N. J.
Charles T. Mosman, Boston, Mass.
W. de L. Carr, Philadelphia, Pa.
G. A. Sawin, Newark, N. J.
P. H. Chase, Philadelphia, Pa.
E. D. Kilburn, New York, N. Y.
Ralph H. Kilner, Chicago, Ill.

George B. Thomas, New York, N. Y.
James T. Lawson, Newark, N. J.

HASBEENS

Walter A. Hall, Captain, West Lynn, Mass.
A. L. Donnelly, Philadelphia, Pa.
George O. Bason, New York, N. Y.
W. C. Kalb, Bradford, Pa.
F. A. Norris, New York, N. Y.
C. A. Adams, Cambridge, Mass.
J. L. R. Hayden, Schenectady, N. Y.
Henry E. Clifton, Schenectady, N. Y.
W. L. Upson, Schenectady, N.Y.

Umpires: N. A. Carle, Newark, N. J.; Harry Alexander, New York.

Scorer: J. J. Kline, Ft. Wayne, Ind.

PRIZE CONTESTS

Prizes for the various events were awarded as follows:

Golf: Low gross score, Mr. A. A. Brown; winner, first eight, Mr. A. A. Brown, runner-up, Mr. W. S. Murray; winner, second eight, Professor C. A. Adams, runner-up, Mr. A. H. Lawton; winner, third eight, Mr. W. J. Foster, runner-up, Mr. J. W. Upp; winner, fourth eight, Mr. W. E. Holcombe, runner-up, Mr. G. B. Shanklin.

Mr. Brown's victory entitles him to have his name inscribed on the Mershon Golf Trophy, which will become the property of the first person who succeeds in winning the golf tournament at two Institute conventions. It has previously been won by Mr. A. M. Schoen, of Atlanta; J. C. Mock, of Detroit; E. W. W. Allen, of Chicago; and L. F. Deming, of Philadelphia.

Tennis: Doubles won by Messrs. K. D. and L. W. Fisher, Perth Amboy, N. J.; runners up, Mr. John Murphy, Ottawa, and Jerome Taylor, Schenectady. The single tournament was not finished, on account of rain. Messrs. T. S. Knight, of Boston, and G. A. Sawin, of Newark, N. J., had won their way to the finals.

Ladies' Putting Contest: First, Mrs. N. M. Garland, New York; second, Mrs. E. J. Cheney, Albany; booby prize, Mrs. I. M. Cushing, Boston.

Lucky Dancing Contest: Mrs. G. B. Shanklin, Schenectady, and Mr. Wallace S. Clark, Schenectady.

Ladies' Card Party: Bridge: First, Mrs. N. M. Garland, New York, second, Mrs. Wm. T. Poulterer, Philadelphia. Hearts: First, Mrs. Harry Alexander, New York; Second, Mrs. E. K. Shelton, Pittsfield.

MEMBERS AND GUESTS IN ATTENDANCE

DEVELOPMENT OF THE INSTITUTE

No events at the Annual Convention of the Institute, held at the Lake Placid Club June 24–27, exceeded in importance the conferences that were held under the auspices of the Institute's Development Committee.

On Wednesday morning, June 26, the Section delegates had a brief meeting and unanimously voted to merge the conferences regarding Institute activities, which are usually held by the delegates each year, with the meetings referred to below which were held under the auspices of the Development Committee.

The delegates in attendance at the Convention were as follows:

Atlanta	*Schoen, A. M.
Baltimore	Potts, L. M.
Boston	*Cushing, Ira M.
Chicago	*Schuchardt, R. F.
Cleveland	Ripley, C. S.
Denver	Carter, W. A.
Detroit-Ann Arbor	*Parker, J. C.
Erie	*Schum, C. H.
Fort Wayne	*Kline, J. J.
Indianapolis-Lafayette	*Wayne, J. L., 3rd
Ithaca	Karapetoff, V.
Los Angeles	*MacDonald, J. E.
Lynn	*Underwood, L. E.
Madison	*Watson, J. W.
Milwaukee	Mayer, F. J.
Minnesota	Barnert, Meyer
Philadelphia	*James, Wm. F.
Pittsburgh	Work, W. R.
Pittsfield	Currie, N., Jr.
Portland, Ore.	Boykin, R. M.
Rochester	*MacDowell, A. S.
St. Louis	Hamilton, J. L.
San Francisco	*Clark, J. C.
Schenectady	Millham, L. F.
Seattle	*Harisberger, J.
Spokane	Nixon, George
Toronto	Hull, A. H.
Utah	Purton, T. A.
Urbana	Knight, A. R.
Washington, D. C.	Honaman, R. K.

*Also members of Development Committee.

The members of the Development Committee in attendance in addition to those indicated above in the list of delegates, were as follows:

Brand, F. F., Pittsfield, Mass.
Del Mar, W. A., New York, N. Y.
Ewart, Frank R., Toronto, Ont.
Hall, W. A., West Lynn, Mass.
Lincoln, P. M., Pittsburgh, Pa.
Robinson, L. T., Schenectady, N. Y.
Scott, C. F., New Haven, Conn.
Townley, Calvert, New York, N. Y.
Wallau, H. L., Cleveland, Ohio.

DEVELOPMENT COMMITTEE'S CONFERENCES

Three sessions were held under the auspices of the Development Committee. The first of these, at luncheon on Wednesday, June 25, consisted of a conference of members of the Development Committee, the delegates of the Institute Sections, the officers, members of the Board of Directors, and a few others particularly interested in the important subjects under discussion. The remaining two sessions were open to all members of the Institute attending the Convention.

At the first conference the Executive Committee of the Development Committee presented a tentative report to the entire Development Committee, for the purpose of obtaining discussion for use in formulating a report of the Development Committee to the Board of Directors of the Institute embodying recommendations regarding the Institute's activities. The discussion continued throughout the afternoon.

At the first session, on Thursday morning, June 26, Mr. Calvert Townley, Chairman of the Development Committee, presented the tentative report of the Development Committee with such amendments as had been agreed upon at the meeting of the previous afternoon. The remainder of this session and the entire evening session of the same day were devoted to general discussion of the recommendations suggested in the tentative report and amendments.

Chairman Townley explained that the Development Committee had been at work for about six months, and that through publication of statements by the President of the Institute and the Chairman of the Development Committee in the Institute PROCEEDINGS, every member of the Institute had been requested to forward suggestions to any member of the Development Committee; also that all the Sections of the Institute had been invited and urged by the Development Committee to hold special sessions for the purpose of discussing the activities of the Institute and what, if any, changes are desirable, and that more than half of the Sections had held such meetings and presented summaries of their discussions to the Development Committee; also that many individual members had communicated their views to the Development Committee; and that all suggestions received through Sections or individuals had received the consideration of the Development Committee. Furthermore, that there was a very general demand for certain changes in some of the more important activities of the Institute; and that, in formulating this tentative report, the Executive Committee had included these fundamental matters only and had not attempted to make recommendations relating to the large number of individual suggestions received, all of which, will however receive further consideration later by reference to the appropriate committees of the Institute.

The plan proposed by the Executive Committee for the continuance of the work, was to formulate after hearing the discussion at the Convention, a report to the Board of Directors embodying recommendations to meet the clearly indicated demands of the membership for the improvement and development of the Institute's activities. These recommendations include:

1. Development of the scope of the monthly PROCEEDINGS in order to include, in addition to the high grade electrical engineering papers which have formed the principal part of the PROCEEDINGS up to the present time, other material of more general interest, without in any way lowering the Institute's standards.

2. Inclusion in the monthly publication of a set of abstracts of practically all papers presented at Section meetings throughout the country.

3. Consideration of whether or not a satisfactory plan can be developed which will eliminate the present wasteful practise of printing practically all papers twice, once in the monthly PROCEEDINGS and again in the annual TRANSACTIONS, by possibly printing the monthly in two sections, bound together in one publication when issued and so arranged that they may be separated later by the recipient, who may wish to dispense with the transient matter and retain the part containing technical papers and discussions of permanent value.

4. As a result of the improvement of the monthly publication, it will become a better advertising medium; and it is suggested that advantage be taken of this fact to develop the advertising section and thereby meet the additional cost of enlarging the editorial staff and printing more material.

5. Create a New York Section, organized and conducted along the same lines as existing Sections elsewhere.

6. Extend the present practise of holding some of the Institute and Directors' meetings in different parts of the country where local Sections are

established, instead of holding nearly all of these meetings in New York as at present.

7. Divide the country into geographical divisions corresponding in number with the number of Institute Vice-Presidents; and select one Vice-President from each of these districts.

8. Make it a part of the duty of each Vice-President to visit the Sections in his own division at least once a year.

9. Pay the traveling and living expenses of the officers and Board members attending Institute meetings.

10. Increase the Vice-Presidents' term of office from one year to two years. Provide that no member of the Board of Directors may continuously hold office for more than six years.

11. Decentralize committee work as far as may be found feasible and desirable, by substituting Section committees for some of the Institute committees. Appoint a general committee to study this question and to make recommendations.

12. Present more high grade papers of general engineering interest.

13. Create a committee in each Section charged with the duty of assigning to the younger members specific participation in designated meetings by the preparation of papers and discussions, or otherwise. By this and other methods, including appointment of a reasonable number of the younger men to membership on committees, it is hoped to stimulate the interest of the younger members and thereby increase their loyalty to the organization and their opportunities for self development.

14. The remainder of the tentative report related to methods of cooperation between the Sections of the Institute and sections of other societies, and local engineering organizations; and also to cooperation by the national organizations. In general, it was recommended that all of these questions be taken up through a joint conference committee of the development committees of the four national societies of civil, mining, mechanical, and electrical engineers, and plans have already been made to do this.

While many suggestions were made during the discussions, all of which will receive further consideration by the Development Committee before formulating its report to the Board of Directors, the general result was embodied in a resolution passed at the final session, on Friday evening, to the effect that all the recommendations of the Development Committee were approved in principle, with the understanding that details would be worked out by appropriate committees at a later date.

Summarizing all of the discussions regarding Institute affairs at the Convention, the results were exceedingly gratifying, indicating a high degree of interest in the work of the Institute; and there is every indication that as a result of the work of the Development Committee and the membership at large, the activities of the Institute will be modified and extended to meet the generally expressed wishes of the membership. The complete report of the Development Committee to the Board of Directors will be published in a later issue of the PROCEEDINGS.

A. I. E. E. DIRECTORS' MEETING LAKE PLACID CLUB, JUNE 25, 1919

The regular monthly meeting of the Board of Directors of the American Institute of Electrical Engineers was held at the Lake Placid Club, N. Y., Wednesday, June 25, 1919, at 4:00 p.m.

There were present: President C. A. Adams, Cambridge, Mass.; Vice-Presidents F. B. Jewett, New York, John B. Taylor, Schenectady; Managers C. E. Skinner, Charles Robbins, Wilfred Sykes, F. D. Newbury, Pittsburgh, N. A. Carle, Newark, N. J., E. H. Martindale, Cleveland, W. A. Hall, West Lynn, Wm. A. Del Mar, W. I. Slichter, New York, G. Faccioli, Pittsfield; Secretary F. L. Hutchinson, New York. Also, by invitation, Vice-President-elect A. M. Schoen, Atlanta, and Manager-elect L. F. Morehouse, New York.

The action of the Finance Committee in approving monthly bills amounting to $16,313.02, was ratified.

The Finance Committee presented a revised budget for the appropriation year ending September 30, 1919, which was approved, to supersede the budget adopted in October 1918. The change in the estimate of both receipts and disbursements was due to the changed conditions on account of the termination of the war.

It was voted that a committee be appointed by the President to formulate a plan for dealing with loyal employees of the Institute who are incapacitated from service on account of illness or otherwise.

The following resolution was adopted:

> RESOLVED: that the Board of Directors of the American Institute of Electrical Engineers hereby expresses to the members of the Membership Committee its hearty appreciation of the effective work of that Committee, applications for membership having been received from 1710 candidates during the year ending June 1, 1919.

Chairman Slichter of the Meetings and Papers Committee reported orally that programs were practically arranged for the following meetings: Pacific Coast Convention, Los Angeles, September 18-20; joint meetings with American Physical Society in Philadelphia, Oct. 10 and with the Institute of Radio Engineers in New York, Oct. 1; and a meeting under the auspices of the Power Stations Committee in New York in November.

Reports were presented of meetings of the Board of Examiners held May 26 and June 16, 1919; and the actions taken on applications at those meetings were approved. Upon the recommendation of the Board of Examiners the following action was taken upon pending applications: 48 Students were ordered enrolled; 358 applicants were elected to the grade of Associate; 9 applicants were re-elected to the grade of Associate; 18 applicants were elected to the grade of Member; 1 applicant was elected to the grade of Fellow; 10 applicants were transferred to the grade of Member; 2 applicants were transferred to the grade of Fellow.

President Adams reported orally on the conference of the Rating Committee of the International Electrotechnical Commission which he attended, with Messrs. H. M. Hobart and C. O. Mailloux, as delegates of the Institute, in Paris, May 5-7; also on the conference with the British Engineering Standards Committee which he and Mr. Hobart attended as representatives of the American Engineering Standards Committee, in London, May 26 to June 5.

A communication under date of April 22 was presented from Mr. Van H. Manning, Director, Bureau of Mines, Washington, inviting the Institute to send a delegation to attend the dedication ceremonies of the new buildings of the Pittsburgh Experiment Station of the Bureau of Mines, September 29 to October 1, 1919. The President was authorized to appoint such a delegation.

In addition to the above, many other matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

FUTURE A. I. E. E. MEETINGS

Pacific Coast Convention.—The Pacific Coast Convention of the Institute will be held September 18-20, 1919 under the auspices of the Los Angeles Section.

New York Meeting.—A joint meeting with the Institute of Radio Engineers will be held in New York on October 1, 1919. The subject of this meeting will be Radio Telegraphy.

Philadelphia Meeting.—On October 10, 1919 a regular meeting of the Institute will be held in conjunction with the American Physical Society. This meeting will be under the auspices of the Electrophysics Committee.

New York Meeting.—A regular Institute meeting under the auspices of the Power Stations Committee will be held in New York on November 14, 1919.

Programs for the above meetings are now being arranged and will be given in full in future issues of the PROCEEDINGS.

BILL TO ESTABLISH A FEDERAL DEPARTMENT OF PUBLIC WORKS

A conference of technical societies was called by the Engineering Council in Chicago, April 23 to 25, to consider the establishment of a national department of public works. The conference was attended by 71 delegates representing 74 organizations with a membership in excess of 105,000. There were also 7 members of Engineering Council and 3 members of National Service Committee of Engineering Council, making the total number participating 81.

The following recommendations were adopted:

1. That the services and bureaus of the National Government having to do chiefly with matters of engineering and architecture, be grouped in one department to be known as the Department of Public Works.
2. That the Department of Public Works comprise those works which are built and operated for the use of the Public.
3. That the Department of Public Works be made available when desirable for the performance of special engineering and architectural work for the use of other Government bureaus.
4. That there be a systematic classification and organization of engineers, architects and other employees whose status shall be such that they may be recruited and maintained on merit.

Following an extended discussion of ways and means of continuing the work of the conference and promoting the passage of a bill in Congress to establish a Department of Public Works, a permanent organization was effected.

As the outcome of this meeting a bill was introduced in Congress June 25th in which the main idea is to assemble all engineering activities of the Government in one department. Under the terms of this bill the Department of Interior would become the Department of Public Works, and such bureaus of the Interior Department as are non-engineering in character are to be placed under the jurisdiction of appropriate departments, while engineering bureaus from other departments are to be included in the Department of Public Works. Some of the principal provisions of the bill are as follows:

The Patent Office is to be removed from the Interior Department and placed under the Department of Commerce. The Bureau of Pensions is assigned to the Department of the Treasury. The Bureau of Education goes to the Labor Department. The Bureau of Indian affairs also is transferred to the Department of Labor, with the proviso that the engineering and construction work and the land and mineral surveys now performed under the direction of the Bureau of Indian Affairs are to be prosecuted under the Department of Public Works. St. Elizabeth's Hospital and the Freedman's Hospital in this city are assigned to the Treasury Department. Columbia Institution for the Deaf and the Howard University go to the Bureau of Education, under the provisions of the bill.

On the other hand, the Department of Public Works is slated to absorb the Supervising Architect's Office of the Treasury Department; the Construction Division, River and Harbor Improvements, Mississippi River Commission, and California Debris Commission of the War Department; the Bureau of Standards and the Coast and Geodetic Survey of the Department of Commerce; the Bureau of Public Roads and the Forest Service of the Department of Agriculture.

The bill provides that the Secretary of Public Works "shall by training and experience be qualified to administer the affairs of the Department and to evaluate the technical principles and operations involved in the work thereof". The measure excepts from the foregoing provision the Cabinet officer who is at the head of the Department at the time of the passage of the bill.

Four Assistant Secretaries, each to be paid $7500 per annum, are provided and their duties outlined. One Assistant Secretary is to have administrative jurisdiction over all matters of engineering design and construction. Another is to have charge of architectural design and construction. The third is to have jurisdiction over all scientific work and surveys, while the fourth Assistant Secretary is to be in immediate charge of all land and legal matters. The Assistant Secretaries are charged with the duty of coordinating and bringing into efficient relationship all the activities of the department so that it may be harmoniously and efficiently administered.

An important feature of the bill is the proviso; that engineer officers of the U. S. Army detailed on non-military work are to be assigned by the Secretary of War to like duties under the new department, for not over two years. This enables the Secretary of Public Works to make gradual transfer of improvements and instrumentalities to civil administration without detriment to public interest. Members of the Corps of Engineers may, under the direction of the Secretary of Public Works, be detailed by the Secretary of War to temporary duty in the new department for such instruction, training and experience as is desired.

CLASSIFICATION AND COMPENSATION OF ENGINEERS

The Committee on Classification and Compensation of Engineers appointed by Engineering Council has made a preliminary report covering three sections, namely, Federal, Railroad, and Municipal and State Sections. The following abstract covers the principal features of the report:

Federal Government Section

A survey of Government activities shows there are 28 offices that employ Government engineers. A letter was sent to each department secretary outlining the work of the Committee and requesting assistance in furnishing a list of engineering bureaus in his department and in issuing instructions to the chiefs to furnish the needed data. Favorable responses from all departments were received, except the War Department, which stated it would be impracticable to furnish the desired information. Following the approval of the secretaries, a letter containing a questionnaire was sent to the chiefs of the engineering offices, many of whom have sent in their final reports. In order to determine salary recommendations the Committee has collected reports from various organizations which have dealt with this subject, but little work has been done yet on the analysis of the data collected as this cannot readily be done until the majority of the reports have been received.

Railroad Section

The Railroad Section reports that a questionnaire was prepared to be sent to the chief engineers of the railroads under Federal control under the supposition that the salaries of all of the men were a matter of public knowledge, and also requested recommendations on an unofficial basis from them. Before sending out this questionnaire, the Chairman made a personal call on Director-General Hines and discussed with him the propriety of making such a request. Mr. Hines did not think that the matter should be approached in the manner suggested, nor that the employer should be called upon to furnish a list of salaries and to express in advance an opinion as to how these salaries should be changed, but stated that he did not see any objection to securing information from members of the Founder Societies. The Chairman therefore has confined his questions to members of the Founder Societies.

Municipal and State Section

By reason of the wide variety of titles used for the Municipal and State service, the Committee found it necessary to undertake the formulation of a standard classification of positions and duties before attempting to investigate the question of compensation. The assistance of the Municipal Engineers of the City of New York was invoked, and after a painstaking investigation a schedule of suitable titles with corresponding qualifications and duties has been prepared. The fitness of this schedule for general use is now being considered. It is proposed to incorporate this schedule in a questionnaire for circulation among engineers of all states and important cities with a view to determining present compensation and changes which should be made.

COMPENSATION

In attempting to formulate standard rates of compensation for professional engineers, the first task is to find out what rates are actually in force, and the second is to find what adjustment should be made to correspond to the great change which has taken place in the cost of living, or, in other words, in the value of the dollar. The enormous increase in prices of the necessaries of life has been accompanied by an increase in wages especially among organized workers, but no such increase has taken place for salaried workers in the professions. Where salaries have been increased during the past three years there are few cases in which the increase has been at all commensurate with the increase in prices of the necessaries of life.

There is little doubt that a large proportion of the salaried workers in professional occupations during the past three years have been unable to pay their living expenses from their earnings and have been obliged to rely on income from property owned or to use up savings of other years in order to maintain themselves.

A serious question is whether the present scale of prices is here to stay. It appears to be the opinion of many financiers and economists that the present high prices are likely to continue for a long time, probably for several years. If these are to continue for several years then surely the salaried worker has an equitable claim to have his compensation brought back in purchasing power to what it was formerly. The Committee believes therefore that in adopting standards for the compensation of workers in all technical fields due consideration should be given to the great increase in the cost of living which has taken place. The dollar of salary must be considered with regard to what it will purchase today and what it will purchase next year, not with regard to what it would purchase 10 or 15 years ago.

Under the resolution of Engineering Council providing for the appointment of this Committee, the scope of its work is limited to the preparation of a report as to "what course of action should be pursued". It is recommended by your Committee that the resolution be amended in such a way as clearly to authorize it to carry on its investigations as now planned and to direct it to formulate a definite classification for each of the services under consideration and a schedule of compensations which might reasonably be fixed for positions in each class.

The resolution might also convey directions to the Committee to submit with its final report suggestions as to the course to be pursued, to the end that its recommendations may be generally accepted.

Upon receipt of this report the following resolutions were adopted by Engineering Council:

RESOLVED, that the Committee on Classification and Compensation of Engineers be continued as organized with three sections: (1) Federal Government, (2) Railroads, (3) Municipal; that the committee be authorized to collect information concerning existing classifications and compensations and to formulate and recommend improved schedules which may be recommended by Engineering Council for general acceptance and use.

RESOLVED, that the Committee be requested to submit with its final report suggestions as to the course to be pursued to the end that its recommendations may be generally accepted.

AMERICAN ENGINEERING STANDARDS COMMITTEE

Statement Regarding Reorganization

In many lines of engineering much excellent standardization work had been done before the war; the war emphasized its importance and showed most clearly the need of co-operation to prevent the confusion caused by the promulgation of overlapping standards by independent bodies. During the war the Government Departments coordinated these efforts in certain lines and greatly assisted in unifying them. The American Institute of Electrical Engineers, American Institute of Mining and Metallurgical Engineers, American Society of Civil Engineers, American Society of Mechanical Engineers and American Society for Testing Materials, recognizing the value of what had been done, invited the Government Departments of War, Navy and Commerce to appoint representatives to act with them to continue this work. The body so formed is the American Engineering Standards Committee. It has required considerable time to definitely formulate its objects, and to arrange methods for accomplishing them that would be effective without in any way interfering with the many organizations that have been doing such excellent work in this line.

The American Engineering Standards Committee has just completed and adopted a revision of its Constitution which has been sent to the Governing Boards of all the Departments and societies represented on the Committee with a request for its ratification.

The new Constitution changes the name to American Engineering Standards Association, the change from "Committee" to "Association" more fittingly indicating the wide scope of the interests involved.

The objects of the Association are stated as follows:

1. To unify and simplify the methods of arriving at engineering standards, to secure co-operation between various organizations and to prevent duplication of standardization work;
2. To promulgate rules for the development and adoption of standards;
3. To receive and pass upon recommendations for standards submitted as provided in the Rules of Procedure, but not to initiate, define or develop the details of any particular standard;
4. To act as a means of intercommunication between organizations and individuals interested in the problems of standardization;
5. To give an international status to approved American engineering standards;
6. To cooperate with similar organizations in other countries and to promote international standardization.

Means are provided for increasing the number of representatives in the Association by invitation or on request. Several important organizations interested in standardization will be invited to appoint representatives as soon as the necessary power is obtained.

The routine work of the Association will be conducted by its Secretary under the direction of a Board of Directors. This Board will have power to deal with all of the affairs of the Association except the final approval of the standards submitted to it.

Any organizations may request the Association to approve standards which it has formulated, or to approve committees that it has appointed, and by so doing becomes a Sponsor Society. Such a request is entirely at the option of the organization that has formulated or expects to formulate the standard. At the request of the Sponsor, approval of the standards is given when they are the substantially unanimous conclusions of a committee made up as follows:

a. Sectional Committees dealing with standards of a commercial character (specifications, shop practises, etc.), shall be made up of representatives of producers, consumers and general interests, no one of these interests to form a majority. A producer is a person, or the representative of a firm or corporation, directly concerned in the production of the commodity involved. A consumer is a person, or the representative of a firm or corporation, that uses the commodity involved, but is not directly concerned with its production. General interests include independent engineers, educators, and persons who are neither consumers nor producers, as defined above.

b. Sectional Committees dealing with standards of a scientific or non-commercial character shall consist of persons specially qualified, without regard to their affiliations.

It is anticipated that in nearly all cases the approval of standards and committees by the Association will be requested. In case it is considered advisable, the Association is authorized to call a meeting of those who would be interested in the formulation of a new standard or the revision of an old one, to select one or more Sponsor Societies. The Sponsor Society or Societies will appoint a Sectional Committee to formulate or revise the standard. This Sectional Committee will report to the Sponsor when its work is completed. The Sponsor may then request the Association to approve. The Association deals only with the Sponsor and acts only at its request. Provision is made in all publications that a standard must be referred to as that of the Sponsor, using whatever title the Sponsor has given it, followed by the statement "approved by the American Engineering Standards Association." The approval may be given in one of three ways as—Recommended Practise, Tentative Standard, or Standard, the expectation being that nothing will be approved as Standard until it has shown that it is generally acceptable.

The Association thus acts only to bring together those interested in a common object, and when they have completed their work, will at their request, certify that it has been done in such a manner as to justify its adoption. Nothing revolutionary is proposed, it is merely an extension of present practise. The Executive Committee of the American Society for Testing Materials now passes on the composition of committees, ascertains that their conclusions are substantially unanimous, and if so, reports them to the society for acceptance or rejection. The Association does the same for groups of organizations. Its Board of Directors performs the same functions as the Executive Committee of the American Society for Testing Materials, and the Association as a whole accepts or rejects. It neither selects Sponsors nor Sectional Committees; it does not consider the subject matter of a standard, nor the procedure under which it is arrived at, except that it requires sufficient information from the Sponsor to show that the conclusions are substantially unanimous and that the Sectional Committee is balanced and representative. It requires that in all publications the Sponsor shall be given full credit.

In addition to this work in assisting in the selection of committees and certifying that their work has been done under proper conditions, the Association will act as a bureau of information regarding standardization. It will collect information regarding existing standards and as to the bodies that have formulated and adopted them. This will enable it to promptly give necessary information to those who select a committee to formulate a new standard or revise an old one. It will also enable it to furnish information desired by the working committees regarding what has been or is being done on similar or related lines. It will establish relations with similar bodies in other countries and can do much to promote the acceptance of International Standards. It is possible to secure international acceptance of American Standards more easily through such a body than in any other way.

With these fundamental restrictions of its activities it may be asked whether there is sufficient reason for the existence of the Association. This naturally has been carefully considered and it is the unanimous conclusion of the committee and of all of those who have been consulted who have been active in standardization work, that such an organization is urgently needed. In the past there have been many occasions when two or more organizations have formulated standards for substantially the same thing. Often these differences have been very slight, but neither has been quite acceptable to the other party. In the majority of such cases if these organizations had been brought together at the start they could have agreed on a standard that would have been satisfactory to both. The American Engineering Standards Association will furnish a means by which any organization intending to define a standard can readily ascertain what others are interested, and should be consulted in regard to it. At present there is no such means. There is nowhere anything approaching a complete list of the organizations doing standardization work, much less any list of the standards proposed or in preparation. The enormous advantage of having any standard generally accepted, and the much greater probability of accomplishing this if it is prepared under definite conditions that have proved effective in the past, will, it is believed, cause most of the organizations engaged in such work to ask and receive the assistance of the American Engineering Standards Association. It provides definite machinery for securing co-operation and preventing duplication of work. It establishes definite rules securing the absolute autonomy of any group engaged in the development of standards and insures that this group shall receive full credit for its work.

With the assurances of co-operation that the American Engineering Standards Association has already received, we believe that there is no question of the advisability of forming the more broadly representative Association. Several organizations have already presented requests for the approval of existing standards and we are informed that many others only await the notification of the Committee that it is fully organized.

It has been impossible to make any public statement of the Committee's plans until they had been definitely formulated. This, we feel, has now been accomplished and we can therefore state what it is hoped to accomplish and the methods proposed for the purpose.

CONFERENCE ON COMMERCIAL AND ENGINEERING TRAINING

A national conference on Commercial and Engineering Training as announced in the June PROCEEDINGS, was held at Washington, D. C., June 23-24, 1919. The following resolutions which were adopted at the final session of the conference clearly reveal the drift of the discussion and constitute an endorsement of the object of the conference.

The resolutions are as follows:

It is the sense of the meeting that:

1. Industrial and commercial development has created a demand for men with technical engineering training and business ability. Manufacturing industries are seeking engineers to qualify to serve in capacities requiring sound business training. Banks and brokers also need men with business training and the engineering point of view. This need is rapidly increasing and bids fair to demand a large number of technically trained men for both domestic and foreign commerce.

2. In order to meet this demand the economic phases of engineering subjects should be emphasized wherever possible in engineering instruction. This may be done by emphasizing the problems of values and costs in the regular technical work and by introducing or extending courses in general economics, cost accounting, business organization and business law into the engineering curricular. These courses should be designed particularly to meet the needs of the engineering student.

3. The engineering phases of economic subjects should be emphasized wherever possible in commercial instruction. Students in commercial courses should also be given opportunity to take special courses in the basic principles and practises of engineering so that they may understand in general terms the operation of power plants and transportation systems from the engineering point of view.

4. It is also urged upon all institutions with departments in engineering and economics or

commerce that they consider some plan of coordination to develop a course in preparation for those careers wherein practical training in modern languages, in the essentials of engineering and business theory and practise have been found to be both helpful and necessary.

CORRECTION OF ERROR IN 1918 EDITION OF NATIONAL ELECTRICAL CODE

In the 1915 edition of the National Electrical Code the second paragraph of Rule 23, section "a" read as follows:

"Where the switch required by No. 24 "a" is inside the building, the cutout required by this section must be placed so as to protect it, unless the switch is of the knife blade type and is enclosed in an approved box or cabinet, under which conditions the switch may be placed between the source of the supply and the cutout."

Through an error this section was omitted when the 1918 edition was printed.

The Electrical Committee of the National Fire Protection Association has voted that this matter be given the widest publicity, that all interested parties may be advised that this section was omitted. The Electrical Committee would recommend that Inspection Departments approve an installation in accordance with this paragraph.

BROAD SCIENTIFIC RESEARCH PROGRAM ADVOCATED BY AMERICAN FEDERATION OF LABOR

The American Federation of Labor adopted the following resolution at its Atlantic City convention:

"WHEREAS, scientific research and the technical application of results of research form a fundamental basis upon which the development of our industries, manufacturing, agriculture, mining, and others must rest; and

WHEREAS, the productivity of industry is greatly increased by the technical application of the results of scientific research in physics, chemistry, biology, and geology, in engineering and agriculture, and in the related sciences; and the health and well-being not only of the workers but of the whole population as well, are dependent upon the advances in medicine and sanitation; so that the value of scientific advancement to the welfare of the nation is many times greater than the cost of the necessary research; and

WHEREAS, the increased productivity of industry resulting from scientific research is a most potent factor in the ever-increasing struggle of the workers to raise their standards of living, and the importance of this factor must steadily increase since there is a limit beyond which the average standard of living of the whole population cannot progress by the usual methods of re-adjustment, which limit can only be raised by research and the utilization of the results of research in industry; and

WHEREAS, there are numerous important and pressing problems of administration and regulation now faced by federal, state, and local governments, the wise solution of which depends upon scientific and technical research; and

WHEREAS, the war has brought home to all the nations engaged in it the overwhelming importance of science and technology to national welfare, whether in war or in peace, and not only is private initiative attempting to organize far-reaching research in these fields on a national scale, but in several countries governmental participation and support of such undertakings are already active; therefore be it

RESOLVED, by the American Federation of Labor in convention assembled, that a broad program of scientific and technical research is of major importance to the national welfare and should be fostered in every way by the Federal Government, and that the activities of the Government itself in such research should be adequately and generously supported in order that the work may be greatly strengthened and extended; and the Secretary of the Federation is instructed to transmit copies of this resolution to the President of the United States, to the President pro tempore of the Senate, and to the Speaker of the House of Representatives.

VOCATIONAL TRAINING FOR CRIPPLED SOLDIERS, SAILORS AND MARINES

A situation exists making it evident that thousands of soldiers, sailors and marines crippled in the service, both here and abroad, do not fully understand their rights, particularly re-education at Government expense in callings suited to their disability. Large numbers of disabled men were discharged before the Federal Board for Vocational Training began functioning, and it is now extremely difficult to reach them.

The Government is not only willing

but anxious to train disabled men, enabling them to assume again the responsibilities of civil life. While in training men will receive an amount equal at least to the base pay received during their last month's service, in no case less than $65.00 per month with additional allowances for dependents. Totally disabled men come under a special provision. On completion of training men will be assisted in obtaining employment. Men who have lost a limb will receive a permanent first class artificial limb.

The provisions outlined above are to be considered as a Government obligation and not a charity and any person coming in contact with disabled men will be doing a patriotic duty by directing them to write to the Federal Board for Vocational Training at Washington, D. C.

NATIONAL RESEARCH FELLOWSHIPS IN PHYSICS AND CHEMISTRY

The National Research Council announces further appointments to National Research Fellowships in physics and chemistry. Previously six appointments were announced, three in chemistry and three in physics. The object of the National Research Council in maintaining a system of research fellowships is to promote fundamental research in physics and chemistry primarily in educational institutions in the United States. Fellowships are awarded to persons who have demonstrated a high order of ability in research for the purpose of enabling them to conduct investigations at educational institutions which make adequate provisions for research in physics and chemistry. The new appointments are as follows:

IN CHEMISTRY

Warren C. Vosburgh, of New York City.
B.S. Union College, 1914
A.M. Union College, 1916
Ph.D. Columbia University, 1919.
Research Assistant to the Professor of Chemistry at Columbia University for the past six months.

George Scatchard, of New York City.
A.B. Amherst College, 1913
Ph.D. Columbia University, 1917.
Formerly Research Assistant to the Professor of Chemistry at Columbia University and instructor in organic chemistry; First Lieutenant, Sanitary Corps, U. S. A.

IN PHYSICS

Ernest F. Barker, of London, Canada.
B.S. University of Rochester, 1908
M.A. University of Michigan, 1913
Ph.D. University of Michigan, 1915.
Professor of Physics, Western University, London, Canada, since 1915.

Albert Edward Caswell, of Eugene, Oregon.
A.B. Leland Stanford University, 1908
Ph.D. Leland Stanford University, 1911.
Professor of Physics, University of Oregon, since 1917.

The members and acting members of the Research Fellowship Board are as follows:

Wilder D. Bancroft
Henry A. Bumstead
Simon Flexner
George E. Hale
Elmer P. Kohler
A. O. Leuschner
Robert A. Millikan
Arthur A. Noyes
E. W. Washburn

ELECTION OF OFFICERS—ILLUMINATING ENGINEERING SOCIETY

The election of the following officers of the Council for the fiscal year 1919-1920, was confirmed by the Council on June 12th, 1919. The following men were elected to fill the offices made vacant by expiration of terms: President, S. E. Doane; Vice-President, Wm. J. Clark; General Secretary, Clarence L. Law, Treasurer, L. B. Marks; Directors, E. C. Crittenden, F. E. Cady, R. B. Ely.

FIFTH NATIONAL EXPOSITION OF CHEMICAL INDUSTRIES

The Fifth Annual National Exposition of Chemical Industries will be held this year in Chicago at the Coliseum and First Regiment Armory during the week of September 22nd. In connection with the Exposition a program is in preparation which includes meetings of the American Institute of Mining

Engineers during the first part of the week, the American Ceramic Society on Wednesday September 24, the American Electrochemical Society on the 25th to 27th, and the Technical Association of Pulp and Paper Industry on the 24th to 27th.

Among the interesting features of the program will be a symposium upon Safety in Plant and Mine and a series of motion pictures made under government supervision of safety work in plant, field and mine.

PAST SECTION MEETINGS

Atlanta.—May 30, 1919, Atlanta Theatre. Subject: "Electrical Communication in War Times." Address with moving pictures by Major Edward B. Craft.

Baltimore.—April 25, 1919, Engineers' Club. Address by Mr. R. H. McLain on "The Engineer and the Public". Attendance 45.

Chicago.—May 26th, 1919, Western Society Rooms. Illustrated addresses as follows—(1) "Measuring Gas Electrically" by J. C. Wilson; (2) "Lifting Magnet Operation" by B. E. Fernow. Election of officers—chairman, A. F. Riggs; secretary, A. C. King; members of executive committee, C. A. Keller, F. F. Fowle, Gordon Fox and H. L. Caldwell. Attendance 225.

Cleveland.—May 19, 1919, Hotel Statler. Election of officers as follows —W. B. David, chairman; L. D. Bale, secretary-treasurer; Alex. M. McCutcheon, chairman, papers committee; and as members executive committee, W. D. Smoot, W. M. Skiff and R. W. Knowles.

Detroit-Ann Arbor.—May 1, 1919, Board of Commerce. Paper: "Wireless Telephony and Telegraphy in War" by A. A. Oswald. Joint meeting with the Detroit Engineering Society. Attendance 150.

Denver.—May 17, 1919, Shirley Hotel. Address by Dr. Albert C. Crehore on "Progress in Atomic Theory. Captain D. C. McClure told of engineering work with the American Army of Occupation in the Rhine district. Election of officersas follows—chairman, H. S. Evans; vice-chairman, D. C. McClure; secretary-treasurer, R. B. Bonney. Attendance 32.

Fort Wayne.—May 16, 1919—G. E. Company Building. Election of officers as follows—chairman, C. I. Hall; secretary-treasurer, O. B. Rinehart; members of executive committee, W. S. Goll, W. Howard Miller and A. F. Welch.

Ithaca.—May 16, 1919, Franklin Hall, Cornell University. Illustrated lecture by Mr. R. E. Wagner on "Electric Arc Welding". Attendance 75.

Lynn.—May 28, 1919, G. E. Hall. Address by Colonel J. M. Andrews entitled "Random Remarks about the 105th Infantry in France." Attendance 120.

Madison.—June 11, 1919, Engineering Building. Papers: (1) "Influence of Maximum Demand on Rates" by C. B. Hayden; (2) "Modern Types of Maximum Demand Meters" by F. A. Kartak. Professor C. M. Jansky elected chairman. Attendance 23.

Milwaukee.—June 11, 1919, Athletic Club. Illustrated address by Mr. Curtis on "Motion Pictures in the World's War". Attendance 85.

Panama.—June 1, 1919, Balboa Heights Election of officers as follows—chairman, William T. O'Connell; vice-chairman, Earl A. Graham; secretary-treasurer, M. P. Benninger; executive committee, B. R. Grier, C. W. Roberts, and J. T. Thibault.

Pittsburgh.—June 7, 1919, University Club. Paper: "Some Experiencesof the Fifteenth Engineers in France" by Lieut. Colonel T. H. Schoepf. Attendance 150.

Pittsfield.—April 10, 1919, New American Hotel. Paper: "The Motion Pictures Secret Part in Winning the War" by Jamison Handy. Attendance 125.

April 24, 1919, New American Hotel. Address by Colonel J. M. Andrews on "With the 105th in France". Attendance 75.

May 28, 1919, Masonic Temple. Annual Banquet of the Pittsfield Section. Dr. George Otis Smith, Director of U. S. Geological Survey, gave an address on "America's Peak Load". Attendance 218.

Portland.—May 6, 1919, Gasco Building. Address by Mr. Geo. E. Quinan on "National Electrical Safety Code". Attendance 60.

San Francisco.—May 23, 1919, Palo Alto. Paper: "Recent Development in Long Distance Radio Telegraphy" by L. F. Fuller. Election of officers as follows—chairman, W. G. Vincent; Secretary, A. G. Jones. Attendance 160.

Seattle.—April 15, 1919, Chamber of Commerce. Paper: "Analysis of Wave Forms by Means of Indicating Instruments" by L. F. Curtis. Attendance 50.

May 20, 1919, Chamber of Commerce. Paper: "High Pressure Steam Distribution System in Portland" by O. H. Le Ferre. Attendance 36.

Spokane.—May 16, 1919. Annual meeting. Dinner at Silver Grill—Technical program at Chamber of Commerce. Paper: "Development of the Airplane" by Foster Russell. Election of officers as follows—chairman, J. E. E. Royer; vice-chairman, Glenn H. Hoppin; secretary-treasurer, Foster Russell; executive committee, C. F. Uhden; R. S. Daniels, and L. J. Pospisil. Attendance 51.

St. Louis.—May 28, 1919, Engineers Club. Addresses as follows—"Methods of Measuring Insulation Resistance of Electrical Apparatus" by H. Weichsel; "Circulating Currents of D-C. Armatures", "V-Curves of Synchronous Motors", and Phase "Relation of Interconnected Polyphase Systems", by A. S. Langsdorf. Attendance 50.

Toronto.—April 25, 1919, Engineers Club. Paper: "Some Voltage Limitations of Current Transformers" by W. B. Buchanan. Election of officers as follows—chairman, A. B. Cooper; secretary, D. M. Fraser. Attendance 65.

May 16, 1919, Engineers Club. Subject: "The Metric System." Speakers: Messrs. E. F. Burton, E. V. Pannell, W. P. Dobson, C. G. Spencer, E. T. J. Brandon, W. F. McKnight, H. W. Price, Perry A. Borden and W. F. Sutherland. Attendance 60.

PAST BRANCH MEETINGS

University of Arkansas.—May 20, 1919. Papers: (1) "Electric Propulsion of Battleships" by Robert Cherry; (2) "Industrial Influence of Waterways" by S. J. Felsenthal; (3) "Electric Shocks" by Wm. L. Teague; (4) "A. I. E. E. for Past Session" by B. R. Agnew; (5) "Incandescent vs. Arc Light for Motion Pictures" by P. D. Hannah. Attendance 15.

Drexel Institute.—April 28, 1919. Paper: "The Possibility of Great Progress in Electrical Engineering During the Reconstruction Period" by Prof. Johnson. Attendance 24.

May 28, 1919. Election of officers as follows—chairman, L. R. Culver; secretary, T. J. Hartmann; treasurer, T. D. Dutton. Attendance 20.

Kansas State Agricultural College.—March 28, 1919. Paper: "Light Plants in Small Cities" by Prof. C. E. Reid. Attendance 56.

April 25, 1919. Paper: "What I Meet in Inspection Work" by Mr. Rhodes. Attendance 62.

May 9, 1919. Papers: (1) "X-Ray" by S. W. Honeywell; (2) "A Trip to Kansas City" by J. S. Painter; (3) "Resuscitation" by Prof. R. G. Kloeffier.

May 23, 1919. Election of officers as follows—president, Mr. Gulledge; vice-president, Mr. Sahlmann; secretary, Mr. Lucas; treasurer, Mr. Downer. Attendance 54.

Massachusetts Institute of Technology.—June 6, 1919. Annual Banquet. Address by Prof. D. C. Jackson on "My Recent Experiences in France." Election of officers as follows: president, Harman B. Deal; vice-president, Ralph D. Booth; secretary, Florence Fogler;

treasurer, Irving H. Wilson. Attendance 75.

University of Michigan.—May 28, 1919, Engineering Building. Illustrated lecture by Prof. A. H. Lovell on "The Engineers in the Service". Address by Mr. F. L. Snyder on "Telephone Service and Transmission". Election of officers as follows—chairman, Lester M. Ilgenfritz; vice-chairman, Gordon R. Anderson; secretary, Ross Gunn; treasurer, George Clark. Attendance 65.

Michigan Agricultural College.—May 14, 1919. Paper: "Alternating Currents", by R. D. Wyckoff. Demonstration of the osillograph. Election of officers as follows: chairman, R. D. Wyckoff; secretary-treasurer, R. B. Kling; executive committee, M. M. Cory, R. A. Shenefield, and R. W. Noddins. Attendance 10.

University of Minnesota.—May 28, 1919, Engineering Auditorium. Election of officers—chairman, Norman Kingsley; secretary, Clarence L. Nelson Attendance 35.

University of North Carolina.—Annual Banquet. Attendance 33.

Ohio Northern University.—May 19, 1919, Dukes Memorial. Election of officers as follows—chairman, Mark Jepson; vice-chairman, John Ulrey; secretary, W. L. Lynde; treasurer, Monroe Zimmerman. Attendance 17.

Ohio State University.—May 13, 1919, Robinson Laboratory. Papers: "Practical Application of Thermocouples in Hardening of Steel" by Howard P. Bish; (2) "A-C. Timing Devices" by Ralph P. Graber. Attendance 28.

May 16, 1919, University Chapel. Showing of films "The Potter's Wheel" and "Fairy Magic" through courtesy of General Electric Company. Attendance 74.

University of Pennsylvania.—May 28, 1919, Engineering Building. Annual business meeting. Addresses by Profs. C. E. Clewell, H. E. Trent, Dr. Pender and Mr. Frye. Attendance 34.

Throop College of Technology.—June 2, 1919. Address by Prof. Harris J. Ryan on "The Work of the Electrical Engineer". Attendance 200.

University of Virginia.—May 14, 1919, Peabody Hall. Motion pictures on—"Thomas Edison—The Benefactor", "Back to the Farm", and "Pittsfield Electrical Works", by courtesy of General Electric Company. Attendance 50.

University of Washington.—May 6, 1919, Forestry Hall. Papers: (1) "Design of Modern Pin Type Insulators" by W. A. Kleist; (2) "Testing of Suspension Type Insulators" by R. O. Bach. Attendance 13.

Washington University.—May 12, 1919. Papers: (1) "Lead Storage Batteries" by Geo. D. Rosenthal; (2) "Mechanical Power of Light" by Martin Frisch: (3) "Effects of Electric Shock" by Edw. Bowles. Attendance 17.

ENGINEERING SERVICE BULLETIN

Opportunities. The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-523. Cornell University requires some instructors in electrical engineering at salaries varying from $1000. to $1500., depending on the experience of the applicant. Apply with reference to Professor A. Gray or if especially interested in advance theory to Professor V. Karapetoff.

V-524. Lighting and starting engineer wanted by prominent manufacturer of *automotive electrical* equipment. High-grade man with both designing and production experience in electric lighting and starting. Please write fully covering in detail the following information: Education, experience, history, age and compensation.

V-525. Wanted. An electrical engineer experienced in mechanical design of electrical apparatus junction boxes, switching equipment, etc. Familiarity with spacings, contact surfaces, strength of materials, etc., essential. Position is that of chief draftsman and design engineer. A real opportunity for a man with practical design viewpoint and ability to originate designs to meet problems arising in the field. State age, nationality, experience, and salary expected.

V-526. Graduate engineer experienced in the operation of steam power and gas producer plants. The work will consist of supervising and improving the operation of such plants; which will also embrace the design and technical control of large melting, heating and annealing furnaces, heat regeneration, gas cleaning and smoke prevention. Ability to make and carry out suggestions which will reduce operating costs is particularly desired. Location Pennsylvania. Salary depends upon man.

V-527. Commercial power salesman for electric public utility. Must possess tact and have pleasing personality. Preferably a technical graduate. Duties will include solution of industrial engineering problems of customers of public utility company. Some knowledge of rates, electrical industrial equipment, and distribution practises advisable. Location West Virginia.

V-528. Power company in Middle West has opening for thoroughly experienced substation designer familiar with a-c. and d-c. layout, involving transformers, converters, 4000 to 13,000 volt cable lines, etc. Give age, experience and salary desired.

V-529. Engineer, experienced in the design of transformers. Permanent position for man who can qualify. State age, training, experience and salary expected.

V-530. Engineer, familiar with the design and application of fractional horsepower motors, both a. c. and d. c. Opportunity to develop with a rapidly growing business. In replying give experience.

V-531. Engineer, experienced in the design of induction motors. Permanent position for man able to do independent work. Please state training and experience.

V-532. Experienced designing engineers, competent to do original design work on direct-current motors and generators of small and medium sizes. In replying, state education, experience and salary expected.

V-533. Prominent manufacturer of electrical equipment for automobiles with rapidly expanding business has opportunity for high-grade man experienced in testing research and development of steel, insulating compounds and other materials used in the manufacture of small electrical appliances. Philadelphia plant, located in pleasant cool, suburban environment. Applications to receive consideration should be typewritten and include the following information which will be regarded with utmost confidence: Personal history, education, detailed experience, age, present and expected salary.

V-534. Prominent manufacturer of electrical equipment for automobiles with rapidly expanding business has opportunity for high-grade man with experience in manufacture of small accurately made mechanical appliances on large production basis. One who can plan and develop mechanical detail for efficient quantity production. Experience in *automotive electrical* field especially desirable. Philadelphia plant, located in pleasant, cool, suburban environment. Applications to receive consideration should be typewritten and include the following information which will be regarded with utmost confidence: Personal history, education, detailed experience, age, present and expected salary.

V-535. Prominent manufacturer of electrical equipment for automobiles with rapidly expanding business has opportunity for high-grade physicist with experience in electrical development and research. The organization, plant and equipment of this concern is probably the best of its kind in this country. Widely known and advertised, an organization with high standards and a quality product. Consideration will be given only to men who can appreciate these standards and policies and who will make them theirs. Philadelphia plant, located in pleasant, cool, suburban environment. Applications to receive consideration should be typewritten and include the following information which will be regarded with utmost confidence: Personal history, education, detailed experience, age, present and expected salary.

V-536. A large manufacturing firm in the Middle West would like to get in touch with young men who are just finishing university courses in electrical or mechanical engineering, or who left their university courses to enter Army and Navy service and are now looking for employment. Good opportunities will be open for the right men in sales, engineering, design and research work. In answer please state educational training and experience.

V-537. Foreman wanted for electrical instrument testing department. Applicant should have had executive, practical and technical experience. This position is open only to a man who appreciates the value and necessity of maintaining and improving the quality of the products. In reply state age, past experience and compensation desired.

V-538. A Southern technical college has an instructorship to offer in the Electrical Engineering Department. Salary $1200. The work will consist largely of laboratory instruction.

V-539. Chief Draftsman. Man thoroughly experienced in the design of electrical measuring and protective apparatus. Married man preferred. Location Pennsylvania. In reply give detailed experience record, age and salary desired.

V-540. Electrical manufacturer in New York City has opening in its engineering department for a young man, technical graduate. Rapidly growing business in new field. Exceptional opportunities for right man.

V-541. Wanted. Design engineer experienced in modern substation and power plant layouts. Location New York City. Give details of experience and salary expected.

Electrical Assistant (male). The United States Civil Service Commission announces an open competitive examination for electrical assistant (men only) on July 23, 1919, at various places throughout the United States. Vacancy in the Signal Service at Large, War Department, San Francisco, at $1800. a year and future similar vacancies at $1500. to $1800 a year will be filled from this examination. Duties require familiarity with practical side of electricity as applied to telegraph, telephone and kindred engineering. Applicants must be 20 years old, have a common school education and at least three years' experience with telegraph or telephone company. Applicants should apply at once for Form 1312, stating title of examination, to Civil Service Commission, Washington, D. C.

Draftsmen wanted for the Panama Canal. Draftsman (electrical) at $200. to $220. a month. Must be technical school graduate with at least three years' drafting room experience and capable of handling the electrical design work on steam or hydro-electric stations and high or low tension substations. Draftsman (electrical) at $168. to $179. a month. Must have had at least two years' drafting room experience in underground power distribution and building illumination. All applicants must be in good health and physically sound, American citizens, and if foreign born must submit with their application their final certificate of naturalization or that of their father if they claim citizenship through him, which will be returned promptly. Age limits 20 to 45 years. Free steamship transportation is furnished from New York or New Orleans to the Isthmus to new appointees, salary beginning on date of sailing. Must pay own railroad fare to port of sailing. Free bachelor quarters are furnished on the Isthmus and meals can be secured at the Government hotels at about 40c. each. Yearly leave with pay up to 61 days may be allowed. Write for Form 115 and complete information from Chief of Office, The Panama Canal, Washington, D. C.

SERVICES AVAILABLE

1315. Technical graduate in electrical engineering with post graduate degree of M. S., desires change of position because of narrow field offered by present position. Three years teaching electrical subjects and three years with large engineering company on development and design work. At present holding responsible position. Married. Age 28. Salary $3000.

1316. Electrical Engineer. Technical graduate with ten years broad experience, covering construction, operation and maintenance of electrical power plants, sub-stations, lighting distribution systems and general industrial power applications. Age 30, married; highest references; available on short notice. Present salary $2400.

1317. Electrical engineering graduate, 33 years of age, desires position as signal and electrical engineer. Has had ten and one half years' experience on steam and electric railroads, including four years in position of signal engineer. At present an officer of the Signal Corps in France. Available September 1. Minimum salary $3300.

1318. Electrical Engineer, 40, married, eighteen years' experience construction, operation hydroelectric, Diesel, and gas-power plants. Present position superintendent of power in mining company South America, including hydroelectric, Diesel and gas-power plants. Available August 1. Speaks and writes Spanish. Direct letter or cable for further information: Engineer, Casilla 7556, Santiago de Chile.

1319. Electrical engineering graduate, now First Lieutenant Engineers, just returned from overseas, desires position as constructing or operating engineer. Experienced in power plant construction and operation. Can handle men. Age 26. Salary $1800.

1320. Electrical Engineer, 35, married, eight years in power, substation, transmission line design and construction. Experienced in hydroelectric power on Pacific Coast. Desires position in South America on Atlantic slope in charge of complete design and construction of hydroelectric developments. Now in Chile. Available on three months notice. Speaks Spanish. Salary $4000.

1321. Technical graduate, age 27, single, healthy, two years General Electric test, one year construction foreman, one year Second Lieutenant Signal Corps. Desires position as works electrical engineer or connection with industrial engineering firm. Salary $2500.

1322. Graduate (1919) electrical engineering, desires position with an electrical contractor or with a public service company offering opportunity for advancement. Have been employed summers along various electric lines. Age 22. Eastern location preferred.

1323. Electrical engineer, 37, married, about 18 years successful experience in mechanical and electrical work both technical and executive. Desires broader field. Qualified for a high grade position with an engineering college or firm of consulting engineers.

1324. Assistant to electrical and mechanical engineer for three years on large work in Latin American country, technical graduate, speak Spanish, age 27. Considerable experience on construction work and handling of men. Desires position with large organization. Willing to go anywhere. Salary $3000.

1325. Electrical engineer, 31, maried. Technical graduate with several years experience in central station and substation construction and maintenance, including the design and layout for reconstruction and additions, desires change offering responsible position with broader opportunities. Good executive. Minimum salary $2400.

1326. Teacher of electrical engineering. Graduate degree, middle western university. Four years teaching experience, two years practical engineering work, and some experience teaching radio. Also keenly interested in research. Age 29 years, unmarried. Salary $1800.

1327. Engineering executive, graduate electrical engineer. Extensive experience in construction and operation of electric railways and power properties, also in factory management and syndicate work. Age forty-two. Desires connection with consulting and construction firm with possible future purchase of interest or with company in which prospects are good. Salary $5000.

1328. College and technical graduate, twenty years practical experience, electrical and mechanical, involving design and construction of light and power distribution, central and substation layouts, high and low-tension underground and pole line transmission, estimating and valuation work; desires permanent connections with an established firm or industrial plant. Salary dependent on prospect. Best references.

1329. Electrical engineering graduate, with commercial and teaching experience along power machinery and central station lines, wishes position with electrical manufacturing company in engineering or sales department; or with a public utility company. Middle West preferred. Could invest a few thousand dollars in a first class going concern.

1330. A cable engineer with eight years' experience in the design, manufacture, testing and installation of all kinds of mines and cables. Age 30. Technical education. Married.

1331. Graduate electrical engineer, extensive supplemental training in advanced physics and chemistry, and ten years thoroughly practical experience wishes position as research director or engineer with manufacturing company, or with consulting engineer. Exceptionally broad experience in research, both electrical and chemical, and in engineering commercial application of developments. Experienced directing subordinates.

1332. Head of Department of electricity and telephony at a well-known correspondence school desires position as assistant professor of electrical engineering, physics or mechanical engineering. Technical graduate 1910, degree M. E., four and one-half years practical experience in electrical and mechanical engineering. In present position nearly five years. Age 34. Married. Available on one month's notice.

1333. Telephone engineer. Technical training and experience in installation, testing, inspection, maintenance and operation of complete telephone and telegraph central office plant. Complicated circuit work a specialty. Nine years' experience. Executive and administrative ability. Can engineer and supervise the installation of complete telephone plant. Minimum salary $2200. per annum.

1334. Public utility manager and engineer, experienced in operation of ice plants; recently returned from Europe, desires position. Before the war; manager four years, group of properties including city of one hundred thousand population. Particularly strong as executive and as power generation engineer; successful with public. Age 42.

1335. Graduate electrical engineer, seven years' experience, General Electric test, operation, design, construction of hydroelectric plants, appraisal and consulting; desires position with established public service corporation as operating engineer or superintendent. Married. Age 29.

1336. College engineering graduate, age 25, with about two years' experience in operation of power plant, design of electrical and mechanical appliances, and in switchboard development work, desires a position in medium sized electrical industry where chances for advancement are good. Minimum salary to start $35.00 to $40.00 per week, depending upon location. Best references.

1337. Electrical engineer, age 38, thirteen years' experience in operation and maintenance of power plants, distribution and transmission systems; two years commercial office experience; ten years with one company and five years with present company. Technical graduate. Associate A. I. E. E. Salary $3000.

1338. Power plant chief engineer with wide experience in both construction and operation of steam and hydraulic stations, desires to make change in position. Salary $3000. a year. Best of references, including present employers.

1339. Electrical engineer, married, age 32, ten years general engineering experience, development and construction, power plants, waterworks, sewerage, electrochemical copper deposition and shop production. At present in charge of industrial plant layout. Eastern location desired. Salary $3600.

1340. Technical graduate, age 27. Two years testing experience including some factory work, one year sales engineer. Desires position as sales engineer; location in Cleveland preferred.

1341. Very ambitious young man, age 24, would like position in engineering department of firm where advancement is rapid. Have had good technical electrical education and three years' experience in telephone plant maintenance, and three years in office work. Engaged at present, but available on short notice. Best references.

1342. Graduate electrical engineer, five years' experience with manufacturers as construction, industrial and sales engineer and two years field service as Captain, Engineers, U. S. Army, desires position requiring engineering and executive ability, integrity and tact. Thoroughly experienced in manufacture, operation and application of all types of electrical machinery. Highest of references. Correspondence is invited.

1343. Graduate electrical engineer. Experience: Design and manufacture of steam apparatus and devices; iron ore mining and development of property; contact method sulphuric acid plant design and construction; some chamber plant design. Pleasing personality, competent and energetic.

1344. Technical graduate, age 27, single. Associate in A. I. E. E. Desires position with electrical or manufacturing company with opportunity for advancement. Not afraid to work. Ten months testing transformers with Westinghouse Elec. & Mfg. Co. Two years chief electrician U. S. Navy. Six years electrical experience. Will be released from U. S. N. by July 20.

1345. Former Captain of Engineers, Yale graduate, 35, unmarried, with shop and business experience. Five years branch sales office manager for large electrical manufacturer. Desires executive position where engineering and sales experience and business ability will count.

1346. Hydroelectric engineer, Member A. I. E. E., experienced in designing and constructing hydroelectric power developments and high-voltage transmission, also fifteen years as manager in Spanish-American country, is open for engagement in United States or elsewhere.

1347. Electrical engineer and superintendent, technical graduate, Member A. I. E. E., seven years' experience, age 32, recently released from Army, desires position as electrical engineer of industrial plant or distribution engineer of central station. Broad experience in design, construction and operation, electrical equipment of mills and mines. Formerly electrical superintendent of plant employing approximately one hundred electricians. Salary $3000.

1348. Electrical engineer, graduate University of Wisconsin 1917, six months with large eastern firm in construction work, one year as engineer and electrical officer on submarine. Desire construction work in middle west. Available after August 1.

1349. Superintendent of nineteen years' experience both in the construction and operation of power houses, substations and high tension transmission lines. Good executive, able to handle men in large numbers. Have had large experience in purchasing. Am thirty-eight years old, single, and willing to go any place.

1350. Graduate electrical engineer 1907, age 36 years, at present with consulting engineering company. Desires to make a change. Seven years in charge of power house and substation construction for light and power company. Also considerable maintenance experience. Can give references and additional information. Salary expected $3600.

1351. Wanted, executive, engineering or sales position. Canadian, speak English and French correctly. Thirty-eight, married, self educated. Five years telegraph and telephone, operating manufacturing. Five years electrical engineering on hydro, industrial and manufacturing. Three years sales and general engineering. Five years Government electrical inspector. Location no object. Salary $4000.

1352. Mechanical and electrical engineer, unmarried; excellent executive ability; desires permanent position in China. Has recently returned from France as a Captain of Engineers. Would prefer work in the commercial field, but would consider any work for which qualified.

1353. Electrical and mechanical engineer, 27, college, desires position with an electrical manufacturing company, in capacity of designing, research, testing and development of new electric apparatus and machinery. Experienced in development, etc., of electrical apparatus, power station design and electric railway work. Available on one week's notice to present employer. References all former employers.

1354. Electrical graduate, single, testing, commercial and sales experience with large manufacturer desires position with growing concern. Available September 1. Middle West preferred.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is ocated on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Ph tostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in mo e usable shape.

Members who may desire it will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a m to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a.m. to 6 p.m.

Accessions.—(May1–May 31, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Institute does not assume respon ibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

THE AMERICAN MACHINIST SHOP NOTE BOOK:

A Collection of Articles, Written for the American Machinist by Practical Men, Covering a Wide Variety of Machine Shop Activities and Giving the Solutions of Problems that have Arisen in Machine Shops the World Over. Compiled by E. A. Suverkrop. 1st edition. N. Y., published by American Machinist, McGraw-Hill Book Co., Inc., sole selling agents. 301 pp., 223 illus., 9 x 6 in., cloth, $2.

CONTENTS: Drafting and Design; Patterns and Foundry; Forge Shop, Hardening and Tempering; Drilling Machine; Engine Lathe; The Milling Machine; Planer and Shaper; Tool Making; Die and Press Work; Gages; Grinding; Boring; Gearing; Screw Machine; Shop Tools, Appliances and Expedients.

A collection of methods for dealing with difficult or unusual machine-shop jobs, compiled from the periodical mentioned, and classified under the above headings to facilitate ready reference. The articles show methods that have been successful and are suggestive to the machinist faced by similar difficulties.

CUTTING CENTRAL STATION COSTS:

Ways by which Central Station Managers, Operating Engineers and Sales Managers are Meeting High Costs. Compiled by S. B. Williams. 1st edition, N. Y., Published by Electrical World, McGraw-Hill Book Co., Inc., sole selling agents, 1919. 322 pp., illus., 9 x 6 in., cloth. $2.

The Commercial Editor of the *Electrical World* has here collected the material contributed to that journal during the last nine months of the war, explaining methods adopted by various central stations. Economies in boiler and generating rooms, line construction and distribution methods and substation practise, commercial practise and administrative plans are discussed.

EFFICIENT RAILWAY OPERATION:

By Henry S. Haines, N. Y., The Macmillan Co., 1919. 709 pp., tables, 9 x 6 in., cloth, $4.50.

This volume is a description of the progressive development of efficiency in the operation of the railway system in the United States, as compared with similar progress in other countries, for the use of students, railway employees and general readers. Railway operation, as distinguished from administration, is the subject of the book; matters of finance, rates and labor questions are therefore not included.

A bibliography and extensive statistical tables are given in the appendixes.

ELECTRICITY AND MAGNETISM FOR ENGINEERS.

Part II. Electrostatics and Alternating Currents. By Harold Pender. 1st edition, N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 221 pp., 172 illus., 9 x 6 in., cloth, $2.

Gives from an engineering point of view, a description of the more important effects commonly described as electrical and magnetic phenomena, and the application of these laws to some of the simpler problems which arise in connection with the generation, transmission and utilization of electrical phenomena. Intended for college instruction.

HANDBOOK FOR HIGHWAY ENGINEERS:

Containing Information ordinarily Used in the Design and Construction of Rural Highways. By Wilson G. Harger and Edmund A. Bonney. 3rd edit., entirely revised. N. Y., McGraw-Hill Book Co.; Lond., Hill Publishing Co., Ltd., 1919. 986 pp., illus., tables, 1 map, 7 x 4 in., flexible cloth, $4.

This handbook is a compact volume, presenting in convenient form the information ordinarily required in the field and office practise of road design and construction, and is planned to meet the requirements of both experienced and inexperienced road men.

In the present edition, approximately 350 pages of new material have been incorporated, covering mountain road location and design, camp equipment, medical notes, photography, selected soil and gravel treatment of moderate traffic roads and the recent developments of hard surface roads.

JAMES WOODHOUSE, A PIONEER IN CHEMISTRY, 1770-1809.

By Edgar F. Smith. Phila., The John C. Winston Co., 1918. 299 pp., 1 pl., 1 por., 8 x 5 in., cloth, $1.50.

Dr. Smith's account of the life and labors of James Woodhouse is a valuable contribution to the early history of chemistry in America. Woodhouse was elected Professor of chemistry at the University of Pennsylvania in 1795 and retained this connection until his death in 1809. He was an industrious and ingenious chemist, who by his work and writings did much to establish the teaching of chemistry on a sound basis and to arouse interest in the industrial applications of the science.

MARINE INSURANCE:

Its Principles and Practise. By William D. Winter. 1st edition. N.Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 433 pp., 8 x 6 in., cloth, $3.50.

In this treatise, the writer presents a thorough, simple exposition of marine insurance; suited to the needs of shipping men, merchants and others who require a general knowledge of the subject. Based on a course of lectures given at New York University.

MATHEMATICS FOR ENGINEERS:

Part I. Including Elementary and Higher Algebra, Mensuration and Graphs, and Plane Trigonometry. By W. N. Rose. N. Y., E. P. Dutton & Co., (1919). 510 pp., 257 illus., 11 tables, 9 x 6 in., cloth, $5. (The Directly-Useful Technical Series).

This treatise endeavors to cover all the mathematical work needed by students and engineers in their practise, and is intended also to serve as a reference book for private study. Part I deals with the fundamental rules and processes of Algebra, Plane Trigonometry, Mensuration and Graphs. Practical applications having a direct bearing on engineering practise are added in the greater number of instances and many calculations, tables and charts designed to make the book of the greatest possible assistance to busy engineers are included.

PRACTICAL SHELL FORGING

And the Plastic Deformation of Steel and Its Heat Treatment. By Clifford O. Bower, N. Y., Longmans, Green & Co., 1919. 279 pp., 152 illus., 4 pl., 17 tables, 10 x 6 in., cloth, $10.50.

This volume, by an experienced British forge master, is a detailed account of the processes of shell manufacture, in which particular attention is given to the laws governing the plastic deformation of steel at high temperatures and the variations in its physical character to be obtained by thermal treatment. It will be useful indirectly, the author hopes, to all persons engaged in the manufacture of hydraulic forgings.

TRAINING FOR THE ELECTRIC RAILWAY BUSINESS:

Written under the supervision of T. E. Mitten by C. B. Fairchild, Jr., Philadelphia and Lond., J. B. Lippincott Co., 1919. 155 pp., 9 pl., 3 charts, 8 x 5 in., cloth, $1.50.

Explains in non-technical language the business side of electric railroading, and gives an insight into the requirements, the opportunities and the training involved in the several departments. The various engineering and transportation problems are taken up and the recruiting and management of the army of laborers needed thoroughly discussed.

TRAUTWINE:

The Civil Engineer's Pocket-Book. By John C. Trautwine. Revised by John C. Trautwine, Jr., and John C. Trautwine, 3rd. 20th edition. Phila., Trautwine Co., 1919. 1528 pp., illus., tables, 7 x 4 in., flexible cloth, $6.

The present volume represents the fourth extensive revision of this well-known work of reference since its original appearance in 1872, and the first since the nineteenth edition as published in 1909.

The present edition contains 271 more pages than the preceding one. In its preparation, about 400 pages of material have been inserted, relating principally to matters connected with railways, on which subject about 250 pages of new matter have been added. Besides this inclusion of new data, the work has been revised and brought up to date throughout.

THE TURNOVER OF FACTORY LABOR:

By Summer H. Slichter, with an introduction by John R. Commons. N. Y. and Lond., D. Appleton & Co., 1919. 460 pp., tables, 8 x 5 in., cloth, $3.00.

CONTENTS: General Analysis of the Turnover, The Cost of the Turnover, The Causes of the Turnover, and Methods of Reducing the Turnover.

The author intends his volume as a comprehensive study of methods of handling men, to supplement existing books on works management. It is founded on personal experience in large industrial plants, visits to factories, talks with employers and working men, schedules and questionnaires. As the study was begun in 1913 and most of the data were collected before the acute situation of 1916, the discussion is from the standpoint of the situation in peace times.

The book deals with manual laborers generally, except out-of-door seasonal workers.

ASSOCIATES ELECTED JUNE 25, 1919

ACKHURST, JOHN STANLEY, Apparatus & Supply Salesman, Canadian General Electric Co., Halifax, N. S.

ADAMS, C. CLIFFORD, Elec. Engineering Foreman, Western Machinery Co.; res., 133 N. 11th Ave., Phoenix, Ariz.

ALDOUS, ERNEST E., Asst. Manager, Denver Office, American Steel & Wire Co., 1st Nat'l Bank Bldg., Denver, Colo.

AMY, ERNEST V., Laboratory Assistant, New York Edison Co., 92 Vandam St.; res., 48 West 70th St., New York, N. Y.

ANTHONY, ALFRED W., JR. Asst. Electrical Engineer, Edison Electric Ill. Co. of Brockton, 89 Highland St., Brockton, Mass.

ARCHER, HARRY, Erecting Engineer, General Electric Co., 609 Colman Bldg., Seattle, Wash.

ARMINGTON, RALPH L., Asst. Engineer, Boston & Maine R. R., Boston; res., 63 Princeton St., Medford, Mass.

ATKINSON, JOHN EARL, Machinery Application Engineer, Westinghouse Elec. & Mfg. Co., 1400 Alaska Bldg., Seattle, Wash.

BACON, VAUGHAN ROBERT, Partner, Bacon & Strahmann, Woodman of the World Bldg., Omaha, Neb.

BANDORF, WALTER, Sales Engineer, Westinghouse Elec. & Mfg. Co., 121 E. Baltimore St., Baltimore, Md.

BARBER, SAMUEL HILLIARD, Tester of Motors & Generators, Diehl Mfg. Co.; res., 1024 E. Jersey St., Elizabeth, N. J.

BARKER, ROBERT J., Local Representative, Westinghouse Elec. & Mfg. Co., 619 C. of C. Bldg., Rochester, N. Y.

*BARRY, ROBERT LEE, Sales Engineer, Goodman Mfg. Co.; res., 3722 Lueders Ave., Cincinnati, Ohio.

BARTH, ERNEST ALBERT, Ensign, (Electrical) U. S. N. R. F., 15th Regiment, Great Lakes Naval Training Station, Great Lakes, Ill.

*BASSETT, HERBERT B., Electrical Engineer, Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., Clover Club, Edgwood Park, Pittsburgh, Pa.

BECK, ROY J., Electrical Engineer, Century Electric Co., 6031 Westminster Place, St. Louis, Mo.

BEKKU, SADATOSHI, Engineer, Electrotechnical Laboratory, Imperial Government, Tokyo, Japan.

BERCAW, ORVILLE M., Sales Engineer, Cutter Elec. & Mfg. Co., 1501 Monadnock Bldg., Chicago, Ill.

*BERRY, CLARENCE J., Electrical Engineer, National Lamp Works, Nela, Park, E. Cleveland, Ohio.

BERRY, WALTER J., Operating Engineer Steam & Electric Power Plant, Hotel Bossert; res., 279 Empire Blvd., Brooklyn, N. Y.

BOCHER, AARON C., Chief Engineer, Universal Indicator Co., 205 Enterprise Bldg., Milwaukee, Wis.

BONNIVIER, CARL M., Electrician, Fore River Plant, Bethlehem Shipbuilding Corp.; res., 158 South St., Quincy, Mass.

BOUND, PERCIVAL THOMAS, Draftsman, Canadian Westinghouse Co. Ltd., Hamilton; res., 140 E. 24th St., Mount Hamilton, Ont.

BRAME, ARTHUR H., Electrical Engineer, Sterrett & Fleming; res., 2404 North Capitol St., Washington, D. C.

BRONSON, CHARLES D., Load Dispatcher, Pacific Gas & Electric Co., Oakland; res., 1235 Park Ave., Alameda, Cal.

BROOKS, S. C., Elec. Engg. Dept., United Electric Light Co.; res., 119 Firglade Ave., Springfield, Mass.

BROWN, CONY C., Chief Electrician, New Jersey Zinc Co., Franklin, N. J.

BROWN, NICHOLAS EVERETT, Gen. Supt., U. S. Electrical Mfg. Co., 300 So. Central Ave., Los Angeles, Cal.

BROWN, ROBERT B. J., Engineering Dept., American Tel. & Tel. Co., New York; res., 169a 72nd St., Brooklyn, N. Y.

*BROWN, STEWART K., Meter Laboratory Foreman, Potomac Electric Power Co., Washington, D. C.

BROWN, WILLIAM M., Inspector, Colorado Fuel & Iron Co.; res., 1039 Cedar St., Pueblo, Colo.

Fake, Frank C., Trouble man, General Electric Co., Electric Bldg., Portland, Ore.

Falk, Arthur H., Elec. Engg. Asst., Boston Elev. Ry. Co., Boston; res., 307 Harvard St., Dorchester, Mass.

Faught, Ray Clinton, Sales Engineer, General Electric Co.,Lexington Bldg., Baltimore, Md.

Fein, I. J., Draftsman, Appalachian Power Co., Bluefield, W. Va.

Ferguson, Clinton Brooks, Sales Engineer, Cutler Hammer Mfg. Co., 77 Franklin St., Boston, Mass.

Ferguson, James W., Division Foreman, Seattle Municipal Light Plant, City County Bldg., Seattle, Wash.

Finnie, Herman V., Chief Engineer, Canadian Crocker-Wheeler Co. Ltd.; res., 1 Midland St., St. Catharines, Ont.

Flannery, Daniel Thomas, Asst. Resident Inspector, Ontario Power Co., Niagara Falls, Ont.

Flesher, Ira, Electrical Construction Foreman, West Penn Power Co.; res., 110 So. 4th St., Connellsville, Pa.

Flint, Thos. R. C., Municipal Engineer, Hydro-Electric Power Commission of Ontario; res., 12 Galley Ave., Toronto, Ont.

Forbes, Andrew, Electrician, Portland Railway, Light & Power Co., Electric Building, Portland, Ore.

Foster, Harold, Draftsman, Canadian Crocker-Wheeler Co. Ltd., St. Catharines, Ont.

Floyd, George D., Asst. Laboratory Engineer, Hydro-Electric Power Commission, 8 Strachan Ave., Toronto, Ont.

Freese, Andrew Clayson, Chief Inspector, Colorado Fuel & Iron Co.; res., 1635 Pine St., Pueblo, Colo.

Freitag, Frank J., Draftsman, Federal Shipbuilding Co., Kearney, N. J.; res., 1006 Halsey St., Brooklyn, N. Y.

Frenger, Reymond F., Commercial Engineer, Westinghouse Elec. & Mfg. Co., 2133 Conway Bldg., Chicago, Ill.

Frutig, L. H., Substation Foreman, Interborough Rapid Transit Co., 2633 Jerome Ave., New York, N. Y.

Galleth, Victor Wm., Electrician, Receiving Ship, Bayridge, Brooklyn, N. Y. A. Headquarters.

Galyon, E. O., Supt. of Electrical Erection, Westinghouse Elec. & Mfg. Co., 1906 Pine St., St. Louis, Mo.

Gamble, Stephen E., Sales Engineer, Westinghouse Elec. & Mfg. Co., 707 First Natl.Bank Bldg.,San Francisco, Cal.

Garside, Harry, Plant Supt., Budd Mfg. Co.; res., 606 N. E. Boulevard, Philadelphia, Pa.

Gear, C. M., Supt. of Substations & Transmission Lines, West Penn Power Co., Connellsville, Pa.

Gerald, Arthur Hooper, Electrical Inspector, The Pullman Car Lines, 701 Pullman Bldg., Chicago, Illinois.

Gibson, William A., Electrician, J. G. White Engineering Corp., Muscle Shoals, Ala.

Goddard, George Theron, Gen. Foreman, Elec. Dept., Illinois Central R. R.; res., 6611 Kenwood Ave., Chicago, Ill.

Goetze, Herbert D., Electrician, Crosby Light & Power Co.; res., 614 S. Main St., Crosby, No. Dakota.

Going, Lew Wallace, Acting Chief Electrical Inspector, Electrical Division, City Hall, Portland, Oregon.

Grace, George C., Foreman of High Tension Construction, United Illuminating Co., Bridgeport, Conn.

Greene, A. N., Salesman, Century Electric Co.; res., 5124 Cates Ave., St. Louis, Mo.

Greene, Paul A., Lieut. (jg), U. S. N. R. F., Inspecting Engg. Material, U. S. N., 44 Court St.,Brooklyn,N.Y.

Greenshields, William Robert, Salesman, Canada Wire & Cable Co., Ltd., 2410 Dundas St., Toronto, Ont.

Gregg, John M., Instructor in Charge of Elec.-Engg. Dept., Marquette, University; res., 343 Newport Ave., Milwaukee, Wis.

Griffith, Adolphe, Inspector of Electrical Equipment, Colorado Fuel & Iron Co., Pueblo, Colo.

Gritzan, L. Le Roy, Illuminating Engineer, Standard Electric & Elevator Co., 118 E. Pratt St., Baltimore, Md.

Gromaskie, Paul J., Substation Operator, Pittsburgh Railways Co., Pittsburgh; res., Canonsburgh, Pa.

Groome, Frank T., Sales Manager, The Banjamin Electric Mfg. Co. of Canada, Ltd., 11-17 Charlotte St.. Toronto, Ont.

Grover, Leo E., Engineer, General Electric Co., 120 Broadway, New York; res., 169 72nd St., Brooklyn, N. Y.

Gruber, Howard D., Asst. Prof. of Elec. Engg., Lehigh University; res., 123 Highland Ave., Bethlehem, Pa.

Gumm, Leslie M., Sales Engineer, Westinghouse Elec. & Mfg. Co.; res., 6128 So. Park Ave., Chicago, Ill.

Gurtner, Arthur H., Asst. to Engineer in Charge, Bijur Motor Appliance Co.; res., 260 10th St., Hoboken, N. J.

Hall, Warren Sage, Electrical Engineer, Illinois Steel Co., So. Chicago, Ill.

Hare, Roy A., In charge, Test Dept., Canadian Crocker-Wheeler Co. Ltd., St Catharines, Ont.

Harrington, John Leroy, Engineering Dept., The Chesapeake & Potomac Tel. Co.; res., 3829 Clifton Ave., Baltimore, Md.

Harrison, Marion Allen, Manager, Watertown Light & Power Co., Cor. W. Kemp & 1st Sts., Watertown, So. Dakota

Harris, James Arthur, Power Engineer (Commercial), Toronto Electric Light Co.; res., 865 Shaw St., Toronto, Ont.

Hayden, Clyde C., Foreman of Substations, Southern Pacific R. R. Co., Oswego, Oregon

Hedin, William F., Load Dispatcher, Portland Railway, Light & Power Co.; res., 2141 E. Morrision St., Portland, Ore.

Heinrich, Walter Albert, Designing Engineer of Development Div., W. N. Matthews & Bros. Inc., 2920 Easton Ave., St. Louis, Mo.

*__Helwig, Eugene C.__, Circuit Engineer, Western Electric Co., New York, N.Y.; res., 22 Passaic St., Hackensack, N. J.

Heppenstall, Thomas E., Asst. to Electrical Supt., International Nickel Co.; res., Engineers' Club, Copper Cliff, Ontario.

Hill, Charles F., Chief Electrician, W. F. Schrafft & Sons Corp., 160 Washington St. N., Boston, Mass.

Hinman, L. E., Asst. Engineer, Southern Pacific R. R. Co., 40 Union Station, Portland, Oregon.

Hirai, Morito, Engineer, Production Dept., Yuasa Storage Battery Co., Jakatsuki, Kyoto, Japan.

*__Hoard, George L.__, Private, M. G. Co., 28th Infantry, U. S. Army, 3939 Burke Ave., Seattle, Wash.

ASSOCIATES RE-ELECTED JUNE 25, 1919

Barber, H. C., District Sales Manager, Standard Underground Cable Co., 201 C. P. R. Bldg., Toronto, Ont.

Bothwell, Clarence C., Sales Manager, Canadian Laco-PhillipsCompany, C. P. R. Bldg., Toronto, Ont.

Crowley, John W., Salesman, Westinghouse Elec. & Mfg. Co., 121 E. Baltimore St., Baltimore, Md.

Dawson, Arthur W., Supt., Michigan Northern Power Co., Sault Ste. Marie, Mich.

Jones, Joseph Stansbury, Engineer, Charles Cory & Son, Inc., 290 Hudson St., New York, N. Y.

Schmeisser, Ernest Gail, Secy. & Treas.,Baltimore Oil Engine Co., 1700 David Whitney Bldg., Detroit, Mich.

Sears, Georg G., Supt., White River Division, Puget Sound Traction, Light & Power Co., Dieringer, Wash.

Walker, Edwin M., General Manager, Terre Haute, Indianapolis & Eastern Traction Co., Tribune Bldg., Terre Haute, Ind.

Young, Walter E., Asst. Manager, Apparatus Sales Dept., Canadian General Electric Co., 212 King St., West, Toronto, Ont.

MEMBERS ELECTED JUNE 25, 1919

***Adams, Charles Clyde**, Switchboard Specialist, General Electric Co., 1016 Monadnock Block, Chicago, Ill.

Adams, William Charles, Chief Engineer, Northern Electric Co., Ltd., Montreal, Quebec.

Bretch, Edw., President, Advance Electric Co., 20 N. Commercial St., St. Louis, Mo.

Burton, Harry James, Supt. of Construction Dept., Consumers Power Co.; res., 238 Oak Ridge Drive, Jackson, Mich.

Cady, Walter G., Prof. of Physics, Wesleyan University; res., 49 High St., Middletown, Conn.

Cutts, Frederick, Local Manager, General Electric Co.; res., 278 Canner St., New Haven, Conn.

Douglass, William Edwin, Engineer, Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.

Du Bois, Charles G., Vice-President, Western Electric Co., 195 Broadway, New York, N. Y.

Edsall, William S., Publicity Supt., Sperry Gyroscope Co.; res., 94 South Oxford St., Brooklyn, N. Y.

Howes, Franklin J., Engineer in Charge, Engg. Dept., Rochester Railways & Light Co., 34 N. Clinton Ave., Rochester, N. Y.

Ink, John B., Electrical Engineer, Stone & Webster Boston; res., 186 Elmwood Ave., Wollaston, Mass.

Kellam, Clark Jacob, General Meter Inspector, Public Service Electric Co., 80 Park Place, Newark, N. J.

Kolster, Frederick A., Physicist, U. S. Bureau of Standards, Washington, D. C.

Orr, Robert Ellis, Asst. Engineer, Pacific Electric Ry. Co., 694 Pacific Elec. Bldg., Los Angeles, Cal.

Sheperd, Russell R., Electrical Supt., Steel & Tube Co. of America, Indiana Harbor, Ind.

Taylor, Edgar C., Asst. Supt., Electric Distribution, Los Angeles Gas & Electric Corp.; res., 807 West 49th St., Los Angeles, Cal.

Templin, John Richard, Consulting Electrical Engineer, Christchurch, New Zealand.

Tighe, Lawrence G., Gen. Supt., Production & Distribution, The Northern Ohio Traction & Light Co., Akron, Ohio.

FELLOW ELECTED JUNE 25, 1919

Webster, Arthur Gordon, Prof. of Physics, Director of Dept., Clark University; res., 66 West St., Worcester, Mass.

TRANSFERRED TO GRADE OF FELLOW JUNE 25, 1919

Bodler, Oscar W., Electrical Engineer, Eastman Kodak Co., Rochester, N.Y.

Squier, George O., Major General, Chief Signal Officer, War Department, Washington, D. C.

TRANSFERRED TO GRADE OF MEMBER, JUNE 25, 1919

Borden, Perry A., Instrument Engineer, Hydroelectric Laboratories, Toronto, Ont.

Brooks, Henry W., National Tractor Co., Cedar Rapids, Iowa

Brooks, Herbert B., Physicist, Bureau of Standards, Washington, D. C.

Coors, William F., Sales Engineer, General Electric Co., Butte, Mont.

Ewart, Frank R., Construction Engineer, Ewart & Jacob, Toronto, Ont.

Holcombe, Ernest S., Electrical Construction Engineer, Interborough Rapid Transit Co., New York, N. Y.

Josephs, Lyman C., Jr., Engineer, International Motor Co., New York, N. Y.

Mullergren, Arthur L., Sec's & Treasurer, Benham Engineering Co., Oklahoma City, Okla.

Tibbals, Emerson C., Electrical Engineer, Atlantic Loading Co., New York, N. Y.

Westbrook, Francis A., Engineering Dept., Habirshaw Electric Cable Co., New York, N. Y.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on June 16, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Galusha, Don L., Dwight P. Robinson & Co. Inc., New York, N. Y.

Mathey, E. D., Electrical Engineer, Air Nitrates Corp.; Electrical Engineer, American Cyanamid Co., New York, N. Y.

To Grade of Member

Alden, Vern E., Asst. to General Superintendent, Consolidated Gas Electric Light & Power Co., Baltimore, Md.

Gaillard, Capt. David St. Pierre, Executive Asst. to Chief of Nitrate Div., Ordnance Dept., U. S. A., Washington, D. C.

Herault, P. C., Supt. Transmission, Georgia Railway & Power Co., Atlanta, Ga.

Hutchinson, Lieut. George E., U. S. N. R. F., New York, N. Y.

Jones, Joseph S., Engineer, Charles Cory & Son, Inc., New York, N. Y.

Joy, William M., Chief of Electrical Design, Electric Bond & Share Co., New York, N. Y.

Kohlhaas, Herman T., Head of Apparatus Analysis Div., Engg. Dept., Western Electric Co., New York, N.Y.

Le Tourneau, Edward H., Electrical Engineer, Portland Railway, Light & Power Co., Portland, Ore.

Maddocks, William S., Head of Electrical Engineering Dept., Lockwood Greene & Co., Boston, Mass.

Mainland, James, Chief Engineer, Washington & Old Dominion Railway, Washington, D.C.

Siegfried, Joseph H., Supt. of Power, Pacific Power & Light Co., Pasco, Wash.

Sorsby, Paul C., Engineering Dept., General Electric Co., Atlanta, Ga.

Wakeman, Henry R., Supt. of Distribution, Portland Railway, Light & Power Co., Portland, Ore.

Wright, Walter F., Eugene F. Phillips Electrical Works Ltd., Toronto, Ont.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before July 31, 1919.

PERSONAL

Philander Betts who was commissioned Major, Engineer Reserve Corps in February 1917 and promoted to the rank of Lieut. Colonel in March 1918 received his honorable discharge from the Army on May 31, 1919. Col. Betts was detailed to the Cantonment Division, Quartermaster Dept. which later became the Construction Division of the Army. During the last few months of his service he was engaged in writing the history and compiling the historical records of all War Dept. construction made necessary in this country in connection with the war.

G. Francis Gray has returned to civilian life and is now connected with the Engineering Dept., National Aniline and Chemical Co., 21 Burling Slip, N. Y. City. While in Government service Mr. Gray had charge for a year and a half of the radio development work being done for the Signal Corps by various manufacturers and commercial laboratories.

A. D. Rickenbacher has resigned his position with the City Post Office, Washington, D. C., and is now connected with the Washington Section of the Pullman Car Lines.

Charles E. Burgoon has completed his work with the Air Nitrates Corporation, N. Y., and Muscle Shoals, Ala., and accepted a position of Senior Examiner in the Cancellation Dept. of the Emergency Fleet Corporation, Philadelphia, Pa.

C. F. Elwell, Consulting Radio Engineer, has been awarded the Cross of the Knight of the Crown of Italy on the proposal of the Minister of Marine. Mr. Elwell erected and equipped the wireless station at Rome direotly connecting Italy and the United States, as well as stations at Lyons, Nantes, Eiffel Tower and Salonica.

W. D. Weaver, now retired and to whom a memorial tablet was dedicated at the Annual Meeting of the Institute on May 16, was awarded on June 18 the honorary degree of LL.D. by his first Alma Mater, the University of Kentucky at Lexington, Ky.

L. W. W. Morrow who has been at Yale on leave of absence from the University of Oklahoma during the past year is retained at Yale as Assistant Professor of Electrical Engineering. Professor Morrow was in charge of one of the divisions of the Signals Corps Training School for Officer Candidates while it was active. When at the University of Oklahoma Professor Morrow was Director of the School of Engineering and took an active interest in public utilities of the State particularly in connection with engineering and valuation matters.

G. F. Wittig has been made Assistant Professor of Electrical Engineering in the Sheffield Scientific School of Yale University. He has been at Yale during the past year, first in connection with the Signal Corps Training School for Officer candidates and after its disbanding has been a member of the Physics Department. Professor Wittig was associated for a time with the Westinghouse, Church, Kerr Company and was for several years head of the Department of Electrical Engineering and Physics at the University of Alabama and was later Assistant Professor at the University of Pennsylvania.

Professor A. P. Little, formerly of the Bureau of Standards, who came to Yale during the past year in connection with the Signal Corps Training School for Officer Candidates has been appointed Professor of Electrical Engineering in the Colorado School of Mines.

George W. McIver, Jr., who was relieved from duty with the U. S. Army on May 10 is now affiliated with Robertson & Co., 54 Wall St., New York in charge of their Export Machinery Dept. Mr. McIver was commissioned Captain of Engineers Sept. 25, 1917 and served from May 10, 1918 until after the armistice with the 37th Electrical and Mechanical Regiment. He was then assigned to the American Peace Commission to evaluate war damages to industries. Previous to entering the army Mr. McIver was General Supt. of the Wisconsin-Minnesota Light and Power Co.

Frederick Krug, Assistant Superintendent, Electrical Dept., N. Y. & Honduras Rosario Mining Co., was married on Thursday, June 19, 1919 to Doretha Krumwiede of Brooklyn, N. Y. Mr. Krug will return with his bride to San Juancito, Honduras, Central America.

George Ellery Hale, Director of Mount Wilson Observatory and Foreign Secretary of the National Academy of Sciences has received the unusual honor of election as Associe Etranger, Academie des Sciences, Institute de France. This distinction has been held previously by but two Americans.

The National Research Council upon the presentation and acceptance of Dr. Hale's resignation as its Chairman and the election of James R. Angell as his successor, created and bestowed in perpetuity upon Dr. Hale the title of Honorary Chairman in recognition of his services to the National Research Council and to Science and Research.

OBITUARY

Captain Stuart Thomson of whose death a brief notice was inserted in the May Proceedings passed away on March 23, 1919 from the effects of bronchitis followed by double pneumonia. Capt. Thomson, son of Dr Elihu Thomson was born in Lynn' Mass., August 13, 1886. He graduated with highest honors from Harvard in 1908 and in 1909 from M. I. T. where he specialized in Industrial Chemistry and Electrochemical Engineering. He then entered the employ of the G. E. Co. in the Research Laboratory, first at Lynn and then at Schenectady, where he later entered the Consulting Engineering Dept. During the early months of the war as a civilian he worked on many war problems for the G. E. Co., was later loaned by them to Research Laboratory of the Bureau of Mines and finally received his appointment as First Lieutenant, Chemical Warfare Service, Nov. 27, 1917. Because of his unusual ability in solution of new problems he was transferred to the Aircraft Armament Section of the Ordnance Dept. working chiefly on the design and production of "Drop Bombs." In October 1918 he was promoted to the rank of Captain. He was retained in the service until March 1919. His strenuous devotion to duty so sapped his vitality, that he became an easy victim to pneumonia. Capt. Thomson who became an Associate in the A. I. E. E. in 1912 is survived by his wife, an infant son, his father Prof. Elihu Thomson and three brothers.

Alexander C. Thompson who enlisted in 1915 with the 1st Australian Flying Squadron as an Air Mechanic and served with them until the Armistice was signed, died of pneumonia two days before arriving at his home in Australia. Corporal Thompson who was mentioned in dispatches for excellent work was a graduate of Victoria University, Manchester, England and had served in Testing Dept. of the Canadian G. E. Co. He was elected an Associate in the A. I. E. E. in 1914.

Walter S. Garvey died in Minneapolis on April 26, 1919 following an illness of more than a year. Mr. Garvey graduated from the University of Minnesota in 1916, then accepting a position with the Westinghouse Elec. & Mfg. Co. in their Duluth office as Sales Engineer. He was elected an Associate in the Institute in 1918.

CHARLES E. KNOX died on the evening of June 1, 1919. Mr. Knox, who was a consulting engineer of prominence in New York City was elected an Associate in the Institute in 1899 and transfered to the grade of Fellow in 1913.

J. W. BARD died on December 13, 1918 as a result of double pneumonia following an attack of influenza. Mr. Bard at the time of his death was Chief Engineer of the Sangamo Electric Company. He graduated as an Electrical Engineer from the University of Illinois in 1906, then spending a year in Laboratory of the Western Electric Company followed by four years with the Peoria Gas and Electric Company as meter superintendent. In 1911 he entered the employ of the Sangamo Co. as Electrical Engineer later becoming Chief Engineer. Mr. Bard was elected an Associate in the Institute in 1908 and transfered to Member grade in 1913.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

Clive E. Baugh,
(former address)
853 Arlington Ave.,
Oakland, Cal.

George H. Groce,
(former address)
McFell Signal Co.,
2857-59 S. Halsted St.,
Chicago, Ill.

Ernest Kardos,
(former address)
156 E. 116th St.,
New York, N. Y.

A. B. McCollum,
(former address)
4030 Lindell Blvd.,
St. Louis, Mo.

E. W. Sundberg,
(former address)
6912 Page Ave.,
St. Louis, Mo.

Louis F. Wolfinger,
(former address)
1042½ So. Union St.,
Los Angeles, Cal.

OFFICERS AND BOARD OF DIRECTORS 1918-1919

President

Comfort A. Adams

Membership, H. A. Pratt
Public Policy, Calvert Townley

Chairmen

Headquarters, N. A. Carle
Electrical Engineering Service, William A. Del Mar
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering
Standards, L. T. Robinson
Board's Committee on Technical Activities, Wilfred Sykes

SPECIAL COMMITTEES

Committee on Institute Publications, W. I. Slichter
Development Committee, Calvert Townley

*TECHNICAL COMMITTEES

Chairmen

Power Stations, Philip Torchio
Transmission and Distribution, Edward B. Meyer
Traction and Transportation, C. F. Uebelacker
Industrial and Domestic Power, A. G. Pierce
Lighting and Illumination, C. E. Clewell
Economics of Electric Service, William B. Jackson
Protective Devices, D. W. Roper

Chairmen

Electrochemistry and Metallurgy, Carl Hering
Electrophysics, F. W. Peek, Jr.
Telegraphy and Telephony, Donald McNicol
Marine, H. A. Hornor
Use of Electricity in Mines, K. A. Pauly
Iron and Steel Industry, Eugene Friedlaender
Electrical Machinery, Alexander M. Gray
Instruments and Measurements, S. G. Rhodes
Educational, V. Karapetoff

*INSTITUTE REPRESENTATION ON

Pan-American Engineering Committee
American Bureau of Welding
Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education
Council of American Association for the Advancement of Science
Advisory Board of American Year-Book
U. S. National Committee of the International Illumination Commission
National Joint Committee on Overhead and Underground Line Construction
American Committee on Electrolysis
Engineering Council
Engineering Division, National Research Council
Engineering Foundation Board
Naval Consulting Board
American Engineering Standards
Commission of Washington Award
Joint Committee on Standard Thread for Insulators and Insulator Pins
Special Joint Committee on Determination of Power Factor in Polyphase Circuits

---

*A complete list of the officers, committees and representatives of the Institute will be found in the June, 1919, issue of the Proceedings.

Section II.—Papers and Reports

Order and Amplitude of Harmonics in Voltage Wave Forms with Indicating Instruments. By Leslie F. Curtis, Los Angeles, Cal., September 18–20, 1919 947
Theory of Probabilities Applied to Failures of Suspension Insulators. By L. M. Klauber, Los Angeles, Cal., September 18–20, 1919 959
Some Problems in the Operation of Power Plants in Parallel. By E. C. Stone, Pittsburgh, Pa., February 11, 1919 973
Predetermination of Synchronous Phase-Modifier Performance. By Hubert V. Carpenter, Los Angeles, Cal., September 18–20, 1919 997
Grounded Neutral Transmission Line. By W. E. Richards, Lake Placid Club, N. Y., June 24, 1919 1006

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII AUGUST, 1919 Number 8

PACIFIC COAST CONVENTION

The Pacific Coast Convention of the Institute which has been announced to take place in Los Angeles, Cal., September 18-20, 1919, will be held under the auspices of the local section, and Vice-president John B. Fisken, of Spokane, Wash. has accepted an invitation to preside at the convention sessions.

The program is not yet completed, but contains the following list of technical papers; three of which are published in Section II of this issue of the PROCEEDINGS:

Order and Amplitude of Harmonics in Voltage Wave Forms with Indicating Instruments, by Leslie F. Curtis.

Theory of Probabilities Applied to Failures of Suspension Insulators, by L. M. Klauber.

Predetermination of Synchronous Phase-Modifier Performance, by Hubert V. Carpenter.

Operating Features of a 1000-*Mile*, 220,000-*Volt Trausmission Line*, by R. W. Sorrenson, H. H. Cox and G. E. Armstrong.

The local convention committee, the membership of which was announced in the June PROCEEDINGS, has nearly completed its arrangements for this meeting, and announcements of the program will be mailed by the committee to all Institute members in the Pacific Coast States.

FUTURE A. I. E. E. MEETINGS

New York Meeting.—A joint meeting with the Institute of Radio Engineers will be held in New York on October 1, 1919. The subject of this meeting will be Radio Telegraphy.

Philadelphia Meeting.—On October 10, 1919 a regular meeting of the Institute will be held in conjunction with the American Physical Society. This meeting will be under the auspices of the Electrophysics Committee.

New York Meeting.—A regular Institute meeting under the auspices of the Power Stations Committee will be held in New York on November 14, 1919.

Programs for the above meetings are now being arranged and will be given in full in future issues of the PROCEEDINGS.

FIFTH NATIONAL EXPOSITION OF CHEMICAL INDUSTRIES

Among the interesting features of the Fifth National Exposition of Chemical Industries to be held at the Coliseum and 1st Reg. Armory Chicago, week of Sept. 22, 1919 will be an exhibit of many types of electric furnaces, exhibits of new metal alloys, complete exhibits by the U. S. Bureau of Mines, showing the extraction of metals from their ores, exhibits of numerous new instruments and measuring devices developed largely during the war, health and welfare exhibits. In addition numerous meetings and technical sessions of interest will be held, as listed in the July PROCEEDINGS.

ENGINEERING COUNCIL

REPORTS OF THE NATIONAL SERVICE COMMITTEE

STATUS OF WATER POWER LEGISLATION

The Federal Power Bill which originated in the House was referred to the Senate and turned over to the Committee on Commerce on July 8th. The Senate has been waiting for the House to pass this bill before it began further active work on its water power bills.

It is contemplated that the Esch bill No. 3184 as it passed the House, will be in substance at least, satisfactory to the Senate Committee, and that this legislation will be reported out shortly.

The necessity for legislation embodied in this bill is felt in all parts of the country and especially by engineers who are intimately connected with the projects which it will affect.

The salient features of the Esch bill are the creation of a commission known as the Federal Power Commission, to be composed of the Secretaries of War, Interior, and of Agriculture. To this commission are given the powers heretofore exercised by the Secretaries in connection with water-power development under their several jurisdictions. It was thought better to create a commission consisting of Cabinet officers than a new commission necessitating large appropriations. Moreover, the clerical and expert forces of the several departments are made available for this Federal Power Commission.

The powers of the commission are set forth in detail in the pending bill, as are also the duties and obligations of the grantees upon receiving the licenses provided for in the bill. The terms of the license are also set forth and a continuance thereof for a period not exceeding 50 years. Further provisions relating to recapture or of retaking of the projects upon the termination of 50 years are also fully set forth. Provisions are also made for the regulation of rates to be charged to consumers by the grantees. Penalties are provided for entrance into combinations or monopolies in restraint of trade on the part of grantees. Suitable penalties are prescribed for the violation of the terms of the provisions of the act.

Copies of the bill will be mailed on request to National Service Committee, Engineering Council, McLachlin Building, Washington, D. C.

PAYMENT OF MILEAGE TO ENGINEER OFFICERS

The following extracts from a letter referred to the National Service Committee of Engineering Council explains the unfortunate experience of some of the Engineers who were enrolled in the Reserve Corps at the beginning of the war.:

> Among other things, we were informed that reserve corps officers when ordered to active duty would receive the pay and allowance that officers ordinarily do when changing stations. Any number of western engineers, several of them located in Alaska, applied for commissions in the first engineer reserve corps. After their applications had gone forward the reserve corps was abolished by the War Department. Without receiving any information to this effect these men were telegraphed offers of commissions in the Engineers, U. S. A. They accepted and were ordered to Camp A. A. Humphreys, Va., for duty as students. Upon their arrival they were informed that they would receive no travel allowances at all. The seven cents a mile that they expected was not due them because they had accepted commissions in the regular army, not in the reserve corps. This was the first intimation that they had as to their new status. Most of the men particularly those fron Alaska, had been to a very considerable expense in traveling, as much as $350, in some cases, and naturally consider themselves unfairly treated.
>
> Another instance, which covers my own case, occurred as follows: Some 25 or 30 of us entered the service in the Philippine Islands. We were discharged in the States, most of us in the eastern part. Our discharges came just too late to catch the December transport for the Philippines so we were forced to wait for the January boat which arrives in Manilla about February 15th. We were thus over two months without pay, our army pay having stopped on the date of our

discharge and our pay as civilians not beginning until our arrival in the Philippines. Anticipating these conditions some of the men requested that they be ordered to the Philippines and discharged there or that they be returned to the inactive list in the reserve corps so that they could return to their homes with pay. Both of these requests were refused and the men discharged along with the rest.

A letter of inquiry in regard to this complaint was addressed to the Secretary of War by Engineering Council and elicited a reply from the Chief of Engineers, U. S. A. stating that the criticisms voiced in the above letter were justified, and recommending that a draft of suitable legislation be submitted to Congress to correct the inequities described.

Grateful acknowledgment has been made to the reply of the Chief of Engineers.

A bill has been introduced in the House by Mr. Johnson, of Washington, authorizing and directing the Secretary of War to pay mileage from the place of residence to first station to all officers who accepted commissions after signing blanks containing a provision that the Government would allow travel expenses at the rate of seven cents per mile to applicants who might be commissioned. In order that this or similar legislation may be enacted into law, interested parties should send in detailed explanation of their cases.

Former Engineer officers who have had similar experiences to those described above should communicate with the National Service Committee, Washington, D. C. The committee can do nothing without the cooperation of the engineers most interested in the matter.

PAST SECTION MEETINGS

Baltimore.—June 5th, 1919, Engineers Club. Illustrated address by Dr. J. B. Whitehead on "Submarine Detection." Attendence 90.

Detroit-Ann Arbor.—June 20, 1919, Detroit Board of Commerce. Addresses on Institute Development by Professors J. C. Parker and H. H. Higbie, and Messrs, E. M. Walker and F. J. Molitor. Attendance 50.

Minnesota.—May 20, 1919, University of Minnesota. Papers: (1) "Construction Features of Some Recent Electrical Generating and Distributing Plants" by Wm. T. Walker; (2) "Steam Power Plant Operation at the Riverside Plant of the Minneapolis General Electric Company" by H. S. Whiton; (3) "A Synopsis of the Work of the Bureau of Conservation" by Hans J. Meyer. Attendance 85.

June 17, 1919, University of Minnesota. Addresses as follows—(1) Engineering as Relates to the Army" by Major William Pierce Cowles; (2) "Aviation Field Engineering" by Lieut. Vernon S. Beck. Election of officers—chairman, Fred G. Dustin; secretary, Leo H. Cooper. Attendance 23.

Panama.—June 8, 1919, Cristobal, C. Z. Inspection trip to the new Panama Railroad Pier No. 6. Joint meeting with the Engineers Club. Attendance 26.

Portland.—June 10, 1919, University Club. Paper: "Ranging by the Flash and Sound Method" by E. F. Whitney.

Spokane.—June 13, 1919, Chamber of Commerce. Discussion of "The Metric System." Joint meeting with other engineering societies. Attendance 31.

Philadelphia.—June 9, 1919, Howard McCall Field. Election of officers as follows—Chairman, C. E. Clewell; secretary-treasurer, Ross B. Mateer; assistant secretary, Raymond Bailey; managers, P. H. Chase, L. J. Corta, E. B. Tuttle; hold over managers, C. E. Clewell, N. E. Funk, Baxter Reynolds. The meeting took the form of an outing at the athletic field of the Philadelphia Electric Company, with sports in the afternoon, a dinner in the pavilion and dancing in the evening. Attendance 90.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-542. Engineer, experienced in the design of transformers. Permanent position for man who can qualify. State age, training, experience and salary expected.

V-543. Engineer, familiar with the design and application of fractional horse power motors, both a-c. and d-c. Opportunity to develop with a rapidly growing business. In replying give experience.

V-544. Engineer, experienced in the design of induction motors. Permanent position for man able to do independent work. Please state training and experience.

V-545. Experienced designing engineers, competent to do original design work on direct current and generators of small and medium sizes. In replying state education, experience and salary expected.

V-546. Assistant Professor of Electrical Engineering. A large university in the middle west desires to appoint two assistant professors in electrical engineering, one of whom has had specialized experience in central station and electric railway work. Engineers who have had from five to ten years' experience in the engineering rather than in the teaching field desired. Duties will be teaching and lecturing. Salary $2000. to $2250. per school year of 9 months.

V-547. Instructors in electrical engineering for laboratory work are wanted by a large middle western university. Men with a few years of general experience in the engineering field desired. Two appointments are available. Salary $1400. to $1700. per school year of 9 months.

V-548. Instructors in electrical engineering, principally for laboratory instruction. Experience in testing or operation desirable. Opportunity for advanced study. Two positions open at $1250. and $1500. Address: Electrical Engineering Department, Sheffield Scientific School, New Haven, Conn.

V-549. Professor of electrical engineering wanted for technical school in Shanghai, China. Class room and laboratory work. Some knowledge of steam-turbine testing required. Salary Mex. $4000. to Mex $4700. according to qualifications; equivalent to U. S. $3600. to U. S. $4200. at present rate of exchange. Residence furnished married man. Three-year contract. Transportation paid. Further information from Employment Bureau of A. I. E. E.

V-550. Instructorship open in electrical engineering. Location Ohio. Salary $1800. Vacation allowance about six weeks. Applicants must have had thorough technical training, at least one year practical experience, and must possess tact and judgment. Give experience in detail, age and references.

V-551. Mechanical draftsman, with several years' experience in designing complete d-c. electric motors, ½ h. p. to 150 h. p., from engineer's specifications. Excellent opportunity for the right man. Location near New York City. State age, experience in detail and salary expected.

V-552. Vacancy in Electrical Engineering Department of university on northern Pacific Coast. Salary $2000. for nine months service. Applicant must be able to teach fundamentals of direct and alternating current, and give courses in electrical machine design and power transmission. In reply give experience in detail, age, etc.

V-553. A technical school in the Middle States needs an assistant instructor in the electrical department. Must have had practical experience in the field in either electric light and power work, or telephony, preferably both. Previous teaching experience desirable but not necessary. Must be able to conduct class room work in electricity, also laboratory and practical work in installation and maintenance methods. State age, experience, education, references and salary expected in first letter. School year, nine months.

V-554. Wanted, by large eastern university, an instructor in electrical engineering. Both class room and laboratory work. Salary $1500. to $2000., depending upon experience of applicant. In reply state both educational and practical experience.

V-555. The University of Pennsylvania, Electrical Engineering Department, has an opening for an instructor in electrical engineering at a salary of from $1200. to $1500., according to the experience of the applicant. Address: Dr. Harold Pender, R. F. D. 2, Surry, Maine.

SERVICES AVAILABLE

1355. A newly graduated electrical engineer desires position with large manufacturing concern. Brazilian, 23 years old, single, excellent health. Willing to travel or reside anywhere. Available at once.

1356. Electrical engineer, 25 years old and married, Associate A. I. E. E., desires change. At present in charge of wire and cable testing laboratory. Would like similar work, or plant electrical engineer. Will gladly furnish references and history of past experience, which has been varied. Location optional. Salary to start $2500.

1357. Electrical engineer wants general engineering position. Capable of design of L. T. and H. T. installations, bus structures, switchboards in power and substations. Experienced in general illumination, lamps; machine and instrument testing; relay protection of transmission lines; electric railway power, cars and control equipment. Graduate of Lowell Institute. Thirteen years' experience; age 33. Salary desired $2500.—$3000. yearly.

1358. Aggressive, ambitious young man with excellent credentials, University graduate, electrical-mechanical. Speaks English, French and Spanish correctly. Experienced along engineering, shop, sugar machinery, draughting, import, export, sales and publicity. Desirous of connecting with exporting or consulting firm in New York City or vicinity. Employed by large and progressive electrical exporter.

1359. Young man, age 34, wants position of superintendent or assistant of power company. Twelve years of broad experience in operation, maintenance and load dispatching with steam and hydroelectric systems with voltages up to 110,000. Expert in remedying operation and insulator troubles. Testing, distribution and construction experience. Salary $175. a month.

1360. Electrical engineer; graduate E. E., Associate A. I. E. E., age 26, single; two years G. E. test, at present in engineering office. Have had accounting and business training. Desires position as electrical engineer or as assistant manager in power plant; prefer the West. Best references. Monthly salary at start $150. Available on application.

1361. Technical graduate, five years experience with Westinghouse Electric on apprenticeship course and in factory and field construction work, seven and one-half years in charge of construction work for public utility light and power company, at present connected with branch of U. S. Government on war work nearing completion, desires to make connection with public utility, manufacturing or industrial plant, location no object, age 33, married. Salary $3000.

1362. Teaching position wanted. Graduate as Bachelor of Science of technical school in central west and as Master of Science of eastern college, desires position as instructor or assistant professor, the latter preferred, in electrical engineering. Two years General Electric test experience.

1363. Electrical engineer, sixteen years' experience in operation, maintenance and repairs, also construction of electrical equipments, desires position; at present disengaged. No restriction as to location. Technical training. Age 38, married. Minimum salary $2100. per year. Just released from service in Construction Division, U. S. Army.

1364. Electrical Distribution Engineer, thoroughly competent to design, install or maintain an overhead or underground electrical distribution system. Technical college graduate E. E. Executive ability. Five years practical experience. Excellent references. Age 31, married. Desires permanent employment where advancement depends upon experience, knowledge and results. Temporarily employed. Salary $2500.

1365. Electrical engineer desires position as assistant, resident or designing engineer. College graduate. Eight years electrical manufacturing, eight years constructing and operating. Handled men last ten years. Specially qualified as designing or assistant engineer, power stations, transmission and distribution, industrial control, electrical rolling mills. Have handled estimates, specifications, and correspondence seven years. Lowest salary $3600. English, married.

1366. Electrical and mechanical engineer, M. I. T. graduate. Recently Lieutenant in Naval Reserve Force. Available for position requiring engineering and business ability. Married, age 35. Eight years' experience as consulting mechanical and electrical engineer, two years general manager traction company, two years production engineer for large company. Highest references. Location foreign or domestic. Salary $5000.

1367. Electrical engineer, expert on motor drives, thirteen years responsible executive experience in industrial and power plant work, generators, switchboards, telephone wiring, line work. University graduate, American, Christian, 39, married. Desires position with large industrial plant or central station as engineer or power salesman.

1368. Graduate electrical engineer, two years central station construction and design, one year G. E. test, and two years teaching, wishes position with consulting engineer or progressive engineering concern offering good chances for advancement. Age 28 years, single, Associate A. I. E. E., member N. E. L. A. Willing to sacrifice to get place desired. Best references.

1369. Graduate electrical and mechanical engineer. Four years General Electric and Allis-Chalmers tests. Five years in general engineering and commercial departments of the G. E. Co. One year as assistant to the chief engineer and superintendent of operating and construction departments of large hydro-steam transmission company. Age 35.

1370. Graduate electrical engineer, age 28, unmarried, desires position as fire prevention engineer, where opportunities exist for individual growth. Have had several years' experience in the supervision of the development, design and manufacture of devices, and the maintenance and operation of systems employed in protective telegraphy. Salary desired to start $2500.

1371. Electrical engineer, college graduate 1911, expert on power transmission line, substation and distribution system, design, estimate, construction, operation, maintenance, other valuable engineering and business experience, desires position as superintendent or engineer of transmission or distribution. Employed. Minimum salary $2400.

1372. Engineering graduate (1917) with B. S. E. E. and M. S. degrees from southern state university desires position as instructor in physics and electrical engineering, preferably in South or West. Fellow in these subjects during graduate year. Ex-Army Officer. One year in public utility training school. Salary expected $1500.

1373. Electrical engineer, Lehigh graduate 1911. Four years assistant electrical engineer anthracite mining company; three years electrical engineer railroad valuation. Associate A. I. E. E. and Illuminating Engineering Society; Army officer about to be discharged; can obtain discharge on short notice.

1374. Mechanical engineer B. S. and M. E., six years on power station construction, seven years investigation of municipal departments and preparation of special reports on fire protection. Experienced in steam engine, gas engine and boiler testing. Desires position as fire protection engineer. Employed at present.

1375. Electrical engineering graduate (1917) with post graduate degree from Massachusetts Institute of Technology and Harvard desires responsible position preferably with electric railroad or consulting engineering firm. Experienced in electrical testing and electric railway research. Age 25 and single. Available on short notice.

1376. Engineer-Salesman in complete charge for several years, thoroughly familiar with magnet wire trade in

U. S., Canada and export, is ready to change connection. Now with one of the largest manufacturers. Well known, with large following. Can arrange interview.

1377. Executive, engineer, manager, $2500. High grade man with broad experience and technical training, re-entering civil life after service abroad in the U. S. Navy. At present on Pacific Coast but available for suitable connections domestic or foreign. Experienced in developing and manufacturing complicated control and signaling apparatus. Expert on industrial control. Highest references.

1378. Electrical engineer who for fourteen years has been associated with one of the largest electrical manufacturers in various capacities in designing and sales engineering, desires position with comparatively small but reliable manufacturer or a "live" central station. Age 33, married. Minimum salary $3000. Will gladly furnish dependable references.

1379. Electrical engineer, graduate E. E., married; fifteen years' experience; power station, substation and industrial station design; construction; transmission; distribution; railway and light and power work; executive and business experience. Age 32. Salary $3000. minimum.

1380. Electrical engineer, technical graduate. Wide experience in construction and maintenance of power plant machinery for traction lines, and heavy traction equipment. Now in charge of rolling stock and shops for large interurban system. Good organizer. Salary $3600. to $4000. according to location and other conditions.

1381. Electrical and mechanical engineering graduate. Age 26. Associate A. I. E. E. Two years' experience testing and inspecting electrical devices. One year on experimental development work. References regarding ability available. Desires permanent position with opportunity for advancement. New York or vicinity preferred. Available immediately. Salary expected $2000.

1382. Technical graduate, age 25, married, three years electrical and mechanical experience, desires position. One year with light and power corporation as junior testing engineer. At present Lieutenant (junior grade), U. S. Navy, engineering duty, but expect early discharge.

1383. Electrical and aeronautical engineer. Age 28. At present Captain, U. S. A. Chief Engineer of an aviation repair depot, desires position with an electrical or manufacturing company; broad experience in electrical testing and design of electrical and aeronautical equipment. Executive and administrative ability. Expect discharge by September 30. Salary $4000.

1384. An associate professor of electrical engineering in a large state university; fifteen years' experience in teaching electrical engineering subjects and the author of several well known texts; desires to change location. Salary $3000.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is located on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Photostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who may desire it will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a m. to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a.m. to 6 p.m.

Book Notices.—(June 1–June 30, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

THE BLIND.

Their Condition and the Work Being Done for Them in the United States. By Harry Best. N. Y., The Macmillan Co., 1919. 17 + 763 pp., illus., tab., 8 x 6 in., cloth, $4.

The particular sections of this comprehensive survey likely to interest engineers are those treating of the industrial employment of the blind and of indemnities for the loss of sight. Both topics are given full consideration. Attention is given to the theoretical aspects of industrial establishments for the blind, the organization and results of present establishments, and the possible and present employment of the blind in general occupations. The payment of indemnities through suits at law, insurance policies and workingmen's compensation acts are also described very fully.

BOILER CHEMISTRY AND FEED WATER SUPPLIES.

By J. H. Paul. Lond. & N. Y., Longmans, Green and Co., 1919. 242 pp., 1 pl., tab., diag., 9x6 in., cloth, $4.50.

The lack of any adequate discussion of the chemical reactions which occur in high pressure boilers fed with natural waters, and of the effects of these reactions upon the steaming capacity of the boiler and upon the metal of which it is made, have led the author to prepare this volume, in which he gives the knowledge gained by long practical experience with boilers under varied circumstances and conditions. As far as possible, he has stated the facts and his conclusions in the language of everyday life.

THE CANADIAN MINING MANUAL. 1918.

A handbook of information concerning the Minerals and Mines of Canada. Edited by Reginald E. Hore. Toronto, Mines Publishing Co. (copyright 1919) 352 pp., illus., pl., por., maps, tab., diag. 11 x 9 in., cloth, $5.

This is the fourth edition of this handbook of Canadian minerals, metals, mining and metallurgical companies, in which the chief objects are to present concisely, matter of interest to persons connected with the mining industry and to attract attention to the possibilities of Canadian mineral resources. A preliminary survey of progress in 1918 and a summary of the official reports for 1917 are given for each province and product. There are also a number of special articles on topics of interest, a directory of mining companies and a list of the producers of various mine products.

THE ELEMENTS OF ASTRONOMY FOR SURVEYORS.

By R. W. Chapman. Lond., Charles Griffin and Company, Ltd.; Phila., J. B. Lippincott Co., 1919. 247 pp., tab., 56 diag., 8 x 6 in., cloth, $1.75. (Gift of J. B. Lippincott).

The author of this small volume has attempted to provide students of surveying with an elementary exposition not only of the practical methods of observation and computation, but also of the main principles by which the formulas are derived. The methods of observation are illustrated by fully worked out actual observations and prominent attention is given to the effects of observational and instrumental errors.

ENGINEERING DESCRIPTIVE GEOMETRY AND DRAWING.

A Treatise on Line Drawing, Descriptive Geometry, and Engineering or Mechanical Drawing, for the Use of Midshipmen at the United States Naval Academy. By Frank W. Bartlett and Theodore W. Johnson. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 617 pp., illus., pl., tab., 9 x 6 in., cloth, $5.50.

This volume consists of three independent treatises on Line Drawing, Engineering Descriptive Geometry, and Engineering Drawing. Collectively they represent the course in drawing at the United States Naval Academy and are intended to provide a complete course for students with no previous knowledge of mechanical drawing.

Part one has been written to replace Bartlett's Mechanical Drawing. Part two, which treats of the science of orthographic projection, was issued as a separate work in 1910 and has been revised to date. Part three, the work of Prof. Johnson, deals with the application of Parts one and two to the needs of engineers, draftsmen and mechanics, for practical. construction of machines of every kind. Part three is also issued separately for the use of those who wish a general course in mechanical drawing.

EXCAVATION.

Machinery, Methods and Costs, Including a Revision of "Excavating Machinery." By Allen Boyer McDaniel. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 18 + 542 pp., 209 illus., 9 x 6 in., cloth, $5.

Frequent requests for information on recent types of excavators and the newer uses of older types, have led the author of this work to prepare it to replace his "Excavating Machinery," published in 1913. The present work is divided into two sections; the first describes the construction, method and typical cost of operation of each type of excavator, the second is a comparative study of the efficient and economic use of the different types of machines in the various fields of construction work. Highway and railroad construction, reclamation, river, harbor, canal and municipal work, quarrying, tunneling and mining are considered. References to the literature are included.

IRRIGATION ENGINEERING.

By Arthur Powell Davis and Herbert M. Wilson. 7th edition, revised and enlarged. N. Y., John Wiley and Son Inc.; Lond., Chapman & Hall, Ltd., 1919. 640 pp., 249 illus., 59 tab., 9 x 6 in., cloth, $4.50.

The early editions of Wilson's Manual of Irrigation Engineering were especially valuable because of the authors familiarity with large irrigation works in India and Egypt. Subsequent activity in irrigation, particularly in the United States, and developments in related lines of municipal water supply and hydroelectric construction, have presented new problems and evolved new solutions of old ones. Social and economic differences between America and Asia have also caused distinctive changes in practice. In preparing this revised edition, Mr. Davis has taken the changed situation into consideration, with the result that the book is in the main rewritten and rearranged, and contains much new material.

LIQUID FUELS FOR INTERNAL COMBUSTION ENGINES.

A Practical Treatise for Engineers and Chemists. By Harold Moore. N. Y., D. Van Nostrand Co., 1918. 15 + 200 pp., 49 illus., tab., 9 x 6 in., cloth, $5.

The author describes in part one of this volume the chemical differences between the various fuels; petroleum, shale oil, coal and lignite tars, wood and peat distillation products, oils and alcohols, which are used for internal combustion engines. In part two of the book these fuels are classified according to their suitability for use in engines fitted with carburetters, vaporizers or atomizers. Part three presents methods for the examination and valuation of liquid fuels with a view to their use in these engines, the procedure in such cases being different from that used in determining their value for external combustion.

MAGNETISM AND APPLICATIONS OF MAGNETS.

By John D. Ball. (School of Practical Electricity, Book 4) Milwaukee, Electroforce Publishing Co., (copyright 1919) 113 pp., 95 illus., tab., 10 x 7 in., cloth, $1.50. (Gift of author).

This volume, which is one of a series of textbooks for technical high schools, trade schools, etc., combines a brief description of the laws and principles of magnetism and the commercial uses of magnets with a selection of laboratory experiments to illustrate the theories of magnetism and electro-magnetism. Only elementary mathematics is used.

MILITARY GEOLOGY AND TOPOGRAPHY.

A Presentation of Certain Phases of Geology, Geography and Topography for Military Purposes. Herbert E. Gregory, Editor. Prepared and issued under the auspices of the Division of Geology and Geography National Research Council. New Haven, Yale University Press. 1918. 281 pp., illus., pl., maps, 9 x 6 in., cloth, $1.25.

This book is the result of a preliminary effort to meet the need which the Great War has demonstrated for a more widely diffused knowledge of geology as an aid in conducting military operations and in the solution of economic problems relating to raw materials. Attention is given mainly to those facts and principles that have proven to be applicable to military problems. Bibliographies for supplementary reference study are included.

MOTOR VEHICLE ENGINEERING.

Engines (for Automobiles, Trucks and Tractors). By Ethelbert Favary. 1st edition. N. Y., McGraw-Hill Book Company, Inc.; Lond., Hill Publishing Co., Ltd., 1919. 12 + 333 pp., 133 illus., 39 tab., 9 x 6 in., cloth, $3.

The present volume, the first of a contemplated series intended to give designers, engineers and students a concise summary of modern practice in automobile design and construction, deals with engines. It illustrates standard designs for all engine parts and gives the formulas for determining the strength and dimensions of these parts, together with other useful information. Only simple mathematics is used.

PUMPING MACHINERY.

A Treatise on the History, Design, Construction and Operation of Various Forms of Pumps. By Arthur M Greene, Jr. 2nd edition, revised. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 703 pp., 504 illus., tab., 9 x 6 in., cloth, $4.

Gives a brief, historical review of the development of pumping machinery, describes the action of a number of common forms of pumps and states the methods of design of pumping apparatus. It is intended to develop certain general principles of mechanics which are applicable to pumping machinery as well as to train the student in application of the theoretical portions of an engineering course. The descriptive chapters on modern pumps have been prepared from the catalogues and bulletins of manufacturers and from current technical literature. A full bibliography is included.

SHORE PROCESSES AND SHORELINE DEVELOPMENT.

By Douglas Wilson Johnson. 1st edition. N. Y., John Wiley and Sons. Inc.; Lond., Chapman & Hall, Ltd. 1919. 17 + 584 pp., 149 illus., 73 pl., 9 x 6 in., cloth, $5.

Professor Johnson has recorded in compact form the results of an extended study of the scattered literature on shore processes and shoreline forms. Water waves, the work of waves, current action, the development of the shore profile and the shoreline, shore ridges and minor shore forms are discussed, and a statement of the fundamental principles which seem best established is given. The author hopes that the book will prove useful to engineers, geologists and geographers. Full lists of references and a bibliography are included.

WATERPROOFING ENGINEERING.

For Engineers, Architects, Builders, Roofers and Waterproofers. By Joseph Ross. 1st edition. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 10 + 442 pp., 140 illus., 41 tab., 9 x 6 in., cloth, $5.

The absence of any systematic treatise on waterproofing has led to the preparation of this book, which is based on the author's practical experience and researches, as well as his study of the existing literature. The function of waterproofing, the systems in use, methods and results are described, and specification and cost tables are given. A useful glossary of waterproofing terms and a bibliography are appended.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before August 31, 1919.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on July 14, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Barnholdt, Harold L., Designing Engineer, Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.

Morecroft, John H., Associate Professor in Electrical Engineering, Columbia University, New York, N. Y.

To Grade of Member

Arana, Victor M., Consulting Electrical Engineer, Head of Electrical Dept., National School of Arts and Crafts, Lima, Peru, S. A.

Johnson, Carl E., Vice-President & General Manager, U. S. Electrical Mfg. Co., Los Angeles, Cal.

Moore, Nelson S., Electrical Engineer, Lewis and Roth Corp., Philadelphia, Pa.

Stanley, Howard A., Superintendent, Fall River Electric Light Co., Fall River, Mass.

Stoltz, G. E., General Engineer, Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.

Young, W. E., Assistant Manager, Apparatus Dept., Canadian General Electric Co., Toronto, Ont.

PERSONAL

Major J. R. Worth, Construction Division, U. S. A. is stationed at Pittsburgh, Pa., c/o West Penn Power Co., Beedeedum Trees Bldg., as Government Constructing Quartermaster for three steam-electric plants. He will probably remain about a year.

Dr. V. Bush has been appointed Associate Professor of Electrical Engineering at the Massachusetts Institute of Technology. Dr. Bush is a graduate of the Electrical Engineering Course of Tufts College receiving an M. S. degree in 1914. He received the degree of Doctor of Engineering from M. I. T. in 1916. After graduating from Tufts he became an instructor in the Tufts staff and was later made an Assistant Professor. During the course of scientific researches in the war, Dr. Bush was associated with the New London researches of the United States Navy for the detection of submarines. Dr. Bush is now engineer of the American Radio and Research Co.

G. L. Crosby, Sales Manager of the Roller-Smith Company announces the establishment by his company of agency arrangements with L. B. Gottschall, 211 N. St. Paul Street, Dallas, Texas. The complete line. of the Roller-Smith Company products will be handled by Mr. Gottschall who has had extensive experience in the sale and installation of electrical apparatus in his locality.

OBITUARY

G. R. Baker died at Jabl-us-Siraj, Afghanistan, on November 11, 1918 from the effects of typhoid-pneumonia. He was buried in British territory in Peshawer, India. Mr. Baker had been acting as first Assistant to the Chief Engineer of the Kabul Hydroelectric Scheme and just before his final illness had taken charge of the plant and was to remain as Chief Engineer in charge. He had been formerly in the employ of the General Electric Company as Construction Engineer and had worked on the Panama Canal installation, erected plants in Cuba and the Western States. He became an Associate in the Institute in 1915.

BOARD OF DIRECTORS, 1919-1920.

California 220,000-Volt—1100-Mile—1,500,000-Kw. Transmission Bus. By R. W. Sorenson, H. H. Cox and G..E. Armstrong , Los Angeles, Cal., September 18-20, 1919 1027
Some New Formulas for Reactance Coils. By H. B. Dwight 1039
Inherent Limitations on Transformations Possible by Stationary Apparatus. By Joseph Slepian 1061

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII **SEPTEMBER, 1919** **Number 9**

THE PACIFIC COAST CONVENTION

The eighth annual Pacific Coast Convention will be held in Los Angeles, California, September 18-20, 1919, under the auspices of the Los Angeles Section. The program as arranged by the local committees insures important technical sessions as well as many pleasant social features.

The technical program is as follows:

1. *California 220-Kv., 1100-Mile, 1,500,000-Kw. Transmission Bus*, by R. W. Sorensen, Professor of Electrical Engineering, Throop College of Technology, and H. H. Cox and G. E. Armstrong, of the Southern California Edison Company.
2. *Predetermination of Synchronous Phase Modifier Performance*, by Hubert V. Carpenter, Dean of Mechanic Arts and Engineering, State College of Washington, Pullman, Wash.
3. *Theory of Probabilities Applied to Failures of Suspension Insulators*, by L. M. Klauber, of San Diego Consolidated Gas and Electric Company.
4. *Order and Amplitude of Harmonics in Voltage Wave Forms with Indicating Instruments*, by Leslie F. Curtis, Assistant Professor of Electrical Engineering, University of Washington.
5. *Symposium on Operating Difficulties.* This symposium will consist of a number of valuable short papers from many sources, covering various operating troubles.

Paper No. 1 appears in this issue of the PROCEEDINGS and papers Nos. 2, 3 and 4, in the August PROCEEDINGS. The Symposium papers will be read from manuscript.

The Entertainment Committee promises a splendidly arranged program, to be announced at the convention, of special interest to ladies, who are cordially invited to attend.

JOINT A. I. E. E. AND I. R. E. MEETING IN NEW YORK

A joint meeting of the American Institute of Electrical Engineers and the Institute of Radio Engineers will be held in the Auditorium of the Engineering Societies Building, 33 West 39th Street, New York, on October 1, 1919, at 8:15 p. m.

Three papers will be presented as follows:

1. *Trans-Oceanic Radio Telegraphy*, by E. F. W. Alexanderson, of the General Electric Co.
2. *Telephone Repeaters*, by F. B. Jewett and B. Gherardi, both of the Western Electric Co.
3. *Principles of Radio Transmission and Reception with Antenna and Coil Aerials*, by J. H. Dellinger, of the Bureau of Standards.

JOINT MEETING IN PHILADELPHIA

October 10-11, 1919

A joint meeting of the American Institute of Electrical Engineers and the American Physical Society will be held in Philadelphia, at the Bellevue-Stratford Hotel, on Friday and Saturday, October 10-11, 1919.

The technical sessions on Friday will be held in the Clover Room of the Bellevue-Stratford and the subscription dinner Friday evening in the Stratford Room. The technical sessions on Saturday will be held at the works of the Leeds and Northrup Company, where a complimentary luncheon will be served by the company.

The program is as follows:

FRIDAY, 9:00 A. M.

Session of the Physical Society

Atomic Structure. Paper by P. W. Bridgeman and Irving Langmuir. Discussion by Saul Dushman and others. It is intended to make this interesting to engineers as well as physicists.

FRIDAY, 2:30 P. M.

Session of the A. I. E. E.

1. *The Arrangement of Atoms in Metals*, by Dr. A. W. Hull of the General Electric Research Laboratory. An X-ray study of crystal structures, a demonstration with models of crystals will be shown. (Written for engineers).
2. *The Oscillating Vacuum Tube as a Generator of Electrical Power*, by Professors J. H. Morecroft and H. T. Friis, both of Columbia University. Lantern slides of oscillograph records.
3. *Electromagnetic Induction*, by Dr. J. S. Barnett of the Carnegie Institute, Washington.
4. *Piezo Electrical Effect*, by Dr. A. M. Nichols of the Western Electric Company. (Demonstration).

FRIDAY, 6-00 P.M.

Subscription Dinner

Five minute talks by presidents of the two societies.

FRIDAY, 8:00 P.M.

Technical papers by Prof. H. A. Bumstead of Yale University, and Mr. J. J. Carty, Vice-president of the American Telephone and Telegraph Company.

SATURDAY MORNING

Session of the Physical Society

Inspection of the Leeds and Northrup Plant.

Two semi-technical papers by the Research Laboratories of Leeds and Northrup Company.

SATURDAY NOON

Complimentary Luncheon by the Leeds and Northrup Company.

Automobile ride around Germantown.

SATURDAY AFTERNOON

Regular Physical Society papers.

There will probably be opportunity for technical excursions to the Welsbach factory or a steamer ride on the Delaware River to Chester at 10:30 Friday morning. The steamer ride will be available Saturday morning also.

PHILADELPHIA MEETING OF AMERICAN CHEMICAL SOCIETY

The Fall meeting of the American Chemical Society will be held at the Bellevue-Stratford Hotel, Philadelphia, Pa., under the auspices of the Philadelphia Section, from Tuesday, Sept. 2 to Saturday, Sept. 6, 1919, inclusive.

Tuesday afternoon and evening will be occupied by a Council meeting and dinner.

Wednesday morning several addresses will be delivered notably that of Welcome by Hon. Joseph S. Mac Loughlin, Director of Supplies of Philadelphia; an address by Secretary of War, Newto D. Baker and one by a Navy Dep representative. Wednesday afterno will be the General Divisional Meeting at which many papers of interest will be delivered and discussed, Wednesday evening a smoker.

Thursday, 9:30 to 1 p. m. divisional meeting; 2 p. m. excursion to industrial establishments.

Friday the entire day will be devoted to presentation of various papers. At 7 p. m. a banquet will be given at Bellevue-Stratford.

Saturday a boat ride along the Delaware water front, passing Hog Island, etc., is tendered by the Delaware Section.

NATIONAL SAFETY COUNCIL TO MEET IN CLEVELAND

Some of the most important probems before American industry will be discussed in connection with the general subject of accident prevention at the Eighth Annual Safety Congress of the National Safety Council in Cleveland, October 1st to 4th.

The great bulk of the accident prevention talent of the country—160 scheduled speakers and approximately 3,000 men and women who direct the safety work of the nation's greatest industries—will come together for a four day exchange of ideas and experiences.

There will be four general sessions, four round tables, and 35 sectional meetings during the congress. As all the general sessions will open at 2 o'clock in the afternoon and the sectional meetings at 9:30 o'clock in the morning it will be possible for any one to attend all the general sessions and also all the sectional meetings for his particular industry.

The first general session will be devoted entirely to a discussion of employees representation under the following sub-heads: "Cooperation and Industrial Progress," "Labor Management and Collective Bargaining," "Practical Aspects of Employees' Representation" and "Employees' Representation from the standpoint of Organized Labor."

A. I. E. E. DIRECTORS' MEETING
August 12, 1919

The first meeting of the Board of Directors of the Institute for the administrative year beginning on August 1, 1919, was held at Institute headquarters New York, on Tuesday, August 12, at 3:00 p. m.

There were present: President Calvert Townley, New York; Past-President C. A. Adams, Cambridge, Mass.; Vice-Presidents A. M. Schoen, Atlanta, N. A. Carle, Newark, N. J.; Managers Charles S. Ruffner, W. A. Del Mar, W. I. Schlichter, L. F. Morehouse, New York, E. H. Martindale, Cleveland, Walter A. Hall, West Lynn, Mass.; Wilfred Sykes, Pittsburgh, G. Faccioli, Pittsfield, Mass.; L. E. Imlay, Niagara Falls; Treasurer George A. Hamilton, Elizabeth, N. J.; and Secretary F. L. Hutchinson, New York.

President Townley announced the appointment of committees for the administrative year beginning August 1, 1919, as published elsewhere in this issue of the PROCEEDINGS.

In accordance with the By-laws of the Edison Medal Committee, the Board elected from its own membership Messrs. G. Faccioli, Walter A. Hall, and Wilfred Sykes, to serve upon the Committee for the term of two years ending July 31, 1921.

Mr. Guido Semenza was reappointed Local Honorary Secretary for Italy, and Mr. Charles le Maistre was appointed Local Honorary Secretary for England, for the term of two years ending July 31, 1921.

The action of the Finance Committee in approving monthly bills amounting to $14,773.50, was ratified.

Reports were presented of meetings of the Board of Examiners held July 14 and August 6, 1919; upon the recommendation of the Board, the following action was taken upon pending applications: 17 Students were ordered enrolled; 126 applicants were elected to the grade of Associate; 7 applicants were elected to the grade of Member; 1 applicant was elected to the grade of Fellow; 26 applicants were transferred to the grade of Member; 5 applicants were transferred to the grade of Fellow.

Upon the recommendation of the Sections Committee, the organization of a Student Branch at the Engineering School of Milwaukee was authorized.

In addition to the above, many other

matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

ANDREW CARNEGIE

At a joint meeting of representatives of the Founder Societies, the United Engineering Society and the Engineers Club, held on August 12th, the following resolutions were adopted regarding the death of Mr. Andrew Carnegie. Copies of these resolutions have been spread upon the records of the various societies represented and have been transmitted to the family of Mr. Carnegie:

Andrew Carnegie's death August 11, 1919, at Lenox, Massachusetts, brought to its close a career which greatly advanced all the engineering arts and sciences. By the introduction into the United States of the Bessemer process for the production of steel and by the establishment and development of steel plants, which became the greatest in the world, he made available for engineers the most useful modern material for engineering construction. In the successful conduct of many industrial enterprises, he amassed great wealth, the possession of which he came to regard with deep seriousness as a public trusteeship. He devoted himself to the distribution of large portions of his fortune to projects for the benefit of Mankind. He distributed his wealth not only in many directions, but also with the exercise of great widsom based on careful investigation. His munificence provided large funds for the building of a home for the great national engineering societies and many associate societies. He was an honorary member of the American Institute of Mining and Metallurgical Engineers and American Society of Mechanical Engineers. He was personally known and loved by many engineers. In view of these facts, be it

Resolved, That the American Societies of Civil, Mining, Metallurgical, Mechanical and Electrical Engineers, the United Engineering Society and the Engineers' Club, herein express to the family of Mr. Carnegie and record their sincere appreciation of the great contributions of Andrew Carnegie to the advancement of engineering, and of his friendly assistance in making possible beautiful homes for the Engineering Societies and the Engineers' Club, thus fostering the spirit of unity in the profession.

THE ENGINEER CORPS UNDER THE PROPOSED ARMY REORGANIZATION

The so-called "Army Reorganization Bill" now before Congress provides for a largely increased Corps of Engineers. The total engineer personnel under the Regular Army organization now provided by law is 12,933, while the bill now before the Senate Committee on Military Affairs authorizes an enrollment of 28,338. The reorganization scheme provides that the Chief of Engineers shall have the rank of Major General, whereas under the present law he is a Brigadier General. Two Brigadier Generals are provided and the number of colonels is increased from 23 to 43; lieutenant-colonels from 30 to 52; majors from 72 to 134; captains from 152 to 322, and first lieutenants from 148 to 431.

There is much speculation, inside as well as outside of the service, as to the source from which this largely increased personnel of engineer officers will be secured. It seems apparent that a large number of the newly created commissions must be filled through the Reserve Corps or otherwise. Unless some fundamental change is made in the method of selecting engineer officers from among West Point graduates a large proportion of the engineer officers in service will lack those exclusive qualifications which have heretofore characterized the Corps by reason of the fact that engineer officers are, under the present law, selected from West Point graduates who have attained the highest rank in academic studies.

It is reported that since the signing of the armistice about 1500 Regular Army officers have presented their resignations, and these include a number of engineer officers of the highest usefulness whose loss to the Corps will be severely felt. The Chief of Engineers in recent testimony before a committee of Congress commented upon the present low state of morale among

Regular Army officers and it has been assumed that he included in this catagory the officers of his own department, as well as those in others. In any event the situation is interesting from the point of view of the civilian engineer because unless some expedient is adopted, the nature of which is at present not quite clear, it may occur that the enlarged engineering program of the War Department may make it possible for duly qualified civilian engineers to render service to the country via the military route, even in time of peace.

NEW APPOINTMENTS AT MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Mr. W. H. Timbie, who is well known for his teaching in vocational subjects and for his important list of books relating to Electrical Engineering and Applied Electricity, has been appointed Associate Professor of Electrical Engineering in the Massachusetts Institute of Technology.

Mr. Timbie graduated from Williams College in 1901 with honors, being high in the list of Phi Beta Kappa. During his college course he prepared for teaching and shortly after graduation became a teacher of Applied Science at the Pratt Institute in Brooklyn. Upon the establishment of the Wentworth Institute in Boston he became Head of the Department of Applied Science in that Institute.

During the past year he has been Editor in Chief of the Committee on Education and Special Training in the United States War department at Washington.

Mr. Timbie is a Member of the American Institute of Electrical Engineers, has been active in the National Educational Association and has important memberships in other engineering and educational societies.

At the Massachusetts Institute of Technology his principal duty will be the supervision of the cooperative course in Electrical Engineering which is carried on in association with the General Electric Company.

Messrs. Frederick S. Dellenbaugh, Columbia University, 1910, Arthur L. Nelson, Massachusetts Institute of Technology, 1915, and F. B. Philbrick, Massachusetts Institute of Technology, 1918, have been appointed Instructors in Electrical Engineering at the Massachusetts Institute of Technology.

Mr. Dellenbaugh was a Captain of the Signal Corps in overseas service during the War. He graduated from the Electrical Engineering Course at Columbia, and has been in the employ of the Crocker Wheeler Manufacturing Company and the Westinghouse Electric and Manufacturing Company in the departments of Design and Commercial Engineering. His particular duties in his new appointment will be in the teaching of Dynamo Design and the Mechanical Applications of Electric Power. Mr. Dellenbaugh will also give a portion of his time to research along lines relating to electrical machinery.

Mr. Nelson graduated from the Electrical Engineering Course of the Massachusetts Institute of Technology. During the War he has been a Lieutenant in the Engineer Corps of the Navy with important work relating to construction of power plants and supply of power at the submarine base. After graduating he had experience with the C. H. Tenney Company in construction and operation of electric plants. Mr. Nelson's work will be instruction relating to Central Stations and Distribution Systems. He will also carry on some work as a consulting engineer.

Mr. Philbrick since graduating has been in the employ of the General Electric Company. His work at the Institute will be instruction in Electrical Measurements under the direction of Professor Laws and carrying on researches relating to electric circuits which Professor Laws has on hand.

ENGINEERING COUNCIL

APPOINTMENT OF ENGINEER ON INTERSTATE COMMERCE COMMISSION

The following letter has been addressed to President Wilson by J. Parke Channing, Chairman of Engineering Council, urging the appointment of an engineer for the vacancy on the Interstate Commerce Commission and setting forth the reasons for such an appointment:

The President,
The White House,
Washington, D. C.

Sir:

The transportation systems of our country are largely the creations of its professional Engineers. This statement can be made without disparagement to the statesmen, the financiers, the manufacturers, the lawyers, the educators, the mechanics, the laborers and many others, who, with the Engineers, have contributed to the development of transportation. Through all stages of preliminary exploration, final survey, construction, upkeep and operation, in financial management, and in adjustment of the relations of transportation to the public, the genius and knowledge of the Engineer are essential. Not only in technical physical matters, but also in determinations of policy, his contributions have supplemented and must ever supplement those of other men. These declarations hold good for all the carriers of commerce, by rail, by highway, by water, by pipe-line, by wire, or by air. Hence, it follows that the body established by the Government to regulate the commerce, the carriers and the ways of communication, embracing so many engineering features, should number among its nine members, men of engineering training and experience.

Engineering Council, being aware of a vacancy on the Interstate Commerce Commission, begs leave to request the Chief Executive that in filling this vacancy, he give earnest thought to the selection of a man who, to his other qualifications, adds the training and experience of an engineer familiar with transportation problems.

Engineer members wisely chosen would bring to the investigations and deliberations of the Interstate Commerce Commission not only technical knowledge of great value, but also experience in executive duties, a judicial attitude gained through the direction of work under contracts, minds of analytical habit, familiarity with costs of construction and operation, experience in dealing with employees of many vocations, and integrity of thought cultivated by that inescapable obedience to the laws of Nature involved in the practice of this profession. The Engineer's training fits him for that mode of thinking which is indispensable to impartiality of judgment. One important function of the Commission is valuation of public utilities and another is the determination of relationships and responsibilities of the management of such utilities to the public. No other body of men has given so extensive and so scientific consideration to these matters as have members of the Engineering Profession.

Council's purpose is not to further the interests of any individual or group, but solely to serve the Nation by strengthening one of its most important regulatory bodies. Upon the wisdom, intelligence and courage of this Commission depends in large measure the commercial welfare of the country. It is believed that the Engineering Profession can and should contribute to the country's well-being through the channel of membership in the Interstate Commerce Commission.

Very respectfully,
J. PARKE CHANNING
Chairman.

STRENGTHENING OF PATENT OFFICE

Proposed Legislation

The Patents Committee of Engineering Council has collaborated with the similar committee of National Research Council in developing a scheme for the improvement of the method of dealing with patents in this country. The staff of the Patent Office is itself actively engaged in this effort. Out of the report prepared by the National Research Council, and approved and adopted by Engineering Council as the report also of its Patents Committee, remedial legislation has taken form. Three bills have been introduced, known as H. R. 5011, a bill to make the Patent Office independent of the Department of the Interior or any other department, and to simplify the procedure of the Courts with reference to assessment of damages or profits for infringement of patents; H. R. 5012, a bill to establish a single Court of Patent Appeals; and H. R. 7010, a bill to increase the force and salaries in the Patent Office.

Chairman Charles A. Terry, of the Patents Committee, suggests that interested engineers write to their congressmen, urging the passage of these bills and so far as convenient, request their friends to do likewise.

REPORT OF DELEGATES TO FRANCE TO FOUNDER SOCIETIES

The delegation of American Engineers which visited France last winter at the invitation of the Congrés General du Génie Civil has submitted its report to the Engineering Societies which the delegates represented. The delegation was made up as follows:

Representing the A. S. C. E.: James F. Case, George F. Swain, Nelson P. Lewis, George W. Tillson, George W. Fuller and A. M. Hunt.

Representing the A. S. M. E.: Charles T. Main.

Representing the A. I. E. E.: Lewis B. Stilwell.

Representing the A. I. M. E.: E. G. Spilsbury.

The report covers the activities of the delegation from the time of its arrival in France, December 16, 1918 to January 18, 1919 when it embarked for its return home. The French engineering congress had held meetings in March, 1918, and presented a large number of papers, copies of which were studied by the delegation on the trip over. The delegates were therefore prepared to discuss the papers and to make recommendations to the congress on their arrival.

A great many French cities were visited by the delegates where engineering and manufacturing works were inspected, and trips were also made to the front where the principal battles of the war were fought.

As the result of its visit the delegation feels that it has gained a very good idea of the conditions in France and of the problems which confront that country. As a result of its discussions with the French engineers, the excursions made and a study of the reports of the French congress, the delegation was able to leave a preliminary report with the congress, which report has since been expanded, and further information added regarding American practise, at the request of the French engineers.

The report to the founder societies gives a general review of the subjects considered by the delegation and the proposed work of reconstruction. A synopsis of this report is contained in the addresses by members of the delegation at a joint meeting of the founder societies in New York, February 10, which were published in abstract in the March 1919 PROCEEDINGS.

The complete report is on file at Institute headquarters where it may be consulted at any time.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated, the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate, the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before September 30, 1919.

McKechnie, Angus, Asst. Power Apparatus Specialist, Western Electric Co., 84 Marion St., Seattle, Wash.

McMillan, Henry W., Chief Electrician, C. B. & O. Shops, W. Burlington, Iowa.

***Miwa, T.**, Supt., California Vegetable Packing Co. Ltd., 1920 E. Vernon Ave., Los Angeles, Cal.

Nakao, Keiji, Chief Electrical Engineer & Manager of Engg. Dept., Furukawa Mining Co., Yayesucho Kojimachiku, Tokyo, Japan.

Nakasawa, George K., Engineering Dept. Ashio Copper Mines, Ashio, Japan.

Nevatt, Albert E., Inspector, B. & P. Coke Plant, Colorado Fuel & Iron Co.; res., 511 Broadway St., Pueblo, Colo.

O'Brien, Charles M., Supt., Minnesota Electric Light & Power Co., 112 E. Moses St., Cushing, Okla.

***Olson, Victor O.**, 75 New St., Naugatuck, Conn.

Park, Charles D., Asst. Meter Specialist, General Electric Co., 120 Broadway, New York, N. Y.

Pearson, Ernest Helmer, Erecting Engineer, Electric Machinery Co., Minneapolis, Minn.

***Perry, Arlington C.**, Designer, American Rolling Mill Co.; res., 124 S. Harrison Ave., Middletown, Ohio.

Peterson, Charles A., Electrician, Burnside Shops, Illinois Central R. R. 10934 Wabash Ave., Chicago, Ill.

Phelan, George Stanley, Supt. of Elec. Construction, Ideal Coated Paper Co., Brookfield, Mass.

Priddle, William Henry, Draftsman, Toronto Hydro-Electric System; res., 1161 Ossington Ave., Toronto, Ontario.

***Purple, Jay Curtis**, Newark Valley, N. Y.

Pyster, John Neal, Chief Engineer, Raritan Copper Works, Perth Amboy N. J.

Rademacher, William Henry, Engineer in Service Office, Crocker-Wheeler Co., Ampere; res., 216 Weequahic Ave., Newark, N. J.

Rees, John B., Div. Equipment Engineer, Cumberland Tel. & Tel. Co., Nashville, Tenn.

Roe, Fremont Lee, 57th & Grand Ave., Wauwatosa, Wis.

***Roedel, William G.**, Electrical Tester, American Bosch Magneto Corp., Springfield, Mass.

Rogers, Frederick P., Major, Signal Corps. U. S. A., Peoples Bldg., Charleston, S. C.

Ryan, Francis M., Student in Elec. Engg., Univ. of Washington, Seattle, Wash.

Sadler, Ernest K., Dist. Supt., Nevada Valleys Power Co., Battle Mountain, Nevada.

Sauer, Louis B., Chief Inspector, Kellogg Switchboard & Supply Co., Chicago; res., Western Springs, Ill.

Schulz, Paul H., Chief Electrician of Street Lighting, Bureau of Illumination Service, City Hall, Milwaukee, Wis.

Seeley, Charles G., Manager, Melbourne Office, Australian General Electric Co., Queen & Little Collins St., Melbourne, Aus.

Shank, L. D., Manager & Supt., Municipal Light & Water Works, Centerville, Md.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on August 6, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Morehead, John M., Consulting Engineer, New York, N. Y.

To Grade of Member

Davis, Archibald, Jr., Senior Lieut., U. S. N. R. F., St. Louis, Mo.

Seeger, Edwin W., Electrical Engineer, Cutler-Hammer Mfg. Co., Milwaukee, Wis.

Thompson, William J., Member of firm, Thompson-Levering Co., Philadelphia, Pa.

Tremaine, A. Raymond, Manager and Chief Engineer, Depew & Lancaster Light, Power & Conduit Co., Lancaster, N. Y.

STUDENTS ENROLLED AUGUST 12, 1919

10440 Robinson, H. E., Clarkson Coll. of Tech.
10441 Kimball, H. R., Worcester Poly. Inst.
10442 Hilderbrandt, P. J., N. Y. Elec. School.
10443 Thompson, I. D., Clarkson School of Tech.
10444 Benscheidt, N. H., Univ. of Kansas.
10445 Anderson, H. C., Sheffield Scientific School.
10446 Langdon, G. G., State Coll. of Washington.
10447 Carlson, C. O., Sheffield Scientific School.
10448 Haugh, H. A., Sheffield Scientific School.
10449 Osgyani, G. L., Sheffield Scientific School.
10450 Schmidt, H., Brooklyn Poly. Inst.
10351 Valldejuby, R. R., J. Y. Elec. School.
10452 Erb, H. G., Penn. State Coll.
10453 Lutsey, S. F., Casino Tech. Night School.
10454 Reid, K. M., Cornell Univ.
10455 Thakkur, K. B., Cornell Univ.
10456 Wise, E. M., Univ. of Wis.
Total 17

PERSONAL

Sidney W. Farnsworth recently returned from his duties as Associate Scientific Attaché at the American Embassy, London. He is now associated with Mark Manufacturing Co., Chicago, as Assistant to the Manager of the Evanston plant.

D. C. Hopper has accepted a position with the Newport News and Hampton Railway, Gas and Electric Company. Previous to the outbreak of the war Mr. Hopper was with the Commonwealth Edison Company of Chicago as Assistant Superintendent of underground cable system and since that time has been in charge of the electric distribution and signal systems of the American International Shipbuilding Corporation.

Dwight P. Robinson and Company, New York, have been awarded a contract by the Duquesne Lighting Company of Pittsburgh, to design and construct a power station at Cheswick, near Pittsburgh, to have an ultimate capacity of 300,000 kw. of which one unit of 60,000 kw. is to be installed initially.

David S. Wegg, Jr. has accepted a position as testing engineer for the Isko Company, Chicago, Ill., manufacturers of electric refrigerating machines. Mr. Wegg has been serving as assistant to the Contracting Officer, Chicago District, Ordnance Dept., U. S. A.

C. J. Berry, for the last six years with the National Lamp Works of the General Electric Company, Cleveland, has accepted a position as electrical engineer with Brandt and Fouilleret, Paris, France. Mr. Berry served as First Lieutenant in the U. S. Air Service in the A. E. F.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired.

All replies to either "Opportunities" or "Services Available" announcements should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-556. Well known electrical firm expanding its export service requires translator to rewrite electro-technical English into technical Spanish chiefly for publications to be distributed in South America. Engineer preferred. Advancement, etc., will depend on ability and expansion of the trade. State qualifications, experience and salary expected.

V-557. A college graduate with some practical or teaching experience is wanted for the position of instructor in the electrical engineering department of a well known college near New York City. Salary $1200 for about nine months' work.

V-558. Assistant to superintendent of power. Technical graduate in mechanical engineering, 1918 or 1919.

V-559. Technical engineers for steam plant betterment work. Men would be required to advise management and coach operating force in economical operation. Tact, willingness to work and combustion experience (oil and gas firing) required. Location southwest. Salary depends on qualifications.

V-560. A graduate of three or four years' standing, age 28 to 30, for general work as assistant engineer in a 100,000 h. p. hydroelectric development. This position offers an early opportunity for advancement to assistant having direct supervision of operation and maintenance followed by responsible charge of development.

V-561. Young man, single, recently graduated from technical school for inspecting and testing electrical apparatus, also general laboratory work. General Electric Company test department experience preferred. Good scholastic record and personality important.

V-562. A trained mechanical engineer with a knowledge of machinery and machine parts. Preference will be given to the man who is particularly qualified from the purely technical side. The use of a good deal of higher mathematics will be necessary in this work. The opportunity offered is that of assistant to the head of the engineering division of a large corporation selling to the machinery field. Salary will be commensurate with demonstrated ability.

Instrument Repairman (Electrical) Wanted for the Panama Canal—$197.60 month. Must be capable of testing, repairing and installing all types of watt-hour meters, and indicating and curve drawing instruments, both alternating and direct current in portable and switchboard types. Also instrument maker, $1.05 hour, thoroughly experienced on engineering instruments. Must be American citizens, final papers, under 50 years of age, in good health. Free steamship transportation from New York or New Orleans, wages beginning date of sailing. Write "Chief of Office, The Panama Canal, Washington, D. C."

The United States Civil Service Commission announces open competitive examinations for the positions of Electrical Engineer (male) $2,400 to $3,600 a year, and Assistant Electrical Engineer (male) $1,800 to $2,400 a year. Vacancies are in the Signal Service at Large, Washington, D. C.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.

Under the Auspices of the Meetings and Papers Committee.

GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII SEPTEMBER, 1919 Number 9

THE PACIFIC COAST CONVENTION

The eighth annual Pacific Coast Convention will be held in Los Angeles, California, September 18-20, 1919, under the auspices of the Los Angeles Section. The program as arranged by the local committees insures important technical sessions as well as many pleasant social features.

The technical program is as follows:

1. *California 220-Kv., 1100-Mile, 1,500,000-Kw. Transmission Bus*, by R. W. Sorensen, Professor of Electrical Engineering, Throop College of Technology, and H. H. Cox and G. E. Armstrong, of the Southern California Edison Company.
2. *Predetermination of Synchronous Phase Modifier Performance*, by Hubert V. Carpenter, Dean of Mechanic Arts and Engineering, State College of Washington, Pullman, Wash.
3. *Theory of Probabilities Applied to Failures of Suspension Insulators*, by L. M. Klauber, of San Diego Consolidated Gas and Electric Company.
4. *Order and Amplitude of Harmonics in Voltage Wave Forms with Indicating Instruments*, by Leslie F. Curtis, Assistant Professor of Electrical Engineering, University of Washington.
5. *Symposium on Operating Difficulties.* This symposium will consist of a number of valuable short papers from many sources, covering various operating troubles.

Paper No. 1 appears in this issue of the PROCEEDINGS and papers Nos. 2, 3 and 4, in the August PROCEEDINGS. The Symposium papers will be read from manuscript.

The Entertainment Committee promises a splendidly arranged program, to be announced at the convention, of special interest to ladies, who are cordially invited to attend.

JOINT A. I. E. E. AND I. R. E. MEETING IN NEW YORK

A joint meeting of the American Institute of Electrical Engineers and the Institute of Radio Engineers will be held in the Auditorium of the Engineering Societies Building, 33 West 39th Street, New York, on October 1, 1919, at 8:15 p. m.

Three papers will be presented as follows:

1. *Trans-Oceanic Radio Telegraphy*, by E. F. W. Alexanderson, of the General Electric Co.
2. *Telephone Repeaters*, by F. B. Jewett and B. Gherardi, both of the Western Electric Co.
3. *Principles of Radio Transmission and Reception with Antenna and Coil Aerials*, by J. H. Dellinger, of the Bureau of Standards.

JOINT MEETING IN PHILADELPHIA

October 10-11, 1919

A joint meeting of the American Institute of Electrical Engineers and the American Physical Society will be held in Philadelphia, at the Bellevue-Stratford Hotel, on Friday and Saturday, October 10-11, 1919.

The technical sessions on Friday will be held in the Clover Room of the Bellevue-Stratford and the subscription dinner Friday evening in the Stratford Room. The technical sessions on Saturday will be held at the works of the Leeds and Northrup Company, where a complimentary luncheon will be served by the company.

The program is as follows:

Friday, 9:00 a. m.
Session of the Physical Society

Atomic Structure. Paper by P. W. Bridgeman and Irving Langmuir. Discussion by Saul Dushman and others. It is intended to make this interesting to engineers as well as physicists.

Friday, 2:30 p. m.
Session of the A. I. E. E.

1. *The Arrangement of Atoms in Metals*, by Dr. A. W. Hull of the General Electric Research Laboratory. An X-ray study of crystal structures, a demonstration with models of crystals will be shown. (Written for engineers).
2. *The Oscillating Vacuum Tube as a Generator of Electrical Power*, by Professors J. H. Morecroft and H. T. Friis, both of Columbia University. Lantern slides of oscillograph records.
3. *Electromagnetic Induction*, by Dr. J. S. Barnett of the Carnegie Institute, Washington.
4. *Piezo Electrical Effect*, by Dr. A. M. Nichols of the Western Electric Company. (Demonstration).

Friday, 6-00 p.m.
Subscription Dinner

Five minute talks by presidents of the two societies.

Friday, 8:00 p.m.

Technical papers by Prof. H. A. Bumstead of Yale University, and Mr. J. J. Carty, Vice-president of the American Telephone and Telegraph Company.

Saturday Morning
Session of the Physical Society

Inspection of the Leeds and Northrup Plant.

Two semi-technical papers by the Research Laboratories of Leeds and Northrup Company.

Saturday Noon

Complimentary Luncheon by the Leeds and Northrup Company.

Automobile ride around Germantown.

Saturday Afternoon

Regular Physical Society papers.

There will probably be opportunity for technical excursions to the Welsbach factory or a steamer ride on the Delaware River to Chester at 10:30 Friday morning. The steamer ride will be available Saturday morning also.

PHILADELPHIA MEETING OF AMERICAN CHEMICAL SOCIETY

The Fall meeting of the American Chemical Society will be held at the Bellevue-Stratford Hotel, Philadelphia, Pa., under the auspices of the Philadelphia Section, from Tuesday, Sept. 2 to Saturday, Sept. 6, 1919, inclusive.

Tuesday afternoon and evening will be occupied by a Council meeting and dinner.

Wednesday morning several addresses will be delivered notably that of Welcome by Hon. Joseph S. Mac Loughlin, Director of Supplies of Philadelphia; an address by Secretary of War, Newto D. Baker and one by a Navy Dep representative. Wednesday afterno will be the General Divisional Meeting at which many papers of interest will be delivered and discussed, Wednesday evening a smoker.

Thursday, 9:30 to 1 p. m. divisional meeting; 2 p. m. excursion to industrial establishments.

Friday the entire day will be devoted to presentation of various papers. At 7 p. m. a banquet will be given at Bellevue-Stratford.

Saturday a boat ride along the Delaware water front, passing Hog Island, etc., is tendered by the Delaware Section.

NATIONAL SAFETY COUNCIL TO MEET IN CLEVELAND

Some of the most important probems before American industry will be discussed in connection with the general subject of accident prevention at the Eighth Annual Safety Congress of the National Safety Council in Cleveland, October 1st to 4th.

The great bulk of the accident prevention talent of the country—160 scheduled speakers and approximately 3,000 men and women who direct the safety work of the nation's greatest industries—will come together for a four day exchange of ideas and experiences.

There will be four general sessions, four round tables, and 35 sectional meetings during the congress. As all the general sessions will open at 2 o'clock in the afternoon and the sectional meetings at 9:30 o'clock in the morning it will be possible for any one to attend all the general sessions and also all the sectional meetings for his particular industry.

The first general session will be devoted entirely to a discussion of employees representation under the following sub-heads: "Cooperation and Industrial Progress," "Labor Management and Collective Bargaining," "Practical Aspects of Employees' Representation" and "Employees' Representation from the standpoint of Organized Labor."

A. I. E. E. DIRECTORS' MEETING
August 12, 1919

The first meeting of the Board of Directors of the Institute for the administrative year beginning on August 1, 1919, was held at Institute headquarters New York, on Tuesday, August 12, at 3:00 p. m.

There were present: President Calvert Townley, New York; Past-President C. A. Adams, Cambridge, Mass.; Vice-Presidents A. M. Schoen, Atlanta, N. A. Carle, Newark, N. J.; Managers Charles S. Ruffner, W. A. Del Mar, W. I. Schlichter, L. F. Morehouse, New York, E. H. Martindale, Cleveland, Walter A. Hall, West Lynn, Mass.; Wilfred Sykes, Pittsburgh, G. Faccioli, Pittsfield, Mass.; L. E. Imlay, Niagara Falls; Treasurer George A. Hamilton, Elizabeth, N. J.; and Secretary F. L. Hutchinson, New York.

President Townley announced the appointment of committees for the administrative year beginning August 1, 1919, as published elsewhere in this issue of the PROCEEDINGS.

In accordance with the By-laws of the Edison Medal Committee, the Board elected from its own membership Messrs. G. Faccioli, Walter A. Hall, and Wilfred Sykes, to serve upon the Committee for the term of two years ending July 31, 1921.

Mr. Guido Semenza was reappointed Local Honorary Secretary for Italy, and Mr. Charles le Maistre was appointed Local Honorary Secretary for England, for the term of two years ending July 31, 1921.

The action of the Finance Committee in approving monthly bills amounting to $14,773.50, was ratified.

Reports were presented of meetings of the Board of Examiners held July 14 and August 6, 1919; upon the recommendation of the Board, the following action was taken upon pending applications: 17 Students were ordered enrolled; 126 applicants were elected to the grade of Associate; 7 applicants were elected to the grade of Member; 1 applicant was elected to the grade of Fellow; 26 applicants were transferred to the grade of Member; 5 applicants were transferred to the grade of Fellow.

Upon the recommendation of the Sections Committee, the organization of a Student Branch at the Engineering School of Milwaukee was authorized.

In addition to the above, many other

matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

ANDREW CARNEGIE

At a joint meeting of representatives of the Founder Societies, the United Engineering Society and the Engineers Club, held on August 12th, the following resolutions were adopted regarding the death of Mr. Andrew Carnegie. Copies of these resolutions have been spread upon the records of the various societies represented and have been transmitted to the family of Mr. Carnegie:

> Andrew Carnegie's death August 11, 1919, at Lenox, Massachusetts, brought to its close a career which greatly advanced all the engineering arts and sciences. By the introduction into the United States of the Bessemer process for the production of steel and by the establishment and development of steel plants, which became the greatest in the world, he made available for engineers the most useful modern material for engineering construction. In the successful conduct of many industrial enterprises, he amassed great wealth, the possession of which he came to regard with deep seriousness as a public trusteeship. He devoted himself to the distribution of large portions of his fortune to projects for the benefit of Mankind. He distributed his wealth not only in many directions, but also with the exercise of great widsom based on careful investigation. His munificence provided large funds for the building of a home for the great national engineering societies and many associate societies. He was an honorary member of the American Institute of Mining and Metallurgical Engineers and American Society of Mechanical Engineers. He was personally known and loved by many engineers. In view of these facts, be it
>
> *Resolved*, That the American Societies of Civil, Mining, Metallurgical, Mechanical and Electrical Engineers, the United Engineering Society and the Engineers' Club, herein express to the family of Mr. Carnegie and record their sincere appreciation of the great contributions of Andrew Carnegie to the advancement of engineering, and of his friendly assistance in making possible beautiful homes for the Engineering Societies and the Engineers' Club, thus fostering the spirit of unity in the profession.

THE ENGINEER CORPS UNDER THE PROPOSED ARMY REORGANIZATION

The so-called "Army Reorganization Bill" now before Congress provides for a largely increased Corps of Engineers. The total engineer personnel under the Regular Army organization now provided by law is 12,933, while the bill now before the Senate Committee on Military Affairs authorizes an enrollment of 28,338. The reorganization scheme provides that the Chief of Engineers shall have the rank of Major General, whereas under the present law he is a Brigadier General. Two Brigadier Generals are provided and the number of colonels is increased from 23 to 43; lieutenant-colonels from 30 to 52; majors from 72 to 134; captains from 152 to 322, and first lieutenants from 148 to 431.

There is much speculation, inside as well as outside of the service, as to the source from which this largely increased personnel of engineer officers will be secured. It seems apparent that a large number of the newly created commissions must be filled through the Reserve Corps or otherwise. Unless some fundamental change is made in the method of selecting engineer officers from among West Point graduates a large proportion of the engineer officers in service will lack those exclusive qualifications which have heretofore characterized the Corps by reason of the fact that engineer officers are, under the present law, selected from West Point graduates who have attained the highest rank in academic studies.

It is reported that since the signing of the armistice about 1500 Regular Army officers have presented their resignations, and these include a number of engineer officers of the highest usefulness whose loss to the Corps will be severely felt. The Chief of Engineers in recent testimony before a committee of Congress commented upon the present low state of morale among

Regular Army officers and it has been assumed that he included in this catagory the officers of his own department, as well as those in others. In any event the situation is interesting from the point of view of the civilian engineer because unless some expedient is adopted, the nature of which is at present not quite clear, it may occur that the enlarged engineering program of the War Department may make it possible for duly qualified civilian engineers to render service to the country via the military route, even in time of peace.

NEW APPOINTMENTS AT MASSACHUSETTS INSTITUTE OF TECHNOLOGY

Mr. W. H. Timbie, who is well known for his teaching in vocational subjects and for his important list of books relating to Electrical Engineering and Applied Electricity, has been appointed Associate Professor of Electrical Engineering in the Massachusetts Institute of Technology.

Mr. Timbie graduated from Williams College in 1901 with honors, being high in the list of Phi Beta Kappa. During his college course he prepared for teaching and shortly after graduation became a teacher of Applied Science at the Pratt Institute in Brooklyn. Upon the establishment of the Wentworth Institute in Boston he became Head of the Department of Applied Science in that Institute.

During the past year he has been Editor in Chief of the Committee on Education and Special Training in the United States War department at Washington.

Mr. Timbie is a Member of the American Institute of Electrical Engineers, has been active in the National Educational Association and has important memberships in other engineering and educational societies.

At the Massachusetts Institute of Technology his principal duty will be the supervision of the cooperative course in Electrical Engineering which is carried on in association with the General Electric Company.

Messrs. Frederick S. Dellenbaugh, Columbia University, 1910, Arthur L. Nelson, Massachusetts Institute of Technology, 1915, and F. B. Philbrick, Massachusetts Institute of Technology, 1918, have been appointed Instructors in Electrical Engineering at the Massachusetts Institute of Technology.

Mr. Dellenbaugh was a Captain of the Signal Corps in overseas service during the War. He graduated from the Electrical Engineering Course at Columbia, and has been in the employ of the Crocker Wheeler Manufacturing Company and the Westinghouse Electric and Manufacturing Company in the departments of Design and Commercial Engineering. His particular duties in his new appointment will be in the teaching of Dynamo Design and the Mechanical Applications of Electric Power. Mr. Dellenbaugh will also give a portion of his time to research along lines relating to electrical machinery.

Mr. Nelson graduated from the Electrical Engineering Course of the Massachusetts Institute of Technology. During the War he has been a Lieutenant in the Engineer Corps of the Navy with important work relating to construction of power plants and supply of power at the submarine base. After graduating he had experience with the C. H. Tenney Company in construction and operation of electric plants. Mr. Nelson's work will be instruction relating to Central Stations and Distribution Systems. He will also carry on some work as a consulting engineer.

Mr. Philbrick since graduating has been in the employ of the General Electric Company. His work at the Institute will be instruction in Electrical Measurements under the direction of Professor Laws and carrying on researches relating to electric circuits which Professor Laws has on hand.

ENGINEERING COUNCIL

APPOINTMENT OF ENGINEER ON INTERSTATE COMMERCE COMMISSION

The following letter has been addressed to President Wilson by J. Parke Channing, Chairman of Engineering Council, urging the appointment of an engineer for the vacancy on the Interstate Commerce Commission and setting forth the reasons for such an appointment:

The President,
The White House,
Washington, D. C.

Sir:

The transportation systems of our country are largely the creations of its professional Engineers. This statement can be made without disparagement to the statesmen, the financiers, the manufacturers, the lawyers, the educators, the mechanics, the laborers and many others, who, with the Engineers, have contributed to the development of transportation. Through all stages of preliminary exploration, final survey, construction, upkeep and operation, in financial management, and in adjustment of the relations of transportation to the public, the genius and knowledge of the Engineer are essential. Not only in technical physical matters, but also in determinations of policy, his contributions have supplemented and must ever supplement those of other men. These declarations hold good for all the carriers of commerce, by rail, by highway, by water, by pipe-line, by wire, or by air. Hence, it follows that the body established by the Government to regulate the commerce, the carriers and the ways of communication, embracing so many engineering features, should number among its nine members, men of engineering training and experience.

Engineering Council, being aware of a vacancy on the Interstate Commerce Commission, begs leave to request the Chief Executive that in filling this vacancy, he give earnest thought to the selection of a man who, to his other qualifications, adds the training and experience of an engineer familiar with transportation problems.

Engineer members wisely chosen would bring to the investigations and deliberations of the Interstate Commerce Commission not only technical knowledge of great value, but also experience in executive duties, a judicial attitude gained through the direction of work under contracts, minds of analytical habit, familiarity with costs of construction and operation, experience in dealing with employees of many vocations, and integrity of thought cultivated by that inescapable obedience to the laws of Nature involved in the practice of this profession. The Engineer's training fits him for that mode of thinking which is indispensable to impartiality of judgment. One important function of the Commission is valuation of public utilities and another is the determination of relationships and responsibilities of the management of such utilities to the public. No other body of men has given so extensive and so scientific consideration to these matters as have members of the Engineering Profession.

Council's purpose is not to further the interests of any individual or group, but solely to serve the Nation by strengthening one of its most important regulatory bodies. Upon the wisdom, intelligence and courage of this Commission depends in large measure the commercial welfare of the country. It is believed that the Engineering Profession can and should contribute to the country's well-being through the channel of membership in the Interstate Commerce Commission.

Very respectfully,
J. Parke Channing
Chairman.

STRENGTHENING OF PATENT OFFICE

Proposed Legislation

The Patents Committee of Engineering Council has collaborated with the similar committee of National Research Council in developing a scheme for the improvement of the method of dealing with patents in this country. The staff of the Patent Office is itself actively engaged in this effort. Out of the report prepared by the National Research Council, and approved and adopted by Engineering Council as the report also of its Patents Committee, remedial legislation has taken form. Three bills have been introduced, known as H. R. 5011, a bill to make the Patent Office independent of the Department of the Interior or any other department, and to simplify the procedure of the Courts with reference to assessment of damages or profits for infringement of patents; H. R. 5012, a bill to establish a single Court of Patent Appeals; and H. R. 7010, a bill to increase the force and salaries in the Patent Office.

Chairman Charles A. Terry, of the Patents Committee, suggests that interested engineers write to their congressmen, urging the passage of these bills and so far as convenient, request their friends to do likewise.

REPORT OF DELEGATES TO FRANCE TO FOUNDER SOCIETIES

The delegation of American Engineers which visited France last winter at the invitation of the Congrés General du Génie Civil has submitted its report to the Engineering Societies which the delegates represented. The delegation was made up as follows:

Representing the A. S. C. E.: James F. Case, George F. Swain, Nelson P. Lewis, George W. Tillson, George W. Fuller and A. M. Hunt.

Representing the A. S. M. E.: Charles T. Main.

Representing the A. I. E. E.: Lewis B. Stilwell.

Representing the A. I. M. E.: E. G. Spilsbury.

The report covers the activities of the delegation from the time of its arrival in France, December 16, 1918 to January 18, 1919 when it embarked for its return home. The French engineering congress had held meetings in March, 1918, and presented a large number of papers, copies of which were studied by the delegation on the trip over. The delegates were therefore prepared to discuss the papers and to make recommendations to the congress on their arrival.

A great many French cities were visited by the delegates where engineering and manufacturing works were inspected, and trips were also made to the front where the principal battles of the war were fought.

As the result of its visit the delegation feels that it has gained a very good idea of the conditions in France and of the problems which confront that country. As a result of its discussions with the French engineers, the excursions made and a study of the reports of the French congress, the delegation was able to leave a preliminary report with the congress, which report has since been expanded, and further information added regarding American practise, at the request of the French engineers.

The report to the founder societies gives a general review of the subjects considered by the delegation and the proposed work of reconstruction. A synopsis of this report is contained in the addresses by members of the delegation at a joint meeting of the founder societies in New York, February 10, which were published in abstract in the March 1919 PROCEEDINGS.

The complete report is on file at Institute headquarters where it may be consulted at any time.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated, the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate, the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before September 30, 1919.

ASSOCIATES ELECTED AUGUST 12, 1919

ARNOIS, CHARLES, Sales Distributor, Campbell Electric Co., Lynn, Mass.; res., 1309 E. Adams St., Syracuse, N. Y.

ARNOLD, ALFRED EDWARD, Chief Electrician, Oakland Motor Car Co.; res., 42 Green St., Pontiac, Mich.

*AUGUSTINE, R. W., Kellogg Switchboard & Supply Co., Chicago; res., 249 Thomas St., Oak Park, Ill.

AVINS, NATHAN, Testing of Electrical Machinery, Diehl Mfg. Co., Elizabethport, N. J.; res., 158 East 113th St., New York, N. Y.

AYMOND, WALTER E., Capt. Engineers, U. S. A.; Supt., Natchetoches Elec. & Water Works, Natchetoches, La.

BARRETT, JAMES E., Statistical Dept., San Joaquin Light & Power Corp., Fresno, Cal.

BERGER, PAUL, Asst. in Research Laboratory, Kellogg Switchboard & Supply Co.; res., 3544 W. 12th Place, Chicago, Ill.

BINION, W. H., Foreman, Electrical Dept., Eastman Kodak Co.; res., 374 Raines Park, Rochester, N. Y.

BINNS, ARTHUR P., Asst. District Engineer, Hydro-Electric Department; res., 12 Bellevue Parade, New Town, Hobart, Tasmania.

BOND, JOHN MILTON, Head of Test Dept. Car Equipment Dept. Interborough Rapid Transit Co.; res., 596 Riverside Drive, New York, N. Y.

BONNER, JAMES SHEPHERD, Long Line Engineer, Cumberland Tel. & Tel. Co., Nashville, Tenn.

BREMILST, ARTHUR F., Expert Armature Winder, 125 Armory St., Roxbury; res., 63 Lawrence St., Medford, Mass.

BROADWELL, WILLIAM ERNEST, Transmission Engineer, Cumberland Tel. & Tel. Co., Nashville, Tenn.

BURLEEN, OSCAR, Asst. Elec. Engineer, Elevator Supplies Co., Inc., Hoboken; res., 316 Forest St., Arlington, N. J.

BURT, ROBERT C., Research Laboratory, General Electric Co.; res., 22 Gillespie St., Schenectady, N. Y.

CALL, GEORGE RICHARD, Treasurer, Call Bond and Mortgage Co., Sioux City, Iowa.

CASTLEMAN, DAVID JAMES, Greensboro, Ala.

CATLETT, ROBERT LARKIN, Electrician, E. I. du Pont de Nemours & Co., Dye Works, Deepwater; res., Stag Club, Carneys Point, N. J.

*CHESTNUT, ROY W., Waynoka, Oklahoma.

COLLISON, ALFRED B., Traveling Salesman, Southern Electric Co., Baltimore; res., Bayonne Ave., Hamilton, Md.

COOK, FREDERICK ERNEST, Motive Power Office, United Railroads of San Francisco, 1125 Fillimore St., San Francisco, Cal.

COOKINGHAM, EDWARD H., Manager, Telephone & Electric Supply Co.; res., E. 2004, 12th Ave., Spokane, Wash.

*CORDES, HERBERT A., Student University of Southern California; res., 3037 S. Vermont Ave., Los Angeles, Cal.

COTTRELL, LYNN E., General Foreman, Elec. Construction, Submarine Boat Corp., Port Newark; res., 19 Eaton Place, E. Orange, N. J.

COWGILL, MILLER RAYMOND, Supt., Fire Alarm Dept., Victor Talking Machine Co.; res., 108 N. 5th St., Camden, N. J.

CUNERTY, THOMAS JOSEPH, Engineer, Shewan Tomes & Co., 12 Broadway, New York, N. Y.

CUNNINGHAM, FREDERICK JOHN, Asst. Div. Supt., Consumers Power Co., Mechanic & Trail Sts., Jackson, Mich.

DALE, W. JOCELYN E., Electrical Engineer, Compania Azucarera Elia, Ingenio "Elia" Elia., Camaguey; res., Apartado 2593, Havana, Cuba.

DANIEL, WILLIAM ROBERT, Chief Electrician, Radio, Navy Yard, New York; res., Naval Y. M. C. A., Brooklyn, N. Y.

*DEAN, HARRY, Electrician, Bolsover Colliery Co., Mansfield, England.

DE LAPP, CYRIL A., Foreman, Ship Electrical Installation, Federal Shipbuilding Co., Kearny, N. J.; res., 152 Guernsey St., Brooklyn, N. Y.

DEMMERT, WILLIAM CHARLES, Draftsman, American Cyanamid Co., New York, N. Y.; res., 119 Garrison Ave., Jersey City, N. J.

DEVELAZCO, JOSEPH F., Distribution Engineer, Havana Electric Railway Light & Power Co., Havana, Cuba.

DIERKEN, JOSEPH HENRY, Chief Electrician, The Capital Traction Co., 36th & M. Sts., N. W., Washington, D. C.

DOI, KURA, In charge of Engg. Dept., Suzuki & Company, 220 Broadway, New York, N. Y.

DRIVER, EDGAR THOMAS, Elec. Dept., The British Aluminum Co., Ltd., 60 Front St., Toronto, Ont.

DRUMMOND, RALPH S., Asst. Chief Electrician, Morris & Company, Union Stock Yards; res., 7003 S. Green St., Chicago, Ill.

ELLIOTT, FREDERICK FORESTER, Generating Station, London Elec. Supply Co., Ltd.; res., 46 Lansdowne Gardens, London S. W. 8, England.

FEARING, JUSTIN L., Asst. Engineer, U. S. Patent Office, Washington, D. C.

FINK, LOUIS, Electrician, W. & A. Fletcher Co., Hoboken; res., 282 Forest St., Jersey City, N. J.

FLOOD, ARMAND A., Electrician, Eastman Kodak Co.; res., 126 Plymouth Ave. So., Rochester, N. Y.

GIFT, FRANK A., Division Electrician, Plant Dept., Western Union Tel. Co., 515 Bankers Investment Bldg., San Francisco, Cal.

*GILLESPIE, LEIGH R., Telephone Engineer, Stromberg-Carlson Tel. Mfg. Co.; res., 431 Hayward Ave., Rochester, N. Y.

GOLLOS, ANATOL, Electrical Engineer, Chicago Union Station Co.; res., 554 Belmont Ave., Chicago, Ill.

GREEN, JOHN G., General Manager, Kentucky River Power Co., Hazard, Ky.

GROSS, WALTER CLAY, Long Line Engineer, Cumberland Tel. & Tel. Co., Nashville, Tenn.

*GUIMARAES, ARY DE S. M., Engineer, "Prefeitura de Nictheroy", Caixa 545, Rio de Janeiro, Brazil, S. A.

GUTERMAN, HERBERT, Electrical Engineer, University of Paris, Paris, France; res., 53 W. 113th St., New York, N. Y.

HAGEN, CARL, Chief Electrician, Portland Lumber Co.; res., 228 Meade St., Portland, Ore.

HAKANSON, JOEL, Engineering, Export Div., Edison Storage Battery Co.; res., 1935 Daly Ave., New York, N. Y.

HAMILTON, WILLIAM S. H., Railway Equipment Dept., General Electric Co.; res., 11 North Wendell Ave., Schenectady, N. Y.

HARRIES, HARRY GEORGE, Industrial Division, Westinghouse Elec. & Mfg. Co., Chicago, Ill.

*HODGSON, JONATHAN ARCHIBALD, Clerk, C. J. Hodgson & Co.; res., 714 Pine Ave., West, Montreal, Quebec.

*HOPKINS, RALPH A., Sales Engineer, Westinghouse Elec. & Mfg. Co., Los Angeles; res., 681 Oakland Ave., Pasadena, Cal.

HULING, W. H., System Operator, Central Hudson Gas & Electric Co., 67 Montgomery St., Newburgh, N. Y.

HULSE, LEONARD R., 1st Lieutenant Engineers, U. S. Army; res., Army & Navy Club, Newport News, Va.

JOBIM, ADHEMAR DE C., Cia General Electric do Brazil, Caiza do Correiro 109, Rio de Janeiro, Brazil, S. A.

JOHNSON, OLIVER F., Engineer, The Pacific Tel. & Tel. Co., 502 Sheldon Bldg., San Francisco, Cal.

KASAHARA, KENJIRO, Chief Engineer & Manager, Mitsubishi Shipbuilding Co., Ltd., 120 Broadway, New York, N. Y.

KEYS, ALBERT H., Manager, Comanche Light & Power Co., Lawton, Oklahoma.

KIVLIN, JOSEPH F., Appraisal Expert, U. S. A. P. Fabric Inspection Depot, Saylesville, R. I.; res., 55 Peck St., N. Attleboro, Mass.

*KLINEFELTER, LEE M., Electrical Draftsman, Navy Yard; res., 85 Lafayette Blvd., Norfolk, Va.

*KRAMER, ANDREW W., Ensign (E) U. S. N. R. F.; res., 7724 Lowe Ave., Chicago, Ill.

LAING, NORMAN B., Elec. Engineering Staff, Ford Motor Co., 73 Willis Ave. East, Detroit, Mich.

LANKFORD, E. A., Proprietor, Lankford Elec. & Battery Station; res., 605 Story St., Boone, Ia.

LAUBE, OTTO T., Asst. in Research Laboratory, Kellogg Switchboard & Supply Co.; res., 3320 Beach Ave., Chicago, Ill.

LAUER, HENRI, Engineering Dept., Bijur Motor Appliance Co., Hoboken, N. J.; res., 132 W. 85th St., New York, N. Y.

LIPPINCOTT, DONALD K., Chief Engineer, Motor Protector Mfg. Co.; res., 1750 Mission St., San Francisco, Cal.

LIVERMORE, HENRY WELLS, Dist. Manager, Electric Arc Cutting & Welding Co.; res., Hotel Lenox, Boston, Mass.

LOCKE, GEORGE ARTHUR, Electrical Engineer, Western Electric Co., 463 West St., New York, N. Y.

Logan, Henry, Technical Director, L. Sonneborn Sons, Inc.; res., 520 W. 175th St., New York, N. Y.

***Long, Charles Clarke**, 1st Lieut. Engineers; res., 899 Montauk Ave., New London, Conn.

***Ludden, Homer J.**, San Juan, Texas.

Malone, James Edward, Foreman, Interborough Rapid Transit Co., New York; res., 353 57th St., Brooklyn, N. Y.

***Mansfield, Laurence E.**, Automatic Attendant, Western Union Tel. Co.; res., 130 Peoples St., Atlanta, Ga.

Manwaring, Myron, Electrician, Salt Lake County, 427 Vine St., Murray, Utah.

***McAllister, George M.**, Engineering Dept., National Lamp Works of General Electric Co., Nela Park, E. Cleveland, Ohio.

McKechnie, Angus, Asst. Power Apparatus Specialist, Western Electric Co., 84 Marion St., Seattle, Wash.

McMillan, Henry W., Chief Electrician, C. B. & O. Shops, W. Burlington, Iowa.

***Miwa, T.**, Supt., California Vegetable Packing Co. Ltd., 1920 E. Vernon Ave., Los Angeles, Cal.

Nakao, Keiji, Chief Electrical Engineer & Manager of Engg. Dept., Furukawa Mining Co., Yayesucho Kojimachiku, Tokyo, Japan.

Nakasawa, George K., Engineering Dept. Ashio Copper Mines, Ashio, Japan.

Nevatt, Albert E., Inspector, B. & P. Coke Plant, Colorado Fuel & Iron Co.; res., 511 Broadway St., Pueblo, Colo.

O'Brien, Charles M., Supt., Minnesota Electric Light & Power Co., 112 E. Moses St., Cushing, Okla.

***Olson, Victor O.**, 75 New St., Naugatuck, Conn.

Park, Charles D., Asst. Meter Specialist, General Electric Co., 120 Broadway, New York, N. Y.

Pearson, Ernest Helmer, Erecting Engineer, Electric Machinery Co., Minneapolis, Minn.

***Perry, Arlington C.**, Designer, American Rolling Mill Co.; res., 124 S. Harrison Ave., Middletown, Ohio.

Peterson, Charles A., Electrician, Burnside Shops, Illinois Central R. R. 10934 Wabash Ave., Chicago, Ill.

Phelan, George Stanley, Supt. of Elec. Construction, Ideal Coated Paper Co., Brookfield, Mass.

Priddle, William Henry, Draftsman, Toronto Hydro-Electric System; res., 1161 Ossington Ave., Toronto, Ontario.

***Purple, Jay Curtis**, Newark Valley, N. Y.

Pyster, John Neal, Chief Engineer, Raritan Copper Works, Perth Amboy N. J.

Rademacher, William Henry, Engineer in Service Office, Crocker-Wheeler Co., Ampere; res., 216 Weequahic Ave., Newark, N. J.

Rees, John B., Div. Equipment Engineer, Cumberland Tel. & Tel. Co., Nashville, Tenn.

Roe, Fremont Lee, 57th & Grand Ave., Wauwatosa, Wis.

***Roedel, William G.**, Electrical Tester, American Bosch Magneto Corp., Springfield, Mass.

Rogers, Frederick P., Major, Signal Corps. U. S. A., Peoples Bldg., Charleston, S. C.

Ryan, Francis M., Student in Elec. Engg., Univ. of Washington, Seattle, Wash.

Sadler, Ernest K., Dist. Supt., Nevada Valleys Power Co., Battle Mountain, Nevada.

Sauer, Louis B., Chief Inspector, Kellogg Switchboard & Supply Co., Chicago; res., Western Springs, Ill.

Schulz, Paul H., Chief Electrician of Street Lighting, Bureau of Illumination Service, City Hall, Milwaukee, Wis.

Seeley, Charles G., Manager, Melbourne Office, Australian General Electric Co., Queen & Little Collins St., Melbourne, Aus.

Shank, L. D., Manager & Supt., Municipal Light & Water Works, Centerville, Md.

Shapiro, Harry, Draftsman, Goldmark & Harrisson; res., 160 East 84th St., New York, N. Y

Shull, William G., Engineer, Kellogg Switchboard & Supply Co., Aberdeen & Adams Sts., Chicago, Ill.

Small, Vincent E., Electrician, Skinner Eddy Corp.; res., 2622, 45th Ave., S. W., Seattle, Wash.

Sparks, Charles, Asst. Shop Supt., Kellogg Switchboard & Supply Co., Adams & Aberdeen Sts., Chicago, Ill.

Speaker, Charles, Ensign, Navy Dept., Bureau of Steam Engineering, Washington, D. C.

Starkey, Fred Christopher, Chief Electrician, Erie Proving Ground, Port Clinton, Ohio.

Stone, Harris Deming, Electrical Engineer, A. C. Gilbert Co., New Haven, Conn.

Thaxton, Guy Werter, Asst. Engineer of Tests, Elec. Engg. Dept., Tenn. C. I. R. R. Co., Ensley; res., 520, 43rd St., Fairfield, Ala.

Thomason, Joseph J., Asst. Engineer, South Western Gas & Electric Company 1603 W. 8th St., Texarkana, Texas.

Tidd, George W., Prof. of Engineering, Marion Military Institute, Marion, Ala.

Tokarske, John J., Electrician, Colorado Fuel & Iron Co., Minnequa Works; res., 1045 Spruce St., Pueblo, Colo.

Tone, Richard Wolfe, Student, Sheffield Scientific Schools; res., 334 Howard Ave., New Haven, Conn.

Visser, C. Gerald, Testing Dept., General Electric Co., Schenectady, N. Y.

Wayman, P. F., Construction Engineer, Hydro-Electric Power Commission, 190 University Ave., Toronto, Ont.

Weber, William Albert, Sales Dept., Century Electric Co., St. Louis, Mo.

Wells, James Maxwell, Electrical Inspector, City of Riverside, 854 Mulberry St., Riverside, Cal.

Whitaker, Jefferson D., Service Engineer, Westinghouse Elec. & Mfg. Co., 32 So. Peoria St., Chicago, Ill.

White, Charles E., Industrial Engineer, Century Electric Co., 1827 Pine St., St. Louis, Mo.

White, John Walter, Special Representative, Westinghouse Electric Export Co., Havana, Cuba.

Wiederhold, Oscar Charles, Jr., Electrical Mechanic, Thorton Fuller Automobile Co.; res., 4531 Pulaski Ave., Philadelphia, Pa.

Wood, Oliver D., Transformer Engg. Dept., General Electric Co., Pittsfield, Mass.

Wootton, William L., Asst. to Chief Elec. Engineer, New York Edison Co., New York; res., 45 Brevoort Place, Brooklyn, N. Y.

*Former Enrolled Students.

Total 126.

MEMBERS ELECTED AUGUST 12, 1919

Crouse, George B., Dept. Engineer, Sperry Gyroscope Co.; res., 493 Washington Ave., Brooklyn, N. Y.

Fiske, Harold B., Supt., Drummondville Div., So. Canada Power Co., 330 Coristine Bldg., Montreal, Quebec.

Hawley, John Terrill, Supt. of Power House, Sanitary District of Chicago, Lockport, Ill.

Keilholtz, Lester Smeath, Chief Engineer, Domestic Engineering Co., Taylor & Pitt Sts., Dayton, Ohio.

Mullins, R. J., Manager, Northern Iowa Gas and Electric Co., Eagle Grove, Iowa.

Stark, John Roy, Elec. Engineer, Laboratory & Experimental, Webster Electric Co., Racine, Wis.

Thomson, John A., Chief Electrical Engineer, Havana Central Railroad Co., Central Station, Havana, Cuba.

FELLOW ELECTED AUGUST 12, 1919

Ellis, Alvarado Leroy, Asst. Director, Thomson Laboratory, General Electric Co., Lynn; res., 17 Banks Road, Swampscott, Mass.

TRANSFERRED TO GRADE OF MEMBER AUGUST 12, 1919

Alden, Vern E., Asst. to General Superintendent, Consolidated Gas Electric Light & Power Co., Baltimore, Md.

Devereux, Washington, Chief of Electrical Dept., Philadelphia Fire Underwriters Ass'n, Philadelphia, Pa.

Dickinson, Neville S., Electrical Engineer, Elevator Supplies Co., Hoboken; Consulting Electrical Engineer, Nairn Linoleum Co., Kearny, N. J.

Fox, Alfred C., General Superintendent, General Utilities Corp., St. Paul, Minn.

Gaillard, Capt. David St. Pierre, Executive Asst. to Chief of Nitrate Div., Ordnance Dept., U. S. A., Washington, D. C.

Herault, P. C., Supt. Transmission, Georgia Railway & Power Co., Atlanta, Ga.

Hutchinson, Lieut. George E., U. S. N. R. F., New York, N. Y.

Jones, Joseph S., Engineer, Charles Cory & Son, Inc., New York, N. Y.

Joy, William M., Chief of Electrical Design, Electric Bond & Share Co., New York, N. Y.

Kleberg, Alfred L., Captain Q. M. C. Construction Division, Washington, D. C.

Kohlhaas, Herman T., Head of Apparatus Analysis Div., Engg. Dept Western Electric Co., New York, N. Y.

Kribs, Gordon, Assistant Engineer, Hydro-Electric Power Commission of Ontario, Toronto, Ont.

Le Tourneau, Edward H., Electrical Engineer, Portland Railway, Light & Power Co., Portland, Ore.

Lillibridge, Ray D., President, Ray D. Lillibridge, Inc., New York, N. Y.

Lindridge, Charles D., Engineer, Western Electric Co., New York, N. Y.

Maddocks, William S., Head of Electrical Engineering Dept., Lockwood Greene & Co., Boston, Mass.

Mainland, James, Chief Engineer, Washington & Old Dominion Railway, Washington, D. C.

Muir, Roy C., Electrical Engineer, International General Electric Co., Schenectady, N. Y.

Rhodes, Sam R., Associate Professor Mechanical and Electrical Engineering, Clemson College, Clemson College, S. C.

Shoemaker, Richard W., Engineer of Distribution, Great Western Power Co., San Francisco, Cal.

Siegfried, Joseph H., Supt. of Power, Pacific Power & Light Co., Pasco, Wash.

Sorsby, Paul C., Engineering Dept., General Electric Co., Atlanta, Ga.

Turnbull, Thomas L., Consulting Engineer & General Manager, Bowness Improvement Co., Calgary, Alberta.

Vaniman, R. Lawrence, President, Produce Terminal Corp., Chicago, Ill.

Wakeman, Henry R., Supt. of Distribution, Portland Railway, Light & Power Co., Portland, Ore.

Wright, Walter F., Eugene F. Phillips Electrical Works Ltd., Toronto, Ont.

TRANSFERRED TO GRADE OF FELLOW AUGUST 12, 1919

Andrus, Lucius B., Chief Engineer, American Public Utilities Co., Grand Rapids, Mich.

Galusha, Don L., Dwight P Robinson & Co., Inc., New York, N. Y.

Mathey, E. D., Electrical Engineer, Air Nitrates Corp.; Electrical Engineer, American Cyanamid Co., New York, N. Y.

Rosenthal, Leon W., Vice-President, American Bosch Magneto Corp., Springfield, Mass.

Sorensen, Royal W., Professor in Charge, Dept. of Electrical Engineering, Throop College of Technology, Pasadena, Cal.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on August 6, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Morehead, John M., Consulting Engineer, New York, N. Y.

To Grade of Member

Davis, Archibald, Jr., Senior Lieut., U. S. N. R. F., St. Louis, Mo.

Seeger, Edwin W., Electrical Engineer, Cutler-Hammer Mfg. Co., Milwaukee, Wis.

Thompson, William J., Member of firm, Thompson-Levering Co., Philadelphia, Pa.

Tremaine, A. Raymond, Manager and Chief Engineer, Depew & Lancaster Light, Power & Conduit Co., Lancaster, N. Y.

STUDENTS ENROLLED AUGUST 12, 1919

10440 Robinson, H. E., Clarkson Coll. of Tech.
10441 Kimball, H. R., Worcester Poly. Inst.
10442 Hilderbrandt, P. J., N. Y. Elec. School.
10443 Thompson, I. D., Clarkson School of Tech.
10444 Benscheidt, N. H., Univ. of Kansas.
10445 Anderson, H. C., Sheffield Scientific School.
10446 Langdon, G. G., State Coll. of Washington.
10447 Carlson, C. O., Sheffield Scientific School.
10448 Haugh, H. A., Sheffield Scientific School.
10449 Osgyani, G. L., Sheffield Scientific School.
10450 Schmidt, H., Brooklyn Poly. Inst.
10351 Valldejuby, R. R., J. Y. Elec. School.
10452 Erb, H. G., Penn. State Coll.
10453 Lutsey, S. F., Casino Tech. Night School.
10454 Reid, K. M., Cornell Univ.
10455 Thakkur, K. B., Cornell Univ.
10456 Wise, E. M., Univ. of Wis.
Total 17

PERSONAL

Sidney W. Farnsworth recently returned from his duties as Associate Scientific Attaché at the American Embassy, London. He is now associated with Mark Manufacturing Co., Chicago, as Assistant to the Manager of the Evanston plant.

D. C. Hopper has accepted a position with the Newport News and Hampton Railway, Gas and Electric Company. Previous to the outbreak of the war Mr. Hopper was with the Commonwealth Edison Company of Chicago as Assistant Superintendent of underground cable system and since that time has been in charge of the electric distribution and signal systems of the American International Shipbuilding Corporation.

Dwight P. Robinson and Company, New York, have been awarded a contract by the Duquesne Lighting Company of Pittsburgh, to design and construct a power station at Cheswick, near Pittsburgh, to have an ultimate capacity of 300,000 kw. of which one unit of 60,000 kw. is to be installed initially.

David S. Wegg, Jr. has accepted a position as testing engineer for the Isko Company, Chicago, Ill., manufacturers of electric refrigerating machines. Mr. Wegg has been serving as assistant to the Contracting Officer, Chicago District, Ordnance Dept., U. S. A.

C. J. Berry, for the last six years with the National Lamp Works of the General Electric Company, Cleveland, has accepted a position as electrical engineer with Brandt and Fouilleret, Paris, France. Mr. Berry served as First Lieutenant in the U. S. Air Service in the A. E. F.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired.

All replies to either "Opportunities" or "Services Available" announcements should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-556. Well known electrical firm expanding its export service requires translator to rewrite electro-technical English into technical Spanish chiefly for publications to be distributed in South America. Engineer preferred. Advancement, etc., will depend on ability and expansion of the trade. State qualifications, experience and salary expected.

V-557. A college graduate with some practical or teaching experience is wanted for the position of instructor in the electrical engineering department of a well known college near New York City. Salary $1200 for about nine months' work.

V-558. Assistant to superintendent of power. Technical graduate in mechanical engineering, 1918 or 1919.

V-559. Technical engineers for steam plant betterment work. Men would be required to advise management and coach operating force in economical operation. Tact, willingness to work and combustion experience (oil and gas firing) required. Location southwest. Salary depends on qualifications.

V-560. A graduate of three or four years' standing, age 28 to 30, for general work as assistant engineer in a 100,000 h. p. hydroelectric development. This position offers an early opportunity for advancement to assistant having direct supervision of operation and maintenance followed by responsible charge of development.

V-561. Young man, single, recently graduated from technical school for inspecting and testing electrical apparatus, also general laboratory work. General Electric Company test department experience preferred. Good scholastic record and personality important.

V-562. A trained mechanical engineer with a knowledge of machinery and machine parts. Preference will be given to the man who is particularly qualified from the purely technical side. The use of a good deal of higher mathematics will be necessary in this work. The opportunity offered is that of assistant to the head of the engineering division of a large corporation selling to the machinery field. Salary will be commensurate with demonstrated ability.

Instrument Repairman (Electrical) Wanted for the Panama Canal—$197.60 month. Must be capable of testing, repairing and installing all types of watt-hour meters, and indicating and curve drawing instruments, both alternating and direct current in portable and switchboard types. Also instrument maker, $1.05 hour, thoroughly experienced on engineering instruments. Must be American citizens, final papers, under 50 years of age, in good health. Free steamship transportation from New York or New Orleans, wages beginning date of sailing. Write "Chief of Office, The Panama Canal, Washington, D. C."

The United States Civil Service Commission announces open competitive examinations for the positions of Electrical Engineer (male) $2,400 to $3,600 a year, and Assistant Electrical Engineer (male) $1,800 to $2,400 a year. Vacancies are in the Signal Service at Large, Washington, D. C.

The duties of these positions comprise the development and design of electrical equipment and especially Signal Corps storage batteries, or the administration of commercial telephone systems and installation of Government-owned systems. Competitors will not be required to report for examination at any place, but will be rated on the following subjects; Education, training and experience 60; publications, reports, or thesis (to be filed with application) 40; Applicants should apply for complete particulars and for Form 2118, stating title of the examination desired, to the Civil Service Commission, Washington, D. C.

SERVICES AVAILABLE

1385. Industrial engineer, age 30. Extensive training in electrical and machine design, repair and re-design of motors. Eight years' experience. Now consulting engineer for several rebuilders. Married. Salary $3600.

1386. Executive electrical and mechanical engineer, now administrative officer of large Government plant. Free about Aug. 15. Formerly consulting engineer. Thirty-four years of age, married. Splendid references. Design and construction of steam and hydroelectric plants, special electrical and manufacturing equipment and automatic electrical control systems. Experience in utility work, purchasing and salesmanship. Salary $3000. to $5000.

1387. Power system executive. Engineering graduate; 10 years' experience in construction and operation of high voltage high power generating stations, transmission lines, substations and distribution systems; at present employed at salary above $4500., but desires opportunity for greater service and responsibility in the line of operation, construction or general design.

1388. Young man with excellent record supervising the installation of electrical apparatus and factory equipment desires to connect with plant or company who can use the services of a hustler.

1389. Technical graduate, 27 years of age, with five years practical experience in the manufacture of high voltage insulating materials, including enamel magnet wire, all grades of tape, cloth and paper insulation, fiber plate, rods and tubing. At present employed. Available on short notice. Salary dependent on prospects.

1390. Electrical-Mechanical Engineer desires position with progressive New England manufacturer. Technical graduate, capable of handling the works engineering or acting as assistant to chief engineer of large company. Three years of time study, production, and plant engineering experience. Good personality and executive ability. Interested in permanent position where it will be possible to become financially interested in company. Best references. Single. Age 26. Present salary $170.

1391. Plant Engineer or master mechanic. Technical graduate, excellent executive, successful in handling men of all classes, diplomatic and tactful. Seventeen years experience in electrical and mechanical engineering, including installation and maintenance; power and industrial plant; heating and lighting layout; organization and production engineering; selling and purchasing.

1392. Electrical Engineer, graduate 1918 of middle western university, desires position with good opportunity for advancement. Two months instructor army training detachment, one year Ensign U. S. Navy. Best of references. Age 30. Salary $1900.

1393. Electrical Engineer, graduate 1919, desires position with an electrical contractor or electrical manufacturing concern. Age 22. Eastern location preferred.

1394. Engineer-Salesman. Graduate in electrical and mechanical engineering. Seven years experience with large central station company in new business department. Also several years with electrical manufacturer in sales capacity. Experience in compiling data and reports and in general office routine and methods. Age 33. Available immediately. Salary $2500.

1395. Technical graduate, age 41, married, Associate A. I. E. E. Three years Westinghouse test, motors and generators, year and a half erecting engineer. Seven years superintendent municipal light, power and water works. At present holding such position. Desires change offering responsible position with broader opportunities.

1396. Sales Engineer available at once. Would like to represent some motor or power equipment manufacturer through New England.

1397. Electrical Engineer, technical graduate with over seven years varied experience. One year General Electric test, two and one-half years appraisal, one and one-half years layout of lighting and motor applications, two years purchasing officer electrical apparatus and supplies U. S. Army. Salary $3000.

1398. Mechanical Engineer, age 30, graduate, engineer, specializing in the development, design and construction of electrical and mechanical appliances, devices and instruments requiring inventive ability. Design of automatic machinery for contemplated production. Experienced in factory management.

1399. Graduate Electrical Engineer, age 30, married. Aggressive and ambitious, with executive ability and sales instinct. Eight years experience with utility corporation as tester, construction supervisor, technical correspondent and methods engineer. Desires position with a real future, preferably along consulting or sales engineering lines. Present location New York City.

1400. Electrical Engineer, age 33, university graduate. Ten years diversified experience in engineering, operation and maintenance of hydro and steam power plants up to 100,000 h. p. capacity, d-c. and a-c., low-tension and high-tension, for industrial, mining and power companies. Capable executive. Have successfully managed operating and maintenance forces of 175 men. Available now.

1401. Position wanted by technical school graduate, age 28, with four years experience on estimating and construction of transmission lines; also two years experience on structural steel. Married; prefers location in New England. Would consider being assistant to superintendent of power and lighting plant.

1402. Electrical engineering graduate; General electric test, experienced as construction foreman in power plant construction and operation. Desires position as works electrical engineer or connection with manufacturing company in commercial engineering. Location preferred, Pennsylvania. Associate A. I. E. E. Married, age 24. Salary $2000.

1403. Electrical Engineer, university graduate, age 37. Two years experience telephone line construction and maintenance; ten years experience as executive in charge of railway, a-c. and d-c. distribution systems, including bonding, electrolysis and signals. Desires position as distribution engineer, or would consider proposition from manufacturer of highway-crossing protection.

1404. Available at once. What have you to offer electrical engineer, 30 years of age, and married? Past two years as testing and inspecting engineer motors, generators and mechanical mechanical equipment, six years practical experience in substation and powerhouse construction. Maintenance position desired.

1405. Electrical Engineer, ten years with present employer, starting as electrician, then assistant mechanical engineer, last four years as electrical engineer, desires wider opportunity. Four years, most of time in charge, on test floor, motor and generator manufacturer. Much experience laying out, buying and installing machinery for enlarged factory, College graduate, 37 years old, married. Salary to start $3000-$3600.

1406. Mechanical engineering graduate, one year drafting experience, two years automobile experience, testing oils, gasoline, and gasoline substitutes. Some knowledge of electrical machinery. Desires position in or near New York City. Just returned from service with A. E. F. in France.

1407. Technical graduate, age 26 married, seven years electrical construction experience, Associate A. I. E.E Recently released form U. S. N. R. F. after 18 months engineering duties with Bureau of Steam Engineering, U. S. N. Desires position with lighting and power company, preferred. Will accept $1800 to start with opportunity for advancement.

1408. Lieutenant, U. S. Army, just returned from A. E. F. desires position with power or construction company. Graduate electrical engineer, single, age 28. Four years operation and maintenance engineering with central station organization. Three months valuation work. Enlisted U. S. Army June 1917. Best references from all employers. Salary $2000.

1409. Graduate Electrical Engineer, Associate A. I. E. E., age 29, married, desires position. Specialist in design, maintenance and construction of overhead and underground transmission and distribution lines. Experienced in inside wiring, sub- and central stations. In executive capacity last five years. At present in Army, but expect discharge in 30 days. Salary $3000.

1410. Public Utility expert in service of two important Public Utility Commisssions for past ten years and fully qualified to handle valuation and rate cases involving electric, water, gas telephone, sewer and railway utilities, is available for consulting work or will consider permanent connection with suitable organization. A1 record and references.

1411. Electrical Engineer, technical graduate, five years experience with a hydro-electric power and transmission company, including tests, drafting, station and system operation and general operating engineering, desires an engineering position with an engineering or operating company.

1412. Electrician desires an opportunity which may lead to executive position. Four years experience power house construction, General Electric and Westinghouse test floor practise, and mill maintenance. Associate, A. I. E. E.

1413. Graduate electrical and mechanical engineer, age 39, American, married. Total of nineteen years experience, principally design, construction and operation of electric railways, steam and hydro-electric power plants, substations and transmission lines. Do not like present work. Minimum salary $3600.

1414. Physicist, chemist and author of work on electrical measurements. Reputation well-known for scientific discoveries. Twenty years experience in physical laboratory teaching and lecturing at one of the great universities. Desires position either in commercial research work, or teaching physics or chemistry.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is located on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Ph tostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who may desire it will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a m. to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a.m. to 6 p.m.

Book Notices.—(July 1-July 31, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

ABRASIVES AND ABRASIVE WHEELS:

Their Nature, Manufacture and Use. A complete treatise on the manufacture and practical use of abrasives, abrasive wheels and grinding operations. By Fred B. Jacobs. N. Y., The Norman W. Henley Publishing Co., 1919. 338 pp., 174 illus., 1 por., 8 x 5 in., cloth, $3.

This work opens with descriptions of the various natural and artificial abrasives, the manufacture of grinding wheels and artificial sharpening stones, the grades established in commerce and the methods of testing grinding wheels. Chapters follow on the care of wheels, dust collecting systems and safeguards, abrasive papers and cloths, methods of surface, cylindrical an internal grinding, special grinding operations, and cutter and saw sharpening. The author writes from experience as a machinist and as a salesman of grinding wheels.

AIRPLANE DESIGN AND CONSTRUCTION:

By Ottorino Pomilio. 1st edition. N. Y., McGraw-Hill Book Company, Inc.; Lond., Hill Publishing Company, Ltd. 1919. 403 pp., 248 illus., 58 tab., 9 x 6 in., cloth, $5.

A book on the structure and design of airplanes, in which the results of European experimental research in aerodynamics are presented in considerable detail. The problems relating to airplane design and operation are analyzed, working formulas are derived and the data needed by designers are presented.

THE APPLICATIONS OF ELECTROLYSIS IN CHEMICAL INDUSTRY:

By Arthur J. Hale., Lond. and N. Y., Longmans, Green and Co., 1918. 148 pp., 56 illus., 9 x 6 in., cloth, $2.50. (Monographs on Industrial Chemistry).

The author describes briefly the electrolytic refining and winning of metals; the production of hydrogen and oxygen, chlorin, caustic soda, hypochlorites, chlorates and perchlorates; and of various other organic and inorganic compounds. References to the literature and patents are included.

A CENTURY OF SCIENCE IN AMERICA:

With special reference to the *American Journal of Science*. 1818-1918. By Edward Salisbury Dana and others.

New Haven, Yale University Press, 1918. 458 pp., 22 por., 9 x 6 in., cloth, $4.

The present book commemorates the one-hundredth anniversary of the founding of the *American Journal of Science* by Benjamin Silliman in July, 1818. The opening chapter gives a somewhat detailed account of the early days of the *Journal*, with a sketch of its subsequent history. The remaining chapters are devoted to the principal branches of science which have been prominent in the pages of the *Journal*; geology, paleontology, mineralogy, chemistry, physics, zoology and botany. They have been written with a view to showing in each case the position of the science in 1818 and the general progress made during the century. Special prominence is given to American science and particularly to the contributions to it to be found in the *Journal's* pages.

ELECTRICAL AIDS TO GREATER PRODUCTION:

Plans, methods and appliances by which industrial electrical engineers are meeting increased demands for power. Compiled and edited by Allen M. Perry. 1st edition, N. Y., published by *Electrical World*, McGraw-Hill Book Company, Inc. 1919. 332 pp., illus., chart, tab., 9 x 6 in., cloth $2.

CONTENTS: General Power Problems of Industrial Plants; Distribution, Transformation, Switching, and Protection; Motors, Control, Specific Applications, Troubles and Remedies; Illumination—Selection of Equipment, Economies, and Specific Applications; Electric Furnaces, Welding, etc.; Meters and Measurements as Applied to Industries; Handling Material in Industrial Plants with Electric Tractors; Outdoor Substations.

The engineering editor of the *Electrical World* has prepared this volume from the articles on the application of electricity to plants which have appeared in that periodical during the last few years. It summarizes the methods that have arisen from the necessity for increased factory output and reduced cost of production caused by the war in many classes of industries.

INDUCTION COILS IN THEORY AND PRACTICE:

By F. E. Austin. [Hanover, N. H., copyright 1919] 64 pp., 45 illus., 9 x 6 in. cloth, $1.

A presentation of the fundamental principles of the induction coil, for use as a text-book. Intended to enable the student to construct induction coils to meet a variety of demands as well as to construct coils to fulfill specific requirements.

AN INTRODUCTION TO THE PHYSICS AND CHEMISTRY OF COLLOIDS:

By Emil Hatschek. Third edition. Phila., P. Blakiston's Son and Co., 1919. 116 pp., 17 illus., 7 x 5 in., cloth, $1.50.

This small volume is intended to introduce readers with a reasonable knowledge of physics and chemistry to the fundamental facts and methods of this important branch of physical chemistry.

Small additions and corrections have been made to this edition, to include such recent advances as fall within the scope of a brief introductory work.

LABORATORY EXPERIMENTS WITH DIRECT CURRENTS:

By F. E. Austin. [Hanover, N. H., copyright 1917] 152 pp., illus., 7 x 5 in., flexible cloth. (Gift of author).

A laboratory course, covering about forty hours, for students in technical and industrial high schools, etc., based on the author's experience as a teacher. The chief aim is to make evident some of the engineering applications of direct currents.

MACRAE'S BLUE BOOK:

Chic. and N. Y., MacRae's Blue Book Co., 1919. 1846 pp., 12 x 9 in. cloth, $10.

This record of manufacturers is intended for use by purchasing agents interested in iron and steel products, building materials, railway supplies, etc. It includes an alphabetical address list of the principal manufacturers in the United States, a classified index of the makers of 10,000 products, an index of trade names, a collection of miscellaneous data useful to purchasers and users of the articles considered, and the standard list prices of building materials, iron and steel products, etc.

MINERAL DEPOSITS:

By Waldemar Lindgren. 2nd edition. N. Y., McGraw-Hill Book Company, Lond., Hill Publishing Co., Ltd., 1919. 957 pp., illus., tab., 9 x 6 in., cloth, $5.

Mineral deposits are usually classified and described by the metals or substances which they contain; for instance, deposits of copper are described together, with little or no effort to separate them into genetic groups. This book is the outcome of a desire to place the knowledge of mineral deposits on the broader and more comprehensive basis of a consistent genetic classification and thus bring it into a more worthy position as an important branch of geology.

In this second edition, all of the chapters have been revised and several have been largely rewritten. A discussion of metallogenetic epochs has been added, as well as an index by elements. Some less essential descriptions have been excised, in order that the book might not increase in bulk.

PRACTICAL HELPS for the Electric Railway Shop, Track, Power, Line and Rolling Stock Departments.

Compiled from *The Mechanical and Engineering Edition of Electric Railway Journal.* 1st edition. N. Y., published by Electric Railway Journal, McGraw-Hill Book Company, Inc., 1919. 331 pp., illus., tab., 9 x 6 in., cloth, $2.

CONTENTS: Track and Structures, by R. C. Cram—Power Generation by Hartley LeH. Smith.—Power Transmission, by Charles R. Harte.—Car Design, by Norman Litchfield.—Car Equipment, by C. W. Squier.

These extended articles have been selected from a series published in the *Electric Railway Journal,* which was prepared for the information of men responsible for the upkeep of the physical equipment of an electric railway system. The articles cover the fundamentals of the various subjects in a broad, practical manner.

STANDARDIZATION OF MINING METHODS:

By Charles A. Mitke. A series of important articles reprinted from *Engineering and Mining Journal.* 1st edition. N. Y., published by *Engineering and Mining Journal,* McGraw-Hill Book Co., Inc. 1919. 110 pp., 47 illus., 6 charts, 4 tab., 7 x 5 in., cloth, $1.50.

As mining engineer for the Phelps Dodge Corporation, the author has studied mining practices in detail, with a view to the establishment of standard methods. The present volume is based on his experience and is an account of the standardization of various mining practices in the interests of safety and economy.

A SYSTEM OF PHYSICAL CHEMISTRY:

By William C. McC. Lewis. 2nd edition. 3 vols. N. Y. and Lond., Longmans, Green and Co., 1918. diagrams, 9 x 6 in., cloth, $4.50.

Professor Lewis' work is intended as a general textbook for use by those who already possess some knowledge of both physics and chemistry and as a fairly comprehensive account of our present knowledge. It is well equipped with references to the original literature, and so is useful for reference use.

The third volume, on the Quantum theory, has been added in this edition. Other changes, necessitated by the advances made since the previous edition, have caused considerable expansion of the book.

TIMBER:

Its Strength, Seasoning, and Grading. By Harold W. Betts. 1st edition. N. Y., McGraw-Hill Book Company, Inc.; Lond., Hill Publishing Company. 1919. 234 pp., illus., maps, charts, tab., 9 x 6 in., cloth, $3.

This volume, for engineers, manufacturers and users of lumber and wood material, is intended to meet the lack of a work on wood as a structural material, similar to existing handbooks on steel, concrete, etc. The methods of testing the strength of wood and wood products, such as telephone poles, packing boxes and vehicle parts, are described and the results of numerous tests by the Forest Service are tabulated. A table based on 130,000 tests, showing the average mechanical properties of 124 American woods, is given. Proper methods of seasoning wood are fully discussed. The grading rules of the different manufacturers' associations are given and the book closes with extensive statistics on the lumber produced and used in the United States.

DEVELOPMENT OF THE INSTITUTE

LETTER FROM THE PRESIDENT

August 19, 1919.

TO THE MEMBERSHIP OF THE
AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS.

In connection with the forthcoming year's activities and with particular reference to the recommendations of the Committee on Development, it is essential that a careful study be made of our finances and while, in advance of such a study, no accurate figures are available, some approximations must be before us, otherwise intelligent consideration cannot be given to the questions on which the opinions of all members have been invited. Therefore, I hope you will consider that I am justified in laying before you the following information.

A reference to the last annual report shows that our revenue for the year ending April 30, 1919 was $134,944.32 and that practically this entire sum was needed to defray current expenditures. The Institute, like every other organization, has now to face the increased and still increasing costs of operation and it is therefore certain that, even if we are to continue our activities unchanged, a larger expenditure will be required in the future than has been necessary in the past. It has in fact come to my knowledge that at least two other National Engineering Societies are seriously considering an increase in their dues in order to provide for this increased expenditure.

Communications to the Development Committee have clearly demonstrated that there is a strong general sentiment throughout the membership in favor of progress and expansion in order that the Institute may keep up with the times and be alive to its possibilities, so that it can retain the prestige which its past record has secured and can remain, as we all want it to, one of the leading engineering organizations of the Nation. Nothing is more certain than that increased activity means increased expenses and it must therefore soon be decided how far our activities are to be limited by our pocketbook and what if any means shall be adopted to increase our income.

Cooperation of the Institute with the other National Engineering Societies, and with local bodies, as a means of increasing the usefulness of the engineer in public affairs and his advancement as an individual has been almost universally demanded, not only by our own membership, but by the membership of the other three National Societies as well; but such an effort will not only be barren of results but will in fact bring ridicule and contempt upon the profession by failure if it shall not be backed with the necessary sinews of war. The amount of money required for this activity will of course be determined by its extent and no present figure can be better than a guess, however judging by a two years experience on Engineering Council hampered from the beginning by lack of funds yet called upon to occupy an ever widening field, $15,000.00 per year would be a modest estimate of the Institute's share of this expense.

Another almost universal desire of our membership is that the central organization and the sections should be brought into closer contact. As a means of accomplishing this purpose, your Development Committee has suggested the holding of Institute and Board meetings more generally in different parts of the country, also that Geographical Divisions be created with a Vice President from each whose duty in addition to attending Board meetings shall include a tour of his Division at least once a year. The American Society of Civil Engineers, with a total membership only a little smaller than ours, has created thirteen such divisions. If it shall be found that the same number will suit our requirements, we will have thirteen instead of six Vice Presidents and therefore seven additional Board members. In order to help insure the attendance of Board members at board meetings, your Development Committee has recommended that their travelling expenses be paid, as is now done by both the American Society of Civil Engineers and the American Society of Mechanical Engineers, which recommendation along with that for the payment of the Vice President's expenses when visiting the sections in their respective divisions would probably require an annual outlay of approximately $18,000.

Suggestions from the membership as to changes in our publications are many and varied but practically all of them favor the printing of some kind of additional matter and of course, every extra printed page means extra expense. The extent of such expenditure obviously cannot be determined until some definite plan has been proposed but for the purpose of having some figure before us suppose we estimate that the increased cost of the publication will be $25,000 per annum.

The additional cost of running the Institute without change is not easy to predict but a 10% increase would certainly not be regarded as abnormal, *i. e.*, $12,500.00.

Summarizing the foregoing figures, we therefore have

Cooperation with other Engineering Societies	$15,000.00
Travelling expense of Board members	18,000.00
Increased cost of publications	25,000.00
Increased cost of operation	13,500.00
Total	$71,500.00

or an increase of over $7.00 per member for a membership of 10,000.

The foregoing figures are confessedly approximate and inserted for the purpose of illustration only, but it is fairly safe to say that the increased annual costs will in no case be less than $5.00 nor more than $10.00 per member and therefore the question at once arises, where is the money to come from?

Shall we increase our dues? Shall we seek to obtain additional revenue from some other source or shall we forego some or all of our proposed new activities? Even if we do not expand we shall still be confronted with the increased high cost of living so that even a stand pat policy is impracticable. We must either provide additional revenue or curtail.

Members of the Society of Mechanical Engineers have solved a similar problem for themselves by expanding their monthly publication into a journal, using the so-called standard periodical page—9 in. x 12 in.—and by securing a substantial increase in their advertising clientele. As a result their financial problems, at least for the time being, are behind them, no increase in dues is thought of and they are not only willing but able to give to their membership every one of the advantages which we so dearly covet but which as yet we cannot afford. I am informed that when the expansion was first suggested, it was vigorously opposed by a large number of members of the

American Society of Mechanical Engineers but that the question now receiving consideration is whether or not the publication shall be made into a weekly instead of a monthly. There seems to be no thought of going back to the old order.

"What man has done, man may do" and this experience of our sister society furnishes us with an interesting object lesson. Your Development Committee felt that an aggressive advertising policy conducted along the proper lines and on a high plane was in no sense inconsistent with the maintenance of our past and present high standards of which we are at the same time both so jealous and so proud. No essential difference could be detected between the ethics of our present advertising policy now sanctioned by long practise and yielding last year about $8,000.00 gross, and a more intensive application of the same policy which might be expected ultimately to yield several times that figure. As contrasted with the unpalatable alternative of adding, possibly $7.00, to our annual dues, the Committee was of opinion that the membership would have strong preference for increased advertising and it framed its report accordingly.

It should be of course, clear that an advertising policy and an editorial policy are two distinct matters and must not be confused. We may or may not like the Journal of the Mechanical Engineers. We may favor any one of the many suggestions offered for the improvement of our own Proceedings. Such questions should be decided on their own merits and not confused with the ethics of advertising. The only ways in which our advertising policy will affect our editorial policy is that on the one hand, if we expect to receive advertising support we must issue a publication which will be read, and on the other hand if we do not get increased advertising revenue we shall have no money to pay for any sort of publication expansion.

Such economies as have been proposed in printing and distributing papers and in avoiding duplicate expense in issuing the Transactions, even if they could be all fully realized, would still fall far short of securing the revenue which now seems essential.

In accordance with the resolution of the Board of Directors at its August meeting, the publication question and all communications from every source relative thereto have been referred to a Special Publications Committee which is already at work. If any change is to be made in our practise there is an obvious advantage in making it effective January 1st, 1920. The next board meeting is scheduled for October, at which time a decision should be made; therefore in order that the Publication Committee may fully consider all suggestions from the membership, it is desirable that same should be at hand at the earliest possible date. Every one who is interested is earnestly urged to give these matters as much study as he believes them to merit and to send his comments thereon to the Secretary as promptly as possible. If you do not express your views either in support of, or in opposition to the Development Committee's report, neither the Publication Committee nor the Board will know about them, and you may not like the action—or lack of it—which may result.

CALVERT TOWNLEY,
President.

RESOLUTIONS ADOPTED BY THE BOARD OF DIRECTORS, AUGUST 12, 1919

RESOLVED, that the report of the Committee on Development be received, with an expression of hearty appreciation of the valuable services rendered to the Institute by the Committee.

RESOLVED, that the recommendations in the report of the Committee on Development, dated August 12, 1919, be hereby approved in principle and that the President refer the various parts of the report to qualified committees, either existing or special, the President being hereby authorized to appoint such special committees as he deems desirable, with the request that these committees formulate definite plans of procedure with estimates of expense involved, for bringing into effect such changes in present practise as the committees deem desirable; also that these committees give careful consideration to such additional communications as may be received from the membership relating to subjects with which the committees are dealing. These reports to be presented at the October meeting of the Board.

RESOLVED, that the report of the Committee on Development, dated August 12, 1919, be released for publication, with particular reference to the technical press; and that it be published in full in the next issue of the Institute PROCEEDINGS, with a request to the membership that the report be carefully considered and that comments upon it or additional suggestions relating to Institute activities be forwarded promptly to the Secretary of the Institute, so that they may be received by him prior to October 1 and be promptly referred for consideration to the various committees and officers concerned with the particular activities to which the communications may relate.

RESOLVED further, that the Committee on Development be continued, with particular reference to the consideration of the Institute's participation in joint activities with various other engineering and technical organizations, which activities are now under consideration by the Joint Conference Committee of the development committees of several national engineering societies.

NOTE: In accordance with the above resolutions, President Townley has referred the various parts of the Development Committee's report to the Institute committees on Publications, Meetings and Papers, Technical Activities, Sections, Student Branches, Law, and Development. The portion of the report relating to engineering education was referred to Engineering Council.

The membership of the Institute is urged to give careful consideration to the various recommendations embodied in the report, and to communicate their views promptly for consideration by the various committees.

F. L. HUTCHINSON
Secretary

REPORT OF COMMITTEE ON DEVELOPMENT

To the Board of Directors,
American Institute of Electrical Engineers.

Gentlemen:

The Committee on Development begs herewith to submit its report.

This Committee was appointed by the President pursuant to a resolution of the Board passed at the meeting of October 11, 1918, and reading as follows:

> **RESOLVED;** that a Committee on Development be appointed by the President to consider suggested or proposed modifications, in the field and methods of work of the Institute, and to make recommendations to the Board of Directors concerning these matters.

We are informed that each Section was invited to nominate its representative of the Committee and owing to the delay of some Sections in responding to this invitation, several months elapsed before the President was able to appoint the Committee.

Subsequently at a meeting of January 10th, 1919, a further resolution was passed by the Board authorizing the appointment of an Executive Committee, *viz.*:

> **RESOLVED;** that the President be authorized to appoint an Executive Committee from the membership of the Committee on Development, for the purpose of considering the various suggestions that may be submitted and outlining a working program for the main committee.

In a letter dated January 27th the President explained what was sought to be accomplished by the creation of the Committee on Development and outlined a suggested course of procedure, following which on February 4th, the Executive Committee held a meeting in New York and prepared a communication to the Section members of the Committee, dividing the subject to be considered into three major headings, namely:

1. The Relation of the Institute to its members.

2. The Relation of the Institute to other engineering organizations.

3. The Relation of the Institute to the public.

Under each heading a series of questions was set up designed to bring out as full a discussion as possible and to make it clear that it was the duty and privilege of the Committee to consider every angle of Institute affairs. This letter in addition to being sent to each member of the Committee on Development was published in the March PROCEEDINGS along with the President's letter of January 27th and accompanied as well by an invitation addressed to the membership at large, whether or not connected with a Section, to send in suggestions.

Attention was again called to the matter in a printed notice, mailed to the entire membership under date of March 20, in which the membership was urged to submit suggestions promptly through any member of the committee.

A subsequent reminder was addressed to the Section members of the Development Committee announcing that a meeting of the Executive Committee would be held on May 8, 1919, at which time communications had been received from 16 sections and from a number of individual members. Most of these communications showed clearly that the Sections had given the matter earnest and careful study, had realized the opportunity that was being offered them and were anxious each to do its part. It was gratifying to the Executive Committee to find that there was such a general unanimity of opinion on many of the questions considered as to indicate very clearly the wishes of the great body of the members and incidentally to make the work of the Executive Committee in compiling the views of the different Sections remarkably simple.

A summary of the views presented was prepared and a tentative plan of procedure outlined by the Executive Committee and sent to the Section members of the Committee on May 13th with the request for their further comment and criticism. Responses to this communication were received from the following: Sections: Detroit-Ann Arbor, Erie, Fort Wayne, Indianapolis, Milwaukee, Pittsfield, St. Louis, and Toronto; Individuals: L. C. Marburg, C. L. Clarke, C. Francis Harding, P. M. Lincoln, and Harold S. Osborne.

The tentative plan of procedure was very generally endorsed either entirely or with minor modifications. The Executive

Committee believes that the reasons that more Sections did not respond to a criticism of the tentative plan was that many of them found the plan satisfactory and thought it would go through automatically if they did not object.

A third meeting of the Executive Committee was held on June 16th and a report to be presented to a meeting of the full Committee at the Annual Convention was prepared, the same being the original tentative plan as modified to meet the criticisms received.

At the Lake Placid Convention the Section delegates voted to merge their meeting with that of the Development Committee, and a meeting of the Development Committee and Section delegates was accordingly held on June 25th, beginning at 1.00 P. M. at luncheon and continuing until after 6.00 o'clock. The President, the Board of Directors, several Past-Presidents and a few guests accepted the Committee's invitation to sit with them and the entire report was very fully discussed. On the following morning the Chairman presented the recommendations of the Development Committee to an open session of the Convention which adjourned until the evening of the same day and discussed the report at length. The recommendations which follow are the result of the foregoing proceedings. It was felt that unless the consensus of opinion among the membership at large be obtained a satisfactory plan would not be forthcoming. Your Committee believes that such consensus of opinion has been obtained and recites the activities of the Committee as its basis for that conclusion. There are also attached hereto, for convenient reference, the following exhibits:

I. Circular letter, dated February 18, 1919, addressed to members of the Development Committee by the Chairman and including the President's letter, dated January 27th, also list of Committee members.
II. Original responses from the Sections and from individual members.
III. The Executive Committee's report to the Development Committee, dated May 13th.
IV. Original comments on the reports of May 13, from Sections and individual members.
V. The Executive Committee report of June 20th as submitted to the Development Committee, Section Delegates, Board of Directors and Past-Presidents at the Annual Convention, June 24th.
VI. Tentative draft of constitution for local affiliation prepared by Messrs. Hall and Robinson as a subcommittee and read to the Development Committee on June 24th.

VII. Stenographic report of the Convention sessions of the Development Committee and of the Institute.

VIII. The reports of the corresponding committee of the A. S. C. E., A. S. M. E. and A. I. M. & M. E. submitted to their respective Boards.

IX. Original communications received since the Annual Convention with reference to the work of the Committee.

There is an almost unanimous view that the PROCEEDINGS do not seem sufficiently to interest the membership at large, and the suggestions of a remedy cover a wide range of possibilities. The value of the class of papers which heretofore have been published in the PROCEEDINGS as representing advances in the art and constitute a record of progress is appreciated and it is insisted that the high standard of the Institute should be maintained but it is believed that this view is not inconsistent with a recognition of the rights of 90 per cent or perhaps 95 per cent of the total membership who are concerned with the day to day engineering problems and with the personal side of engineering relationships. It is believed that if the PROCEEDINGS can be properly expanded that publication will serve better to both bind the present membership closer together and furnish an added incentive for engineers not already members to join. The Development Committee has devoted a great deal of time to discussions of this matter but feels that with the recommendations of the various Sections and the stenographic report of the Lake Placid meetings to be considered, further study should be given to this matter in order that the very best plan may be adopted. The Committee therefore, submits the following recommendations, to wit:

Publications

That the Publication Committee be asked to consider and recommend to the Board improvements in the present plan of publishing the PROCEEDINGS and the TRANSACTIONS and of printing and distributing copies of Institute, Section and Branch papers.

That in dealing with these questions the Publication Committee consider:

(a) Enlarging the editorial and executive publication staff for the purpose of expanding the PROCEEDINGS to contain additional live matter of interest and value to the membership as a whole without giving less importance to the principal activities of the Institute, *i. e.*, the promotion of the fundamental advance in the art and the encouragement of original investigation in the field of electricity.

(b) Publishing all Institute papers and occasional papers of unusual broad general interest and value from Sections or from other sources; publishing a set of abstracts of every paper presented to every Section so that each month there will be a complete record of this class of Institute activity.

(c) Eliminating as far as may be feasible the duplication of expense now incurred by twice publishing the papers heretofore distributed (in both the PROCEEDINGS and the TRANSACTIONS) but without depriving the membership of the TRANSACTIONS in some form.

(d) Publishing discussions in the PROCEEDINGS.

(e) Endeavoring to increase the revenue producing capacity of the PROCEEDINGS by expanding its advertising policy and if necessary changing its page dimensions.

(f) Printing pamphlet copies of some or all Section, and perhaps Branch, papers and economizing on the cost of printing Institute and such Section and Branch papers by limiting their quantity and free distribution while making them available for the membership.

Note.

In considering the foregoing summarized recommendations the Publication Committee is asked to examine the stenographic report of the Lake Placid sessions of the Development Committee and of the Institute hereto attached.

Another unanimous desire of the membership is for closer contact between the Institute officers, prominent engineers and Sections as a means of improving the morale of our organization, stimulating Section activities and of interesting the membership at large, particularly the younger members in Institute work. With the large number of Sections and Branches now in existence and the probability that this number will increase it seems obvious that if the present Institute officers were to comply with this demand they would have time for nothing else and even then the demand would not be satisfied. An obvious alternative therefor is to have more officers and let them be chosen from different parts of the country. If this be done and these officers are to be really participants in the Institute management and not simply visiting functionaries, means must be provided to insure their attendance at Institute and Board meetings. It is believed that these objects can be accomplished by decreasing the number of Institute meetings, thereby reducing the demand of the time of its officers by holding them in different parts of the country thus making it easier for those residing at points remote from headquarters to attend and by paying the expenses of Board members when in attendance. If the Institute meetings be not held in New York it almost naturally follows that the New York members constituting a very large and important per cent should organize a Section so that their present opportunities may be expanded instead of abridged.

In order to accomplish the results described, the Committee makes the following recommendations, namely:

Organization.

(a) That a New York Section be organized and conducted on the same lines as existing Sections elsewhere.

(b) That the present practise of holding some of the Institute and Directors' meetings in different localities, where local Sections are established, be extended, instead of holding nearly all of these meetings in New York as at present. It may be desirable to reduce the frequency of Institute and Directors' meetings and hold them every two months or perhaps even less frequently instead of every month as now.

(c) That the country be divided into geographical divisions corresponding in number to the number of Institute Vice-Presidents. If more than six divisions should be thought desirable, they should be established and the number of Vice-Presidents increased to correspond. In order to allow for the future shifting of membership density and at the same time to escape the necessity of cumbersome constitutional amendments the number and delimination of geographical divisions should be specified in the by-laws instead of the constitution to provide for ready amendment by the Board of Directors.

(d) That one Vice-President be selected from each geographical division, the President and Managers to be elected from the membership at large as at present.

(e) That the Institute should pay the traveling and living expenses of the officers and Board members when attending Institute meetings.

(f) That it be the duty of each Vice-President to visit each Section in his own division at least once a year, the Institute to pay his traveling and living expenses for such visits. Of course it would also be desirable if the Vice-Presidents could exchange visits.

(g) That the Vice-Presidents' term of office be lengthened from one year to two years and the constitutional inhibition against the election of a Vice-President as Manager be removed. Provide against too extended tenure of office by a constitutional provision that except in the case of a Manager or a Vice-President, who may be elected President, no member may continuously hold office longer than six years.

Activities.

(a) That committee work be decentralized as far as it may be found feasible and desirable by substituting Section committees for Institute committees. Appoint a general committee to study this question and make recommendations.

(b) That more high grade papers of general engineering interest be presented.

(c) That a committee be created in each Section charged with the duty of assigning to the younger members specific participation in designated meetings by the preparation of papers, discussion or otherwise. It is hoped by this means and by the appointment of a reasonable number of the younger men to the larger committee membership caused by decentralization, that the interest of the younger men will be stimulated, and their loyalty increased.

There is a universal recognition of the fact that engineers do not participate as actively or as prominently in public affairs as they should and that both the public welfare and their own individual advancement would be promoted if this condition could be rectified. There are two general reasons believed to be responsible for the existing condition, one a lack of any general organization of engineers which would facilitate their cooperation, and second, too great technical specialization in the engineering curricula of our technical schools and colleges which tend to narrow the vision of the engineering student and start him on his career with an exaggerated idea of the importance of specialization and an insufficient appreciation of the part he must play in public affairs.

The first of these reasons was very generally brought up in one form or another by the Sections and although it is recognized that a corrective can be applied by our Institute only in cooperation with other engineering bodies, it was felt that we could properly take a constructive step by adopting a skeleton plan for cooperation and then appoint conferees who could discuss the matter with similar conferees from other societies and endeavor to agree to definite recommendations to their respective governing bodies. With this object in mind the Committee respectfully recommends:

Local Federations.

(a) That a comprehensive but flexible uniform outline for the federation of local engineering bodies be prepared taking advantage of the experience already gained by existing affiliations.

(b) That we use our endeavors to have the other national societies establish and support local Sections along lines similar to ours but do not confine local federations to such branches, rather planning to include all the worthy engineering bodies.

(c) That wherever such federations can be organized there be established under an appropriate name a federated local council of engineers to be made up of a properly apportioned number of representatives from the different locals.

National Council.

(a) That there be established a direct touch between each local federated council and a National Engineering Council composed of delegates from as many National engineering societies as are willing and worthy to participate.

(b) That through the medium of the National and the local federated councils there be perfected a working arrangement for engineering cooperation in all public affairs where such is desirable.

Engineering Congress.

That there be inaugurated the custom of periodically holding an Engineering Congress, the delegates to which should be selected from all parts of the country under a plan to be developed for suitable representation, this Congress to consider and take action on such matters of general interest to engineers and to the public as may merit its attention and as have been previously advertised, for a sufficient length of time, to permit locals everywhere to give them consideration and when possible to send instructed delegates.

Engineering Curricula.

The second reason, namely, a possible modification of the engineering curricula of our technical schools and colleges while perhaps of underlying and fundamental importance not only did not have the general consideration of many of the Sections in their local deliberations but was nearly crowded off the Lake Placid program by the press of other matters. It was, however, the unanimous view of the members attending the sessions at Lake Placid that this matter should receive early and thorough consideration by the Institute, and the following preamble and resolution was there presented and adopted:

> As the individual engineer cannot look for greater public recognition or individual advancement than his training and fitness warrant.
>
> And, in the belief that the bigger development of the profession consists in broader social and public service by publicly-minded engineers,
>
> Recognizing that on the one hand young engineers are employed for too long a period at work which does not stress their capabilities and, on the other, that the demands of industry for ever-increasing numbers of technicians must be supplied,
>
> And having in mind the excellent precedents established by the medical and legal professions,
>
> This Committee would welcome the establishment at the earliest date practicable of a normal six years' collegiate course in engineering, two years of which at the least should be devoted to training in the humane arts and sciences including, for example, Political Science, Economics, History and General Letters; the last four years being devoted to sound training in the sciences and in only the fundamentals of diversified engineering.
>
> With or prior to such a development we would endorse a program for the marked extension of vocational training in the industrial centers in order that the needs of industry may be met.
>
> To the accomplishment of these ends this Committee requests the appointment of representatives to serve on a Joint Committee of Engineering Organizations to promote such a national educational program as shall provide for the future necessities of the engineering profession consistent with the needs of society.

Student Branches.

Closely allied to the consideration of curricula is our policy toward the student branches, and the Chairman of the Institute

Committee on Branches attended the Lake Placid session and was good enough to bring this question forcibly to the attention of the Committee. Whereupon, a motion was adopted that a Committee of the Institute be appointed to confer with the branch representatives and recommend what if any changes should be made in relationship of the branches to the Institute and to development in order that this very important part of Institute activities should have full consideration and be given the attention which it merits.

Conferences with Other Engineering Societies.

While the Board's resolution did not specifically instruct the Development Committee to confer with similar Committees from the other National Engineering Societies, the Chairman was informally advised by the President that where such conferences could expedite and help to crystalize the view point of the several organizations concerned without committing the Institute to any line of action they would be desirable. Responding, therefore, to a suggestion from the Development Committee of the American Institute of Mining and Metallurgical Engineers and to an invitation from a similar Committee from the American Society of Mechanical Engineers, Messrs. Scott, Robinson and the Chairman have conferred with representatives from the Development Committees of the American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers and the American Society of Mechanical Engineers, and discussions are in progress relative to joint action by the several societies represented. These discussions have not as yet proceeded far enough to indicate what if any recommendations to the several governing bodies may be agreed upon but it is gratifying to be able to report progress and state that the spirit of cooperation manifested by the other conferees is a good omen.

All of which is respectfully submitted,

COMMITTEE ON DEVELOPMENT,

CALVERT TOWNLEY,
Chairman.

August 12, 1919.

BOARD OF DIRECTORS, 1919-1920.

PRESIDENT.

D. W. Roper,
C. S. Ruffner,
R. F. Schuchardt,
A. E. Silver,
W. K. Vanderpoel.

INSTITUTE REPRESENTATIVES.

BOARD OF AWARD, JOHN FRITZ MEDAL.

H. W. Buck, John J. Carty,
E. W. Rice, Jr., Comfort A. Adams.

BOARD OF TRUSTEES, UNITED ENGINEERING SOCIETY.

Calvert Townley, L. T. Robinson,
Samuel Sheldon.

LIBRARY BOARD OF UNITED ENGINEERING SOCIETY.

Edward D. Adams, W. I. Slichter,
Samuel Sheldon, Alfred W. Kiddle,
F. L. Hutchinson.

ELECTRICAL COMMITTEE OF NATIONAL FIRE PROTECTION ASSOCIATION.

The chairman of the Institute's Committee on Safety Codes.

JOINT COMMITTEE ON ENGINEERING EDUCATION.

Charles F. Scott, Samuel Sheldon.

COUNCIL OF AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

H. H. Humphrey, John B. Taylor.

ADVISORY BOARD OF AMERICAN YEAR-BOOK.

Edward Caldwell.

U.S. NATIONAL COMMITTEE OF THE INTERNATIONAL ILLUMINATION COMMISSION.

A. E. Kennelly, C. O. Mailloux,
Clayton H. Sharp.

NATIONAL JOINT COMMITTEE ON OVERHEAD AND UNDERGROUND LINE CONSTRUCTION.

Farley Osgood, Percy H. Thomas.

JOINT COMMITTEE ON STANDARD THREAD FOR INSULATORS AND INSULATOR PINS

J. T. Barron.

SPECIAL JOINT COMMITTEE ON DETERMINATION OF POWER FACTOR IN POLYPHASE CIRCUITS

P. G. Agnew, F. C. Holtz,
F. Conrad, A. E. Kennelly,
F. P. Cox, Farley Osgood,
S. G. Rhodes.

AMERICAN COMMITTEE ON ELECTROLYSIS.

Bion J. Arnold, F. N. Waterman,
Wm. S. Murray.

ENGINEERING COUNCIL.

H. W. Buck, N. A. Carle,
E. W. Rice, Jr., Comfort A. Adams,
C. E. Skinner.

ENGINEERING DIVISION, NATIONAL RESEARCH COUNCIL.

C. A. Adams, Frank B. Jewett,
W. R. Whitney.

ENGINEERING FOUNDATION BOARD.

Frank B. Jewett, E. W. Rice, Jr.

NAVAL CONSULTING BOARD

Benjamin G. Lamme, Frank J. Sprague.

AMERICAN ENGINEERING STANDARDS.

Comfort A. Adams, N. A. Carle,
H. M. Hobart.

AMERICAN BUREAU OF WELDING

W. L. Merrill.

COMMISSION OF WASHINGTON AWARD

Charles F. Scott, John Price Jackson.

LOCAL HONORARY SECRETARIES.

Charles le Maistre, 28 Victoria St., London, S. W., England.
Guido Semenza, N. 10 Via S. Radegonda, Milan, Italy.
Robert Julian Scott, Christchurch, New Zealand.
T. P. Strickland, 61 Hunter St., Sydney, N. S. W.
W. G. T. Goodman, Adelaide, South Austrailia.
James S. Fitzmaurice, Adelaide, South Australia.
L. A. Herdt, McGill Univ., Montreal, Que.
Henry Graftio, Ministry of Ways of Communication, Petrograd, Russia.
A. S. Garfield, 10 Rue de Londres, Paris, France.
Harry Parker Gibbs, Tata Hydroelectric Power Supply Co., Ltd., Bombay, India.
John W. Kirkland, Johannesburg, South Africa.

LIST OF SECTIONS

Revised to June 1, 1919

Name and when Organized	Chairman	Secretary
Atlanta Jan. 19, '04	A. M. Schoen	Thomas C. Taliaferro, S. E. Underwriters Ass'n., Atlanta, Ga.
Baltimore Dec. 16, '04	J. B. Whitehead	L. M. Potts, Industrial Bldg., Baltimore, Md.
Boston Feb. 13, '03	I. E. Moultrop	Ira M. Cushing, 84 State St., Boston, Mass
Chicago 1893	A. F. Riggs	A. C. King, 8 So. Dearborn St., Chicago, Ill.
Cleveland Sept. 27, '07	B. W. David	W. D. Smoot, Willard Storage Battery Co., Cleveland, Ohio.
Denver May 18, '15	H. S. Evans	R. B. Bonney, 603 Wyoming Bldg., Denver, Colo.
Detroit-Ann Arbor Jan. 13, '11	J. C. Parker	C. E. Wise, 845 Book Bldg., Detroit, Mich.
Erie Jan. 11, '18	J. C. Barry	P. B. Mansfield, Lawrence Park, Erie, Pa.
Fort Wayne Aug. 14, '08	C. I. Hall	O. B. Rinehart, 1211 W. Jefferson Street, Fort Wayne, Ind.
Indianapolis-Lafayette Jan. 12, '12	Gordon E. Varney	D. C. Pyke, Public Service Commission, State House, Indianapolis, Ind.
Ithaca Oct. 15, '02	Alexander M. Gray	John G. Pertsch, Jr., Cornell Univ., Ithaca, N. Y.
Kansas City, Mo. Apr. 14, '16	W. F. Barnes	W. F. Barnes, 1012 Baltimore Ave., Kansas City, Mo.
Los Angeles May 19, '08	Clem A. Copeland	R. W. Sorensen, Throop College of Technology, Pasadena, Cal.
Lynn Aug. 22, '11	L. E. Underwood	Fred E. Ewart, General Electric Company, West Lynn, Mass.
Madison Jan. 8, '09	C. M. Jansky	L. E. A. Kelso, University of Wisconsin, Madison, Wis.
Milwaukee Feb. 11, '10	H. P. Reed	F. J. Mayer, Wisconsin Tel. Co., Milwaukee, Wis.
Minnesota Apr. 7, '02	Meyer Barnert	J. D. Marshall, 510-3rd Ave., So., Minneapolis, Minn.
Panama Oct. 10, '13	Wm. T. O'Connell	M. P. Benninger, Box 174, Balboa Heights. C. Z.
Philadelphia Feb. 18, '03	C. E. Clewell	Ross B. Mateer, Philadelphia Electric Co., 1000 Chestnut St., Philadelphia, Pa.
Pittsburgh Oct. 13, '02	J. G. Carroll	W. L. Shafer, Rm. 522, 416-7th Ave., Pittsburgh, Pa.
Pittsfield Mar. 25, '04	R. E. Wagner	N. F. Hanley, Gen. Elec. Co., Pittsfield, Mass.
Portland, Ore. May 18, '09	W. D. Scott	E. H. LeTourneau, Portland Ry. Lt. & Pr. Co., Portland, Oregon.
Rochester Oct. 9, '14	R. H. Manson	W. C. Freeman, Stromberg Carlson Telephone Mfg. Co., Rochester, N. Y.
St. Louis Jan. 14, '03	J. L. Hamilton	H. G. Hake, Washington University, St. Louis, Mo.
San Francisco Dec. 23, '04	W. G. Vincent	A. G. Jones, 803 Rialto Building, San Francisco, Cal.
Schenectady Jan. 26, '03	C. S. Van Dyke	L. F. Millham, General Electric Company, Schenectady, N. Y.
Seattle Jan. 19, '04	J. Harisberger	T. C. Smith, Lighting Dept., Seattle, Wash.
Spokane Feb. 14, '13	J. E. E. Royer	Foster Russell, 1405 Old National Bank Bldg., Spokane, Wash.
Toledo June 3, '07	W. A. Hill	Max Neuber, 1257 Fernwood Ave., Toledo, Ohio.
Toronto Sept. 30, '03	Ashton B. Cooper	Daniel M. Fraser, Canadian General Electric Co., Toronto, Ont.

Section II.—Papers and Reports

Transatlantic Radio Communication. By E. F. W. Alexanderson, New York, October 1, 1919 1077
Principles of Radio Transmission and Reception with Antenna and Coil Aerials. By J. H. Dellinger, New York, October 1, 1919 1095
A Report on Electromagnetic Induction. By S. J. Barnett, Philadelphia, Pa., October 10, 1919 .. 1151
The Positions of Atoms in Metals. By A. W. Hull, Philadelphia, Pa., October 10, 1919 1171
The Vacuum Tube as a Generator of Alternating-Current Power. By John H. Morecroft and H. Trap Friis, Philadelphia, Pa., October 10, 1919 1193

Copyright 1919. By A. I. E. E.

Permission is given to reprint any paper after its date of presentation, provided proper credit is given.

Entered as matter of the second class at the Post Office, New York, N. Y., May 10, 1905 under the Act of Congress, March 3, 1879.

Acceptance for mailing at special rate of postage provided for in Section 1103, Act of October 3, 1917, authorized on August 3, 1918.

Published monthly by the A. I. E. E. at 33 West 39th Street, New York.
Under the Auspices of the Meetings and Papers Committee.
GEORGE R. METCALFE, Editor.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico, Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries. Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII OCTOBER, 1919 Number 10

JOINT A. I. E. E. AND I. R. E. MEETING IN NEW YORK

A joint meeting of the American Institute of Electrical Engineers and the Institute of Radio Engineers will be held in the Auditorium of the Engineering Societies Building, 33 West 39th Street, New York, on October 1, 1919, at 8:15 p. m.

Three papers will be presented as follows:

1. *Trans-Oceanic Radio Telegraphy*, by E. F. W. Alexanderson, of the General Electric Co.
2. *Telephone Repeaters*, by F. B. Jewett of the Western Electric Co. and B. Gherardi of the A. T. & T. Co.
3. *Principles of Radio Transmission and Reception with Antenna and Coil Aerials*, by J. H. Dellinger, of the Bureau of Standards.

PHILADELPHIA MEETING FRIDAY AND SATURDAY OCTOBER 10-11, 1919

A joint meeting of the A. I. E. E. and the A. P. S. will be held in Philadelphia at the Bellevue-Stratford Hotel on Friday and Saturday, October 10-11, 1919.

There will be a session of the American Physical Society Friday morning, a session of the American Institute of Electrical Engineers Friday afternoon, a Subscription dinner Friday at 6:00 p. m. and a joint session of the two societies Friday evening.

On Saturday morning there will be a session of the American Physical Society at the Leeds & Northrup Plant following an inspection of the plant, Saturday noon, a complimentary luncheon given by the Leeds & Northrup Company, followed by an automobile ride about Germantown. On Saturday afternoon there will be a regular session of the American Physical Society.

Opportunities will be afforded for technical excursions to the Welsbach factory and for steamer rides down the Delaware River.

Members of each society are cordially invited to participate in the sessions of the other society.

PROGRAM

Friday

9:00 a. m. to 2:30 p. m. (Clover Room)
Registration of Members and Guests.

9:00 a. m. (Clover Room)
Session of the Physical Society

Atomic Structure. Paper by P. W. Bridgeman and Irving Langmuir. Discussion by Saul Dushman and others. It is intended to make this interesting to engineers as well as physicists.

10:30 a. m. (Blue Room)
A. I. E. E. Board of Directors' Meeting.

2:30 p. m. (Clover Room)
Session of the A. I. E. E.

1. *The Arrangement of Atoms in Metals*, by Dr. A. W. Hull of the General Electric Research Laboratory. An X-ray study of crystal structures, a demonstration with models of crystals will be shown. (Written for engineers.)

2. *The Oscillating Vacuum Tube as a Generator of Electrical Power*, by Professor J. H. Morecroft and H. T. Friis both of Columbia University. Lantern slides of oscillograph records.
3. *Electromagnetic Induction*, by Dr. S. J. Barnett of the Carnegie Institute, Washington.
4. *Piezo Electric Effect*, by A. M. Nicholson of the Western Electric Company. (Demonstration).

6:00 p. m. (Stratford Room)

Informal Dinner. $2.50 per person. Short talks by the Presidents of both Societies.

8:00 p. m. (Clover Room)

Joint A. I. E. E. and A. P. S. Session

Technical papers by Prof. H. A. Bumstead of Yale University, and Mr. J. J. Carty, Vice-president of the American Telephone and Telegraph Company.

Saturday

10:00 a. m.

Session of the Physical Society

Inspection of the Leeds and Northrup Company's plant.

Two semi-technical papers by the Research Laboratories of the Leeds and Northrup Co.

12:00 noon

Complimentary Luncheon by the Leeds and Northrup Company.

Automobile ride about Germantown.

2:30 p. m.

Session of the American Physical Society, Regular American Physical Society Papers.

Entertainment

There will probably be opportunity for technical excursions to the Welsbach factory or a steamer ride on the Delaware River to Chester at 10:30 Friday morning. The steamer ride will be available Saturday morning also.

Committee Meetings

Several A. I. E. E. Committee meetings will be held in accordance with notices sent to committee members.

PAST SECTION MEETINGS

Lynn.—July 23, 1919, 42 Center Street, West Lynn. Address by Professor Elihu Thomson on "Mars and Its Inhabitants." Attendance 98.

Panama.—July 27, 1919, U. S. S. New Mexico. Inspection trip to the U. S. S. New Mexico anchored in Panama Bay. Attendance 235.

August 31, 1919, Mount Hope. Inspection trip to the New Cold Storage and Ice Manufacturing Plant. Attendance 50.

STANDARDIZATION AN AID TO WORLD PEACE

At the dinner given in honor of Mr. Charles LeMaistre, Secretary of the British Engineering Standards Association, by the American Engineering Standards Committee, the guest of the evening expressed the opinion that one of the strongest ties which c[illegible] bind two or more nations together [illegible] ring and industrial standardi[illegible]

This, the first functio[illegible] en by the American Engin[illegible] ndards Committee, took pla[illegible] ngineer's Club, New Yor[illegible] Thursday evening Septemb[illegible] It was attended by more [illegible] ty engineers representing practically every organization interested in the development of standards.

Responding to the invitation of Chairman Comfort A. Adams, who acted as Toastmaster, Mr. LeMaistre said in part:

"Human language is but a very poor interpreter of the highest thoughts of the human mind and I must plead with you and ask your indulgence as I can only be but a poor interpreter of the very high ideals which the British

Engineering Standards Association has always set before it. The B. E. S. A. was formed in 1901 at the instance of Sir John Wolfe Barry, the doyen of our engineering profession, and it was through his able guidance during some sixteen years of the most important period of its existence that the Association gradually gained the confidence of the people. We are now an organization of some three hundred committees and twelve hundred members who give their time fully to the work."

"Though much of the work of our committees is done in London many of them meet in the centers where the particular standard under discussion is manufactured. This assures at the very outset that those people who are going to use the standards and who are in daily contact with the apparatus involved, and who have the closest knowledge of the details, shall put up the first proposals. This is not quite what we used to do but we realize more and more that standardization is, shall I say, 15 per cent technical and 85 per cent human. Standardization is an industrial matter and it is the industry that should put up the standards and get the help of the engineers and experts to support them."

"I hardly like to go into a discussion of the general principles of standardization because I should feel that I was talking to my masters. However, we agree that standardization means efficient production. It can only be effective when overlapping is avoided. Overlapping can only be obviated by the operation of some central organization, which we have provided in Great Britain with wonderful effect. We find now that overlapping of effort is becoming less and less each year and the B. E. S. A. is becoming more and more recognized as the central authority for drawing up standards for engineering and allied industries."

"During the last year or two I have received at my office numbers of letters from America inviting cooperation and I have always been in some difficulty to know how to reply. Take for instance the Electrical industry which has in this country at least a dozen organizations doing standardizing work. A request from one of these could not be accepted as from all. My association feels that, at the present important stage of the development of the work and of the closer relationship with the United States, if only we could get coordination of standardization on both sides of the water, one central authority on each side, it would not only help our industries enormously, but we could work hand in hand on these technical problems which involve this complicated human factor. And in doing this big work we would surely be no mean influence in promoting the peace of the world."

Following Mr. LeMaistre's address Chairman Adams called for responses from the representatives present. Dr. C. O. Mailloux spoke as the Chairman of the American Committee of the International Electrotechnical Commission, and as a close friend and admirer of Mr. LeMaistre. Mr. Nelson P. Lewis, past president and representative of the American Society of Civil Engineers, pledged the support of his Society of the contemplated development of the American Committee. Professor Charles F. Scott, representing the American Institute of Electrical Engineers, reviewed the beginnings of electrical standardization in America which he regarded as the basis of international electrical standardization accomplished so far. Mr. Edwin M. Herr represented The American Society of Mechanical Engineers and also spoke for this Society. Mr. Guilliaem Aertsen of the American Society for Testing Materials introduced a pleasing analogy to emphasize the necessity for developing team work which helps not only the team but the individual as well.

Dr. S. W. Stratton, Director of the Bureau of Standards, reiterated the readiness of the Government Departments to cooperate in the development of the Committee's program, and Mr. Charles M. Manly, President of the Society of Automotive Engineers, pledged his Society. Mr. Ira H. Woolson represented the National Board of Fire Underwriters, Mr. A. Cressy Morrison spoke for the National Safety Council, Mr. G. H. Ramsdell told of the standardization work of the American Gas Association. Mr. B. F. Waterman represented the American Gear Manufacturers Association, Mr. Charles W. Baker spoke for the Technical Press, and Mr. D. Knickerbacker Boyd told of the great need of standardization in building materials and design.

NAVAL RADIO STATIONS FOR COMMERCIAL USE

A bill has been introduced in the House whereby the Secretary of the Navy is to be authorized to permit the use of radio stations under the control of the Navy Department for transmission and reception of commercial messages for the immediate benefit of American maritime, press and other interests. The Secretary is to prescribe regulations under which the naval stations will handle these messages, and he is to fix rates for same. News messages for news associations, etc., are not to exceed five cents per word between the Philippine Islands, the Hawaiian Islands and other Pacific and South Pacific islands, and the west coast of the United States. They are not to exceed the rate of six cents per word between Asia, Asiatic Islands and the west coast of the United States. Press and commercial messages shall be entitled to as speedy transmission as the interests of the government will permit.

The use of the Navy Department stations is not to be permitted where American owned and operated private radio stations of adequate power for transmitting messages are maintained and operated. Receipts from such service are to be turned into the Treasury as miscellaneous receipts.

TECHNICAL MEN FOR THE CONSULAR SERVICE

For the coming consular examinations the officials of the State Department have expressed their hope that a considerable number of technical men will take the examination. The Department recognizes that the interest of the United States will be served best if technical men are made available through these examinations for vacancies at points where their training will be of special value.

The salaries in this service have been notoriously unattractive, and the Department recognizes that the salary scale is more inadequate now than it ever has been, as a result of which the United States has lost much prestige in many communities where properly qualified Americans cannot be induced to accept positions. They now want retired engineers and other technical men who are in a position to put something into the service to take these consular examinations in which they can undoubtedly qualify for the best positions obtainable.

The industrial engineers who had passed the consular examination would be assigned to industrial centers of Europe or South America. Mining engineers, chemists, electrical engineers, etc., would be assigned to industrial centers requiring special training.

The consular examinations will be held in the late fall or early winter. No definite date has been fixed as yet.

ENGINEERING COUNCIL

U. S. Topographic Map.—On July 1 the Chairman of Engineering Council addressed a letter to President Wilson, an abstract of which follows:

Every industry, art and science, governmental or otherwise, which demands a knowledge of the lay of the land is dependent on suitable maps. The location of railways and highways; the planning of irrigation, drainage, and water supply projects; the prosecution of geological, soil and forest surveys; the development of water powers and the installation of electric power lines; the improvement and maintenance of inland waterways and the location of reservoir sites for flood relief and water conservation—all require good maps. If none are available special maps must be made with consequent increase of cost and loss of time, or the projects must be pursued with uncertainty.

By the word "map" is meant a topographic or relief map which gives a record of land elevations by contour lines, and all of the physiographic and cultural detail necessary to an accurate picture.

The official map work of the United States is now being prosecuted by twelve separate and distinct Federal agencies, the majority of which are making maps for special purposes, which maps are of little value for any other purpose. We are confident that if the aggregate efforts of Government were coordinated on the making of a base map of suitable accuracy and scale, it would serve for all Governmental as well as private purposes and could be adapted without great expense to any special or unusual purpose. The amount of money now being expended would, if converted into a well-coordinated mapping plan, produce better and more useful results than that which now can be shown by the aggregate production of all Government map-making agencies.

In addition to Government surveys some states, counties, cities and private organizations are engaged in this work. Each of the Federal agencies and the others above mentioned follows methods developed in its own surveys and the result is precisely that which might be expected. There is no agency in the United States which has authority to coordinate the work.

Engineering Council believes that the chaotic condition above described is wrong. It makes this presentation to the Executive because he is the one authority having jurisdiction over all of the Federal agencies above mentioned. It is the opinion of Council that the most purposeful way to bring order into map making and to expedite the completion of our topographic map is to appoint a "Board of Surveys and Maps" consisting of a representative from each of the present Federal map-making agencies, together with representatives from well-qualified map using agencies, which would be vested with authority to work out a plan of standardization and coordination of the work of the Government, and to report the same to the President for such action as he may find wise.

In order to give further definition to the present petition and to facilitate your consideration thereof, Engineering Council suggests the following unofficial bodies as the proper ones to participate in the work of the Board: American Society of Civil Engineers, American Institute of Mining and Metallurgical Engineers, American Society of Mechanical Engineers, American Institute of Electrical Engineers, American Association of State Geologists, National Research Council, American Association of State Highway Officials, and Engineering Council.

On August 27th a reply was received from President Wilson in which he stated he would arrange a conference for giving the matter most serious consideration.

The President directed the Secretary of War to call such a conference and General Black, Chief of Engineers, arranged this meeting for September 15th with representatives from the following Government offices:—Corps of Engineers, U. S. Coast & Geodetic Survey, U. S. Geological Survey, General Land Office, Post Office Department, Bureau of Soils, Reclamation Commission, Bureau of Roads, Indian Office, Mississippi River Commission, Survey of the Great Lakes and the Boundary Commission.

A resolution was adopted, declaring that a program of larger expenditure is imperative and that the coordination of existing map making activities is a necessary step if the public funds are to be used economically.

The chairman was authorized to invite to a future meeting representatives from Engineering Council, American Association of State Geologists, American Association of State Highway Officials, National Research Council, Geological Society of America, Association of Geographers, American Geographic Society and National Geographic Society. The representatives of those organizations will be asked to attend the meeting for the purpose of presenting to the Government representatives the various needs of map users.

Sub-committees of the main committee were later appointed. It will be the duty of these sub-committees to report back to the main committee, following which the representatives from engineering organizations will be called into conference.

Classification and Compensation of Engineers.—Supplementing the preliminary report of the Committee on Classification and Compensation of Engineers of Engineering Council published in the July PROCEEDINGS, the State and Municipal Section reports in part as follows:

A "Classification of the Civil Service of Canada" authorized by the Canadian Parliament and prepared under the direction of the Civil Service Commission has been objected to, particularly on the ground that the compensations proposed for higher grades of service are inadequate. In view of the investigation now being made on behalf of Engineering Council as to the classification and compensation of engineers in Federal, State, Municipal, and Railroad service, this report is of more than usual interest.

Engineering Council's Committee on Classification and Compensation for the State and Municipal services has tentatively proposed that all positions in these services be limited to 13 in number, of which 7 are distinctly professional, while the remaining 6 are in a class directly leading to professional work, but not necessarily of a professional character. In the questionnaire recently issued by the Committee the views of the responsible heads of the services affected are being sought, and in the responses which have been received up to the present writing, there has been practically unanimous agreement on the classification. The inquiry has not progressed far enough to warrant any expression as to the views concerning compensation other than to say that there is an unquestionably strong belief that if the engineering service is to be maintained on a proper plane, there must be a very substantial increase in pay.

The Canadian report appears to cover every position in the civil service. The objections raised appear to be well found. No attempt seems to have been made to standardize titles. Consequently there are in the engineering service at least 157 independent titles as compared with the 13 titles proposed by our Committee.

The report states that the compensations proposed are intended for "normal times" and that pending restoration of such times, the rates recommended should be "supplemented by a bonus," but no information appears as to the magnitude of the bonus.

From study of the report it would appear that the groups and ranges of compensation, tabulated as far as practicable under the classification tentatively proposed by Engineering Council's Committee are about as follows:

TABULATION OF TITLES AND SALARIES FOR ENGINEERS IN CANADIAN CIVIL SERVICE RDPORT UNDER CLASSIFICATION PROPOSED BY COMMITTEE OF ENGINEERING COUNCIL.

Tentative Classification of positions in State and Municipal Service proposed by Engineering Council's Committee on State and Municipal Service.	Salary range proposed for Canadian Service	
	Min.	Max.
Consulting Engineer	$6,000	
Chief Engineer (major work)	6,000	
Chief Engineer (minor work)	3,900	$6,000
Chief Engineer—Deputy	3,900	5,700
Engineer	3,300	4,500
Senior Assistant Engineer	2,640	3,480
Assistant Engineer	2,100	3,120
Junior Assistant	1,680	2,160
Senior Draftsman	Included in Professional Service	
Draftsman	1,260	
Junior Draftsman	900	
Chief Instrumentman	Included in Professional Service	
Instrumentman	1,260	
Rodman	900	

In general, promotion through most of the grades is by increments of about $120, the minimum and maximum rates of each being respectively higher and lower than the rates fixed for the grades below and above, this resulting in a comparatively small salary range for each position and in this respect corresponding with what seems to have been the general practise heretofore. This treatment is one which it would seem desirable to modify to the end that the relative ability and experience of men performing similar work may be given adequate recognition.

Exceptions are noted in the case of "Topographical Engineer," where a salary range of from $2,160 to $3,120 is proposed, and in the case of promotion from "Junior Electrical Engineer" at a maximum salary of $1,980 to "Electrical Engineer" with a minimum salary of $2,640, each of the two latter grades having an extreme salary range of only $360. In the case of "Chief Draftsman," "Structural Engineer," and "Chief Topographical Engineer" maximum salaries are proposed of $3,000, $3,240, and $3,840, with no provision for promotion to other engineering grades, although for each position the qualifications required are such as to indicate ability to progress to high positions in the service.

The table also shows that only 6 engineering positions are open to compensation at a rate of more than $6,000 per annum.

It would seem that this report is open to serious criticism on the grounds that it fails to group engineering service along orderly lines, that it provides too narrow limits for promotions within a grade, and that the compensation proposed for all grades, is inadequate for the service rendered. The latter criticism seems particularly pertinent in comparison with the rates now being demanded by organized labor. The practicability of properly meeting present day conditions by the addition of a "Special War Bonus" to the proposed rates in order to meet the present high cost of living is also to be questioned on the ground that, and as set forth in the circular letter issued by Council's Committee on Classification and Compensation of State and Municipal Engineers, the "revolutionary change in the cost of living" is one which "unless modified by further economic disturbance is likely to be permanent or to continue for a long time to come."

Laws for Licensing of Engineers.—According to the best information obtainable by the License Committee of Engineering Council, laws providing for licensing of engineers are on the statute books of the following eleven States: Wyoming, 1907; Louisiana, 1908, (Amended 1914); California, 1908; South Dakato, 1913; Illinois, 1915; Idaho, 1915; Florida, 1917; Oregon, 1919; Colorado, 1919; Michigan, 1919; Iowa, 1919.

The License Committee is working on a draft of a typical bill which, it is intended, can be used if necessity should arise in States proposing new legislation on this subject, or in those proposing revisions so that laws enacted for licensing engineers may be uniform, or nearly so, throughout the country.

Engineering Council, however, has as yet taken no stand on the desirability of licensing or registering of engineers. It desires to learn the opinions of engineers in various branches of the profession in all parts of our country; also to secure soon all information that would be helpful to the committee.

The earnest assistance of members of the Institute is asked in getting the needed opinions and information.

Please address all letters to ALFRED D. FLINN, Secretary; Engineering Council, 29 West 39th St., New York.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired. All replies should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-541. Wanted: Design Engineer experienced in modern substation and power plant layouts. Loaction New York City. Give details of experience and salary expected.

V-564. Production Manager, for Chicago works of electric motor and dynamo factory. One who is thoroughly experienced in modern production methods. Give full details of experience, age, references, etc.

V-568. Electrical Draftsman, with high grade experience in circuit and diagram work. Give details as to experience and salary desired.

V-569. Draftsmen and designers wanted by prominent manufacturing concern located in middle West. Men familiar with the design of electrical apparatus and with considerable mechanical experience preferred. Splendid opportunity for men released from the Army or Navy who have not as yet found permanent positions. In reply please cover the following information: education, experience, age and salary expected.

V-570. Canadian manufacturing concern located in Toronto, Ontario, desires services of a young man having some experience in designing panel boards and switchboards. Work consists of making practical working drawing and material lists used in construction of panels and switches. Salary $1500 per year. Good opportunity for advancement.

V-571. Wanted: Engineers with experience in the design of induction motors; also, an assistant engineer who has had experience in the design of transformers. Applicants should state qualifications and experience in detail. Location, Canada.

V-574. Graduate in electrical engineering qualified to serve as instructor, or assistant instructor, in the Dept. of

E. E. of an Eastern college. Prefer man who has had at least one year's practical experience since graduation; salary dependent upon qualifications.

V-575. We require the services of several experienced electrical testers, or young technical men desiring general test experience. Apply personally or write, giving detailed description of experience, schooling, age and nationality. Plant located at Ampere station on D. L. & W. R. R., approximately 55 minutes from New York City. Employment Dept., Crocker-Wheeler Electric Co., 4th Ave., Ampere, (East Orange), N. J.

SERVICES AVAILABLE

1415. Former Captain of Engineers available for high grade position with power or street railway property. Graduate electrical engineer, 17 years experience, civil, electrical, hydraulic, power development and irrigation, some teaching. Technical and executive ability. Now on Pacific Coast. Salary $3600.

1416. Graduate in electrical engineering course; two years experience as draftsman. Desires position with opportunity for advancement according to ability. Initial salary not important.

1417. Graduate Electrical Engineer, age 27, desires a position in the production end of engineering, with a growing manufacturer. Has had two years executive experience in general consulting department of large corporation, controlling other engineers and draftsmen, with limited production experience in small factory manufacturing intricate brass mechanisms. Salary $2500.

1418. Electrical Engineer (practical) good technical education. Nineteen years electrical experience. Five years with industrial engineering concern on isolated plant, layout and installation, five years with central station on design and construction in central and substation high-tension work; desires a responsible position. Married; age 37. Present position pays $2600.

1419. Electrical Engineer, technically trained, foreign and domestic experience, conversant in design, manufacture and production of electrical instruments, meters, relays, circuit-breakers and switching apparatus for high and low tension. Can introduce new designs. Requires responsible position. Competent to take up an interest in business. Age 37; married. Salary $3600 to $4800.

1420. Central station executive electrical engineer of 18 years experience with large urban system. Fel. A. I. E. E., Mem. N. E. L. A., E. C. S., etc., is desirous of associating himself in an engineering or managerial capacity, with a progressive property. Available after January 1.

1421. Young electrical engineer, American who can speak German; age 24; A. I. T. graduate of 1919; mechanically inclined; also radio engineer, desires position offering a good future, preferably in the western part of the United States.

1422. Electrical Engineer, age 25, single, desires change. Five years substation and power plant operation, testing; five years installation and operation street lighting and water system. Prefer similar work as plant electrical engineer or chief electrician industrial plant. Location optional. Salary $2500.

1423. College graduate electrical engineer, 26 years old, four years experience traffic and office work in large telephone and telegraph company desires an office position in New York City or vicinity in which good opportunities for advancement are offered. Excellent technical and business correspondent. Minimum salary to start $170. Available on month's notice to present employer.

1424. Electrical and Mechanical Engineer, age 37, married, university graduate E. E., Mem. A. I. E. E. Fourteen years experience, the last ten years as electrical and mechanical engineer for large mining company in charge of installation, operation and maintenance of all power plant equipment, electrical equipment, air compressors, etc. Minimum salary $3600.

1425. Electrician, technical and practical, 22 years experience. Traveled on the road for two of the largest companies, on electrical construction of power plants, industrial motor control systems, coal hoists, cranes, rolling mills, etc. Familiar with winding and commutation troubles.

1426. Graduate electrical engineer, three years experience in test room and laboratory of large electrical concern. Desires a position as electrical engineer in manufacturing or power plant work. Eastern states preferred. Salary $2400.

1427. A graduate electrical engineer of ten years experience, just returned from thirteen months overseas with the A. E. F., and now serving as a Captain of Engineers, expects to be discharged from service on September 30, desires a position on construction work, or with a live manufacturing concern.

1428. Electrical-Mechanical Engineer with five years experience in steam power plant design and construction, general construction and cost estimates. Technical graduate of proven ability. Salary $3000 per year. New York City.

1429. Technical graduate, age 25, married. Have completed an accounting course, two years General Electric and other test work, two years inspection and accounting, electrical equipment installation. Desire permanent position offering good future. Eastern location preferred.

1430. Electrical-Mechanical 1909. Students course order department, construction, sales engineer, electrical manufacturer. Service manager. Engineer and purchasing agent U. S. Government $400,000 electrical work. Desires to leave Government service. Married. Salary for past three years over $3000.

1431. Electrical Engineer, technical graduate, eight years experience in factory construction and field installation of electric machinery and turbines, and operation of power plants and transmission systems; during past two years and at present district manager of gas, water and electric properties of large holding company. Minimum salary $3000.

1432. Graduate electrical engineer. Operating experience, sub- and hydraulic generating stations on high tension system. G. E. test. Experience wide and varied in electrical power apparatus. Of analytical, ingenious and initiative mind. At present cover several states investigating and remedying trouble in application of apparatus manufactured by one of largest companies. Desire change from travelling where experience and qualifications will be of value.

1433. Electrical and Mechanical Engineer desires position as electrical construction engineer or sales engineer for power machinery. General Electric course two years; design and installation of power plants two years; two years U. S. Engineer Corps.

1434. Technical graduate, 25 years of age. Two years Westinghouse test, transformers and large rotating electrical machinery. Desires position with power company as assistant to chief electrical engineer or manager. Salary to start $2000.

1435. Electrical Engineer, graduate E. E., age 26, married, at present in engineering office. Desires position in sales engineering or "live" manufacturing concern. Has had three and half years engineering experience, also teaching experience. Minimum salary $2000 Available on short notice.

1436. Public Utility Management Engineer, eight years experience investigating, developing, and managing properties and systems from central office, recently released from two years organization and technical work as Captain, Ordnance Dept., available immediately for management of properties, or as assistant to executive of holding companies. Graduate electrical engineer, age 32, salary $3000 to $3600.

1437. Electrical Engineer Executive, age 28, ex-Captain U. S. A. Administration of 4000 men on construction. Familiar with all branches public utility work, finance and accounting. Desires position where ability to make decisions and handle new situations counts more than long years of experience in some limited field.

1438. Graduate Electrical Engineer, age 28, with four years experience in construction, testing and operation of steam and hydro-electric power plants, desires a position in growing industry where chances for advancement are good. Minimum salary $2400.

1439. Electrical Engineering graduate of 1916. Three years experience in operation and manitenance of telephone and telegraph apparatus, motors, generators, rectifiers, and storage batteries, lighting and machine power layouts, desires position. Salary depends upon chance of advancement.

1440. Technical Graduate, age 27, married, desires position as assistant to Electrical Engineer, Supt. Const., doing large business or Works Manager of electrical manufacturing company. Two and a half years testing motors and generators (a-c. and d-c.) 1 year tele. central station construction, 4 years electric wiring for light, heat and power. Also two years machine shop practice. Minimum salary $1800.

1441. Electrical Engineer, technical graduate, with broad practical engineering experience. Capable and accustomed to handling engineering problems. Eight years experience in power plants and electrical construction work. Desires responsible position with construction or operating company or consulting engineer. Ohio or adjoining states preferred. Age 36. Salary $3000. Available on reasonable notice.

1442. Able organizer and executive who has made good. At present employed; seeks position with concern wishing to lower costs and better product. Experienced in production, systematizing, costs inspection and designing labor saving appliances, including machine tools and small tools, particularly for electrical manufacturing. Age 33. Salary $10,000.

1443. Electrical Engineer, engaged in hydroelectric design, construction and operation in South America, will consider change to company where free hand is given. Technical training with fifteen years' experience in hydroelectric field. Available early next year. Might arrange to leave in three months. Salary $6000 in Latin America, Spain or the Philippines, or $4500 in U. S. A.

1444. Engineering graduate; seven years experience in electrical construction, test and operation of central station—150,000 kw. capacity. At present employed, but desires position with power or construction company affording opportunity for greater service and responsibility. Married, age 26. Location preferred—Pennsylvania.

1445. Technical graduate, age 33, two years General Electric test, seven years experience in operation, testing and installing, foreman of test past six months with prominent electric manufacturing company. Available on short notice. Salary $2400.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is located on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Ph tostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who may desire it will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a m. to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a.m. to 6 p.m.

Book Notices.—(August 1–August 31, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

BOILER FEED WATER:

A Concise Handbook of Water for Boiler Feeding Purposes (Its Effects, Treatment, and Analysis). By Percy G. Jackson. Lond., Charles Griffin & Co., Ltd.; Philadelphia, J. B. Lippincott Co., 1919. 102 pp., 7 x 5 in., cloth, $2. (Gift of J. B. Lippincott Company).

CONTENTS: Mineral Constituents—Corrosion—Softening—Selection of Softening Plates—Priming—Scale, Grease, and Overheating—Methods of Analysis—Analysis of Scale—Control Tests for Water Softening—Sampling—Solutions—Appendix: List of Factors—List of Atomic Weights—Clark's Table of Hardnesses.

This volume is intended to be a reliable, concise and practical compendium of information on boiler waters and feed water troubles. It is based on long experience as chemist to an English boiler insurance company.

ELECTRIC POWER TRANSMISSION:

Principles and Calculations, including a Revision of "Overhead Electric Power Transmission." By Alfred Still. 2nd edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 407 pp., illus., tables, 9 x 6 in., cloth, $3.50.

"Overhead electric power Transmission" was written to provide a discussion of the fundamental principles and scientific laws determining the correct design of overhead transmission lines, suited to the needs of the office engineer in charge of calculations and specifications. The addition of a chapter on underground conductors has now made it necessary to alter the title. The work has also been thoroughly revised, obsolete matter has been omitted and new material added.

MANUAL OF THE CHEMICAL ANALYSIS OF ROCKS:

By Henry S. Washington. 3rd edition. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 12 + 271 pp., 1 pl., tables, 9 x 6 in., cloth, $2.50.

The author's object is to present a selection of methods for the analysis of silicate rocks, especially those of igneous origin, adapted to the needs of chemists, mining engineers, etc., who have not made a particular study of quantitative analysis.

The present edition has been thoroughly revised and considerably enlarged.

MECHANICAL DRAWING FOR HIGH SCHOOLS.

A Text with Problem Layouts. By Thomas E. French and Carl L. Svensen. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 221 pp., illus., tables, 9 x 6 in., cloth.

The object of this book is to present mechanical drawing as a definite educational subject by which the student's power of visualization may be developed and his constructive imagination strengthened, while he is also taught to think exactly, to understand and make mechanical drawings and to know modern drafting room practice.

The course outlined covers two years' work and is a complete textbook and book of problems.

THE NAVAL ARCHITECT'S, SHIPBUILDER'S AND MARINE ENGINEER'S POCKET-BOOK:

By Clement Mackrow and Lloyd Woolard. 12th edition. N. Y., The Norman W. Henley Publishing Co. 1918. 760 pp., illus., tables, 7 x 4 in., flexible cloth.

The twelfth edition of this pocket-book appeared two and one-half years after the eleventh, from which it differs by the correction of errors and the addition of seventeen pages containing supplementing notes on various sections of the book and an article on estimating the weight and cost of a merchant vessel.

In addition to the subjects usually discussed in such works, articles on aerodynamics and aeronautics are included.

STUDIES IN THE CONSTRUCTION OF DAMS: EARTHEN AND MASONRY.

Arranged on the Principle of Question and Answer for Engineering Students and Others. By Prof. E. R. Matthews. Lond., Charles Griffin & Company, Ltd.; Philadelphia, J. B. Lippincott Company, 1919. 43 pp., 30 illus., 9 x 6 in., paper, $1.50. (Gift of J. B. Lippincott Co.)

This book is intended for students preparing for examinations, especially those for associate membership in the Institution of Civil Engineers, or the Institution of Municipal and County Engineers, or for the degree of bachelor of science in engineering in universities.

A TEXT-BOOK OF HEAT ENGINES:

By Andrew Jamieson. Vol. 1. 18th edition. Revised by Ewart S. Andrews. Lond., Charles Griffin & Co., Ltd., 1919. 551 pp. 8 x 5 in., cloth, $3. (Gift of J. B. Lippincott Company).

This volume is a revised edition of Professor Jamieson's "Textbook on steam and steam engines." with the omission of the chapters on steam turbines and boilers. The omitted chapters, with others on thermodynamics, entropy and internal combustion engines, will appear in volume two.

PERSONAL

Clarence J. Berry who for the last six years has been connected with National Lamp Works of G. E. Company, Cleveland, has resigned and accepted a position as electrical engineer with Brandt and Fouilleret, Paris, France.

J. P. Schroeter, for the last two years with the School of Engineering of Milwaukee has accepted a position as designing engineer for the mechanical and electrical equipment of the new food plant to be erected by the Uihlein interests on Port Washington Road, North Milwaukee. The plant is being designed by A. W. Hoffmann, 410 Berlin Arcade Building, Milwaukee.

OBITUARY

Henry A. Reed, President of the Bishop Gutta Percha Company, died at his residence, 88 North 9th Street, Newark, N. J. on August 23. Mr. Reed in the earliest days of the electrical industry assisted Prof. Morse in his telegraph experiments. In 1887 he became associated with Bishop Gutta Percha Co. as Manager. Mr. Reed was elected an Associate in the Institute in 1889 and Member in 1913.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated, the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate, the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before October 31, 1919.

G. FACCIOLI	F. F. FOWLE
FRANK D. NEWBURY	L. F. MOREHOUSE

(Term expires July 31, 1920)

TREASURER	**SECRETARY**
GEORGE A. HAMILTON	F. L. HUTCHINSON

HONORARY SECRETARY	**DIRECTOR OF THE LIBRARY**
RALPH W. POPE	HARRISON W. CRAVER

GENERAL COUNSEL

PARKER and AARON,
52 Broadway, New York.

PAST PRESIDENTS—1884-1918

- *NORVIN GREEN, 1884-5-6.
- *FRANKLIN L. POPE, 1886-7.
- T. COMMERFORD MARTIN, 1887-8
- EDWARD WESTON, 1888-9.
- ELIHU THOMSON, 1889-90
- *WILLIAM A. ANTHONY, 1890-91.
- ALEXANDER GRAHAM BELL, 1891-2.
- FRANK JULIAN SPRAGUE, 1892-3.
- *EDWIN J. HOUSTON, 1893-4-5.
- *LOUIS DUNCAN, 1895-6-7.
- FRANCIS BACON CROCKER, 1897-8.
- A. E. KENNELLY, 1898-1900.
- CARL HERING, 1900-1.
- CHARLES P. STEINMETZ, 1901-02.
- CHARLES F. SCOTT, 1902-3.
- BION J. ARNOLD, 1903-4.
- JOHN W. LIEB, 1904-5
- SCHUYLER SKAATS WHEELER, 1905-6
- SAMUEL SHELDON, 1906-7.
- *HENRY G. STOTT, 1907-8.
- LOUIS A. FERGUSON, 1908-09.
- LEWIS B. STILLWELL, 1909-10
- DUGALD C. JACKSON, 1910-11.
- GANO DUNN, 1911-12.
- RALPH D. MERSHON, 1912-13.
- C. O. MAILLOUX, 1913-14.
- PAUL M. LINCOLN, 1914-15.
- JOHN J. CARTY, 1915-16.
- H. W. BUCK, 1916-17.
- E. W. RICE, JR., 1917-18.
- COMFORT A. ADAMS, 1918-19.

*Deceased.

INSTITUTE COMMITTEES.

Revised to October 1, 1919.

GENERAL STANDING COMMITTEES.

EXECUTIVE COMMITTEE

Calvert Townley, Chairman,
165 Broadway, New York.
N. A. Carle,
W. A. Hall,
George A. Hamilton,
L. F. Morehouse,
W. I. Slichter,
C. E. Skinner.

FINANCE COMMITTEE

N. A. Carle, Chairman,
Public Service Electric Co., Newark, N. J.
W. A. Hall,
L. F. Morehouse.

MEETINGS AND PAPERS COMMITTEE

W. I. Slichter, Chairman,
Columbia University, New York.
L. W. Chubb,
E. E. F. Creighton,
John H. Finney,
L. R. Jorgensen.
Chairman of Committee on Technical Activities and the chairmen of all technical committees.

EDITING COMMITTEE

Henry H. Norris, Chairman,
Electric Railway Journal, 10th Ave. & 36th St., New York.
L. W. Chubb,
F. F. Fowle,
Martin P. Rice,
W. I. Slichter.

BOARD OF EXAMINERS

F. L. Rhodes, Chairman,
195 Broadway, New York.
Murray C. Beebe,
H. N. Latey,
Wm. S. Murray,
H. H. Norris,
E. M. Sawtelle,
Clayton H. Sharp,
Wilfred Sykes,
H. S. Wynkoop.

SECTIONS COMMITTEE

Walter A. Hall, Chairman,
General Electric Co., West Lynn, Mass.
C. Francis Harding, Vice-Chairman.
Purdue University, Lafayette, Ind.
F. B. Jewett,
H. A. Pratt,
J. Lloyd Wayne, 3rd,
and the chairmen of all Institute Sections *ex-officio.*

COMMITTEE ON STUDENT BRANCHES

C. Francis Harding, Chairman,
Purdue University, Lafayette, Ind.
Alexander M. Gray,
A. C. Lanier,
J. C. Parker,
Charles F. Scott.

MEMBERSHIP COMMITTEE

R. W. Krass, Chairman,
W. E. & M. Co., 165 Broadway, New York City
Wills Maclachlan,
S. C. Medbery, Jr.,
G. S. Rose,
G. E. Stoltz,
and the Chairmen of all Membership Committees of sections.

PUBLIC POLICY COMMITTEE

H. W. Buck, Chairman,
49 Wall St., New York.
C. A. Adams,
N. A. Carle,
John W. Lieb,
A. C. Marshall,
Wm. McClellan,
C. E. Skinner.

LAW COMMITTEE

Samuel Sheldon, Chairman,
198½ Schermerhorn St., Brooklyn, N. Y.
John H. Finney,
F. B. Jewett,
Charles Robbins,
D. B. Rushmore,
Charles A. Terry.

HEADQUARTERS COMMITTEE

N. A. Carle, Chairman,
Public Service Electric Co., Newark, N. J.
William A. Del Mar,
F. L. Hutchinson.

U. S. NATIONAL COMMITTEE OF INTERNATIONAL ELECTROTECHNICAL COMMISSION

C. O. Mailloux, President,
20 Nassau St., New York.
F. B. Crocker, Vice-President,
A. E. Kennelly, Secretary,
Harvard University, Cambridge, Mass.
Comfort A. Adams
B. A. Behrend,
James Burke,
John J. Carty,
W. A. Del Mar,
Gano Dunn,
H. W. Fisher,
H. M. Hobart,
Dugald C. Jackson
B. G. Lamme,
W. S. Moody,
Charles Robbins,
E. B. Rosa,
David B. Rushmore,
Charles F. Scott,
Clayton H. Sharp,
C. E. Skinner,
S. W. Stratton,
Elihu Thomson,
R. B. Williamson.

COMMITTEE ON SAFETY CODES

Farley Osgood, Chairman,
80 Park Place, Newark, N. J.
(Others to be appointed)

COMMITTEE ON CODE OF PRINCIPLES OF PROFESSIONAL CONDUCT

George F. Sever, Chairman,
7 West 43rd Street, New York.
C. A. Adams,
A. H. Babcock
L. B. Stillwell,
Schuyler Skaats Wheeler

BOARD'S COMMITTEE ON TECHNICAL ACTIVITIES

Wilfred Sykes, Chairman,
Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.
G. Faccioli,
W. I. Slichter.

STANDARDS COMMITTEE

L. T. Robinson, Chairman,
General Electric Co., Schenectady, N. Y.

E. J. Cheney, Secretary
Public Service Commission, Albany, N. Y.

P. G. Agnew,
G. A. Anderegg
Frederick Bedell,
L. F. Blume,
James Burke,
G. A. Burnham,
P. H. Chase,
H. H. Clark
F. P. Cox,
E. B. Craft,
W. A. Del Mar,
F. M. Farmer,
H. W. Fisher,
F. C. Hanker,
H. M. Hobart,
H. H. Humphrey,
H. D. James,
P. Junkersfeld,
A. E. Kennelly,
G. L. Knight,
R. W. Krass,
C. O. Mailloux,
C. S. McDowell,
W. L. Merrill,
Taliaferro Milton
L. F. Morehouse
F. D. Newbury,
H. S. Osborne,
S. G. Rhodes
Charles Robbins
R. F. Schuchardt,
C. E. Skinner,
A. B. Smith,
John B. Taylor,
A. H. Timmerman,
W. K. Vanderpoel,
R. B. Williamson.

EDISON MEDAL COMMITTEE

Appointed by the President for terms of five years

Term expires July 31, 1920.

Carl Hering, Chairman, Harris J. Ryan,
Robert Lindsay.

Term expires July 31, 1921.

W. C. L. Eglin, Bancroft Gherardi,
E. W. Rice, Jr.

Term expires July 31, 1922.

Comfort A. Adams, L. A. Ferguson,
S. W. Stratton.

Term expires July 31, 1923.

Frederick Bedell, L. T. Robinson,
Calvert Townley.

Term expires July 31, 1924.

E. D. Adams, H. H. Barnes,
B. G. Lamme.

Elected by the Board of Directors from its own membership for terms of two years.

Term expires July 31, 1920.

Charles Robbins, C. E. Skinner,
W. I. Slichter.

Term expires July 31, 1921.

G. Faccioli, W. A. Hall,
Wilfred Sykes.

Ex-Officio

Calvert Townley, President,
George A. Hamilton, Treasurer,
F. L. Hutchinson, Secretary.

SPECIAL COMMITTEES.

SPECIAL COMMITTEE ON INSTITUTE PUBLICATIONS

W. I. Slichter, Chairman,
Columbia University, New York.

N. A. Carle,
W. A. Del Mar,
F. L. Hutchinson,
Harold Pender.

COMMITTEE ON DEVELOPMENT

Charles F. Scott, Chairman,
Sheffield Scientific School,
Yale University, New Haven, Conn.

F. F. Brand, Pittsfield, Mass.
H. E. Bussey, Atlanta, Ga.
J. C. Clark, Stanford University, Cal.
Ira M. Cushing, Boston, Mass.
R. H. Dalgleish, Washington, D. C.
W. A. Del Mar, New York, N. Y.
F. G. Dustin, Minneapolis, Minn.
H. W. Eales, St. Louis, Mo.
H. S. Evans, Boulder, Colo.
F. R. Ewart, Toronto, Ont.
Baxter R. Grier, Gatun, C. Z.
W. A. Hall, W. Lynn, Mass.
John Harisberger, Seattle, Wash.
W. F. James, Philadelphia, Pa.
Leslie Killam, Milwaukee, Wis.
J. J. Kline, Fort Wayne, Ind.
P. M. Lincoln, Pittsburgh, Pa.
Chas. A. Lund, Spokane, Wash.
J. E. Macdonald, Los Angeles, Cal.
A. S. MacDowell, Rochester, N. Y.
John C. Parker, Ann Arbor, Mich.
J. G. Pertsch, Ithaca, N. Y.
H. T. Plumb, Salt Lake City, Utah.
L. T. Robinson, Schenectady, N. Y.
A. M. Schoen, Atlanta, Ga.
R. F. Schuchardt, Chicago, Ill.
C. H. Schum, Erie, Pa.
W. D. Scott, Portland, Ore.
Samuel Sheldon, Brooklyn, N. Y.
G. E. Snider, Toledo, O.
N. W. Storer, Pittsburgh, Pa.
L. E. Underwood, W. Lynn, Mass.
H. L. Wallau, Cleveland, O.
J. W. Watson, Madison, Wis.
J. Lloyd Wayne, Indianapolis, Ind.
J. B. Whitehead, Baltimore, Md.

TECHNICAL COMMITTEES.

Revised to October 1, 1919.

ECONOMICS OF ELECTRIC SERVICE

C. S. Ruffner, Chairman,
The North American Company,
30 Broad Street, New York.

H. V. Bozell,
John B. Fisken,
W. S. Gorsuch,
L. G. Ireland,
A. H. Kruesi
J. F. Meyer,
S. G. Rhodes,
Allard Smith,
E. H. Sniffen,
P. B. Yates.

EDUCATIONAL

J. C. Parker, Chairman,
274 New Engineering Bldg., Ann Arbor, Mich.

C. R. Dooley,
F. F. Fowle,
Charles S. Howe,
C. E. Magnusson,
E. B. Merriam,
L. F. Morehouse,
G. H. Pfeiff,
H. W. Price,
R. F. Schuchardt,
W. I. Slichter,
William R. Work.

ELECTRICAL MACHINERY

B. A. Behrend, Chairman,
200 Devonshire St., Boston, Mass.

James Burke,
Alexander Churchward,
A. M. Dudley,
C. E. Eveleth,
G. Faccioli,
B. G. Lamme,
A. C. Lanier,
R. B. Williamson.

ELECTROCHEMISTRY AND ELECTROMETALLURGY

F. A. J. FitzGerald, Chairman,
FitzGerald Laboratories, Niagara Falls, N. Y.

F. F. Ambuhl,
E. R. Berry,
Joseph L. Dixon,
I. R. Edmands,
L. E. Imlay,
F. A. Lidbury,
W. R. Whitney,
J. L. Yardley.

ELECTROPHYSICS

F. W. Peek, Jr., Chairman,
General Electric Co., Pittsfield, Mass.

P. G. Agnew,
H. D. Arnold,
E. F. Burton,
L. W. Chubb,
J. C. Clark,
C. P. Eldred,
E. P. Hyde,
Chester W. Rice,
C. E. Skinner.

INDUSTRIAL AND DOMESTIC POWER

A. G. Pierce, Chairman,
2003 Farmers Bank Bldg., Pittsburgh, Pa.

P. H. Adams,
E. V. Buchanan,
H. W. Cope,
O. L. Coward,
James Dixon,
A. M. Dudley,
R. H. Goodwillie,
H. D. James,
W. C. Kalb,
R. H. McLain,
E. H. Martindale,
A. H. Timmerman,
L. E. Underwood,
H. Weichsel,
R. B. Williamson.

INSTRUMENTS AND MEASUREMENTS

S. G. Rhodes, Chairman,
104 E. 32nd St., New York.

C. W. Baker,
Wm. M. Bradshaw,
H. B. Brooks,
F. P. Cox,
F. V. Magelhaes,
Charles Robbins,
Clayton H. Sharp.

IRON AND STEEL INDUSTRY

W. F. James, Chairman,
1442 Widener Building, Philadelphia, Pa.

F. B. Crosby,
F. D. Egan,
Gordon Fox,
Eugene Friedlaender,
E. S. Jefferies,
W. C. Kennedy,
D. M. Petty,
Wm. T. Snyder,
Wilfred Sykes,
R. B. Williamson,
Fred H. Woodhull,
J. D. Wright.

LIGHTING AND ILLUMINATION

C. E. Clewell, Chairman,
University of Pennsylvania, Philadelphia, Pa.

G. N. Chamberlin,
J. R. Cravath,
Terrell Croft,
N. S. Dickinson,
Bassett Jones,
F. D. Newbury,
P. G. Nutting,
R. C. Powell,
E. B. Rosa,
W. D'A. Ryan,
W. M. Skiff,
G. H. Stickney.

MARINE

Arthur Parker, Chairman,
New York Shipbuilding Corp., Camden, N. J.

Eskil Berg,
L. C. Brooks,
A. R. Cheyney,
Maxwell W. Day
E. G. Gallagher,
H. L. Hibbard,
W. F. James,
W. F. Meschenmoser,
I. H. Osborne,
G. A. Pierce, Jr.,
J. B. Porter,
L. B. Sinclair,
H. M. Southgate,
Wilfred Sykes,
W. E. Thau,
A. E. Waller
F. W. Wood.

MINES

W. A. Chandler, Chairman,
H. C. Frick Coke Co., Scottsdale, Pa.

R. T. Andrae,
F. H. Armstrong,
Graham Bright,
L. C. Ilsley,
R. L. Kingsland,
A. B. Kiser,
Wills Maclachlan,
E. B. Woodward.

POWER STATIONS

Philip Torchio, Chairman,
124 E. 15th St., New York.

J. T. Barron,
A. E. Bauhan
E. T. Brandon,
H. W. Eales,
W. L. R. Emmet
W. S. Gorsuch,
H. P. Liversidge,
I. E. Moultrop,
Frank D. Newbury
H. S. Putnam,
R. F. Schuchardt,
H. L. Wallau,
R. B. Williamson.

PROTECTIVE DEVICES

D. W. Roper, Chairman,
72 West Adams Street, Chicago, Ill.

G. E. Armstrong,
P. H. Chase,
W. H. Cole,
E. E. F. Creighton,
H. W. Eales,
F. C. Hanker,
E. M. Hewlett,
F. L. Hunt,
P. MacGahan,
D. A. McKenzie,
A. A. Meyer,
L. C. Nicholson,
N. L. Pollard,
F. E. Ricketts,
Charles Robbins,
T. C. Taliaferro,
H. R. Woodrow.

TELEGRAPHY AND TELEPHONY

Donald McNicol, Chairman,
253 Broadway, New York.

O. B. Blackwell,
R. E. Chetwood,
E. H. Colpitts,
H. W. Drake,
W. B. Kouwenhoven,
L. F. Morehouse,
R. W. Osborne,
W. O. Pennell,
L. M. Potts,
S. A. Rhodes,
A. B. Smith,
D. M. Therrell,
W. H. Winter,
D. E. Wiseman.

TRACTION AND TRANSPORTATION

W. S. Murray, Chairman,
Room 2800, 165 Broadway, New York.

A. H. Babcock,
Reinier Beeuwkes,
R. H. Dalgleish,
W. G. Gordon,
John Murphy,
W. B. Potter,
Ralph H. Rice,
Guy A. Richardson,
C. S. Ruffner,
N. W. Storer,
H. M. Warren.

TRANSMISSION AND DISTRIBUTION

Edward B. Meyer, Chairman,
Public Service Electric Co., Newark, N. J.

J. E. Woodbridge, Vice-Chairman,
58 Sutter St., San Francisco, Cal.

R. W. Atkinson,
A. O. Austin,
Wallace S. Clark,
W. H. Cole,
A. W. Copley,
M. T. Crawford,
E. E. F. Creighton,
F. E. Ricketts,
D. W. Roper,
C. S. Ruffner,
R. F. Schuchardt,
A. E. Silver,
W. K. Vanderpoel.

INSTITUTE REPRESENTATIVES.

BOARD OF AWARD, JOHN FRITZ MEDAL.

H. W. Buck, John J. Carty,
E. W. Rice, Jr., Comfort A. Adams.

BOARD OF TRUSTEES, UNITED ENGINEERING SOCIETY.

Calvert Townley, L. T. Robinson,
Samuel Sheldon.

LIBRARY BOARD OF UNITED ENGINEERING SOCIETY.

Edward D. Adams, W. I. Slichter,
Samuel Sheldon, Alfred W. Kiddle,
F. L. Hutchinson.

ELECTRICAL COMMITTEE OF NATIONAL FIRE PROTECTION ASSOCIATION.

The chairman of the Institute's Committee on Safety Codes.

JOINT COMMITTEE ON ENGINEERING, EDUCATION.

Charles F. Scott, Samuel Sheldon.

COUNCIL OF AMERICAN ASSOCIATION FOR THE ADVANCEMENT OF SCIENCE.

H. H. Humphrey, John B. Taylor.

ADVISORY BOARD OF AMERICAN YEAR-BOOK.

Edward Caldwell.

U.S. NATIONAL COMMITTEE OF THE INTERNATIONAL ILLUMINATION COMMISSION.

A. E. Kennelly, C. O. Mailloux,
Clayton H. Sharp.

NATIONAL JOINT COMMITTEE ON OVERHEAD AND UNDERGROUND LINE CONSTRUCTION.

Farley Osgood, Percy H. Thomas.

JOINT COMMITTEE ON STANDARD THREAD FOR INSULATORS AND INSULATOR PINS

J. T. Barron.

SPECIAL JOINT COMMITTEE ON DETERMINATION OF POWER FACTOR IN POLYPHASE CIRCUITS

P. G. Agnew, F. C. Holtz,
F. Conrad, A. E. Kennelly,
F. P. Cox, Farley Osgood,
S. G. Rhodes.

AMERICAN COMMITTEE ON ELECTROLYSIS.

Bion J. Arnold, F. N. Waterman,
Wm. S. Murray.

ENGINEERING COUNCIL.

H. W. Buck, N. A. Carle,
E. W. Rice, Jr., Comfort A. Adams,
C. E. Skinner.

ENGINEERING DIVISION, NATIONAL RESEARCH COUNCIL.

C. A. Adams, Frank B. Jewett,
W. R. Whitney.

ENGINEERING FOUNDATION BOARD.

Frank B. Jewett, E. W. Rice, Jr.

NAVAL CONSULTING BOARD

Benjamin G. Lamme, Frank J. Sprague.

AMERICAN ENGINEERING STANDARDS.

Comfort A. Adams, N. A. Carle,
H. M. Hobart.

AMERICAN BUREAU OF WELDING

W. L. Merrill.

COMMISSION OF WASHINGTON AWARD

Charles F. Scott, John Price Jackson.

LOCAL HONORARY SECRETARIES.

Charles le Maistre, 28 Victoria St., London, S. W., England.
Guido Semenza, N. 10 Via S. Radegonda, Milan, Italy.
Robert Julian Scott, Christchurch, New Zealand.
T. P. Strickland, 61 Hunter St., Sydney, N. S. W.
W. G. T. Goodman, Adelaide, South Austrailia.
James S. Fitzmaurice, Adelaide, South Australia.
L. A. Herdt, McGill Univ., Montreal, Que.
Henry Graftio, Ministry of Ways of Communication, Petrograd, Russia.
A. S. Garfield, 10 Rue de Londres, Paris, France.
Harry Parker Gibbs, Tata Hydroelectric Power Supply Co., Ltd., Bombay, India.
John W. Kirkland, Johannesburg, South Africa.

LIST OF SECTIONS

Revised to October 1, 1919

Name and when Organized	Chairman	Secretary
Atlanta.........Jan. 19, '04	A. M. Schoen	Thomas C. Taliaferro, S. E. Underwriters Ass'n., Atlanta, Ga.
Baltimore.........Dec. 16, '04	J. B. Whitehead	L.M.Potts,Industrial Bldg.,Baltimore,Md.
Boston.........Feb. 13, '03	I. E. Moultrop	Ira M. Cushing, 84 State St.,Boston,Mass
Chicago.........1893	A. F. Riggs	A. C. King, 8 So. Dearborn St., Chicago, Ill.
Cleveland.........Sept. 27, '07	B. W. David	W. D. Smoot, Willard Storage Battery Co., Cleveland, Ohio.
Denver.........May 18, '15	H. S. Evans	R. B. Bonney, 603 Wyoming Bldg., Denver, Colo.
Detroit-Ann Arbor.........Jan. 13, '11	J. C. Parker	C. E. Wise, 845 Book Bldg., Detroit, Mich.
Erie.........Jan. 11, '18	J. C. Barry	P. B. Mansfield, Lawrence Park, Erie, Pa.
Fort Wayne.........Aug. 14, '08	C. I. Hall	O. B. Rinehart, 1211 W. Jefferson Street, Fort Wayne, Ind.
Indianapolis-Lafayette .Jan. 12, '12	Gordon E. Varney	D. C. Pyke, Public Service Commission, State House, Indianapolis, Ind.
Ithaca.........Oct. 15, '02	Alexander M.Gray	John G. Pertsch, Jr., Cornell Univ.,Ithaca, N. Y.
Kansas City, Mo.........Apr. 14, '16	W. F. Barnes	W. F. Barnes, 1012 Baltimore Ave., Kansas City, Mo.
Los Angeles.........May 19, '08	Clem A. Copeland	R. W. Sorensen, Throop College of Technology, Pasadena, Cal.
Lynn.........Aug. 22, '11	A. K. Warren	Fred E. Ewart, General Electric Company, West Lynn, Mass.
Madison.........Jan. 8, '09	C. M. Jansky	L. E. A. Kelso, University of Wisconsin, Madison, Wis.
Milwaukee.........Feb. 11, '10	H. P. Reed	F. J. Mayer, Wisconsin Tel. Co., Milwaukee, Wis.
Minnesota.........Apr. 7, '02	Meyer Barnert	J. D. Marshall, 510-3rd Ave., So., Minneapolis, Minn.
Panama.........Oct. 10, '13	Wm. T. O'Connell	M. P. Benninger, Box 174, Balboa Heights, C. Z.
Philadelphia.........Feb. 18, '03	C. E. Clewell	Ross B. Mateer, Philadelphia Electric Co., 1000 Chestnut St., Philadelphia, Pa.
Pittsburgh.........Oct. 13, '02	J. G. Carroll	W. L. Shafer, Rm. 522, 416-7th Ave., Pittsburgh, Pa.
Pittsfield.........Mar. 25, '04	R. E. Wagner	N.F.Hanley.Gen.Elec.Co.,Pittsfield,Mass.
Portland, Ore.........May 18, '09	W. D. Scott	E. H. LeTourneau, Portland Ry. Lt. & Pr. Co., Portland, Oregon.
Rochester.........Oct. 9, '14	R. H. Manson	W. C. Freeman, Stromberg Carlson Telephone Mfg. Co., Rochester, N. Y.
St. Louis.........Jan. 14, '03	J. L. Hamilton	H. G. Hake, Washington University, St. Louis, Mo.
San Francisco.........Dec. 23, '04	W. G. Vincent	A. G. Jones, 809 Rialto Building, San Francisco, Cal.
Schenectady.........Jan. 26, '03	C. S. Van Dyke	L. F. Millham, General Electric Company, Schenectady, N. Y.
Seattle.........Jan. 19, '04	J. Harisberger	T. C. Smith, Lighting Dept., Seattle, Wash.
Spokane.........Feb. 14, '13	J. E. E. Royer	Foster Russell, 1405 Old National Bank Bldg., Spokane, Wash.
Toledo.........June 3, '07	W. A. Hill	Max Neuber, 1257 Fernwood Ave., Toledo, Ohio.
Toronto.........Sept. 30, '03	Ashton B. Cooper	Daniel M. Fraser, Canadian General Electric Co., Toronto, Ont.
Utah.........Mar. 9, '17	Markham Cheever	H. T. Plumb, General Electric Co., Newhouse Bldg., Salt Lake City, Utah.
Urbana.........Nov. 25, '02	A. R. Knight	E. H. Waldo, Univ. of Illinois, Urbana,Ill.
Vancouver.........Aug. 22, '11	R. F. Hayward	T. H. Crosby, Canadian Westinghouse Co. Vancouver, B. C.
Washington, D. C.........Apr. 9, '03	Milton M.Flanders	R. Karl Honaman, Bureau of Standards, Washington, D. C.

ENGINEERING COUNCIL

Tenth and G Streets N. W.
Washington, D. C.

To the Members of the
American Institute of Electrical Engineers:

The Washington office of the Engineering Council was established last January for the benefit of the engineering profession of America. This office is in contact with the various departments of the Government and keeps abreast of legislation relating to matters in which engineers are concerned in connection with the practise of their profession. It endeavors to keep the engineering profession prominently before the legislative and executive branches and seeks to secure the appointment of engineers to all those places which have engineering functions. Finally, it maintains a legislative and departmental service which is supplied to the technical press and to engineers individually. Any engineer who desires a copy of a bill or information upon any bill that is being discussed in Congress, or has need of data of any kind issued by a Government Bureau, has only to ask the Washington office for the information or material. These will be supplied, if available, and no charge will be made.

While many engineers have taken advantage of this information service, the Washington office of Engineering Council is equipped to supply information to a much larger number. It is the desire of Engineering Council to extend the service in order to render the greatest possible aid to the engineers of America. All engineers are invited to use the facilities afforded by the organization at Washington and can be assured that they will receive careful attention and that every effort will be made to meet to the fullest extent any demands that may be made.

M. O. LEIGHTON, Chairman,
National Service Committee

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII NOVEMBER, 1919 Number 11

INSTITUTE MEETING IN NEW YORK, NOVEMBER 14, 1919

The 355th regular meeting of the A. I. E. E. will be held in the fifth floor assembly room of the Engineering Societies Building, 33 West 39th Street, New York, on Friday evening, November 14, at 8:15 p. m.

The meeting is under the auspices of the Power Stations Committee and the general subject of the papers will be Limitations in the Design of Steam Turbines. Three papers will be presented as follows:

Present Limits of Speed and Output of Single-Shaft Turbo Generators, by F. D. Newbury of the Westinghouse Electric and Manufacturing Co.

Present Limits of Speed and Power of Single-Shaft Steam Turbines, by J. F. Johnson of the Westinghouse Elec. & Mfg. Co.

Present Limits of Speed and Power of Single-Shaft Curtis Steam Turbines, by Eskil Berg, of the General Electric Company.

The papers are published in this issue of the PROCEEDINGS and advance copies are available upon request. A thorough discussion on this timely subject is anticipated.

FUTURE A. I. E. E. MEETINGS

A tentative schedule of meetings of the A. I. E. E. for season of 1919-1920 was adopted by the Meetings and Papers Committee at its meeting in Philadelphia, October 10, as follows:

December 12, 1919, New York. Subjects: Searchlights in the U. S. Navy, and Automatic Switching for Telephone Service.

January 9, 1920, Chicago. Meeting under the auspices of the Lighting and Illumination Committee. Subject: Series, Multiple and Mixed Systems of Street Lighting.

February 18 to 20, New York. Mid-winter Convention.

March 12, 1920, Pittsburgh. Meeting under auspices of Traction and Transportation Committee. Subject: Electric Traction.

April 9, 1920, Boston. Joint Meeting with the American Electrochemical Society. Meeting under auspices of Committee on Electrochemistry and Electrometallurgy.

May 21, 1920, New York. Annual business meeting of the Institute.

June 22 to 25, 1920. Annual Convention.

A. S. C. E. MEETING NOVEMBER NOVEMBER 5, 1919

A regular business meeting of the American Society of Civil Engineers to be held in the auditorium of the Engineering Societies Building, New York, on Wednesday, November 5, 1919 at 8:30 p. m. will be devoted to a discussion on "The Compensation of Engineers."

The subject will be presented by Arthur S. Tuttle, Chairman, of Engineering Councils' General Committee, and of the State and Municipal Section; John C. Hoyt, Chairman of the Federal

Section; and Francis L. Stuart, Chairman of the Railroad Section.

A general discussion of this timely question is invited, and all engineers will be welcome at the meeting.

MEETING OF RADIO ENGINEERS

The next meeting of The Institute of Radio Engineers will take place on the evening of Wednesday, November 5th, 1919, at 8:15 p. m. at the Engineering Societies Building, 29 West 39th Street, New York City.

A paper on "Static Elimination by Directional Reception" will be presented by Mr. Greenleaf W. Pickard. There will be presented, with illustrations, an account of extensive researches over a period of years, dealing with the reduction of atmospheric disturbances in radio reception.

Institute members and their friends are cordially invited to attend.

NATIONAL DRAINAGE CONGRESS

The National Drainage Congress will have its Eighth Annual Meeting at the Planters Hotel, St. Louis, Mo., November 11th, 12th and 13th, 1919.

The Congress is concerned with the development of the natural resources of our country and the protection of the public health by preventing and remedying such unfortunate conditions as may be caused by the existence of swamp lands and as may follow the floods of our rivers.

An invitation to attend this Congress and take part in its deliberations is extended to Institute members.

JOINT MEETING IN NEW YORK, OCTOBER 1, 1919

A joint meeting of the A. I. E. E. and the Institute of Radio Engineers was held in the Auditorium of the Engineering Societies Building in New York, October 1, 1919.

The meeting was called to order by President Townley of the A. I. E. E., who, after a few introductory remarks, presented Mr. E. F. W. Alexanderson of the General Electric Company. Mr. Alexanderson presented the first paper of the evening entitled "Transatlantic Radio Communication", after which Vice-President Hogan of the I. R. E. introduced Mr. J. H. Dellinger of the Bureau of Standards who abstracted his paper on "Principles of Radio Transmission and Reception with Antenna and Coil Aerials". The final paper of the evening entitled "Telephone Repeaters" by B. Gherardi of the American Telephone and Telegraph Company and F. B. Jewett of the Western Electric Company, was presented in abstract by Mr. Gherardi.

President Townley then announced that General Edward Russell, chief in command of the Signal Forces of the United States in the American Expeditionary Forces was present and called upon General Russell to address the meeting. General Russell responded in a brief address in which he paid a high tribute to the engineers of the Signal Corps for their very notable work during the war. Owing to the lateness of the hour there was no discussion of the papers but President Townley announced that the Institute of Radio Engineers would hold a meeting at a later date at which time opportunity would be afforded for a full discussion of both of the radio papers.

MEETING IN PHILADELPHIA, OCTOBER 10, 1919

A joint meeting of the American Institute of Electrical Engineers and the American Physical Society, to which members of the Franklin Institute were also invited, was held in Philadelphia at the Bellevue-Stratford Hotel, October 10th and 11th, 1919. About 350 members and guests registered.

The meeting opened Friday morning with a session of the American Physical Society, the first paper being "The Present Theories of Atomic Structure" by Saul Dushman. Paper was illustrated by mechanical models of the structure of atoms. The next paper was "Special Applications of the Octet Theory" by Irving Langmuir, which was followed by a paper on "Spectroscopic Evidence Regarding Atomic Structure" by F. A. Saunders. The fourth paper of the session was entitled "Bearings of High Pressure Phenomena on the Problem of the Constitution of Matter" by P. W. Bridgeman.

Following the morning session a complimentary luncheon was tendered by the Philadelphia Section to the Board of Directors and Committeemen of the Institute.

The afternoon session on Friday was held under the auspices of the A.I.E.E. and four papers were presented. The first paper was by Dr. A. W. Hull of the General Electric Company, entitled *The Arrangement of Atoms in Metals*; this was illustrated by models. The next paper *The Oscillating Vacuum Tube as a Generator of Electric Power* by J. H. Morecroft and H. T. Friis, of Columbia University, was presented by Prof. Morecroft and illustrated by lantern slides of oscillograph records. The third paper was by Dr. S. J. Barnett of the Carnegie Institute of Washington, entitled *Electromagnetic Induction.* The fourth paper on *The Piezo Electric Effect* by A. M. Nicolson of the Western Electric Company, was abstracted by the author and was accompanied by demonstrations.

Friday evening an informal dinner was held in the Stratford Room of the hotel and was attended by 215 members and guests. Following the dinner brief remarks were made by presidents of both the participating societies.

On Friday evening there was a joint session of the A. I. E. E. and A. P. S. at which two papers were presented. The first by H. A. Bumstead of Yale University on *The Indispensibility to each Other of Pure and Applied Science*; the other by J. J. Carty, vice-president of the American Telephone and Telegraph Co. on *Pure Science and Industrial Research.* These papers elicited quite a spirited discussion in regard to research work and especially upon the methods practised in the universities and technical schools for producing competent research workers.

The sessions on Saturday were both under the auspices of the Physical Society and were held at the plant of the Leeds and Northrup Company at Germantown, to which those in attendance were transported by automobiles. The morning session was called for 9:30 a.m. and the first paper was presented by Mr. M. E. Leeds of the Leeds and Northrup Company and was entitled *Research Development and Technical Control in a Small Industry.* This was followed by a paper on *Some Research and Development Problems of the Leeds and Northrup Company* by R. B. Smith of that company. Following the presentation of these papers the members were conducted by guides on an inspection trip through the company's plant after which the members assembled in the meeting room where a complimentary buffet luncheon was served by the Leeds and Northrup Company. After luncheon the meeting again convened, and a number of short papers were presented under the auspices of the A.P.S. the titles being as follows:

"A Precision Potentiometer," by Arthur W. Gray; "On Establishing of the Absolute Temperature Scale," by Frederick G. Keyes; "The Crystal Structure of Ferro-Magnetic Metals," by Albert W. Hull; "Hydrogen Overvoltage," by D. A. MacInnes, Leon Adler and A. W. Contieri; "Note on a Method of Measuring the Decrease of Electron in Thin Films by Means of Characteristic X-Rays," by Bargen Davis; "The Application of Motion Picture Photography to Ballistics and Airplane Performances," by F. C. Brown; "Unipolar Induction," by W. F. G. Swann; "Magnetic Resistance Effects in Films of Bismuth," by F. K. Richtmyer and L. F. Curtiss; "The Spectral Photoelectric Sensitivity of Molybdenite as a Function of the Applied Voltage," by W. W. Coblentz and H. Kahler; "Ionization and Resonance Potentials for

Electrons in Vapors of Lead and Cadimum," by F. L. Mohler, Paul D. Foote and H. F. Stimson; "The Calculation of Audion Constants," by R. W. King.

A. I. E. E. DIRECTORS' MEETING OCTOBER 10, 1919

The regular monthly meeting of the Board of Directors of the Institute was held at the Bellevue-Stratford Hotel, Philadelphia, on Friday, October 10, 1919, at 10:30 a. m.

There were present: President Calvert Townley, New York; Vice-Presidents C. E. Skinner, Pittsburgh, and N. A. Carle, Newark, N. J.; Managers Charles S. Ruffner, Wm. A. Del Mar, Walter I. Slichter, New York, Charles Robbins, Wilfred Sykes, Frank D. Newbury, Pittsburgh, E. H. Martindale, Cleveland, Walter A. Hall, West Lynn, Mass., and L. E. Imlay, Niagara Falls, N. Y.; Treasurer George A. Hamilton, Elizabeth, N. J., and Secretary F. L. Hutchinson, New York.

A report was presented of a meeting of the Board of Examiners held on September 29, 1919; upon the recommendation of the Board, the following action was taken on pending applications: 21 Students were ordered enrolled; 148 applicants were elected to the grade of Associate; 6 applicants were elected to the grade of Member; 13 applicants were transferred to the grade of Member; 4 applicants were transferred to the grade of Fellow.

Chairman Slichter of the Meetings and Papers Committee reported orally regarding tentative plans for Institute meetings as announced elsewhere in this issue.

Upon the recommendation of the Finance Committee, monthly bills amounting to $17,590.99 were approved.

Upon the recommendation of the Finance Committee, a tentative budget covering the activities of the Institute for the year beginning October 1, 1919, was approved.

In addition to the above, many other matters relating to important activities and the general policy of the Institute were discussed and in most cases were referred to various committees and officers for further consideration. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

METHOD OF FINANCING SECTIONS

Resolutions Adopted by Board of Directors of A. I. E. E. October 10, 1919

WHEREAS, the present practise in financing the activities of Institute Sections frequently involves payment of bills from the personal funds of Section officers, who are later reimbursed by Institute headquarters; and

WHEREAS, it is desirable that Institute funds be made available for prompt payment of the expenses incurred locally by each Section.

RESOLVED, that the secretary of each Section, or other officer as designated by the Executive Committee of the Section, open a bank account in his capacity as an officer of the Section and deposit therein the funds received from Institute headquarters as indicated below, and any other funds of the Section received from other sources; and that payment of the expenses of the Section be made from this account.

RESOLVED, further that the Treasurer and the Secretary of the Institute be authorized to make a remittance in October of each year to each Section, of an amount equivalent to one-half the maximum amount to which the Section would be entitled under the By-Laws for the year's work, less any unexpended balance of the funds provided by the Institute during the preceding year; and that an accounting be made to the Finance Committee of the Institute, through the Secretary, at the end of six months, or earlier if necessary, whereupon a remittance of the second half of the maximum amount available will be similarly remitted to the Section and similarly accounted for during the month of September each year.

Any unexpended balance available at the end of the year shall be considered as reverting to the Institute treasury, but for convenience will remain in the local bank account and be deducted from the sum remitted in October from Institute headquarters; *i. e.*, unexpended balances shall not be added to the following year's appropriation.

PAST SECTION MEETINGS

Detroit—Ann Arbor.—October 10, 1919, Board of Commerce, Paper: "Development of Automobile Starters" by C. E. Wilson.

Lynn.—October 8, 1919, G. E. Hall. Subject: Transportation. Speakers: Mayor W. H. Creamer, Messrs. Ralph S. Bauer and Fred. A. Cummings. Attendance 200.

Milwaukee.—October 15, 1919, Athletic Club. Illustrated address by Professor Max Mason of University of Wisconsin. Attendance 150.

Portland.—October 7, 1919, Gasco Building. Paper: "Changing 33-Cycle Apparatus to Operate on 60-Cycle Circuits" by D. W. Proebstel and E. H. LeTourneau. Attendance 75.

Rochester.—Election of officers as follows—chairman, J. W. Morrison; secretary, H. J. Schiefer; executive committee, Ray H. Manson, O. W. Bodler, F. C. Taylor, C. T. Wallis, and E. D. Smith.

Seattle.—September 16, 1919, Butler Hotel Cafe. Annual dinner, followed by general business meeting.

St. Louis.—September 24, 1919, Engineers Club. Address by President Calvert Townley on Institute Affairs and the work of the Development Committee. Joint meeting with the Associated Engineering Societies. Attendance 124.

PAST BRANCH MEETINGS

University of California.—September 24, 1919, Mechanics Building. Address by Mr. W. C. Pomeroy on "History and Aims of the A.I.E.E."

Clemson Agricultural College.—October 14, 1919. Address by Prof. M. T. Burch on "Electrical Equipment of Sea Planes." Current Engineering News by J. M. Black. Election of officers as follows—chairman, J. B. Fitzgerald; secretary, J. F. McHugh; treasurer, R. R. Shedd. Attendance 75.

Kansas State Agricultural College—October 2, 1919. Papers; (1) "Automobile Transmission" by R. S. Knox; (2) "Sub-Station at Camp Funston" by R. A. Graves; (3) "Frequencies" by M. J. Lucas.

University of Maine.—October 15, 1919, Lord Hall. Election of officers as follows—president, Samuel E. Jones; vice-president, Frederick C. Bisbee; secretary, Wesley C. Plumer; treasurer, Henry Butler; executive committee, Professor Barrows, Lloyd R. Douglass and Henry Howard. Attendance 26.

Massachusetts Institute of Technology.—October 15, 1919. Short addresses by members of faculty and students. Attendance 65.

Michigan Agricultural College.—October 9, 1919. Illustrated address by Mr. P. G. Andres on "Power Transmission through Various Media." Attendance 79.

Missouri.—September 15, 1919, Engineering Building. Relation of A.I.E.E to the Student by A. C. Lanier; Summer Experiences, by E. M. Kerr, Ben Fleshman and B. J. George. Election of officers as follows—secretary, F. H. Miller; to executive board, C. H. Albus and A. C. Bruner. Attendance 48.

September 26, 1919, Engineering Building. Paper: "The Field of the Commercial Engineer" by R. H. McLain. Attendance 35.

Ohio Northern University.—September 25, 1919, Dukes Memorial. Addresses as follows—(1) "The Work and Benefits of the A.I.E.E." by Prof. M. B. Jepson; (2) "Why Every Electrical Student Should Belong to the A.I.E.E." by Prof. F. F. Turner. Attendance 20.

October 1, 1919, Dukes Memorial. Papers: (1) "A Proposed 220,000 Volt

Transmission Bus" by Carl Selpein; (2) "The Commonwealth Edison Company's Student Course" by J. E. Wells. Attendance 32.

October 15, 1919, Dukes Memorial. Oscillograph Demonstration by Prof. F. F. Turner. Remarks by engineers from A. T. & T. Co. Attendance 40.

Purdue University.—September 16, 1919, Electrical Building. Addresses as follows—(1) "The National A.I.E.E. and Its Work" by Prof. C. F. Harding; (2) "The Local Branch of the A.I.E.E. and the Benefits of being a Member" by Prof. A. N. Topping. Attendance 200.

September 30, 1919, Electrical Building. Paper: "The Keokuk Power Plant" by A. R. Kaufman. Report of National Convention of A.I.E.E. at Lake Placid by C. O. Wood. Attendance 70.

Rose Polytechnic Institute.—October 13, 1919. Business meeting. Election of officers as follows—chairman, Frank M. Stone; secretary, Harold L. Kessler.

Rensselaer Polytechnic Institute.—September 24, 1919, Sage Laboratory. Addresses on " The R. O. T. C. Training" by Lieut. Col. Putney and member of the faculty. Attendance 105.

Syracuse University.—October 9, 1919, College of Applied Science. Paper: "Comparison of Electric and Steam Locomotives and Their Operation" by H. D. Kelsey. Election of officers as follows—chairman, Gerard W. Terry; secretary, Maurice D. Low. Attendance 15.

A. & M. College of Texas. October 6, 1919, Electrical Engineering Building. Election of officers as follows—chairman, L. E. Cook; treasurer, H. M. Allen; secretary, D. D. Murphree. Attendance 78.

Virginia Polytechnic Institute.—October 7, 1919. Election of officers as follows—president, L. D. Fry; secretary-treasurer, R. W. Harney. Attendance 24.

University of Washington.—October 7, 1919, Forestry Hall. Paper: "Some Aspects of Electrical Engineering" by L. F. Burtis. Election of officers as follows—chairman, George R. Rice; secretary, McKinley Donovan. Attendance 28.

I. E. C. MEETING, LONDON, OCTOBER 20-24

A plenary session of the International Electrotechnical Commission was held in London, October 20-24, 1919. This meeting marked the resumption by the I. E. C. of activities discontinued because of the war. The U. S. National Committee was represented at this session by Dr. C. O. Mailloux, H. M. Hobart, L. W. Chubb and James Burke who sailed from this country on October 8th. A report of the session will appear in a future issue of the PROCEEDINGS.

THE VAIL LIBRARY AT M. I. T.

The attention of Institute members is called to the existence of a very interesting and comprehensive library on electricity and electrical engineering, the Vail Library, at M. I. T.

This library was collected in England by Mr. Dering, and comprises about 20,000 volumes. Many early and rare books are included such as Gilbert's "De Magnete," 1500 (first edition), Cabeo's Philosophis Magnetica," 1629, etc. In addition to the books on electricity, there is a very interesting collection on early development in aviation.

In 1912, President Theodore N. Vail of the A. T. & T. Co. purchased the library and presented it to M. I. T. Since its receipt the collection has been cataloged and about 1000 new books added. This collection offers a wide and interesting field for research and study.

ENGINEERING COUNCIL

CLASSIFICATION AND COMPENSATION OF ENGINEERS

Engineering Council's Committee on the Classification and Compensation of Engineers is continuing its work and getting results. Its three sections, on Railroads, Federal Government, and State and Municipal Governments, are all active. Under a recent date the State and Municipal Section reports that forty-five responses have already been received to its questionaires sent out a few weeks ago. The following notes are supplied by the Chairman of the committee, Mr. Arthur S. Tuttle, Member, American Society of Civil Engineers, and Deputy Chief Engineer, Board of Estimate and Apportionment of the City of New York.

In the case of 8 services the morale is reported to be good but in most of these it appears that the organization reported is a new one or that radical changes in compensation have recently been effected. In 20 reports no comment is made as to the present morale while in 17 instances the general conditions are said to be as follows:

"Morale would be improved if adequate salaries were allowed."

"Practically all men are clamoring for more pay, but as our budget was fixed while the country was at war we are unable to secure the additional funds necessary to raise salaries further."

"Impossible to hold first class men at these rates. Morale is generally good."

"All want more money. Dissatisfied on account of low pay."

"Our organization is in a condition of unrest and change owing to small appropriation."

"Loyal enough generally, but dissatisfied with pay, and accept better offers readily. Difficult to fill their places at same rates."

"Excellent, but all employees desire increase in compensation over that already granted. New men cannot be obtained at previous salaries."

"Dissatisfied with present compensation."

"Force depleted. Employees leaving to take positions at greater compensation. Men remaining uneasy and dissatisfied."

"I might say that I thoroughly agree with the men in New York City who demand a flat raise of $500. yearly in all classes of the service."

"There is a decided spirit of unrest and dissatisfaction due to the fact that engineering salaries have not been increased in proportion to the advance in the cost of living, and to salaries and wages paid to non-professional men and skilled labor."

"Rate of pay tends to drive more active and self-reliant younger men out of this service—lowering general average."

"Majority of men feel they are underpaid."

"Lack of consideration for services rendered has discouraged the force."

"A general increase of $150. to $400, effective September 16, 1919, has improved the morale of the force, which was affected both by a general reduction of force and the economic situation."

"Increasing restlessness on the part of the entire force due to lack of proper salary increases to meet growing expenses."

"While men for the most part do their work satisfactorily, there is a general feeling of unrest and discouragement as the result of what they consider failure to recognize their efforts."

THE BOSTON-WASHINGTON SUPER-POWER LINE

Engineering Council Endorses Proposed Legislation

The Fuel Conservation Committee of Engineering Council recently presented a report upon the bill before Congress which provides for a survey and report on the economic production and distribution of energy in the Boston-Washington coast region.

Prof. L. P. Breckenridge, Chairman of the Committee, states that the time has now come when Engineering Council may well take some helpful action in connection with the above subject, as there seems every reason to believe that the principles involved will result in a large conservation of coal in connection with the development of industrial power. The report is accompanied by extracts from an address by Mr. W. S. Murray before the Bridgeport Chamber of Commerce on September 10th which heartily endorses the project. He states that "by far the most important consideration now is the investigation which Secretary Lane has proposed to Congress by which will be determined the amount and location of waste in this Northeast Atlantic Seaboard Zone, and in the report to be written under the auspices of the Department of the Interior there will be developed engineering and construction plans necessary to its saving. It is my belief that if by this investigation it is proved beyond peradventure of doubt that in the zone described there is going to waste $300,000,000 a year, and a perfectly practical plan is ready at our hands, by which its saving can be effected, there will be no question as to whether it can be financed, but rather what will be the best method of finance to pursue."

Mr. Calvert Townley, Chairman of the Water Conservation Committee of Engineering Council reports favorably in regard to the proposed legislation, saying, "I regard this investigation as very much worth while. Mr. W. S. Murray, for many years a prominent consulting electrical engineer in New England and who has specialized in problems of transportation as well as of power generation and distribution, has made a rough preliminary canvass of the situation and advises me that the possible saving if all power could be supplied by the utilization of the available water power and the construction of very large and efficient steam plant would be of the order of magnitude of $300,000,000."

In view of these reports Engineering Council at its meeting of October 16th took the following action:

"The Fuel Conservation Committee having recommended to Engineering Council that Council support legislation to provide an appropriation to enable the United States Geological Survey to investigate "the possible economy of fuel, labor and materials resulting from the use in the Boston-Washington Industrial Region of a comprehensive system for the generation and distribution of electricity to transportation lines and industries"; and

Engineering Council appreciating the importance of conserving our national fuel resources, of equalizing the cost of power and of relieving railroad congestion, and

Engineering Council believing that the density of traffic and of industrial consumption of power in the territory adjacent to the north-eastern Atlantic seaboard is sufficient to justify physical and economic relief by the application of the principles inherent in super-power generation and distribution, be it

RESOLVED, that Engineering Council endorses legislation making a suitable appropriation for the proposed investigation as a measure conducive to the national welfare.

UTILIZATION OF CULM

The Fuel Conservation Committee of Engineering Council has called attention to the great need of fuel conservation if the anticipated strike in the bituminous coal field comes off on November 1st as now seems probable. Attention is called to the fact that there is in the anthracite region millions of tons of culm that can be used in the generation of steam at properly equipped boiler plants and the power transmitted to New York, Philadelphia and vicinity by means of electrical transmission.

In the utilization of this culm, experiments have shown the economic value of No. 4 Buck which is coal passing through a 1/16 in. mesh and over a 1/32 in. mesh, and have gone further in the utilization of the finer culm passing through a 1/32 in. mesh and pulverizing it until it will pass through a 300 mesh and burning it under boilers. Two plants of this kind are now in operation in the anthracite region and are quite successful.

Another rather interesting experiment was a mixture of 30 per cent of this pulverized coal with 70 per cent of oil and using that in the generation of steam in the place of pure oil. This utilization of the fine anthracite, which has always been a waste product and thrown away, is not only fuel conservation in its truer sense but also, at this time of a threatened bituminous strike when no strike is contemplated in the anthracite field, would furnish fuel to manufacturing plants that otherwise would be obliged to shut down.

ENGINEERS IN THE 1920 UNITED STATES CENSUS

As a result of Engineering Council's request to the Director of the Census, the National Service Committee has been successful in effecting a reclassification of Engineers so that all technical engineers will be listed as such, separately and distinctly from the non-technical engineers. Thus, the next census will bring an enumeration of all technical engineers together as one unit under the main headings of Civil, Mechanical, Electrical and Mining. Architects will also be enumerated separately.

This will enable the engineering profession, the Government or any other interested organization or person to know exactly how many technical men there are in the United States and in each state. Under separate headings the enumeration will also include non-technical engineers, (stationary engineers, locomotive drivers, and other engine-men); but there will be no group heading for the latter.

It is believed that every professional engineer can, with very little violence to the facts, place himself in one of the broad classes adopted for the 1920 Census: Civil, Mechanical, Electrical, Mining. With the general cooperation of all Engineers along these lines a much better enumeration should result than in any preceding census.

ENGINEERING COUNCIL JOINS NATIONAL CHAMBER OF COMMERCE

Engineering Council has been elected to membership in the Chamber of Commerce of the United States. In joining this great association of trade and commercial organizations Engineering Council adds its strength to organized business and gives its members an opportunity to register their views with the central body in the consideration of national questions that affect business.

The Chamber of Commerce of the United States was formed in 1912 as a means of bringing together all of the industrial and business elements of the country. How well it has succeeded is shown in a recent statement that the membership of the Chamber now consists of more than 1100 organizations in every state of the union, in the outlying possessions and of all the principal American chambers of commerce abroad.

One of the chief aims of the National Chamber is to obtain the best business thought on national questions that concern business. This is done through a system of referenda on which the more than half a million individual members of the organizations comprising the Chamber are entitled to vote through their associations. The opinion of business, thus obtained, is transmitted to Congress and to public officials and is given to the public.

The National Chamber will be able to render assistance to Engineering Council in many ways. It will receive weekly a general bulletin containing the freshest and most authentic news of what is transpiring at Washington, the city to which all business is looking these days. In addition there is a special legislative bulletin issued weekly while Congress is in session following the progress of all legislation concerning business. Special bulletins are issued also as occasion arises.

REPORT OF CONFERENCE OF FEDERAL MAP-MAKING ORGANIZATIONS

Following the suggestion of Engineering Council and at the direction of the President, representatives from each of the Federal Government bureaus interested in map making were called into a conference for the purpose of coordinating all of the Government's map-making activities. This conference has now reported back to the President the results of their findings, which indicate that Engineering Council's recommendation in this matter was well founded. Shortly after the conference went in session the following engineering and scientific societies were invited to send representatives to the conference meetings. Owing to lack of time, however, it was agreed that these organizations would present their recommendations to the permanent conference to be organized. Engineering Council, the Ameri-Society of Civil Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Mechanical Engineers, the American Institute of Electrical Engineers, the American Association of State Geologists, the American Association of State Highway Officials, the National Research Council the National Geographic Society, the Association of American Geographers, the American Geographical Society and the Geological Society of America.

While the conference report states that its members were of the opinion that little duplication of effort existed, it goes on to recommend the formation of a permanent Board of Surveys and Maps. An extended review of the map-making activities which is given as an appendix to the report indicates that this recommendation is a logical step. The conference recommendations concerning this Board of Surveys and Maps are as follows:—(1) the Board is to be composed of representatives of mapping bureaus to be assisted by outside engineering organizations, which have been named above; (2) the establishment of an information office in one of the Government bureaus, preferably the Geological Survey, which is to be under supervision of the Board and is to be a mapping information clearing house for the Government and outside engineering organizations; (3) copyright laws are to be so changed that copies of all maps made in the United States and with Government authority, will go to the central information office; (4) the Government departments to receive orders to cooperate with the Board; (5) future topographic maps of all kinds are to conform with specifications for the standard topographic map; (6) he U. S. Coast and Geodetic Survey to have supervision of final adjustment of all important control data under specifications approved by Board of Surveys and Maps; (7) Surveys in the form of maps and publications are to be issued as soon as possible after field work has been completed; (8) program of the Interdepartmental Committee on Aerial Surveying was approved.

Outside technical and scientific organizations that are called in for consultation are to operate in an advisory capacity only, responsibility for action on

Governmental work is to rest solely with the Governmental agencies.

NOTES FROM THE NATIONAL SERVICE COMMITTEE*

International Communication

Because of the international difficulties that have arisen and the many different angles from which international communication has been approached, it has been recommended that the President of the United States arrange in his discretion, an international conference to assemble in Washington to consider all international aspects of communication by telegraph, telephone, cable, wireless telephone and wireless telegraphy. Representatives of this country are to be appointed by the President and are to make recommendations with a view to providing the entire world with adequate facilities for international communication on a fair and equitable basis.

If the bill proposing this conference is enacted, $75,000 will be appropriated for expenses incidental to the conference and its report.

Machine Tools for Technical Institutions

Recently, the House passed a bill authorizing the Secretary of War to sell to schools, universities and colleges surplus machine tools which could be used for educational purposes. The educational institutions were to be charged 10 per cent of the original cost of these tools.

The Senate Committee on Military Affairs has now reported another bill authorizing the Secretary of War to transfer permanently to the Federal Board for Vocational Education, about $250,000 worth of this equipment. Surplus machine tools are to be loaned to the Board, which in turn, distributes them to schools and colleges throughout the country. This bill proposes to place the title to these machines in the hands of the Vocational Board, which is to report to Congress annually as to the disposition and use of the tools.

Steel Basing Point

The Federal Trade Commission has made public the results to date of the controversy over the single and plural basing for steel throughout the United States. Five of the great steel consuming interests have asked the Federal Trade Commission to assume jurisdiction and declare the present system in violation of the Clayton anti-trust law. Forty-three interests have submitted statements opposing abolition of the present system and thirty-six favor a change.

According to Government specialists, who have covered this subejct, a great deal of useless agitation with no prospect of benefiting the great body of consumers, is going to result from the proposal. They say it must be recognized that the raw materials used in the making of steel can be assembled cheaper at Pittsburgh than at any other point and a change would involve making over the whole economic structure under which the steel industry operates. The greatest law-suit in the history of the country is predicted by Judge Gary, should an effort be made to put plural basing points into effect.

Commercial Testing at Government Arsenals

The development of the plan to conduct tests of materials for industrial purposes at Government arsenals has shown considerable progress during the past fiscal year. At Watertown Arsenal for instance, development work has been carried out not only along metallurgical lines but in all phases of work, including the development of cutting oils and the examination of quenching media. During the fiscal year this arsenal has tested 43,964 specimens. This is an increase of 259 per cent over the work of the preceding year. The total number of chemical analyses for the fiscal year was

---

*Contributed from the Washington office of the National Service Committee, Engineering Council.

48,339. This is an increase of 522 per cent.

This is an indication of the increased attention that industrial firms are giving to exact physical and chemical tests of material entering into their product. It is also one of the best indications that the war has affected the use of standardization and more exacting specifications.

Water Power

Engineering Council through its Water Conservation Committee is making determined efforts to assist in passing a bil (H.R.3184) which will give the country good water power legislation. The importance of this bil' has been stressed with senators individually and a special effort has been made through the engineers of Wisconsin to bring the senators from that state into line,—they lead the opposition to previous water-power bills and are planning to do the same with this bill. The interest shown by requests for exact information on the water-power bill to the National Service Committee of Engineering Council indicates that the active interest and support required will be given this bill by engineers.

The bill as reported to the Senate contains several important changes in the text of the bill passed by the House but these are not fundamental changes, and it is contemplated that the House will concur. The Senate Committee has explained and clarified the definitions of "reservations", "navigable waters" and "costs." A proportionate license fee not exceeding twenty-five cents per horse power is proposed, which is to defray costs of the administration of the act. Fair rentals are to be charged for Government dams and other Government property on water-power sites. The House bill gave the Commission unlimited power to fix annual charges whereas the Senate amendment limits this blanket power as indicated above. A change was made to provide that in case the United States does not exercise the right to take over the works the license tendered shall be "on reasonable terms" and "which is accepted" by the original or the new license. That provision was thought necessary to make it certain that capital would invest under the law. A provision for severance damages was stricken out by the sub-committee and was restored by the full committee, so that it now appears in the bill.

Delay faces the action on this bill because past efforts to have immediate consideration indicate that it must await the disposal of the Peace Treaty before it comes up for consideration on the Senate floor.

Engineering Council's Hearing before National Budget Committee

At the request of the chairman of the Select Committee on the Budget, representatives of Engineering Council expressed the opinion of engineers on the subject of a National Budget System, on October 1st. The invitation was received through the National Service Committee of Engineering Council and its chairman, Mr. M. O. Leighton, introduced Council's representatives to the Committee. Mr. Charles Whiting Baker, the chairman of Council's Public Affairs Committee, gave reasons for the general desire among engineers for the adoption of a budget system in the handling of national revenue. He brought out the fact that an important part of Government work is of an engineering nature, which is not being handled with a maximum of efficiency under the present system of appropriating funds because insufficient financial power is left to discretion of the director of the work.

Mr. Nelson P. Lewis, Chief Engineer, Board of Estimate and Apportionment, New York City, explained in considerable detail the efficiencies and economies which have resulted from the operation of the budget system in New York. He showed that under existing conditions it would practically be impossible for New York to get along under any other system and declared that the budget had made an orderliness of administration which could not have been otherwise obtained.

Director and Chief Engineer of United States Reclamation Service, Mr. A. P. Davis, pointed out the necessity of the proper segregation of Government bureaus before an effective budget system can be adopted. As a correct example of segregation, Mr. Davis cited the plan proposed in the Jones-Reavis bill, whereby all related bureaus having engineering activities would be placed in the same department. Such a plan would simplify and make possible the efficient use of the budget system and of lump sum appropriation where responsible department heads could be obtained.

Mr. W. R. Warner of the Warner-Swasey Company, Cleveland, pointed out the great advantages that had accrued to private engineering operations through the use of the budget systems.

It was pointed out during the hearing that engineering work was particularly hampered by the present system of appropriation. The lump sum on "continuing contract" method was held to be necessary in many cases. Illustrations of the success of the plan are the Panama Canal, levee work being done on the Mississippi River and the large reclamation projects.

Petroleum Research Work

The plan recently started for the organization of a Division of Research and Statistics in the American Petroleum Institute will probably shortly be consummated. It is proposed to expend $500,000 annually for this research work. The organizations work as now outlined provides for a Technical Director, who is to be in general charge of all the work. He is to be assisted by Consulting Technical Experts who are to be distinguished specialists in the industry and who are to serve without pay. In addition there is to be an advisory committee made up of one representative from the Bureau of Standards, Bureau of Mines, Geological Survey, Society of Automotive Engineers, National Automobile Chamber of Commerce, American Institute of Mining Engineers, American Society for Testing Materials, American Chemical Society, and the National Research Council. This committee is to meet regularly to discuss the problems of the petroleum industry. An engineer and chief economist are to come under the Director. The economist is to be in charge of statistics, economic phases of the industry and publicity. It is the intention to centralize in the institute all figures that may be required by the states or Federal Government, which would be of value to members of the Institute. They include price figures for crude oil, refined products and natural gas.

The engineer of the division is to coordinate the research work to be undertaken by the sub-division of production, chemical engineering, utilization and special research. Systematic study is to be made of the questions of leasing and bonuses, drilling, pipe lines, storage and tank cars. Many new uses for petroleum products, patents and other special problems are to be studied.

The economist will study international policies affecting the petroleum industry and for this purpose agents are to be stationed in important foreign commercial centers. Uniform cost of accounting and uniform laws and regulations are to be sought.

The policy of the American Petroleum Institute, it is announced, will be to employ the highest type of men and pay them proportionate salaries.

NATIONAL SAFETY COUNCIL

The Eighth Annual Safety Congress of the National Safety Council was held at Cleveland October 1 to 4th, 1919. Among the many papers of interest presented were the following: Effective Means of Focusing the Responsibility for the Prevention of Accidents upon Foremen, J. W. Easley Kansas City Telephone Co., Working Safely on Live High-Tension Lines, H. J. Burton, Consumer's Power Co.; Tagging, Barriers, Markings and Practises of Operators, W. C. Wagner, Phila. Electric Co.; Spasmodic Safety Efforts and the Harmful Results, H. M. Webber, Supt. Dept. of Claims, Chicago Telephone Co.

AIRPLANE ANTENNA CONSTANTS

The Bureau of Standards has just issued a scientific paper entitled "Airplane Antenna Constants, which contains the results of experimental work on various types of airplane antennas. The paper gives methods of measuring the capacity, inductance, resistance and natural wave length, and the directional transmitting effect of airplane antennas with the plane in flight are described. Using these methods the results obtained upon various forms of fixed antennas, as well as one, two and four trailing wires, are recorded. Copies of the paper may be obtained by addressing a request to the Bureau of Standards.

MOTOR TRANSPORT TRAINING SCHOOLS OF THE ARMY

The United States Army is definitely launched in the field of vocational training for the motor transport corps. It has no option in the matter, for men skilled in automobile vehicle operation and repair do not exist in anything like adequate numbers for the requirements even of civil life; and the war with Germany has demonstrated that no matter how good our Army may be in other respects, its efficiency will be conditioned by that of the motor transport branch.

Therefore, the Army is organizing schools to train men in the various branches of automobile repair, construction, and operation. They are real schools under trained teachers where the time of the pupil is wholly devoted to receiving instruction.

Apart from the military necessity, the automotive industries will benefit by the establishment of this training system.

The United States Civil Service Commission is receiving applications to fill 150 positions of assistant instructor in motor transport training schools. The entrance salaries range from $1,800 to $2,400 a year. Detailed information may be obtained from the U. S. Civil Service Commission, Washington, D. C. or from the secretary of the U. S. Civil Service Board at the post office or custom house in any city.

INDUSTRIAL RELATIONS

There has recently been established an organization for the specific purpose of getting the labor facts in every line of industry in this country and abroad; analyzing, digesting and sending them in weekly bulletin form for the use of executives. This service examines each week a large number of labor publications; industrial pronouncements from every labor group; public, semi-public and local documents; books and articles dealing with labor problems and investigates projects undertaken by employers in the field of industrial relations. The service digests and summarizes but does not deal in opinion.

Members of the Institute interested in industrial relations should communicate with Meyer Bloomfield, 6 Beacon Street, Boston, Mass.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute, is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired.

All replies to either "Opportunities" or "Services Available" announcements should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-537. Foreman wanted for electrical instrument and testing department. Applicant should have had executive, practical and technical experience. This position is open only to a man who appreciates the value and necessity of maintaining and improving the quality of the products. In reply state age, experience and compensation desired.

V-569. Draftsmen and designers wanted by prominent manufacturing concern located in middle West. Men familiar with the design of electrical apparatus and with considerable mechanical experience preferred. Splendid opportunity for men released from Army or Navy who have not as yet found permanent positions. In reply please cover the following information: education, experience, age, and salary expected.

V-576. Load Dispatcher for a large combined steam and hydroelectric system. To deal more with the economical side of load dispatching rather than operation. Must have operating experience. Engineering graduate preferred. Location Eastern city. Salary about $175.

V-578. Recent graduate with thorough technical knowledge for general electrical engineering with large central station company in New York City.

V-582. Mechanical Designers for special work. Men who have had experience in the designing of small movement work and fine mechanical apparatus preferred. In reply give age, experience and references.

V-585. Public Utility corporation, location New York State, has openings for two high grade recent technical graduates in its industrial sales department, preferably men who have graduated within the past two years. The work primarily that of a power sales engineer, wherein the individual must make his own complete engineering tests, reports, lighting, motor and equipment layouts, etc. The work also consists of the application of gas to industrial processes, and the supply of steam to individual users. Excellent opportunity to gain a broad engineering training.

V-587. Wire Chief. Middle West telephone company requires a wire chief for maintenance and supervision of switchboard and to be responsible for outside work as well. Pay about $150 per month, depending entirely upon ability. Give particulars of experience, age, etc.

V-588. Sales Electrical Engineers. Experienced in selling electrical apparatus to industrial plants and also other engineering equipment such as engines, pumps, air compressors, condensers, etc. State age, experience and salary desired.

V-589. Electrical Draftsmen wanted who are familiar with electrical layouts for general industrial plant work and who also have a good knowledge of mechanical drafting. In replying state age, nationality, experience, education and minimum salary acceptable with chance for advancement.

V-590. Engineering, familiar with power plant economics; salary about $200 per month; location New York City. Give particulars of experience.

V-591. A large manufacturer of static transformers has an opening for a young engineer who has had some practical experience in the design of transformers or at least has had some experience in the design of alternating current apparatus. Applicants should report their experience fully and give references if possible.

V-592. High Grade Designing Engineers. Several vacancies for men familiar with centrifugal compressors, steam turbines, special or electrical machinery.

V-593. Laboratory Assistant wanted by a public utility. Location New York City. Must be capable to test and repair electrical instruments and miscellaneous devices, and assist in general development and experimental work.

V-594. Wanted: Two instructors in electrical engineering at a State College in Middle West. One or two years practical experience desirable. Salary $1800. Work begins December 30, 1919.

V-596. Electrical manufacturing company requires the services of a graduate electrical engineer with several years experience in the design of induction apparatus. Familiarity with design calculation rather than broad experience is wanted. Must be practical, but not afraid of theory. Position presents opportunity for wide range of designing ability development. Location, Chicago. Salary $3,000.

V-597. Wanted: Young technical graduate for research department of large concern manufacturing carbon brushes. Experience in brush research desirable but not necessary. Good opportunity for advancement.

R-1371. Well known electrical firm expanding its export service requires translator to re-write electro-technical English into technical Spanish, chiefly for publications to be distributed in South America. Engineer preferred. Advancement, etc. will depend on ability and expansion of the trade. State qualifications, experience and salary expected. Location, New York State.

R-1472. Electrical Engineer. A man with electrical engineering experience for a concern manufacturing steel products.

R-1634. Sales Engineer. Highest type engineer with sales ability; desirable that man have had shop experience and be between the ages of 35 and 45 years. Proposition is to sell scales. Will be given restricted territory in vicinity of New York City. Salary on commission basis

R-1698. Operating Engineer. Must have experience in sugar and power plant work, also in electrical work. Two months vacation in the States allowed with passage paid both ways. Single man furnished with board. Married man furnished with residence. Location Porto Rico. Salary $2500.

R-1706. Superintendent for power plant. Must have had experience as superintendent of power plant, to supervise operation of industrial power plant. Location, West. Salary, good for qualified man.

R-1733. Electrical Draftsmen. Must have several years experience in drafting along electrical engineering lines. Capable of working without much supervision. Location, Delaware.

R-1744. Sales Engineer. Electrical Engineer with illuminating engineering knowledge. Location, Michigan and Northern Ohio.

R-1753. Power Plant Engineer (M. E.) with electrical experience, to work up details in office and field on turbine installations, steam piping, spray pumps and cooling towers. Location, New York City.

R-1759. Sales Manager, with ability to organize a sales office to sell electric lamps; man from Atlanta district desired. Must have some experience in outside work; technical knowledge of the lamp or technical education is not essential. Opportunity will be given candidate to make himself thoroughly familiar with the lamp. Salary $150-$200 per month.

R-1770. Electrical Engineer. Native Norwegian, technical graduate, to translate Norwegian articles, specifications and correspondence into English as well as to compile from Norwegian advertisements and catalogues a directory of Norwegian manufacturers. Location, New York State. Apply by letter, stating age, education, experience and salary expected.

R-1771. Electrical Engineer. Graduate, preferably, for a position in the technical library of a large industrial firm. Good opportunity for the right man to develop a technical current news service already installed. Reading knowledge of French and German highly desirable. Apply by letter, stating education, experience and salary expected. Location, New York State.

R-1772. Writer. One of the largest industrial concerns in the country desires a man with absolute knowledge of English, and who has had electrical training or engineering experience. Location, New York State.

R-1786. Production Engineer, for large silverware manufacturer, must be technical graduate with at least five years practical experience along production lines. Must have had experience with modern methods of scheduling, planning, routing and controlling production. Give age, complete details of education and experience, and state salary expected in first letter. Location, Rhode Island.

R-1803. Salesman. Must have had experience to qualify as salesman for company selling asbestos packing and brake lining; territory will be New England and part of New York State.

R-1807. Sales Engineer, with high grade sales ability and knowledge of construction machinery, especially conveying machinery. Men who have actually handled the sales of chain shell buckets preferred, but men with experience in allied machinery and equipment will be considered. Good openings for two or three men to qualify for responsible positions.

R-1810. Sales Correspondent and Estimator. Young mechanical engineer to act as correspondent, estimator, and general office assistant; must be capable of writing effective sales letters in response to both foreign and domestic inquiries, must be able to prepare estimates and submit quotations on machinery such as we handle and must also be able to meet and interview customers who call at our office. State age, education and experience. Location, New York City.

R-1820. Sales Engineer for the Pacific Coast. Must be well informed as to power plant apparatus, well acquainted with the Pacific Coast territory and capable of handling the entire sales business on the Pacific Coast. The advertiser is a manufacturer of a well known line of power plant apparatus. This affords an excellent opening for the right man. State age, education, experience and salary expected. All communications confidential.

R-1821. Salesman, power specialties lines; technical education on steam and hydraulics; must have sales experience and be thoroughly familiar with power plant appliances, including condensers; state age and experience, together with salary expected.

R-1829. Director of Engineering, 35-45, of tactful and diplomatic personality, capable executive, qualified to direct development and experimental work, and possessed of thoroughly practical knowledge of manufacturing side of business; must have had at least ten years experience in internal combustion engine work, preferably with engines of heavy duty type. Duties would be to lay out and follow up all engineering work and take complete charge of engineering department. Location, Indiana.

R-1831. Assistant Industrial Engineer, recent graduate, preferably out of college two or three years, with some experience in industrial engineering and production, with concern manufacturing hard rubber goods, as for electrical appliances, etc.

R-1834. Efficiency Engineer, familiar with Dr. Parkhurst's methods of production. Duties will be to systematize office. Location, New Jersey. Salary $50 to $75 per week, depending on man.

R-1841. Old established concern requires factory manager thoroughly familiar with tool and machine work. Factory at present doing jobbing and contract work. Capacity of factory 200-300 men. Desire a man who can obtain 100% efficiency. State salary required.

R-1842. Assistant Sales Manager, must have had sales experience, preferably along lines of feed-water heaters, oil and steam separators, coils and bends. Location, New England.

R-1845. Designer (Electrical), must be first class man with experience on ignition systems and knowledge of gas engines; excellent opportunity in rapidly growing concern; location middle west.

R-1858. Works Manager, thoroughly experienced in light interchangeable production and assembly. Most know modern methods of control. Attractive personality, excellent record and business judgment required. Location near New York City.

R-1860. Advertising Assistant, young man, engineer, 24-28 years of age, with sufficient advertising experience and knowledge of printing and engraving to assist in preparation of technical advertising copy, letters, and circulars. To be assistant to sales manager of manufacturer of power plant equipment. Location, Philadelphia.

R-1872. Sales Engineer, graduate mechanical engineer from a representative college, of good appearance, etc. with manufacturers of special system that is applied to power and heating plants. Location Pennsylvania. Salary $175 per month; more if man's qualifications warrant it; all expenses paid, traveling east of Chicago. Openings for several men.

R-1879. Electrical Engineer. Capable of supervising and the maintenance and operating work for large pulp and paper company, which generates and is a tenant as well. Line work is single tension service (60,000 volts). Company requires enthusiastic and self-reliant man who is thoroughly competent to take over the operating end of all of the company's electrical work. Location, Quebec, Can.

R-1906. Assistant Superintendent or Works Manager, with experience in electrical and mechanical machinery; also knowledge of foundry practise. Location, vicinity of New York City.

R-1909. Electrical Engineer, with experience in automobiles, useful for exporting house in automobile department. Location, New York City.

R-1910. Assistant Engineer of Way and Structures. Technical graduate, with at least five years experience on construction work, considerable of which must have been on electric railways; must be familiar with track, paving and overhead work and competent to supervise construction and prepare estimates. Knowledge of accounting useful. Apply in own handwriting. $200-$250 per month. Location, Missouri.

R-1911. Assistant Engineer of Power. Technical graduate, construction experience and familiarity with operation and power cost accounting essential. Must be able to supervise design and construction of power house changes and additions; familiarity with steel work and piping layouts required. $200-$250 per month. Location Missouri. Apply in own handwriting.

R-1913. Assistant Engineer of Equipment. Technical graduate, must be familiar with car construction and various equipment in use on electric systems, and able to prepare specifications and supervise new car construction, conduct tests and special studies. $200-$250 per month. Location Missouri. Apply in own handwriting.

R-1926. Armature Winders; all-round men. Continuous employment for two men. $7.20 per day. Location, Baltimore.

R-1940. Technical Advertising Manager. Must have thorough knowledge of power plant practise and first-class record of past services. Unusual opportunity for able man to settle permanently in the future. State minimum salary. Location, Michigan.

R-1943. Superintendent of Power, graduate engineer, familiar with blast furnace plant, including boilers, blowing engines and turbo-generators. Must be familiar with electric line work and motor applications; salary six to seven thousand dollars. Location, Alabama.

R-1945. Electrical and Mechanical Engineers, experienced in work of designing and drafting for lock, dam and power house structures. Government work. Location, Alabama.

R-1971. Electric Sales Engineer. One with experience along technical and practical lines, competent to make layouts of factories, industrial plants and power plants and able to present the complete equipment of machinery from a sales standpoint. Location, Pacific Coast. Give details of experience.

SERVICES AVAILABLE

1446. College engineering graduate, age 25, with about two years experience in operation of power plant, design of electrical and mechanical appliances, and in switchboard development work, desires a position in medium size electrical industry where chances for advancement are good. Minimum salary $35-$45 per week, depending upon location.

1447. Chief Electrician, experienced on modern a-c. central and substation construction and operation and industrial plant work. Five years with present employers. Age 32. Location preferred—Philadelphia or South.

1448. Sales Engineer. Electrical Engineer, university graduate, available for representation at home or abroad. Six years broad experience, sales, testing, invention, development, maintenance and power plant work.

1449. Storage Battery Engineer. Ten years experience in electrical field; at present Lieut., U. S. N. Past three years in charge of installation, operation and maintenance of large storage battery and power installations in U. S. submarines. Capable of handling any kind of storage battery work. Can be released from Navy within a month. Salary $2400.

1450. Electrical Engineer, university graduate, age 32, 18 months electrical test, 1 year installation of hydraulic and electrical machinery in 40,000 kw. plant. Two years operation, testing and maintenance of electrical machinery with large mining company. Foreign service as Army officer. Desires position where energy, hard work and ability will produce additional responsibilities. Available now. Salary $3000.

1451. Have you an opening in your organization for an energetic, capable young man who has initiative and can produce? Has degree of B. S. in Electrical Engineering (1919) and desires to connect with an electrical concern. Just completed the layout of power and light for twelve buildings and consisting of about 550 kw. of power. Age 21. Available immediately.

1452. Electrical Engineer, (1912). Two years charge electrical laboratory and meter department large power company. General engineering, inventory and appraisal, drafting, large power company. Service work G. E. Co. Two years transformer design, one year a-c. motor design; present assistant charge motor design, consulting and quotation. Salary $2400.

1453. Graduate Electrical Engineer (Columbia 1906) with 12½ years experience with large light and power companies and manufacture of high tension electrical control apparatus, desires position. Available on short notice. Salary $3500.

1454. Ambitious young man, age 24, desires position in engineering department of firm where advancement is rapid. Good technical education. At present taking a course in engineering; 3 years office experience; 4 years in maintenance department of telephone company. Present salary $2000. Location near New York City. Available on short notice.

1455. Graduate Electrical Engineer, American, age 32, Mem. A. I. E. E., five years American manufacturing experience, two years chief engineer for large European electrical manufacturer, desires to connect with an American firm. Salary $3000.

1456. Graduate Engineer, B. S. in E. E., M. E., and C. E. Four years general industrial engineering experience. Has proven engineering and executive ability. Practical, energetic, progressive American, with excellent personality, understanding use of technical education. Position desired in New York area with growing industrial or business establishment where success will be appreciated. Salary $2200.

1457. Electrical Engineer, 1919 graduate, with seven years pre-college experience in power plant operation and construction. Single, age 23, salary $125.

1458. Electrical Engineer, graduate of recognized technical school, desires position in production or purchasing department of a growing manufacturer or utility company. Location—Ohio or adjoining states. Nine years experience in the method of production, purchase and acquainted with equipment and cost. Married. Age 34. Salary $3000.

1459. American citizen, French born, age 30. Speaks French and English, also German fluently. Traveled extensively in Europe. Five years with export firm buying and shipping electrical material. Two years assistant to inventor of electrical appliances. At present instructor in electrical machinery. Wishes connection with firm doing business with Europe as traveling or foreign representative.

1460. Engineer, age 36, university education, now in charge of department of a public utilities commission and fully experienced in financial, executive, accounting, operating, construction, appraisal and rate-fixing phases of electric, water, gas and railway utilities, desires connection with organization where this broad executive and technical ability may have unlimited scope. Salary to start $300.

1461. Electrical-Mechanical Engineer. Position desired in the development, sales or executive end of an electrical-mechanical business. Experience as follows—electrician, electrical-mechanical draftsman, chief draftsman, assistant mechanical engineer, plant engineer, head of a department of instruction. Engineering education obtained by night and correspondence schools supplemented by private instruction. Age 28, married.

1462. Graduate Electrical Engineer, age 35, thirteen years practical experience in all phases of manufacture and design of small electrical and mechanical devices, measuring and indicating apparatus. Broad experience in production and administrative lines. Desires responsible engineering or administrative position with aggressive concern introducing small apparatus for quantity production.

1463. Electrical Engineer, technical education. Former Captain of Engineers. Five years experience central station construction, operation and maintenance. Four years power and lighting installations and maintenance. Desires position with industrial concern or public utility.

1464. Electrical and Mechanical Engineering degrees. Allis-Chalmers and General Electric tests. Six years in general engineering and commercial departments of General Electric Co. At present chief engineer of hydro-steam transmission company. Prefer managing sales or engineering work. Age 35. Married.

1465. Electrical Engineering graduate, 1919, with degree of B. S., age 22, desires a position leading to experience in design or use of electrical machinery in industry or electric traction. Would also accept position with concern furnishing electric power. Have two years experience in testing d-c. machinery. Salary $30 per week.

1466. Graduate Electrical-Mechanical Engineer. Thirteen years inspection of apparatus and systems and preparation of reports in connection with patent cases. Two years plant betterment and maintenance, large cotton mill. Three years investigation industrial plants, tests, costs, rates, etc. for management corporation. Also familiar with paper and saw mills, machine shops and shoe factories. Age 42. Former Capt. U. S. A.

1467. Chemical and Electrical Engineer, Mass. Inst. of Tech. graduate, age 27, with three years experience in research, development and factory control work in a plant manufacturing several chemical products, at present employed, desires permanent position offering future in the field of electrophysics, electrochemistry, or electrometallurgy. Salary $2100.

1468. Electrical Engineer, age 28. Desires position with power company or industrial firm having large electrical apparatus such as steel mills, paper mills or mines. Three years Westinghouse test. Last eighteen months in U. S. Navy.

1469. Electrical Engineer, 32, university graduate, 7 years experience in design and constructions of power plants, substations, etc., desires permanent position as construction or designing engineer, or as mechanical and electrical superintendent in charge of installation, operation and maintenance of power plants with progressive industrial concern, factory or mine. Minimum salary $220.

1470. Electrical Engineer, age 36, married. Desires position as executive with a company where possibilities for advancement exist. Twelve years experience in general consulting engineering and valuation of public utilities, varied construction experience on gas, mechanical and electrical properties. Minimum salary to start $4000.

1471. Engineer and Executive. Twelve years consulting engineering experience with leading engineers in responsible charge of administrative and engineering work for electric properties, covering design, operation, organization, development and financial matters. Accustomed to working out difficult matters effectively and pushing things through to finish. Available November. Responsible position public utility or industrial.

1472. Graduate Electrical Engineer, experienced not only in electrical lines but with broad training and practical experience in modern physical chemistry and electro-chemistry, wishes position with manufacturer or consulting engineer; combines experience in research laboratory with factory and engineering practise.

1473. Superintendent of light or power or electrical engineer. Three years in laboratory of Boston Edison Co., and fourteen years with Stone & Webster. Excellent station and distribution experience, installing, operating, and testing on voltages up to 66,000. Can handle help and customers.

1474. Cornell M. E. Graduate (1896). Long experience as telephone, telegraph and fire protection experience, including field inspections, tests, report writing and editing; recent supervisory house and street lighting electrical construction experience; available November 1. Married. Salary $3000-$3600.

1475. Electrical Engineering Graduate, age 29, eight years active experience in electric railway and power field, desires position with public service corporation or consulting engineer. Experience has included work on both steam and hydroelectric power stations, high tension transmission lines, substations, mechanical design and construction. Recently discharged from U. S. Army.

1476. Engineering Executive—graduate electrical engineer, 12 years experience in management of public utilities, valuations, appraisals and investigations as required by Wall Street firms and State Commissions. Purchase and production, manufacturing two years electrical officer (senior lieutenant) U. S. Navy. Desires connection with live organization requiring combination of engineering, business and financial experience. Age 33.

1477. Electrical Engineer desires position with company operating railway and lighting properties or with other corporation in engineering capacity. Sixteen years experience in construction and operation of utilities, latterly in executive positions. Ex-Major, Construction Division, U. S. Army.

1478. Commercial Electrical Engineer desires position, age 30, technical graduate, four years commercial experience with central stations, four years manufacturing, erection and maintenance. Served as engineering watch officer aboard U. S. Navy Transport.

1479. College Graduate, electrical engineering course, desires managerial position with company which operates diversity of public utilities. Experienced in engineering and operating problems of electric, gas and heating utilities. Familiar also with rate-making and valuation methods. Age 32. Salary $3000.

1480. Graduate Electrical Engineer (33) with several years varied experience, wishes development, investigation, or other work of the general nature of laboratory work. Location New York City or vicinity. Minimum salary $200.

1481. Graduate Electrical Engineer (Brazilian) with varied experience in electrical machinery in the U. S., speaking several foreign languages, traveled in European and South American countries, married, 27, desires position with going concern as commercial engineer. Thorough knowledge of Brazil. Capable of acting as representative and developing trade which requires a first hand knowledge of the Latin Americas.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is located on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Photostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who so desire will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a. m. to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a.m. to 6 p.m.

Book Notices.—(September 1–30, 1919) Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All the books listed may be consulted in the Engineering Societies Library.

AIR NAVIGATION:

Notes and Examples. By Captain S. F. Card. N. Y., Longmans, Green & Co.; Lond., Edward Arnold, 1919. 140 pp., illus.,,tab., map, 9 x 6 in., cloth, $3.40.

An elementary text-book of navigation for airplane pilots, which presents the methods and the course of instruction used in training the officers of the British flying services.

APPLIED MECHANICS:

By Fuller and Johnston. Vol. II. Strength of Materials. 1st edition.

N. Y., John Wiley and Sons, Inc.; Lond. Chapman & Hall, Ltd., 1919. 556 pp., illus., 9 x 6 in., cloth, $3.75.

Volume I of this text-book, treating of statics and dynamics, appeared several years ago. The present volume, treating of the strength of materials, covers the fundamentals of this subject, as taught in the engineering departments of the Massachusetts Institute of Technology, in so far as they are required in the study of structural and machine design and in the ordinary problems of engineering practise.

CHILTON TRACTOR INDEX. July, 1919: Published semi-annually by the Chilton Co., Phila. 500 pp., 10 x 7 in., paper, $1.00.

This volume is a directory of the American tractor industry, in which, the editors state, they have attempted to present all the information useful to the industry as a whole. It includes descriptions of power farm machinery, illustrated descriptions and specifications of tractors and farm implements, and directories of manufacturers of implements, tractors, parts and accessories.

CONCRETE-STEEL CONSTRUCTION: Part I. Buildings. A Treatise upon the Elementary Principles of Design and Execution of Reinforced Concrete Work in Buildings. By Henry T. Eddy and C. A. P. Turner. 2nd edition. Minneapolis, C. A. P. Turner and Co., 1919. 477 + 25 pp., illus., tab., 9 x 6 in., cloth, $10.

The authors of this volume believe that the fundamental principles underlying the theory of reinforced construction are not generally understood by engineers and that the methods of computation of applied bending moments in common use are erroneous. Their book presents what they believe to be the correct analysis of the bending and twisting moments present in columns and flat slabs, a method founded upon the manner of distribution of the vertical shears that transmit the loading to the supports.

THE CONDENSED CHEMICAL DICTIONARY: A reference volume for all requiring quick access to a large amount of essential data regarding chemicals, and other substances used in manufacturing and laboratory work. Compiled and edited by The Editorial Staff of the Chemical Engineering Catalog. N. Y., The Chemical Catalog Company, Inc., 1st edition, 1919. 525 pp., 9 x 6 in., cloth, $5.

This volume has been prepared to meet the need for a concise summary of the properties of chemicals, which is felt by exporters, brokers, purchasing agents, manufacturers and others who require quick access to information on chemical products.

The arrangement of the book is alphabetical. The information given includes variant names, formulas, color and properties, constants (boiling and melting points, specific gravity, etc.), derivation, method of purification, grades obtainable, containers, uses, fire hazard and shipping regulations. Substances made in America are indicated. The volume is fully cross-indexed, and includes a number of useful tables of weights and measures, thermometric scales, etc. Synthetic dyes are omitted.

While the compilers state that no attempt has been made to be exhaustive, but merely to give the outstanding facts concerning the chemicals ordinarily met in commerce, approximately six thousand substances are included.

DYKE'S AUTOMOBILE AND GASOLINE ENGINE ENCYCLOPEDIA: By A. L. Dyke. 10th edition. St. Louis, A. L. Dyke. (Copyright 1919). 940 pp., illus., 10 x 7 in., cloth, $5.

It is difficult to imagine any topic connected with the use or repair of automobiles which is not discussed in this comprehensive volume for repairmen and operators. Theoretical considerations are omitted, but an immense amount of practical information is supplied in concise, definite form, illustrated by numerous drawings and charts. In addition to passenger automobiles, the volume treats of trucks, tractors, motorcycles and airplanes.

FOUNDRY PRACTISE: A Text Book for Molders, Students and Apprentices. By R. H. Palmer. 2nd edition. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 390 pp., illus., 40 tab., 8 x 6 in., cloth, $3.

This volume is intended primarily for purposes of instruction, rather than as a treatise for experienced foundry men. The various types of molds are explained and illustrations of the different practises are given. Cupola and air-furnace practise, foundry equipment, methods of mending and cleaning castings are also discussed.

This edition has been enlarged by the inclusion of methods for casting and molding a number of additional articles, such as engine cylinders, propellers, lathe beds and large kettles.

GEODESY: Including Astronomical Observations, Gravity Measurements, and Method of Least Squares. By George L. Hosmer. 1st edition. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall. Ltd., 1919. 368 pp., illus., tab., 9 x 6 in., cloth, $3.50.

The author has endeavored to produce a textbook adapted to a course of moderate length which would make clear the underlying principles and emphasize the theory as well as the details of field work. The methods of observing and computing given are consistent with the practise of the Coast and Geodic Survey.

IRON AND STEEL:

A Treatise on the Smelting, Refining, and Mechanical Processes of the Iron and Steel Industry, including the Chemical and Physical Characteristics of Wrought Iron, Carbon, High-speed and Alloy Steels, Cast Iron, and Steel Castings, and the Application of These Materials in Machine and Tool Construction. By Erik Oberg and Franklin D. Jones. 1st edition. N. Y., The Industrial Press; Lond., The Machinery Publishing Co., Ltd., 1918. 328 pp., illus., 9 x 6 in., cloth, $2.50.

This volume, the authors state, is not intended as a treatise for metallurgists and those engaged in the manufacture of iron and steel, but as a textbook for students in technical schools and those engaged in mechanical engineering and machine building. The book provides for these a broad, general survey of the industry, with definite practical information on the various commercial grades and forms of iron and steel products, and the particular class of service for which each is suitable.

MARINE GAS ENGINES:

Their Construction and Management. By Carl H. Clark. 2nd edit. N. Y., D. Van Nostrand Co., 1919. 136 pp., 102 illus., 8 x 5 in., flexible cloth, $2.

This volume is a small manual of convenient size, intended for those who desire a systematic presentation of the principles of operation and construction of the standard types of marine gas engines, from a practical, rather than a theoretical point of view.

The present edition has been revised to current practise, and material in oil and Diesel engines has been added.

MANUFACTURERS' INSTRUCTORS AND ADVISERS:

By Frederic Meron. N. Y., Theo. Audel & Co. (copyright, 1919). 3 vols. and portfolio, cloth, $7.

CONTENTS: No. 1, Layouts and equipments for factories. 228 pp. and portfolio of 34 plates.

No. 2, Common sense working methods in factories. 161 pp.

No. 3, The human element in organizations, 351 pp.

The author endeavors to present concisely and clearly the results of his experience in the installation, organization and operation of industrial plants, with the object of showing, by comparison and illustration, methods for increasing output and reducing expenses.

THE METALS OF THE RARE EARTHS:

By J. F. Spencer. Lond. and N. Y., Longmans, Green & Co., 1919. 279 pp., diagrams, tables, 9 x 6 in., cloth, $4.50.

This volume supplies a review of our knowledge of these metals, in which their occurrence, separation, compounds and uses are described. An extensive list of references is included, which contains, the author believes, all the important papers published on the subject, as well as most of those of lesser importance.

OSMOTIC PRESSURE:

By Alexander Findlay. 2nd edition. Lond. and N. Y., Longmans, Green and Co., 1919. 116 pp., illus., tab., 9 x 6 in., cloth, $2.15.

The author of this monograph gives an account of the theories of osmotic pressure, the methods of determining it, and the general theory of solutions. An extensive bibliography is included. In preparing this new edition, account has been taken of the results obtained by investigators during the past six years.

OPPORTUNITIES IN CHEMISTRY:

By Ellwood Hendrick, N. Y. and London, Harper and Brothers, 1919. 102 pp., 8 x 5 in., boards, 75c.

This little volume attempts to explain the relation of chemistry to our activities in general and the usefulness of chemical knowledge in various walks of life. It will serve to introduce the subject to those considering its possibilities as a profession.

PAPERS ON THE DESIGN OF ALTERNATING-CURRENT MACHINERY:

By C. C. Hawkins, S. P. Smith and S. Neville. Lond. and N. Y., Sir Isaac Pitman and Sons, Ltd., 1919. 392 pp., illus., pl., tab., 9 x 6 in., cloth, 18 shillings.

CONTENTS: Notes on the Theory and Design of Alternating-Current Generators.—The Flux Wave-form of the Turbo-alternator with Cylindrical Rotor.—Magnetic Calculations for Tapered Teeth.—Notes on the Theory and Design of the Polyphase Induction Motor.

Originating out of many discussions on technical subjects, the papers here collected find a connecting link in their common purpose, which is to deal scientifically and practically with problems arising in the design of alternating-current machinery. The point of view throughout is that of the practical designer.

THE PRINCIPLES OF ELECTRIC WAVE TELEGRAPHY AND TELEPHONY:

By J. A. Fleming. 4th edition. Lond. and N. Y., Longmans, Green and Co., 1919. 707 pp., illus., pl. tab., 9 x 6 in., cloth, $14.

Dr. Fleming's well-known treatise has been again revised by additions which bring it up to date, while antiquated matter has been deleted in order that the volume might not become unwieldy.

The book is a statement of principles rather than a full account of actual apparatus, and is intended to provide a comprehensive view of the subject, particularly with regard to its scientific side, and of that part of it which is concerned with quantitative measurements and the underlying theory.

PERSONAL

COLONEL T. H. DILLON of the Engineers Corps of the United States Army, has resigned from the Army and accepted an appointment to a professorship of Electrical Engineering at the Massachusetts Institute of Technology.

Colonel Dillon graduated from West Point in 1904, and was appointed to the Engineers Corps of the Army. After some military duties he was assigned to the Engineer School of Application of the United States Army, from which he graduated in 1907. He was in Cuba during the American occupation as assistant to the Director of Public Works. He was occupied in the Philippines on the military survey of the Island of Luzon. He was later made electrical engineer of the Panama Canal and superintendent of the Gatun Locks. In 1918 he went to France as Colonel in command of the 37th Engineers.

C. K. CARR, for the last four and a half years Inspector of War Supplies in the Munition Dept., of the British War Mission, has resigned his position, and is now connected with the Staff of Engineers in Plant No. 2 of the Firestone Tire & Rubber Co., Akron, Ohio.

E. H. MARTINDALE has resigned his position as Sales Engineer with National Carbon Company to devote all of his time to The Handy Supply & Manufacturing Company, Cleveland, Ohio, of which he is President & General Manager. During the war Mr. Martindale was a Captain of engineers and served one year in France.

WILBUR H. THOMPSON, for the past year and a half works manager of the Fairmont Mining Machinery Company, Fairmont, W. Va. and previously prominent in heavy traction work with the Westinghouse Electric Company, has been appointed works manager of the Triumph Electric Company, Cincinnati, O.

HAROLD H. SMITH, formerly electrical engineer with the Edison Storage Battery Co. has severed his connection with that company to become Chief Engineer of the Transportation Engineering Corp., 200 Fifth Ave., New York. The Corporation acts as railway distributor for Edison Storage Batteries, "Automatic" industrial trucks and tractors and accessories.

H. G. Thompson formerly Vice-President and General Sales Mgr. of the Edison Storage Battery Co. has also resigned and has been associated with Mr. Smith in the organization of the Transportation Engineering Corp. of which he is President.

L. S. HORNER, Vice-President of the Acme Wire Company, New Haven, Conn. has just been honored with a special citation, received from the British Government, awarded in recognition of his war work as Chief of the Executive Staff of the Bureau of Aircraft Production, engaged in the development and production of aircraft during the World War.

Harry Barker announces his association with Robert C. Wheeler for the practise of engineering and the establishment of their office at 1512 Maiden Lane Bldg., 170 Broadway, New York. Special attention will be given to public utility engineering, including valuations, rates, operation and management, hydraulics, sewage and sewage disposal, water supply; city transportation; development of new processes, etc.

OBITUARY

Charles E. Lord, general patent attorney and manager of the patent department of the International Harvester Company, died on September 25 as the result of an automobile accident.

Mr. Lord was born in 1875 at Somerville, Mass. graduating in 1898 from M. I. T. with B.S. degree. For a short time he was employed in Philadelphia by the A. T. & T. Co. and then returned to M. I. T. for a short period as instructor. He then became assistant examiner in the U. S. patent office at Washington. In 1902 he entered the employ of the G. E. Co. as assistant attorney in the patent dept. and in 1904 resigned to take charge of the patent depts. of the Bullock Electric Co. and the Allis-Chalmers Co. He became president of the Bullock Co. He studied law at Georgetown Univerity and was admitted to the bar. On June 1, 1912 Mr. Lord took charge of all Harvester patent and trade-mark business.

Mr. Lord was a member of many engineering and technical societies and became a Fellow in the Institute in 1912.

Charles L. Easton, superintendent of the Midland Counties Public Service Corporation, Santa Maria, Cal., and the San Joaquin Light & Power Corporation, Santa Maria, Cal., died very suddenly at his home on October 5th as the result of heart failure brought on by a previous attack of influenza.

Mr. Easton, who gained his knowledge of electrical engineering solely through practical experience combined with home study, associated himself with the San Joaquin Light & Power Corp. in 1901 as substation operator. In 1910 on the expansion of the San Joaquin properties Mr. Easton became superintendent of the southern division, which position he held until 1917, when he was made electrical superintendent of the coast properties. He became an Associate in the Institute in 1911.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

George H. Groce
(former address)
2857-59 S. Halstead St.,
McFell Signal Co.,
Chicago, Ill.

Ernest Kardos,
(former Address)
156 E. 116th St.,
New York, N. Y.

A. B. McCollum,
(former address)
4030 Lindell Blvd.,
St Louis, Mo.

Wm. A. Street,
(former address)
Gatun, C. Z.

E. W. Sundberg,
(former address)
6912 Page Ave.,
St. Louis, Mo.

ASSOCIATES ELECTED OCTOBER 10, 1919

Abbott, Robert L., Head of Testing Dept., Sprague Electric Works of Gen. Elec. Co., Bloomfield, N. J.

Airey, Frank J., District Manager, Pacific States Electric Co., 236 S. Los Angeles St., Los Angeles, Cal.

*ANDERSON, ROBERT T., Asst. to Director, Light & Heat Station, Univ. of Pennsylvania; res., 3401 Spruce St., Philadelphia, Pa.

ARCHILA, OCTAVIO, Rua da Quitanda 56, Rio de Janeiro, Brazil, S. A.

AYMERICH, FRANK E., Lighting Specialist, Mexican General Electric Co., Apartado 403; res., University Club, Mexico City, Mexico.

BACHS, JAIME, Chief Load Dispatcher, Ebro Irrigation & Power Co., Ltd., Barcelona, Spain.

BEAN, HARRY M., Engineer, Emergency Fleet Corp., Port Newark; res., 322 Belmont Ave., Newark, N. J.

BEEBE, CHARLES F., Electrical Engineer, 813 Superior Ave. N. W., Cleveland, Ohio.

BEILER, ALBERT HENRY, Asst. Engineer, in Electrical Construction Division, Interborough Rapid Transit Co., 621 Broadway, New York, N. Y.

BENNINGTON, EARL THOMAS, President, Cuyahoga Power Construction Co., 721 W. Superior St., Cleveland, Ohio.

*BISCHOFF, HENRY W., Radio Officer, Air Service, U. S. A., 63 Newtown Road, Long Island City, N. Y.

BLACK, ROBERT, JR., Chief Load Dispatcher, Philadelphia Electric Co., 1000 Chestnut St., Philadelphia, Pa.

BOOTHBY, FRANK H., Power House & Substation Operator, Portland Ry., Lt. & Pr. Co.; res., 61 E. 60th St. South, Portland, Ore.

BOYCE, B. ADAIR M., Chief Electrical Designer, Brush Electrical Engineering Co. Ltd., Falcon Works, Loughborough, Eng.

BRAINERD, ARTHUR ALANSON, Instructor, State Trade School; res., 32 Fairview Ave., Danbury, Conn.

CAMPBELL, THOMAS V., Gen. Foreman, Elec. Shipfitting Dept., Submarine Boat Corp., Port Newark, N. J.; res., Astoria, N. Y.

CAMPBELL, WALTER WILLIAM, Design & Supervision of Industrial Plants; res., 4226 Brooklyn Ave., Seattle, Wash.

CATAPANO, FRANK, Electrician, Brooklyn Navy Yard; res., 121 Mott St., New York, N. Y.

CEGAVSKE, HARRY E., Tester, Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., 518 Todd St., Wilkinsburg, Pa.

CHARTRAND, JOHN B., Sales Engineer, Moloney Electric Co.; res., 1470 St. Louis Ave., E. St. Louis, Mo.

CHOLET, LEON, Electrician, Printing Dept., Metropolitan Life Insurance Co., 11 E. 24th St., New York, N. Y.

COBB, HOWARD L., Radio Electrician, Radio Laboratory, Navy Yard; res., 5837 Wissahickon Ave., Philadelphia, Pa.

CONWAY, UREY WOODSON, Lieut. Commander, U. S. Navy, Navy Department, Washington, D. C.; res., 1308 Delaware Ave., Wilmington, Del.

COOPER, GEORGE S., Electrical Engineer, Richmond Light & Railroad Co., New Brighton, N. Y.

COUTANT, TRACY S., Aux. Engineer, Central New England Railroad Co.; U. S. R. R. Administration, Maybrook; res., Clintondale, N. Y.

DAVIS, HENRY A., Distribution Engineer, Rochester Ry., & Lt. Co.; res., 531 Averill Ave., Rochester, N. Y.

DE CLAMECY, PHILIPPE, Consulting Engineer, B. F. Sturtevant Co., Hyde Park; res., 1862 Beacon St., Brookline, Mass.

*DE GOICOECHEA, LUCIANO, General Contractor, Cosculluela and Goicoechea, Compostela 65, Havana, Cuba.

Tremaine, A. Raymond, Manager and Chief Engineer, Depew & Lancaster Light, Power & Conduit Co., Lancaster, N. Y.

Trust, Humphrey Gerrans, Capt., Royal Marine Engineers, Civil Engineer in Chief's Dept., Admiralty, London, England.

Young, W. E., Assistant Manager, Apparatus Dept., Canadian General Electric Co., Toronto, Ont.

TRANSFERRED TO GRADE OF FELLOW, OCTOBER 10, 1919

Barnholdt, Harold L., Designing Engineer, Westinghouse Electric & Mfg. Co., East Pittsburgh, Pa.

Morecroft, John H., Associate Professor in Electrical Engineering, Columbia University, New York, N. Y.

Morehead, John M., Consulting Engineer, New York, N. Y.

Willis, Fred W., Deputy General Manager and Chief Engineer, Tata Hydro-Electric Power Co. & Andhra Valley Power Supply Co., Bombay, India.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on September 29, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Member

Aldridge, A. P., Engineer-in-Charge, Waipori Falls Power Station, Dunedin, N. Z.

Brown, Carrol G., Professor of Electrical Engineering, School of Engineering, Milwaukee, Wis.

Ferguson, Howard F., District Engineer, Republic Engineers, Inc., Youngstown, O.

Owen, Alexander C., Assistant Electrical Engineer, Public Works Department, Wellington, N. Z.

Scrivener, Robert M., District Manager, Alfred Collyer & Co., Toronto, Ont.

Weiss, Fernand C., Superintendent of Construction, Alabama Power Co., Birmingham, Ala.

Whiting, Donald F., Electrical Engineer, Special Research Division, Western Electric Co., New York, N. Y.

STUDENTS ENROLLED OCTOBER 10, 1919

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated, the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate, the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before November 30, 1919.

REPORT OF SPECIAL COMMITTEE ON PUBLICATIONS

The following report was presented at the meeting of the Board of Directors of the Institute held in Philadelphia. October 10.

October 3, 1919.

To the Board of Directors of the
American Institute of Electrical Engineers.

Gentlemen:

In accordance with the resolutions adopted by the Board of Directors on August 12 relating to the report of the Committee on Development, this committee has carefully considered the Development Committee's report and the communications relating to the publications of the Institute that have been received by the President, the Secretary, the Development Committee, and this committee, up to the present time.

In general, the views expressed by the membership are overwhelmingly in accord with the suggestions in the Development Committee's report, including the publication of additional matter in the Proceedings.

In order to best meet the needs of the membership, and to promote the objects of the Institute as expressed in our constitution, namely, the advancement of the *theory* and *practise* of electrical engineering and of the allied arts and sciences and the maintenance of a high professional standing among its members, this committee recommends the following as the policy to be carried out when and as the necessary funds become available:

1. Transactions.

That the annual Transactions be continued in accordance with the long established policy; *i. e.*, with no change in size or character of contents.

2. Proceedings.

That the publication of a monthly periodical, heretofore designated "Proceedings," be continued.

3. Contents of Proceedings.

(a) That high grade engineering and theoretical papers, in full or in abstract, shall continue to constitute the major portion of the monthly periodical and that the space devoted to such papers shall be limited only by the amount of material available and the permissible expense.

(b) That the substance of discussions at Institute meetings be published.

(c) That the papers and discussions, in full or in abstract, as presented before Sections and Branches, be published as may be selected by the committee in charge.

(d) That a portion of the monthly publication shall be devoted to material relating to the engineering art, other than that which is presented in Institute papers and discussions, such as descriptions of new developments characterized by notable advances.

(e) That the publication of items relating to activities of the Institute and other organizations be continued and expanded.

(f) That some form of descriptive index of electrical engineering literature be published, with due regard to the various indexes now published elsewhere and the avoidance of undesirable duplication.

4. Title of the Monthly.

That the name of the publication be changed from "PROCEEDINGS of the A. I. E. E." to a title that will better indicate the broader scope of the proposed contents.

5. Size of Monthly Publication.

That the size of the monthly publication be increased to nine inches by twelve inches (9″ x 12″), the generally adopted standard for technical periodicals, as soon as it is found commercially practicable.

6. Advertising.

That the Institute's practise of the past twenty-five years of carrying advertisements in the monthly publication, be continued, and that, as heretofore, the editorial and advertising policies be entirely independent of each other.

7. Supervision.

That the general supervision of the monthly and annual publications, including decisions regarding the publication of articles, papers, discussions, and all other matter available for publication, be assigned to a standing Publication Committee; and that the carrying out of the policies that may be determined from time to time by the Board of Directors, be delegated to this standing committee.

Respectfully submitted,
W. I. SLICHTER, *Chairman*
N. A. CARLE
W. A. DEL MAR
F. L. HUTCHINSON
HAROLD PENDER
SPECIAL COMMITTEE
ON INSTITUTE PUBLICATIONS

The Board approved the report and authorized the President to appoint a standing Publication Committee, to formulate and carry out plans in accordance with the recommendations embodied in the report.

REPORT OF
JOINT CONFERENCE COMMITTEE
of
DEVELOPMENT COMMITTEES

The report of the Joint Conference Committee of the Development Committees of the four national societies of Civil, Mining, Mechanical and Electrical Engineers is published below together with a letter from Professor Chas. F. Scott, Chairman of the A. I. E. E. Development Committee, transmitting the report to the Board of Directors of the Institute.

October 10, 1919.

To the Board of Directors,
American Institute of Electrical Engineers.
Gentlemen:

When the Committee on Development made its report on August 12 it stated in the last paragraph that it had entered into conference with representatives of the other three National societies (A. S. M. E., A. S. C. E., A. I. M. & M. E.) A Joint Conference Committee was formed of three members of each Society. After the preliminary meeting on July 2, subsequent meetings were held at Montclair, N. J. on August 13, 14 and 15 at which we were represented by Messrs. Townley and Robinson and in New York, September 15, 16 and 17 by Messrs. Townley, Robinson and Scott. The final report of this Joint Conference Committee is submitted herewith to the Board of Directors.

The report consists of two parts, one covering public activities; the other, Society activities of common interest. The large proportion of the Committee's deliberations was concentrated on the first part and a broad guage plan for the cooperation of engineers and engineering societies in public activities which includes both local and National activities in its scope, has been elaborated. Such a plan must on the one hand present a broad vision and a general purpose; on the other hand it must present sufficient detail to indicate its feasibility. The present report aims to do both. Presumably many of the details of organization will be modified and criticism of the particular methods of carrying out details should not obscure the broad consideration of the scheme as a whole.

The tone of the meetings indicated a serious realization of the enlarging responsibilities which confront engineers and an earnest purpose to devise plans by which the common aspirations of engineers for accomplishing larger service might be realized through effective organization.

As chairman of the Committee I suggest that you consider the issuing of this report to our membership for its consideration and comment.

Further details with regard to the conferences which have been held and other matters relating to the Development Committee are contained in a report which I am sending to the members of the Development Committee, copy of which is enclosed.

Very respectfully,
CHAS. F. SCOTT, *Chairman,*
Development Committee, A. I. E. E.

REPORT

of the

JOINT CONFERENCE COMMITTEE

representing

The American Society of Civil Engineers,
The American Institute of Mining and Metallurgical Engineers,
The American Society of Mechanical Engineers, and
The American Institute of Electrical Engineers.

An informal meeting of the Conferees of the Development Committees of the four Societies was held in New York on July 2nd, 1919, at which the scope of the work was considered, and a sub-Committee on Procedure, consisting of the chairmen of the Conferees from each of the four Societies, was appointed to arrange the program for and the time and place of the first formal meeting. The Conferees subsequently adopted the name, "The Joint Conference Committee."

The Joint Conference Committee convened at the Hotel Montclair, Montclair, New Jersey, August 13, 14 and 15, and in New York, September 15, 16 and 17, 1919.

The Committee has divided its report into two parts, that covering the public activities and that covering the society activities of common interest to the four Societies.

1. CO-OPERATION IN PUBLIC ACTIVITIES

It was the unanimous opinion of those present at all conferences that one of the most important matters on which joint action can be taken is the formation of a single comprehensive organization to secure united action of the engineering and allied technical professions in matters of common interest to them.

In presenting its report upon a proposed form of organization which shall provide a voice to speak for the ideals of the profession, a hand to enforce unity of action and render the maximum of national, social and political service, the Committee presents for consideration the following plan. "The Committee emphasizes that the plan can only be valuable and enduring as the motive dominating it is patriotic, broad-visioned and unselfish, but firmly believes that all efforts toward bringing a united profession to the service of the Nation, the State and the City will bring to its members the public honor, esteem and recognition which their qualifications deserve, now relatively unacknowledged and uncompensated.

In preparing this plan the Committee has recognized that there exists in Engineering Council a tool which is engraving an honorable record on the pages of professional history, but its limitations are well known and its poverty is chronic. If desired, Engineering Council can be moulded into this organization by making it more democratic and founding it on direct representation of all engineers, rather than appointment as at present.

The great object is to provide an effective body, widely and truly representative, modestly yet adequately financed, which will be neither autocratic nor aristocratic, which will at all times stand as the representative and defender of the profession in matters affecting its honor, welfare and common interest.

The mandate for a vehicle to provide for co-operation and solidarity among engineers has been unmistakably expressed by the membership of the four Societies, through their several Development Committees. In obedience thereto the Joint Conference Committee has constructed a plan for an organization designed to perform this function by providing an opportunity to use the strength of every existing technical organization in the country, but without taking from them any of their present privileges, or in any way interfering with their respective spheres of usefulness.

Every new activity, to be effective, means work and needs money. A movement such as proposed, if undertaken without sufficient funds, would not only prove barren of results, but by failure would bring ridicule upon the profession. In advance of its organization no definite budget can be prepared. The revenues proposed are moderate, and are based on the experience of Engineering Council, which, while called upon to occupy an ever-widening field, has been continually handicapped by limited resources.

In submitting the proposed fundamentals to govern a single comprehensive organization by which the engineering and allied technical professions may become more active in their service to the public and themselves, the Joint Conference Committee would point out the following as among some of the objects to be attained by such an organization:

(1) To render the maximum of service to the nation through unity of action.

(2) To give the engineers of the country a more potent voice in public affairs.

(3) To secure greater recognition of the services of the engineer, and to provide for his advancement.

(4) To promote *esprit de corps* among the members of the profession.

(5) To provide the machinery for prompt and united action on matters affecting the profession, among which are:

Licensing and registration of engineers;
National Service Committee;
National Department of Public Works;
Conservation of national resources;
Publicity;
Classification and compensation of engineers;
General employment bureau;
Engineering Education;
International affiliation of engineers;
Industrial relations.

In the greater vision resulting from the world war it is apparent that no one alone can successfully solve the problems with which he is confronted. He needs the co-operation of his fellows. National problems demand united effort. The Joint Conference Committee believes that the greatest value of the proposed organization is in the united effort for the service of the nation, from which effort will result the greatest service to the individual.

The general plan offers a definite method of organization for public service. The Committee presents a means whereby the expressed wish of engineers throughout the land may be formulated in organization which shall make for the common weal.

The Committee submits the plan with the confident belief that it will be accepted by the four Societies, that they will make the sacriifices necessary and assume the responsibility of leadership, supporting the movement by virtue of their position in the engineering profession. A national movement by local societies is sure to come. The four National Societies can take the initiative and continue their leadership in American engineering by prompt action, or by inaction lose the prestige they now hold.

NATIONAL ENGINEERING ORGANIZATION*

Organization and Purpose.

In order that the engineering and allied technical professions may become a more active national force in economic, industrial and civic affairs, and in order that united action may be facilitated, it is desirable that there be co-operation through a single comprehensive organization. The purpose of such organization should be to further the public welfare wherever technical knowledge and training are involved, and to consider all matters of common concern to these professions. It should embrace:

Component Parts of Organization.

1. Local Affiliations, preferably under the auspices of local engineering societies or clubs, as follows:
   a. "Local Associations" or "Sections" of the national engineering or technical societies;
   b. Local engineering societies; and
   c. Other local engineers and members of allied technical professions and associates.
2. A National Council, consisting of representatives of national engineering and technical societies and of representatives of local, state or regional affiliations or organizations.

The formation of State Councils, composed of representatives of the local affiliations within the State or otherwise representative of the majority of the engineers and members of allied technical professions in the State, is desirable as conducive to co-operation and to further the objects of the National Council with which such State Councils should harmonize; and such State Councils are recommended wherever and whenever the local conditions warrant.

---

*The Joint Conference Committee does not deem it desirable to select definite names for either the organization or its component parts, but believes that this should be left to the action of this organization when formed.

Delimitation of Authority.

Local Affiliations, State Councils (where formed) and the National Council, shall take action on local, state and national matters respectively, and they shall be autonomous with respect thereto. It shall, however, be the duty of the National Council to interest itself in the activities of Local Affiliations and State Councils if such activities are of national scope or affect the interest of the engineering and allied technical professions in other parts of the country; provided, that nothing herein stated shall be construed as preventing the discussion by any Local Affiliation or State Council or by the National Council of any matters of interest to engineers and members of allied technical professions.

LOCAL AFFILIATIONS

Purpose.

Local Affiliations are created to consider local matters of public welfare with which the engineering and allied technical professions are concerned, as well as other matters of common interest to these professions, in order that united action may be made possible in local matters.

Constitution.

Each Local Affiliation shall submit its constitution and by-laws and all subsequent modifications thereof to the Executive Board of the National Council for approval.

STATE COUNCILS

Purpose.

State Councils may be created to consider state matters of public welfare with which the engineering and allied technical professions are concerned, as well as other matters of common interest to these professions, in order that united action may be made possible in state affairs.

Constitution.

Each State Council shall submit its constitution and by-laws and all subsequent modifications thereof to the Executive Board of the National Council for approval.

NATIONAL COUNCIL

Purpose.

The National Council is created to consider national matters of public welfare with which the engineering and allied technical professions are concerned, as well as other matters of common interest to these professions, in order that united action may be possible in matters of national scope.

Basis of Representation.

Each local, state or regional affiliation or organization whose membership is not otherwise represented than through the national engineering or technical societies, shall be entitled to one representative to the National Council for a membership of from 100 to 1000 inclusive, and one additional representative for every additional 1000 members or major fraction thereof.

Each national engineering or technical society shall be entitled to one representative for a membership of from 200 to 2000 inclusive, and an additional representative for every additonal 2000 members or major fraction thereof.

Meetings.

The National Council shall hold a stated annual or biennial meeting. Other meetings *may* be called by the Executive Board upon its own initiative, and *shall* be called by it upon the written request of 25 delegates to the National Council, provided that all notices of special meetings shall be mailed not less than 60 days prior to the date thereof.

Terms of Delegates.

Delegates shall serve for terms of four years; provided that arrangements shall be made by the Executive Board so that an approximately equal number of delegates will be elected each year as provided in the by-laws.

National Headquarters and Secretary.

The National Council shall maintain National Headquarters with a permanent Secretary appointed by and holding office during the pleasure of the Executive Board. He shall not be a member of the Executive Board.

Elected Officers.

The following officers shall be elected by the National Council: A President to hold office for two years, who shall be ineligible for immediate reelection; two Vice-Presidents to hold office for four years, one to be elected every two years, and a Treasurer to hold office for two years.

Executive Board.

There shall be an Executive Board which shall direct the activities of the National Council in accordance with its adopted policies. It shall have such other functions as may be assigned to it by the National Council.

The Executive Board shall consist of the four officers elected by the National Council and one representative for each national society of 2000 members or less, with one additional representative from each national society for every additional 2000 members or major fraction thereof, to be selected from the membership of the National Council in each case by the national society concerned, and of a number of representatives selected from the membership of the National Council by the representatives therein of the local, state or regional affiliations or organizations, the said number to bear the same ratio to the representation of the national societies as the total membership of the local, state or regional affiliations or organizations bears to that of the national societies; provided that the numerical basis of representation shall be so changed from time to time that the membership of the Executive Board shall not exceed thirty (30).

The President and Secretary of the National Council shall be the Chairman and Secretary, respectively, of the Executive Board.

Electoral Districts.

The National Council shall divide the country into such districts or regions, as may be desirable to provide for the election of the district members of the Executive Board. In establishing these districts due regard shall be had to geographical conditions and membership.

Admission to National Council.

Any national engineering or technical society or any local, state or regional affiliation or organization desiring representation on the National Council shall submit a written request to the Secretary of the National Council which shall be accompanied by such data regarding the aims and status of the organization as the by-laws may provide.

The Secretary shall refer this request to the Executive Board which shall submit it to the delegates, together with its recommendations, for a letter ballot.

The applicant shall be admitted by a majority vote of the National Council, provided that not more than 25 per cent thereof shall vote in the negative.

Unexpired Terms.

Vacancies in the offices of the President, the Vice-Presidents, the Treasurer and in the Executive Board and delegates shall be filled as soon as feasible, by the agencies originally selecting the incumbents. Officers and delegates thus chosen shall serve for the unexpired terms.

Finances.

For the purpose of financing the National Council and its Executive Board (not for the use of local affiliations and State Councils) the following assessments shall be made:

Each national society represented on the National Council shall contribute annually one dollar and fifty cents ($1.50) per member.

Each local, state or regional affiliation or organization represented on the National Council shall contribute annually one dollar ($1.00) per member.

2. CO-OPERATION IN SOCIETY ACTIVITIES

Careful consideration was given to many points of common interest, and in the time available the Committee feels warranted in taking unanimous action on some of these topics, as follows:

1. Co-operation in Professional Activities:

The Committee recommends that the growing co-operation in the activities of the Societies be fostered. The unified operation of the libraries, the organization of Engineering Council, American Engineering Standards Committee, Engineering Foundation and Employment Service, are conspicuous examples of such common action. Joint committees for definite purposes should be established, and standing or other committees directing similar activities in the several societies would profit by conference. In this way common action may be taken or similar policies may be adopted when advantageous, thus avoiding duplication of effort. Comprehensive means should be provided for united action in other larger professional and technical matters.

2. Joint Meetings:

The Committee is of the opinion that periodic Joint meetings of the four National Societies in various localities would be beneficial in the development of social intercourse between the members and for debating matters of common interest. Furthermore such large conferences would bring the engineer forcibly to the attention of the general public.

3. Industrial Relations:

The question of industrial relations is one of the most pressing issues of the present day. It is a vital factor in the economic future of the country. It is a matter with which the engineer is peculiarly fitted to deal. In view of the great importance of the subject, and of the unique relation of the engineer to industry, the Joint Conference Committee recommends that Industrial Relations should be a major subject for the consideration of the engineering and allied technical professions. It is also recommended that support be given to educational movements, such as the Industrial Service of the Y. M. C. A. in colleges, the Americanization movement, and similar activities.

4. Personal Service Bureaus:

It is recommended that the Engineering Societies Employment Bureau be extended by providing for cooperation with the existing organizations of engineers maintaining employment service, and that upon the formation of the contemplated national organization the service be made available to the members of all constituent associations and branch agencies be established in communities where the local engineers desire to co-operate.

5. Student Organizations:

The Committee recommends that it be the duty of local associations and sections of the National Societies to promote and assist general student engineering societies in neighboring universities and technical schools, to provide carefully selected speakers, and to maintain personal contact with such societies. In view of the desirability of more intimate co-operation among engineers, consideration of the affiliation of the student branches of the national Societies into general student engineering associations is recommended.

6. The American Engineer in Foreign Service:

It is the opinion of the Committee that American engineers in foreign countries should be urged to assemble for purposes of better acquaintance and mutual help, and to fraternize with the engineers of the country in which they reside, for the promotion of world-wide co-operation.

7. Standards:

The Committee is unanimously of the opinion that the corelation of standards by the four Societies and others working with them, along the lines contemplated by the American Engineering Standards Committee, should be approved in principle; but in view of the fact that this matter is under consideration by the Boards of Direction of those Societies and the matter is well advanced, this Committee does not feel warranted in making a further recommendation.

8. Arbitration and Expert Testimony:

The Committee is of the opinion that the recommendation of the Committee on Development of the American Society of Civil Engineers in regard to arbitration and expert testimony, namely, that a committee of the American Bar Association be asked to co-operate with a joint committee of the four Societies in order to develop better practise in these matters, should be referred to Engineering Council.

9. Licensing and Registration of Engineers:

The Committee of Engineering Council that has had under consideration the licensing and registration of engineers has nearly completed its draft of a standard form for a uniform law on these matters. Since it is undesirable to duplicate this work, the Joint Conference Committee recommends that action be deferred pending the receipt of that report.

10. Patent Law:

Since the Patents Committee of Engineering Council, after due consideration, has approved the report of the Patents Committee of the National Research Council, in which definite recommendations are made in regard to the present patent system, it is deemed inexpedient for the Joint Conference Committee to take action on the subject of Patents and the Patent Law

11. Code of Ethics:

The Joint Conference Committee, after discussion of the question of a code of ethics, reached the conclusion that the matter would require extensive study and careful consideration in order to secure joint action by the representatives of the four Societies, and therefore deemed it unwise to attempt to make a report on this matter at this time.

CONCLUSIONS

The Joint Conference Committee was confronted with a multiplicity of matters inviting consideration, but in the two and a half months of its existence it has been able to consider only the more important ones. The vital matter is the general organization of engineers for public activities, a general plan for which is now submitted for the approval of the Societies.

When the four Societies shall have approved the plan, the Committee holds itself in readiness to work out the details by which it may be put into effect. The Committee has therefore adjourned to meet after this matter has been considered by the four Societies.

George G. Anderson Gardner S. Williams Richard L. Humphrey, Chairman	Conferees of the Committee on Development, The American Society of Civil Engineers.
Arthur S. Dwight Philip N. Moore John V. W. Reynders, Chairman	Conferees of the Committee on Development, The American Institute of Mining and Metallurgical Engineers.
Edwin S. Carman Dexter S. Kimball Louis C. Marburg, Chairman	Conferees of the Committee on Aims and Organization, The American Society of Mechanical Engineers.
Lewis T. Robinson Charles F. Scott Calvert Townley, Chairman	Conferees of the Committee on Development, The American Institute of Electrical Engineers.

NOTE: In addition to the above the following members have been in attendance at meetings of the Committee, but were unable to participate in the final drafting of the report: **JOSEPH W. RICHARDS** and **ALLEN H. ROGERS**, the American Institute of Mining and Metallurgical Engineers, and **CHARLES E. LORD**, The American Society of Mechanical Engineers.

There was also present by invitation **COMFORT A. ADAMS**, Engineering Council.

New York, N. Y., September 17, 1919.

The above report was presented at the meeting of the Board of Directors of the Institute at Philadelphia, October 10, and was ordered printed in the PROCEEDINGS for the information of the membership, with a request that members interested communicate their views promptly to the Institute headquarters for consideration by the committees concerned.

Subscription. $10.00 per year to United States, Mexico, Cuba, Porto Rico. Hawaii and the Philippines; $11.00 to Canada and $12.00 to all other countries, Single copies $1.00. Volumes begin with the January issue.

Changes of advertising copy should reach this office by the 15th of the month for the issue of the following month.

American Institute of Electrical Engineers

ESTABLISHED 1884

PROCEEDINGS

Vol. XXXVIII DECEMBER, 1919 **Number 12**

A. I. E. E. MEETING IN NEW YORK, DECEMBER 12, 1919

The 356th regular meeting of the Institute will be held in the Engineering Societies Building, 33 West 39th Street, New York on the evening of December 12, 1919 at 8:15 p. m.

Papers bearing on two distinctly different subjects have been selected for presentation and both are descriptive of subjects of general interest. Mr. Arthur Bessey Smith, engineer with Automatic Electric Co. of Chicago will present a paper entitled "Applicability of Automatic Switching to all Classes of Telephone Service." This paper is an attempt to place before engineers general information in regard to automatic telephone switching and the author states that automatic switching of telephone lines is adaptable to all classes of telephone service and offers a flexible means of solving problems.

The second paper of the evening entitled "The Search Light in the United States Navy," is by Ralph Kelly, formerly of the Bureau of Steam Engineering, Navy Dept., Washington, D. C. Until the present war, the searchlight and the various forms of signalling lights were in a much neglected state; the theory being that, provided enough money was spent on a searchlight and enough of them placed indiscriminately aboard a ship in prominent places, the results would be satisfactory.

During the war the lights have been developed, many varieties eliminated, the number aboard ship reduced about one-half and the remainder properly placed. The Navy Dept. has had a great amount of help from manufacturers and as a final plan of development has been settled upon it is believed the presentation of this plan before the A. I. E. E. will result in such criticism and suggestions as will prove of great assistance.

Both papers are published in this issue of the PROCEEDINGS and advance copies are available on request.

FUTURE A. I. E. E. MEETINGS

January 9, 1920, Chicago. This meeting will be under the auspices of the Lighting and Illumination Committee. Two sessions will be held at which the following papers will be presented: *Series Systems of Distribution for Street Lighting* by W. P. Hurley and *Multiple Systems of Distribution for Street Lighting* by Ward Harrison, and *Mixed Systems of Distribution for Street Lighting*, by C. P. Steinmetz. Detailed information in the January JOURNAL.

February 18 to 20, New York. Mid-winter Convention.

March 12, 1920, Pittsburgh. Meeting under auspices of Traction and Transportation Committee. Subject: Electric Traction.

April 9, 1920, Boston. Joint Meeting with the American Electrochemical Society. Meeting under auspices of Committee on Electrochemistry and Electrometallurgy.

May 21, 1920, New York. Annual business meeting of the Institute.

June 22 to 25, 1920. Annual Convention.

FUTURE SECTION MEETINGS

Baltimore.—December 12, 1919. Subject: "Electrochemical Industries."

Boston.—December 9, 1919. Subject: "Electric Power Transmission Cables."

January 6, 1920. Subject: "Electric Welding."

Cleveland.—December 16, 1919. Subject: "Manufacture, Testing and Electrical Characteristics of Electrical Sheet Steel." Speaker: W. J. Beck, American Rolling Mill Co.

Indianapolis-Lafayette.—December 12, 1919. Subject: "Comparison of Value of the Engineering Profession to other Professions."

January 16, 1920. Joint meeting with other technical societies.

February 20, 1920. Subject: "Problems Confronting Electric Railroads."

Ithaca.—December 12, 1919. Subject: "The One Best Way, as a Solution of the Industrial Problem." Speaker: Frank B. Gilbreth.

Los Angeles.—December 2, 1919. Subject: "Progress in Radio Communication." Speaker: F. B. Jewett.

January 20, 1920. Subject: "Automatic Substations."

February 17, 1920. Subject: "The Engineer in Industry."

Philadelphia.—December 8, 1919. Joint meeting, I. E. S. and Philadelphia Section A. I. E. E. Subject: "Automobile Headlights" by Dr. Sharp, Electrical Testing Laboratories.

Rochester.—December 5, 1919. Subject: "How Load Driving Synchronous Motors are Helping the Power Factor Situation" by Mr. Will Brown, of the Electric Machinery Co.

St. Louis.—December 3, 1919. Annual Dinner, Meeting and Election. Speaker: Col. E. J. Spencer.

Jan. 29, 1920. Technical Story of the Rotary Converter. Speaker: Mr. B. G. Lamme.

Schenectady.—December 5, 1919. Subject: "Electric Ship Propulsion." Speaker: W. L. R. Emmet, G. E. Co.

December 19, 1919. Smoker.

Fort Wayne.—November 20, 1919. Subject: "Gauges," (subject to change)

December 18, 1919. Subject: "High Frequency."

January 15, 1920. Subject: not assigned.

February 19, 1920. Subject: Autogeneous Welding."

March 18, 1920. Subject: not assigned.

A. I. E. E. MEETING IN NEW YORK, NOVEMBER 14, 1919

On the evening of November 14, 1919 the 355th regular meeting of the Institute was held in the fifth floor room of the Engineering Societies Building, 33 West 39th Street, New York. President Townley called the meeting to order at 8:15 p. m.

This meeting which was under the auspices of the Power Stations Committee, Chairman Philip Torchio, drew a representative audience of engineers interested in both the design and operaton of steam turbines. About 375 were in attendance.

President Townley opened the meeting by calling for the presentation of the papers scheduled for the evening. The three authors read their papers in full with interpolated explanatory remarks on special points of interest. Mr. J. F. Johnson of the Westinghouse Elec. & Mfg. Co. on "Present Limits of Speed and Power of Single-Shaft Steam Turbines." was succeeded by Eskil Berg of the General Electric Company on"Present Limits of Speed and Power of Single-Shaft Curtis Steam Turbines." The third and last paper was read by F. D. Newbury of the Westinghouse Elec. & Mfg. Co. entitled "Present Limits of Speed and Output of Single-Shaft Turbo-Generators."

President Townley then turned the meeting over to Chairman Torchio who called on B. A. Behrend to open the discussion. Mr. Behrend called attention to the rapid development in the size of turbine units and predicted a limiting of that development in the future due primarily to metal fatigue as a result of continued vibratory strain. Mr. Behrend was followed by W. L. Emmet of the G. E. Co. who described certain tests conducted by the G. E. Co. on rubber disks of varying thickness revolving at high speed. These tests graphically demonstrated certain of the strains occurring in such revolving disks and some unexpected resulting phenomena. Mr. Emmet was followed in the discussion by W. J. Foster, F. Hodgkinson, B. G. Fernald, G. A. Adams and Farley Osgood. Mr. Osgood presented the operators viewpoint on large turbo units and complained of an apparent lack of interest on the part of designers in the actual performance of machines after installation. Two written discussions by Prof. Gray and R. B. Williamson were presented by title only but will be included in the published discussion. The meeting adjourned at 11 p. m.

A. I. E. E. DIRECTORS' MEETING NOVEMBER 14, 1919

The regular monthly meeting of the Board of Directors of the Institute was held at Institute headquarters, New York, on Friday, November 14, 1919, at 3:00 p. m.

There were present: President Calvert Townley, New York; Past President Comfort A. Adams, New York; Vice-Presidents A. M. Schoen, Atlanta; C. E. Skinner, Pittsburgh; N. A. Carle, Newark, N. J.; Managers Charles S. Ruffner, Wm. A. Del Mar, W. I. Slichter, L. F. Morehouse, New York, Charles Robbins, Wilfred Sykes, Frank D. Newbury, Pittsburgh, G. Faccioli, Pittsfield, Mass.; Treasurer George A. Hamilton, Elizabeth, N. J.; Secretary F. L. Hutchinson, New York.

A report was presented of a meeting of the Board of Examiners held November 3, 1919; upon the recommendation of the Board, the following action was taken upon pending applications: 193 Students were ordered enrolled; 82 applicants were elected to the grade of Associate; 16 applicants were elected to the grade of Member; 1 applicant was elected to the grade of Fellow; 1 applicant was transferred to the grade of Member.

Upon the recommendation of the Finance Committee, monthly bills amounting to $12,723.57 were approved.

In addition to the above, many other matters relating to important activities and the general policy of the Institute were discussed. Reference to these matters may be found in this and future issues of the PROCEEDINGS under suitable headings.

COOPERATIVE RESEARCHES IN ALLOYS

The Division of Industrial Research of the National Research Council is arranging for the formation of a cooperative association to plan and support fundamental researches in alloys. Although much valuable work has been done in this field by scattered investigators there is no doubt that a well-planned and coordinated effort by a cooperative association working under the general guidance of the National Research Council and composed of specialists representing both the manufacturers and the more extensive users of alloys can produce additional results of great importance. The success of other industries which have supported research on a cooperative plan, such as has been done by the National Canner's Association and the Malleable Iron Manufacturers, is evidence of this.

It is planned to create a special scientific staff composed of a Director and Assistant Director of Research and a group of scientific investigators and technical experts who shall give their whole time to the work. To finance the organization each member of the cooperative association will pay $1000 a year, and all contributing members, who may be either alloy manufacturing or using individuals, firms or companies are to benefit alike by the results of the researches.

LETTER FROM THE PRESIDENT

November 6, 1919.

To the Membership of
American Institute of Electrical
Engineers.

Dear Sirs:

In round figures, as now constituted, the Institute membership comprises 8500 Associates, 1500 Members and 500 Fellows.

An examination of the constitutional requirements of the several classes of membership and only a casual review of the men who are now Associates and Members will make it clear to any one that there are a large number in these classes eminently qualified to be transferred to a higher grade.

The requirements for transfer oblige the individual to himself make application, and the purpose of this letter is to suggest to every Associate and Member that he should, first, carefully read the eligibility requirements, as set forth in the Constitution, and, second, examine carefully his own qualifications to see if he should not ask for transfer.

If any one is in doubt as to his own qualifications he might consult with others regarding the matter.

Not only will the standing of the individual be made more correct when he finds himself in the proper grade but the influence and standing of the Institute will be improved, both at home and abroad, in just so far as our membership show that they occupy the positions therein to which their experience entitles them.

I earnestly urge consideration of this matter on the part of all members.

Very truly yours,
(Signed) Calvert Townley,
President.

REPORT OF BOARD'S COMMITTEE ON TECHNICAL ACTIVITIES

In accordance with the action of the Board of Directors on August 12, certain portions of the Development Committee's report of that date were referred to the Committee on Technical Activities for consideration and recommendations. This committee submitted a report to the Board of Directors at a meeting held in Philadelphia, October 10, as follows:

To the Board of Directors,
Gentlemen:

In accordance with your instructions conveyed in a letter of the Secretary of August 21st to the Board's Committee on Technical Activities, this Committee has considered the question of activities outlined on page 15 of the Report of the Committee on Development, paragraphs a, b, and c, and desire to report as follows:

De-Centralization of Committee Activities:

At the present time, a Technical Committee is appointed with the idea that its membership is representative of the broad field covered by it, and to insure such representation, the membership is usually widely scattered geographically, and it so works out that all parts of the country are usually represented. There are possibly a few cases where a Technical Committee engaged in some particular activity might be able to secure assistance through a section where an industry is to a great extent localized, as for instance, coal mining and steel mills. In such cases, it is possible that there would be some advantage in having a local committee of a section to cooperate with the National Committee. This might be of particular value where a National Committee is collecting data and the local committee could be entrusted with following the matter up with the people concerned. However, it does not seem desirable at the present time to change our general system of Technical Committees, although there is nothing to prevent the appointment of local committees working in conjunction with the National Committee in our present arrangement. However, it will perhaps be useful to draw to the attention of the Chairmen the possibility of the appointment of such local committees, and if any National Technical Committee feels that it can obtain any assistance in this way, then it could arrange through the Secretary to have a suitable committee appointed by one or more sections.

One of the difficulties of Committee work at the present time is, that to make the Committees representative, means wide geographic distribution of membership. This practically prohibits Committee meetings so that the activity depends to a great extent on the Chairman with very little assistance from the members of the Committee. There are, of course, some exceptions but this is the general rule, and instead of a still further distribution of the work, it has been suggested that it might be desirable in the interest of securing real committee work, to sacrifice something in regard to representativeness of the membership for the purpose of obtaining men located close together who could meet at frequent intervals. This is, however, tied up with questions of Committee programs, and if such action seems desirable, it should be done on the recommendation of the Board's Committee on Technical Activities as conditions will vary from year to year.

While we do not feel that the sections can work with the Technical Committees to any great extent, it would seem desirable that the technical activities of the sections themselves be brought in closer touch with headquarters. It is the experience of all interested in the Institute work that the success of the section depends almost entirely upon the Chairman. It seems desirable that the Chairmen of the Committees should be brought in closer touch with headquarters, especially in regard to the subject of papers, and it is suggested that our by-laws be changed so that the chairmen of the sections shall become *ex officio* members of the Meetings and Papers Committee. In this way, they will perhaps receive some inspiration from the discussions of technical activities that take place at the Meetings and Papers Committee meetings, and they will frequently be able to secure for their Sections papers of high calibre that the Meetings and Papers Committee cannot use, or arrange to work into the limited number of meetings available. It is felt that in this way, we can somewhat de-centralize by assigning to sections particularly interested in some industry, papers of interest to them of Institute grade which could be published in the PROCEEDINGS as Institute papers, and such action would also encourage them to obtain from their own membership papers of this type. If the proposed distribution of meetings as suggested in the Development Committee's report be carried out, the presence of the Committee members from the sections would be of assistance to the Meetings and Papers Committee in making their recommendations for the location of the National meetings.

Papers of General Interest

It is considered by this Committee very desirable that from time to time papers of general interest should be read before the Institute, particularly papers that keep the membership advised as to the general progress of the art, and also the general development of related arts. To some extent, this has been done in the past with very great success, and we believe that such general papers have the widest interest for our membership. It would seem desirable that we should at least try and arrange to have one such paper at our mid-winter Convention and our annual Convention.

Activities of Younger Members

It does not seem feasible to formulate any definite practise for governing of the activities of the sections by the Institute directors. The success of the sections will be almost always dependent upon the initiative and ability of the Chairmen and to a lesser extent upon the Executive Committee of the section. It may be possible to assist the sections more than in the past if the proposed scheme of geographically distributed Vice-Presidents be adopted. However, it does not seem possible to do anything more than to suggest to the sections the desirability of interesting the younger members in the work and having them take some part in the Institute activities. It is undoubtedly true that the success of the Institute depends upon having as large a percentage of its membership active as possible, and i t is to be regretted that the main work is done by a comparatively small percentage at the present time. While it does not seem possible to make any definite recommendations, the desirability of keeping this before the section chairmen is evident. It also seems desirable that the technical work of the sections should be better worked out than is usual at the present time. Comparatively few sections arrange programs for any considerable period, and most of them are more or less dependent upon papers that are presented with comparatively little preparation by the authors, which is not conducive to good quality. If the Sections would prepare programs for a sufficient period in advance, we believe that it would tend to improve the quality of the papers that would be presented to them. The suggestion to have the chairmen of the sections on the Meetings and Papers Committee, we believe would also be of assistance in this respect.

Technical Committee Reports

This Committee has discussed the question of technical reports by the various Technical Committees. Most of the reports presented by the Committee at the present time are simply a statement of their activities and are of no particular value to the membership of the Institute. We are in agreement that one of the important functions of a Technical Committee is the preparation of a report on the state of the art in the particular field covered by it, and such developments as might be of interest and be worth recording. To properly report on the state of the art, it might be necessary for several committees to co-operate and the desirability of such co-operation is evident when a broad subject such as the generation and distribution of power is considered. Your Committee is considering the desirability of requesting the Power Station Committe, The Transmission and Distribution Committee, Electric Machinery Committee and the Protective Devices Committee to report upon the present state of the art of generation and distribution of electric energy. Such a program would, of course, have to be outlined very much in detail by your Committee to insure proper corelation of the reports, but it is believed that such summaries and authoritative statements made from time to time would be of great interest to the Institute membership at large. From past experience, it would seem that your Committee will have to take the initiative in obtaining such reports, but we are in agreement as to the desirability of such information being gathered by the Committees.

Yours very truly,
(Signed) Board's Committee on
Technical Activities.
W. SYKES, *Chairman*

The Directors accepted the report and adopted the recommendation that the Chairmen of all Sections be made *ex officio* members of the Meetings and Papers Committee. The Chairmen have been notified accordingly and copies of the above report have been mailed to all Section Chairmen, and all members of the Sections Committee, Meetings and Papers Committee, and Board of Directors.

NOMINATIONS FOR INSTITUTE OFFICERS FOR 1920-21

As provided in Section 20 of the Institute by-laws, candidates may now be proposed for nomination for the offices to be filled at the next annual election in May, 1920, by the petition or by the separate endorsement in writing, of not less than fifty members. The petitions or separate endorsements must be in the hands of the Secretary not later than January 25, 1920. For the convenience of members, a form of petition has been prepared by the Secretary, and copies of it may be obtained upon application to Institute headquarters. Endorsements may, however, be made by letter if the form is not available. A member is not limited in the number of candidates he may endorse in this manner.

The officers to be elected are: a President and a Treasurer, for the term of one year each, six Vice-Presidents for the term of one year each, and three Managers for the term of four years each.

The Constitution provides that "the President, Vice-Presidents and Managers shall not be eligible for immediate reelection to the same office. A Vice-President shall not be eligible for immediate election to the office of Manager."

For the information of members, the full text of Section 20 of the by-laws, governing the proposal of condidates for nomination, is printed below:

Sec. 20. In addition to the names of incumbents of office, the Secretary shall publish on the "form showing offices to be filled at the ensuing annual election in May" provided for in Article VI of the Constitution, the names, as candidates for nomination, of such members of the INSTITUTE as have been proposed for nomination for a particular office by the petition or by the separate endorsement of not less than fifty members, received by the Secretary of the INSTITUTE in writing by January 25 of each year; provided, however, that any candidate proposed for nomination by petition may withdraw his name by written communication to the Secretary, and any name so withdrawn prior to the printing of the form shall not be published.

The names of such candidates for nomination shall be grouped alphabetically under the name of the office for which each is proposed, and this by-law shall be reprinted prominently in the December and January issue of each year's PROCEEDINGS, and shall be reproduced on the form above referred to.

INTERNATIONAL ELECTROTECHNICAL COMMISSION

At the plenary session of the International Electrotechnical Commission held in London, October 20-24, 1919, DR. C. O. MAILLOUX, President of the U. S. National Committee of the I. E. C. who sailed from this country on October 8th in company with the other representatives of the Institute on the committee was unanimously elected the new President of the I. E. C. for the period of the next two years. A report of the U. S. Delegates will appear in a future issue of the PROCEEDINGS.

FRANCO-AMERICAN ENGINEERING COMMITTEE

At the invitation of the Societe des Ingenieurs Civils and a committee of the French Engineers Congress issued during the latter part of 1918, a delegation of American engineers was appointed by the four national societies, the A. S. C. E., the A. S. M. E., the A. I. M. E. and the A. I. E. E., to study with French engineers industrial rehabilitation problems. This delegation sailed for France on December 5, 1918. They returned to New York and issued their report at a joint meeting of the societies on February 10, 1919, as outlined in the March PROCEEDINGS. During the Paris sessions of the Congress a permanent Franco-American Commission was suggested.

At the meeting of the Board of Directors of the Institute on August 12 it was voted that a permanent committee should consist of an equal number of representatives from each of the four national societies.

This permanent Franco-American Engineering Committee, composed of two representatives of each of the four Founder Societies, has met and organized by the appointment of Nelson P. Lewis as Chairman. The Committee, as now constituted, is as follows:representing the A. S. C. E.: George F. Swain, Nelson P. Lewis; representing the A. S. M. E.: Charles T. Main, George W. Fuller; representing the A. I. M. E.: E. G. Spilsbury, Arthur S. Dwight; representing the A. I. E. E.: Lewis B. Stillwell, Andrew M. Hunt.

TECHNICAL BOOKS INCLUDING A.I.E.E. TRANSACTIONS WANTED FOR UNIVERSITY OF LOUVAIN

An organization has been formed in this country and England to provide a new library for the University of Louvain, to replace that destroyed by the Germans. Contributions of money and books are solicited for the purpose.

The Librarian of Congress has requested the Institute to donate a set of its TRANSACTIONS to the University of Louvain. This request was approved by the Board of Directors at a meeting held November 24, and the Secretary was authorized to endeavor to obtain donations of the volumes which are missing from the Institute's stock.

There have been thirty-eight (38) volumes of TRANSACTIONS published, twenty-nine (29) of which will be supplied from stock, the missing volumes being Numbers I, III, V, VI, VII, VIII, IX, XVII and XVIII, the last volume named covering the year 1899.

The Secretary of the Institute will be glad to hear from any members who are willing to donate any one or more of these volumes for the specific purpose of completing the set to be donated to to the University of Louvain.

The Library Board of the Engineering Societies Library has offered a selection of books from its duplicates to the American Committee and these have been gratefully accepted. In the discussion of the question by the Library Board it was suggested that many individual engineers would doubtless be glad to present books to the University, if they knew that they were wanted. Standard books on mining, construction, mechanical engineering, electricity, etc., will be very acceptable. It is not essential that these be the latest editions, although works which are antiquated should not be sent. Sets of the publications of learned and professional societies are especially wanted.

Books may be sent to the Librarian of Congress, Washington, D. C. The packages should be marked "For Louvain University." The Engineering Societies Library will be glad to forward any books sent to it for this purpose.

NATIONAL MOTOR TRUCK SHOWS AND HIGHWAY TRANSPORT CONFERENCES

The Motor Truck Sections of the 20th Annual Automobile Shows of 1920, will be held in the 8th Coast Artillery Armory, New York, January, 3rd to 10th, 1920, and in the International Amphitheatre, Chicago, January 24th to 31st, 1920. Upwards of seventy makes of motor trucks, together with trailers, parts and accessories will be displayed.

In conjunction with these great motor truck expositions, Highway Transport Conferences will be held, with sessions each afternoon and evening. Every important phase of highway transportation will be discussed by men recognized as qualified authorities. Various talks will be illustrated by motion pictures and stereoptican slides.

Manufacturers, distributors and business men are invited to attend these shows and conferences, and tickets will be sent on application, each ticket bearing the name of the person using it. Apply directly for complimentary tickets to S. A. Miles, Manager, 7 East 42nd Street, New York City.

ENGINEERING COUNCIL

REPORT OF COMMITTEE ON CURRICULA OF ENGINEERING SCHOOLS

October 15, 1919.

On August 12 the Board of Directors of the American Institute of Electrical Engineers referred to Engineering Council a portion of a report of the Development Committee of that Institute reading as follows:

"There is a universal recognition of the fact that engineers do not participate as actively or as prominently in public affairs as they should and that both the public welfare and their own individual advancement would be promoted if this condition could be rectified. There are two general reasons believed to be responsible for the existing condition, one a lack of any general organization of engineers which would facilitate their cooperation, and second, too great technical specialization in the engineering curricula of our technical schools and colleges, which tends to narrow the vision of the engineering student and start him on his career with an exaggerated idea of the importance of specialization and an insufficient appreciation of the part he must play in public affairs. The second reason, namely, a possible modification of the engineering curricula of our technical schools and colleges, while perhaps of underlying and fundamental importance, was nearly crowded off the Lake Placid program by the press of other matters. It was, however, the unanimous view of the members attending the sessions that this matter should receive early and thorough consideration by the Institute, and the following preamble and resolution were presented and adopted:

'As the individual engineer can not look for greater public recognition or individual advancement than his training and fitness warrant;

And, in the belief that the bigger development of the profession consists in broader social and public service by publicly-minded engineers;

Recognizing that on the one hand young engineers are employed for too long a period at work which does not stress their capabilities and, on the other, that the demands of industry for ever-increasing numbers of technicians must be supplied;

And having in mind the excellent precedents established by the medical and legal professions;

This committee would welcome the establishment at the earliest date practicable of a normal six-year collegiate course in engineering, two years of which at the least should be devoted to training in the humane arts and sciences including, for example, Political Science, Economics, History and General Letters the last four years being devoted to sound training in the sciences and in only the fundamentals of diversified engineering.

With or prior to such a development we would endorse a program for the marked extension of vocational training in the industrial centers in order that the needs of industry may be met.

To the accomplishment of these ends this Committee requests the appointment of representatives to serve on a Joint Committee of Engineering Organizations to promote such a national educational program as shall provide for the future necessities of the engineering profession consistent with the needs of society.' "

This portion of the report was presented by mail to Engineering Council by Secretary Flinn, August 27, 1919, and referred to this Committee. In connection with this reference the chairman of your committee has carried on considerable correspondence with the members of the committee and others, —copies of the latter correspondence being furnished to the members of the committee.

At a meeting of the Committee held yesterday, there being present Messrs. Jacobus, Ludlow and Humphreys, the recommendations of the Development Committee of the American Institute of Electrical Engineers were considered, and your committee now reports thereon as follows:

While your Committee is not prepared to recommend a six-year course for the Colleges of Engineering of the U. S., your Committee calls particular attention to the fact that a six-year course was inaugurated at Columbia University some few years ago, practically on the same plan as in the case of the Schools of Law and Medicine, the technical studies of the engineering portion of the course being concentrated on the last three years and based upon three years devoted to studies leading to the B.A. degree.

The Massachusetts Institute of Technology is also conducting a six-year course in engineering, this being in addition to, and without interference with, the regular four-year course. A somewhat similar program, although perhaps less formal, is followed by the majority of the students in the Harvard University Engineering School, who first take their bachelors' degree in Harvard College, followed by two years in the engineering school. This problem is also being studied and experimented on by other Universities.

Your Committee suggests that as these practical experiments with the six-year course will furnish information not now available, any final recommendation can well be deferred until the results of these experiments can be studied and appraised.

Your Committee is now prepared to report unfavorably on the proposition to substitute the six-year course in place of the four-year course generally in the Colleges of the U. S.

Your Committee strongly endorses the proposition to extend and enlarge the facilities for vocational training throughout the U. S. and particularly in the great industrial centers; this educational work, however, to be carried on without interfering with the courses in engineering.

Your Committee also favors universal military training under proper regulations.

Your Committee does not agree that military training and vocational training should be combined, except so far as the vocational training would be found to be naturally involved in the military training.

Alex. C. Humphreys, *Chairman*
Edwin Ludlow
D. S. Jacobus
C. A. Adams

REPORT OF THE PATENTS COMMITTEE

The Patents Committee, cooperating with similar committees appointed by the National Research Council and various other technical societies has been devoting its energies particularly to securing the adoption by Congress of three bills, as follows:

H. R. 5011 providing for the establishment of a Patent and Trade Mark Office independent of any other Federal Department and for an improved program of patent procedure.

H. R. 5012 providing for an increase inthe force and salaries in the Patent Office.

H. R. 7010 providing for the establishment of a Court of Patent Appeals to consist of a Chief Justice and six Associate Judges.

Another bill has been introduced in the Senate, known as S. 2332, and a corresponding bill in the House: "to create a Department of Public Works and define its powers and duties." This bill proposes to change the name of the Executive Department now designated as the "Department of the Interior" to the "Department of Public Works" and provides that the Patent Office now subordinate to the Department of Interior should be subordinate to the Department of Commerce.

No action has been taken in con ection with this bill, but as it is antagonistic to the proposition of H. R. 5011, ChairmanCharles A. Terry of Engineering Council's Committee expresses the view that so much of the bill S. 2232 as contemplates making the Patent Office a part of the Department of Commerce should be opposed for the reason advanced in favor of the adoption of H. R. 5011.

RESEARCH IN FATIGUE PHENOMENA OF METALS

An agreement between Engineering Foundation, the Trustees of the University of Illinois, and the National Research Council acting as agents of the National Academy of Sciences has been entered into for a cooperative investigation of the Fatigue Phenomena of Metals by the University through its Engineering Experiment Station.

The University will furnish room for this investigation, together with heat, light, power and water and will permit the use of such laboratory apparatus as is available. Professor H. F. Moore has been delegated by the University to supervise and direct the work. Engineering Foundation will provide from time to time certain funds necessary for the prosecution of the work. Results of the investigation are to be published by the Experiment Station and in the Engineering Societies' Journals.

PAYMENT FOR ESTIMATING

For the joint conference with the Associated General Contractors of America and the American Institute of Architects on the question of "Payment of Estimating" the following men have been appointed representatives of Engineering Council: Ralph Modjeski, Theodore L. Condron and Samuel G. Weiler, all of Chicago.

NEW BUILDING FOR CHAMBER OF COMMERCE, U. S. A.

The Chamber of Commerce of the United States is preparing to erect a building in Washington, D. C., to serve as the permanent National headquarters. This building will be a large and dignified structure, and is designed to commemorate the part taken by American business and industry in the Great War. The site selected for this building is at the corner of Connecticut Avenue and H Street, just across Lafayette Square from the White House, the State War and Navy and other Government buildings, in the very heart of the Nation's capital. Of dignified classical architecture, the building will be five stories high, and is estimated to cost $2,500,000. Mr. Cass Gilbert, of New York, is the architect.

Engineers are interested because Engineering Council is a member of the National Chamber, and as such has the privilege of using all the facilities of the Chamber's offices in Washington for the benefit of its member societies. The site for the new building has been purchased, and a campaign to raise the balance of the funds needed is soon to be made. Engineering Council bespeaks the cooperation with the Chamber of such engineers throughout the country as can help. Mr. Harry A. Wheeler, Vice-President of the Union Trust Company, Chicago, Illinois, is the chairman of the Committee on Financing Building.

NOTES FROM NATIONAL SERVICE COMMITTEE

Machine Tools for Technical Institutions

The Senate passed a bill providing for distribution of surplus machine tools to educational institutions at 20 per cent of their cost, minus the cost of their delivery. The House passed a separate bill providing for distribution of these same tools at 10 per cent of their cost price, plus transportation charges. The bill as agreed to in conference, provides "That the Secretary of War is authorized under such regulations as he may prescribe, to sell at 15 per cent of their cost.. The money realized from the sales may be used by the Secretary of War to defray expenses, except cost of transportation, incident to the distribution of these tools ...."

The Machine Tool Section of the Office of Director of Sales, War Department, is in receipt of a large number of inquiries and tentative orders for these tools. They were prepared to make shipments as soon as the bill became law, since it had been anticipated for sometime that the measure would eventually pass.

THE FOURTEENTH CENSUS

Pamphlets of instructions to enumerators for the fourteenth census have been sent to the 80,000 people engaged in this work. These instructions cover a special classification of technical engineers so that the returns will permit of their accurate enumeration. Special agents under the immediate direction of the Washington Census Bureau officials are in charge of the census of mines, quarries, forestry and manufactures.

TECHNICAL NEWS BULLETIN NO. 31

In Technical News Bulletin No. 31, issued November 5th, the Bureau of Standards has compiled a short description of their results on the following works:—Principles of Radio Transmission and Reception with Antenna and Coil Aerials—Tests of Telephone Receivers for Radio Use—Investigation of Corrosion of Cables in St. Louis—Tests of Reinforced Concrete Floor Slabs—Durability of Cement Drain Tile in Alkali Soil—Effects of Calcium Chloride on the Strength of Concrete—Discoloration Tests of Limestone—Increasing the Speed and Color Sensitiveness of Photographic Plates—Photographing through Haze and Smoke, etc.

INDUSTRIAL SAFETY CODES

A conference on Industrial Safety Codes was held at the Bureau of Standards on January 15, 1919, at which the best method of procedure in formulating such codes was considered. A committee appointed at this conference reported on April 15, 1919, and submitted two plans, designated as Plan A and Plan B.

Plan A consisted of the preparation of safety codes under the leadership of the Bureau of Standards with the cooperative effort of all interested organizations and under the general supervision of a large and representative conference committee.

Plan B consisted in the preparation of the safety codes and other standards by appropriate sponsor bodies, but under the auspices and procedure of the American Engineering Standards Committee as enlarged under a revised constitution.

In conformity with the report of the committee above referred to, ballots were sent out for voting on Plan A or Plan B to a designated list of federal bureaus, state commissions, municipal departments, technical associations, manufacturers' associations, utility associations, associations of government representatives, associations of insurance interests, safety and labor organizations.

The result of this ballot is as follows, the voting being by organizations rather than by individual delegates: For Plan A, 25 votes were cast. For Plan B, 60 votes. Of those voting for Plan A, less than one-half indicated a likelihood of joining the Standards Committee in case its reorganization is completed. Of those voting for Plan B, three-fourths looked forward to joining the Committee. In other words, approximately 70 per cent of the ballots cast favor Plan B and about 66 per cent of the organizations voting would expect to join the enlarged and reorganized Standards Committee.

The Bureau of Standards is calling another conference to be held in Washington probably on December 5, 1919. It is intended at that time to consider the procedure which should be followed in further work on safety codes and the cooperation that can be secured among the engineering societies, government departments and other agencies that are actively concerned with safety work.

FORMATION OF AMERICAN METEOROLOGICAL SOCIETY

A new organization known as the American Meteorological Society devoted to the advancement and diffusion of the knowledge of meteorology and climatology; and the broadening of their applications in public health, agriculture, engineering, industry and commerce will hold joint meetings with the American Physical Society and the Association of American Geographers at St. Louis, Dec. 29, 1919 to Jan. 3, 1920.

Many of those interested in this proposed organization have urged strongly that the practical applications of meteorology be emphasized and that special efforts be made to interest engineers, business men, shippers, farmers, fruit growers and others whose work is closely dependent on the weather.

Opinions on organization and other matters relating to this Society will be welcome and should be addresesd to Charles F. Brooks, Weather Bureau, Washington, D. C.

ENGINEERING SERVICE BULLETIN

Opportunities.—The Institute is particularly anxious to learn of desirable opportunities from responsible sources, announcements of which will be published without charge in this BULLETIN. The cooperation of the membership by notifying the Secretary of available positions, is particularly requested.

Services Available.—Under this heading brief announcements (not more than fifty words in length) will be published without charge to members. Announcements will not be repeated except upon request received after an interval of three months; during this period names and records will remain in the office files.

Note.—Copy for publication in the BULLETIN should reach the Secretary's office not later than the 20th of the month if publication in the following issue is desired.

All replies to either "Opportunities" or "Services Available" announcements should be addressed to the number indicated in each case, and mailed to Institute headquarters.

Engineering Societies Employment Bureau.—This is a joint bureau under the auspices of the Engineering Council. The Institute's employment service is coordinated with that of the joint bureau.

OPPORTUNITIES FOR SERVICE

V-600. Engineering graduates or men partly schooled or experienced in technical work are wanted for junior engineering and administrative positions in the larger cities of the Southeast. Immediate opportunities for advancement and good pay to start. Telephone call or write—Kendall Weisiger, Bell Telephone Co., Atlanta, Ga.

V-602. Wanted: Production and designing engineer for manufacturing corrugated steel self cooled and boiler plate water-cooled transformer tanks. Location, Middle West.

V-603. Southern university requires an Assistant Professor of Mathematics, qualified to assist temporarily in Physics. Position is a temporary one, to June 1920, with possibility of reappointment; salary $200 per month.

V-604. Competent electrical engineer desired for service abroad to design, lay out and superintend plant manufacturing long distance telephone apparatus such as Pupin coils upon which patents have expired, etc. Give full details of experience.

V-605. Southern college requires an instructor in electrical engineering; to teach alternating currents and several sections in algebra, geometry and trigonometry. If satisfactory, appointee would be given assistant professorship in E. E. next year. Salary $150 per month to start.

V-606. Sales Engineer with knowledge of or experience in outside and inside distribution construction wanted by Middle West manufacturer of distribution specialties. Salary $1800-$2000.

V-607. A well known college near New York has an opening in its electrical engineering department for a recent graduate in electrical engineering. Some teaching or practical experience required. Salary commensurate with experience and ability.

V-608. Engineering graduate, experienced in application and operation of motors and motor-driven machines, to write articles and descriptive booklets for large electrical manufacture of Middle West.

R-1956. Recent E. E. graduate, good personality, for research work in testing laboratory. Most of time for first two years will be work in laboratory and on inspection. Location, vicinity of New York City.

R-1976. Editor, must have had automotive engineering experience and have good command of English. Location, New York City.

R-1995. Designing Engineer, high grade designer, familiar with centrifugal compressors, steam turbines, special and electrical machinery, etc. Location, Massachusetts.

R-2006. Squad Boss, experienced in power plant and station electrical equipment and installation work. Location, vicinity of New York City.

R-2019. Instructor in Radio Transmission for Middle West university. Prefer a graduate of a first-class college with at least one year of graduate work, including mathematical theory of electricity, particularly of radio and transients; practical military experience desirable, but not essential. Salary $2000 for nine months, with increase and promotion.

R-2021. General Engineering Draftsman, familiar with general plant layout work, piping, industrial equipment, etc. Location, vicinity of New York City. Salary, depends upon man.

R-2026. Electrical Draftsman, experienced in radio work. Location, New York City.

R-2050. Electrolytic Refining. Competent man with experience covering the principal departments of electrolytic copper refining. Must be prepared to go to Europe if necessary. State terms in application, also experience in design, construction and operation.

R-2056. Electrical engineering executive, to take charge of design and manufacture of line of electrical machinery with old established concern. Must have had experience in the electrical field; technically trained man preferred. Give details in first letter. Middle West.

R-2063. Engineer Executive. Comparatively young man, must be good executive, possess tact, be able to handle labor and must know something about machinery, electricity and chemistry. Position is in a plant located in central New York, making use of a simple electrochemical process.

R-2069. Assistants in Metals Testing Laboratory. College graduates desired. Location, Illinois.

R-2072. Editor. Young graduate engineer about 25 years of age for generalral publicity work. Location, New York City.

R-2075. Instructor in Physics. Engineering college, vicinity of New York City, has opening for engineering graduate capable of teaching physics. Position offers the advantage of a thorough grounding in science and an excellent opportunity of advancement to a satisfactory commercial position.

R-2080. Asst. Professor of Electrical Engineering desired in Middle Western University. Qualified to assume charge of central station and electric railway courses. Experienced engineer who has carried on investigative work resulting in contributions to the art is required. Opening in January.

R-2081. Instructor in Electrical Engineering for Middle Western University. Man with thorough knowledge of fundamental electrical theory and a few years experience in teaching desired. Vacancy early in February. Salary $1500-$1800 for nine month school year.

R-2091. Junior Draftsman. Must be able to do electric power plant work. Location, New York City, Salary $35.

R-2095. Maintenance Engineer, preferably man with technical education, with at least ten years experience in the field after graduation. Should have working knowledge of industrial engineering, as plant layout, design of mechanical equipment, steam piping, steam hammers, rolling mills, engines and electric motors. Steel mill experience advantageous but not essential. Good opportunities for further advancement. Location, Pennsylvania.

R-2100. Recent technical graduate, with some practical engineering experience for engineering correspondence, bulletin and price list work on pumping machinery. State education, experience, salary expected, and how soon available. Service man preferred. Location, Massachusetts.

R-2103. Electric Testing Engineer. Recent graduate or man with one to three years' experience, for general testing work in the laboratory of a large manufacturing company. Location, Pennsylvania. Salary, $100 up, depending upon experience. Several openings.

R-2114. Instructor and Writer. Capable of handling correspondence course. Openings in all branches of engineering, as civil, mechanical, electrical, mining, chemical, architecture, etc.

R-2115. Recent E. E. graduate. Young man with college training in fundamentals of electrical engineering and physics of light, to take up practical illuminating engineering in connection with incandescent lamps. Pleasing personality and ability to speak and write fluently important. Location, New Jersey. Salary to start—$1200 to $1500, according to qualifications. Extended experience not necessary; training will be given.

R-2123. Electric Equipment Engineer. To have general charge of laying out, planning and supervising electrical equipment in rapidly expanding power plan of a manufacturing company. Must be able to lay down policy for expansion and additions. Knowledge of steam power plants desirable. Location, vicinity of New York City.

R-2127. Young Electrical Engineer, with two or three years experience, for large industrial corporation located in New Jersey. Apply by letter, stating in detail education, age, experience, time available, minimum salary, etc. Several openings.

R-2128. Physicist. For brush research work. Must have the best mathematical and electrical engineering training, and combine theoretical training with a natural aptitude and practical ability in laboratory manipulation and machine design. The work consists in developing methods and tests which shall suitably relate the physical properties of brushes, such as contact drop, electrical resistance, thermal conductivity, friction, hardness, etc. to the commutation characteristics of the different types of motor generators and alternating-current machines. Location, Cleveland, O.

SERVICES AVAILABLE

1482. Graduate Electrical Engineer, age 30, married, aggressive and ambitious, with executive ability. Ten years experience with power companies and industrial plants as construction supervisor, technical correspondent and engineer. Desires position with real future, preferably along consulting or industrial engineering lines. Present location New York State. Salary to start $3000-$3600.

1483. Electrical and Radio Engineer, age 26, married university graduate, member A. S. M. E., I. R. E. Four years experience in station layouts, design of keys, relays, switches, transformers and high frequency apparatus. Is desirous of securing position as designer or supervising draftsman where opportunities are offered for advancement. Salary $2800.

1484. Have just been discharged from the Army after three years service as Captain of Engineers. Ten years experience in general electrical engineering, particularly marine electrical work. Available for position at once.

1485. Electrical and Mechanical Engineer, desires position as electrical or maintenance engineer of industrial plant with progressive manufacturer, or with consulting engineer, export house or other commercial organization.

1486. Engineer, experienced in the design, construction and maintenance of power and industrial plants, high and low tension distribution, wishes position as works electrical engineer. Age 32, married, good knowledge of Spanish. Six years in present position; now employed in supervisory capacity.

1487. Graduate of Pratt Institute, three years electrical engineers' course. Married, age 26. Desires position (with opportunity for advancement according to ability) in production end of engineering. Has had six years of maintaining and repairs of electrical machinery with government. Present salary $2000.

1488. Electrical Engineer, married, wishes research position in East, preferably New York or vicinity. Experience: one year Westinghouse apprentice; two years university teaching; three years telephone transmission work; four years research engineer of large factory in charge of research, chemical and physical laboratories closely cooperating with production departments.

1489. Greek Electrical Engineer, age 26, Lieut. S. C., U. S. A., graduate American college and university, desires connection with large manufacturing or engineering concern interested in sales or enterprises in the Near East. Thoroughly familiar with the Levant. Speaks Greek, Turkish, French, Armenian. Acquainted with influential bankers and merchants in Greece and Turkey. Location abroad imperative. Salary and commission basis.

1490. Graduate in electrical engineering, married, with two years experience in engineering department of utility system, seeks position of understudying assistant to construction engineer, offering field work to develop his executive, technical and practical start made in present employ. Any where, any time, with increases as merited.

1491. Electrical Engineer, graduate E. E., 1916, age 27, married, at present in engineering office. G. E. test experience. Recently discharged from overseas service. Two years general engineering experience, including design and factory cost estimates of synchronous machines. Also substation operating experience. Prefer office position with reliable consulting engineering firm offering good opportunities for advancement. Salary $3000.

1492. To Motor and Generator Manufacturers: Designing Electrical Engineer, experienced in electrical and mechanical design of electric motors and generators, who is also capable of handling sales, wishes to correspond with reliable and progressive motor and generator manufacturer in view of a responsible position. Age 37, technical graduate, 15 years experience.

1493. Graduate Electrical Engineer with the following experience. Five years engineering work with Westinghouse; three years commercial power sales with three large Eastern power companies. During the war laid out, installed and operated all electrical work in one of the large Eastern ship building plants. Have also had over two years experience around coal mines and steel plants.

1494. Electrical Engineer, age 27, experienced in electric railway and industrial plant engineering and electrical installations aboard ships, desires position in either sales or engineering department of concern offering good chance for advancement. Now in charge of design work (electrical) for freighters and tankers. Available on short notice. Salary $3000.

1495. E. E. graduate of a prominent university, age 25, with two and one-half years' experience in power plant economics, desires position with consulting engineer, electrical or mechanical. Location preferred, New York City.

1496. Electrical Engineer, university graduate, age 33, desires position with opportunity for advancement. Six years' design and construction, central and substations with prominent companies; mechanical, coal tipple and industrial appraisal experience. Three years municipal electrical department, in charge of electrical work in connection with municipal buildings.

1497. Engineer, age 36, holding responsible position with large manufacturing company, directing high-frequency developmental and research work, desires equally responsible position in or near New York. Thirteen years' experience: G. E. test, designing, production work, factory layouts, field investigations, development work, supervision of experimental department. Salary $3800.

1498. Graduate Electrical Engineer, with one year's experience in hydraulic generation and central station work. Services available soon. Salary desired $150 per month.

1499. Electrical Engineer, technical graduate, age 22, energetic and ambitious, desires to connect with an electrical railway company. Available immediately. Salary $130.

1500. A steady worker, college engineering graduate (1917), age 24, single. Fifteen months of general engineering and business experience with a utility company. Former naval steam engineering officer. Can report immediately. Desires position with manufacturer or as an assistant to an inventor in research work. Willing to start low if there is a good future.

1501. Electrical Engineer, 25, thoroughly familiar with research methods and patent law. Graduate, competent to take charge of small laboratory or to assist in management of a large one. Engaged at present. Available in three weeks. Start $2500.

1502. Graduate Electrical Engineer. Position desired in charge of electrical maintenance with industrial concern. Have had repair shop experience, three years in mechanical and electrical design and charge of test department of factory manufacturing motors and welders. Age 32.

1503. Capable Electrical Engineer, technical graduate, seven years' varied experience including two years' General Electric test and shop, desires responsible position with manufacturer, public utility or consulting engineer. Would also consider sales work. At present employed by largest manufacturer, doing field work in New England State. Available about January 1. Location immaterial.

1504. Public Utility manager and engineer. Age 37. Technical graduate. Twelve years' experience in operation, construction, engineering and management of public utilities. Ex-Major, Construction Division, U. S. Army. Formerly employed as consulting engineer for large corporation and manager of three subsidiary companies furnishing gas, electric, refrigeration and heat service.

1505. Meter Engineer. Expert on all kinds of meters, also signal and detail apparatus; molded insulation. Technical graduate, 13 years experience, age 31; present salary $2200.

1506. Research Engineer, electrical and mechanical, having several years experience with large electrical manufacturing company, desires responsible position with aggressive concern.

1507. Engineer, for work in France Seven years general experience, mostly construction and executive; desires position as manufacturer's representative or in other engineering capacity. Salary—minimum $4000 per year.

1508. Engineer, electrical, hydraulic and steam, with 22 years experience, desires position as electrical engineer or superintendent of power houses with large central station or manufacturing company. Salary $7500.

1509. Electrical Engineer. Technical graduate. Age 35. Ten years experience—design, construction and operation, switchboards, industrial plants, public utility plants, underground and overhead work. High class work only. Desire position reconstruction or new plant work. Salary $3600 per year.

1510. Sales Engineer and Sales Executive, technically trained, ten years active experience—manufacturing, power plant design, industrial engineering and selling to the construction, also public utility and large industrial concerns. Can close up contracts, organize and follow up selling campaigns. Age 31, unmarried.

1511. Plant Engineer or Electrical Engineer or Assistant Plant Engineer in factory near New York. Technical graduate in electrical engineering. Twelve years experience; age 32; married; salary $2400.

ENGINEERING SOCIETIES LIBRARY

The library, which comprises the individual libraries of the American Institute of Electrical Engineers, the American Society of Mechanical Engineers, the American Institute of Mining and Metallurgical Engineers, the American Society of Civil Engineers, and the United Engineering Society, is located on the thirteenth and fourteenth floors of the Engineering Societies Building. In addition to engineering works it contains general reference books on allied sciences such as Physics, Mathematics and Chemistry. The library also contains publications of practically all the engineering societies in the world as well as current and bound sets of more than 1,000 engineering periodicals in English and other languages.

In order to place the facilities of this great engineering library at the disposal of persons residing out of town, a Library Service Bureau has been established, and a staff of expert searchers and translators is prepared to cover almost any engineering topic. Charges for service are at actual cost. Photostat copies of prints, drawings, etc., are $0.25 per 10 x 14 inch sheet.

All communications should be made as definite as possible so that the information received may be what is desired and not include collateral matter of no interest. The time spent in searching for such collateral matter will be saved, and information sent more promptly and in more usable shape.

Members who so desire will be kept informed regarding current publications on any engineering subject for a small annual fee.

The library is conducted as a free public library of reference. It is open to the public from 9 a. m. to 10 p. m. on all week days except holidays throughout the year except during July and August when the hours are 9 a. m. to 6 p. m.

Book Notices:—(October 1-31, 1919). Unless otherwise specified, books in this list have been presented by the publishers. The Society does not assume responsibility for any statements made; these are taken from the preface or the text of the book.

All books listed may be consulted in the Engineering Societies Library.

AUTOMATIC SPRINKLER PROTECTION:

By Gorham Dana. 2nd edition. N. Y., John Wiley and Sons, Inc.; Lond. Chapman and Hall, Ltd., 1919. 456 pp., illus., 9 x 5 in., cloth, $3.50.

The author of this volume has attempted to cover the subject in such a way that his book may serve as a textbook for students and also as a reference book for experienced engineers. Starting with a historical summary of the development of the art, he then describes the tests and characteristics of sprinklers, installation rules, layouts, valves, supervisory systems, etc. An appendix lists all types on which information is available and summarizes over six thousand tests of various sprinklers.

CATALYSIS IN INDUSTRIAL CHEMISTRY:

By G. G. Henderson. Lond. and N. Y., Longmans, Green & Co., 1919. 202 pp., cloth, 9 x 6 in., $3.25.

This, the latest volume of the series of Monographs on Industrial Chemistry which is being published under the editorship of Sir Edward Thorpe, is intended to present broadly our present knowledge of the phenomenon of which it treats. The book reviews the existing literature on catalysis, paying particular attention to the many and varied applications now used in industry. The author hopes that it will also suggest the desirability of further investigations.

COMMERCIAL OILS—VEGETABLE AND ANIMAL:

With special reference to Oriental Oils.

By I. F. Laucks. 1st edition. N. Y. John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 138 pp., cloth 8 x 5 in., $1.25.

This book is intended to give men without technical training, who are in the oil trade, the technical data and information required in everyday dealings, in concise form.

The various commercial oils are listed. For each are given the sources, uses, and the physical and chemical characteristics. The values have been collected from the standard texts, supplemented, particularly in regard to oriental oils, by the results obtained in the author's laboratory.

ELEMENTS OF RADIOTELEGRAPHY:

By Ellery W. Stone. N. Y., D. Van Nostrand Co., 1919. 267 pp., 125 illus., 33 pl., 8 x 5 in., flexible cloth, $2.50.

This book, by the instructor at the U. S. Naval Radio Station, San Diego, was written primarily for use in instruction at that school; it is believed, however, that it will be helpful in other schools and for self instruction.

The physical, rather than the mathematical presentation of the subject is used. A knowledge of physics and mathematics is not necessary. Prominence is given to the development of the subject as illustrated by patents.

FIFTY YEARS OF IRON AND STEEL:

By Joseph G. Butler, Jr. Cleveland. The Penton Press, 1919. 145 pp., por., 10 x 6 in., leather. (Gift of author).

This volume is one of a special edition, limited to one hundred copies, of an address delivered before the American Iron and Steel Institute in 1917, in which the author gives his personal reminiscences of the development in iron and steel making, as observed during an active participation in the industry in eastern Ohio, which began in 1857. To this are added some brief data on the early history of iron and steel, and a chapter on the activities of the American iron manufactures during the great war. The volume is profusely illustrated with portraits of men of note in the industry.

FOREST PRODUCTS:

Their Manufacture and Use, Embracing the Principle Commercial Features in the Production, Manufacture, and Utilization of the Most Important Forest Products Other than Lumber, in the United States.

By Nelson Courtlandt Brown. 1st edition. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 471 pp., 120 illus., 1 pl., tab., cloth, 9 x 6 in., $3.75.

The object of this book is to provide a brief account of the chief commercial features involved in the manufacture and use of such products as wood pulp and paper, tanning materials, veneers, cooperage, naval stores, distilled products, charcoal, maple sugar and syrup, dye woods, rubber, cork, excelsior, shingles, mine timbers, etc., which will serve as a text for students and as a book of reference. The volume reviews a field in which, the author states, but little has been written on American practise. Brief bibliographies are appended to the chapters.

THE GASOLINE AUTOMOBILE:

Prepared in the Extension Division of the University of Wisconsin by George W. Hobbs and Ben G. Elliott. Second edition, completely revised by Ben G. Elliott and Earl L. Consoliver. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 483 pp., illus., 1 pl., cloth, 9 x 6 in., $3.00.

Developments in automobile practise during the past four years have necessitated changes in this popular text-book. In addition to the necessary revision, the book has been rewritten and enlarged by the inclusion of several new chapters. In doing this the authors have provided a work on the fundamental principles of automobile design, construction and operation for the instruction of those who drive, repair, sell or otherwise have to do with motor cars.

HYDROLOGY:

The Fundamental Basis of Hydraulic Engineering. By Daniel W. Mead. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 647 pp., illus., maps, tables, 9 x 6 in., cloth, $5.00.

Lack of knowledge of the fundamentals of hydrology and of the importance of hydrological factors has been responsible, the author believes, for more failures in hydraulic engineering projects than defects in structural design. To assist in removing this ignorance he has here set down some of the more important facts and principles, omitting everything that his long experience has not shown to be of practical importance. Carefully selected lists of references are appended to each chapter, to enable readers to complete their study of any phase of the subject, which has not been sufficiently treated within the limits of the book itself.

A MANUAL OF PHYSICAL MEASUREMENTS:

By Anthony Zeleny and Henry A. Erikson. 4th edition. 261 pp., 129 illus., tables, 8 x 5 in., cloth, $2.00.

This manual is an outline of the laboratory course given to students of general physics at the University of Minnesota. One hundred and thirty-three experiments are included. Directions for assembling the apparatus and performing the experiments are given. Appendixes give the mathematical tables needed by users of the book.

OXY-ACETYLENE WELDING MANUAL:

By Lieut. Lorn Campbell, Jr., 1st edition. N. Y., John Wiley & Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 154 pp., 92 illus., 1 pl., cloth, 8 x 5 in., $1.25. (Wiley Engineering Series).

An instruction book for beginners by the officer in charge of welding instruction in the U. S. A.

Ordnance Department. The work is confined to shop practise, and is intended to provide a systematic, standardized method of instructing, adapted to class use and as a reference book in the shop.

THE PHYSICAL CHEMISTRY OF THE METALS:

By Rudolph Schenck. Translated and annotated by Reginald Scott Dean. 1st edition. N. Y., John Wiley and Sons, Inc.; Lond., Chapman & Hall, Ltd., 1919. 239 pp., illus., tables, 9 x 6 in., cloth, $3.00.

This volume is the outcome of a course of lectures delivered in the Technischen Hochschule at Aachen before the engineers of the district. The purpose of the lectures was to show the use of chemical statics and to explain the applications of physical chemistry in the study of smelting operations and metallurgical processes.

The translator has made additions to the original text when necessary and has revised the numerical data to agree with the accepted values

PRACTICAL MATHEMATICS FOR HOME STUDY:

Being the essentials of Arithmetic, Geometry, Algebra and Trigonometry.

By Claude Irwin Palmer. 1st edition. N. Y., McGraw-Hill Book Co., Inc.; Lond., Hill Publishing Co., Ltd., 1919. 493 pp., illus., tab., cloth, 8 x 5 in., $3.00.

During the past fifteen years the author has taught methematics in the evening school at the Armour Institute of Technology to classes of men engaged in practical pursuits of various kinds. For this purpose a course of instruction was published in four volumes, which has now been arranged in one volume, with particular reference to the needs of home students. In the present edition, a few new topics have been added, together with many solutions of problems.

The book includes arithmetic, geometry, algebra, logarithms and trigonometry. It is intended for adult students and the three thousand exercises and problems are selected to illustrate actual practical problems.

PRACTICAL WINDINGS OF ALTERNATING CURRENT MACHINERY:

By J. Herbert Wickman. Milwaukee. J. H. Wickman, 36 pp., 9 x 6 in., paper, $1.

This pamphlet is intended to give the necessary information to armature winders, without mathematical calculations or theoretical discussions. Directions for winding, reconnecting for other voltages or changing the windings from one phase to another are given.

PRINCIPLES OF DIRECT-CURRENT MACHINES:

By Alexander S. Langsdorf. Second edition. N. Y., McGraw-Hill Book Company, Inc.; Lond., Hill Publishing Company, Ltd., 1919. 460 pp., 314 illus., 8 x 6 in., cloth, $4.00. (Electrical Engineering Texts).

This book has been prepared to place before students of electrical engineering a reasonably complete treatment of the fundamental principles underlying the design and operation of all types of direct-current machinery. Instead of attempting to touch the "high spots" in the whole field of direct-current engineering, attention has been concentrated upon certain important features which are ordinarily dismissed with brief mention, but which, the author believes, are vital to a thorough grasp of the subject.

The present edition has been thoroughly revised and enlarged in accordance with the results of experience in the use of the book.

PRINCIPLES OF REINFORCED CONCRETE CONSTRUCTION:

By F. E. Turneaure and E. R. Maurer 3d edition, revised and enlarged. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 485 pp., illus., diag., pl., tables, 9 x 6 in., cloth, $3.75.

Like former editions, this work is intended "to present in a systematic manner those principles in mechanics underlying the design of reinforced concrete; to present the results of all available tests that will aid in establishing coefficients in working stresses; and to give such illustrative material from actual designs as will serve to make clear the principles involved."

In the present edition the material has been considerably amplified and rearranged. Separate chapters have been devoted to the theory of flexure; bond and shear; and the design of beams. The experimental data have been reviewed. A new chapter on flat slabs has been added and the chapter on building construction extended.

RETAINING WALLS:

Based entirely on the Theory of Friction.

By Pedro Dozal. Done into English by R. T. Mulleady. 1st edit. Buenos Aires, M. A. Rosas, 1918. 161 pp., 62 illus., cloth, 11 x 7 in., (Gift of author).

The author presents a general theory in regard to the static pressures acting on a plane cutting an unbounded coherent, incoherent or liquid mass in equilibrium, and its application for the calculation of the pressures on retaining walls. The theory advanced differs from those presented by Rankine and other students of the subject and gives notably different results.

STEAM TURBINES:

A Practical and Theoretical Treatise for Engineers and Students, including a discussion of the Gas Turbine. By James Ambrose Meyer. 4th edition, revised and enlarged. N. Y., John Wiley and Sons, Inc.; Lond., Chapman and Hall, Ltd., 1919. 496 pp., illus., diag., tables, 1 folded chart, 9 x 6 in., cloth, $4.

This edition differs from the preceding ones by containing fuller discussions of the methods of governing, the calculation of the strength of disk type blade wheels, and of recent developments in marine practise. The text as a whole has also been revised. The general purpose of the volume is to provide the designer, operator or manufacturer of steam turbines with a concise manual of information, based on practical experience.

OBITUARY

WILLIAM D. WEAVER an active member of the Institute for over thirty years died at his home in Charlottesville, Va., on Saturday, November 1, 1919.

He was born at Greensburg, Pa., August 30, 1857. He graduated in 1880 from the United States Naval Academy, studying at the Sorbonne and in London. In 1883 he went on the first Greeley Relief Expedition. He founded the *American Electrician* and was editor of the *Electrical World* from 1893 to 1912. He re-entered the United States Navy as volunteer chief engineer in 1898. In 1904 he was treasurer and business manager of the International Electrical Congress at St. Louis. He was twice a director of the Institute, and from 1901 to 1906 chairman of its Library Committee. In 1915 he was selected by the Board of Directors as one of the Institute's representatives on the Naval Consulting Board, but he declined on account of his health.

In 1903 Mr. Weaver prepared and submitted to Mr. Carnegie a proposition under which Mr. Carnegie was to donate an amount for the purpose of "housing" the library and it is a matter of record that the building up of our great engineering library was largely accomplished by his exertions, guided by a most remarkable knowledge of engineering literature. The library stands today a silent monument to Wm. D. Weaver.

At the meeting of the Board of Directors of the Institute on November 14, 1919 the following resolution was adopted:

WHEREAS, on November 1st, 1919, the engineering profession sustained a great loss in the death of William Dixon Weaver, engineer, journalist and patriot; and

WHEREAS, Mr. Weaver was an honored and helpful member of the American Institute of Electrical Engineers for more than thirty years and was transferred to its highest grade of membership, that of Fellow, in 1913; served with distinction upon numerous important committees and as a member of its governing body for six years, was largely instrumental in securing a permanent home for the engineering societies, aided effectively in building up the Institute Library and rendering it serviceable to the membership, and was ever ready to lend assistance to deserving causes and men; be it

RESOLVED: That the Board of Director of the Institute hereby places on record this expression of its sorrow and its appreciation of William Dixon Weaver's long continued generous and active interest in the Institute, his sincere sympathy with its objects, and his earnest devotion to the highest ideals in the growing field of electrical science; and further be it

RESOLVED: That these resolutions be spread upon the minutes of this meeting, that they be printed in the PROCEEDINGS, and that a copy be sent to Mrs. Weaver.

The friends of Mr. L. W. Chubb, who is representing the Institute at a meeting of the International Electrotechnical Commission in London, will be shocked to learn of the tragic death of his wife, which occurred on Saturday night, November 1. Mrs. Chubb was returning home through a heavy rain storm, and stpeped from the pavement to the street to avoid a part of the pavement covered by water; and in doing so, stepped before a passing automobile, death resulting in a few hours. Mrs. Chubb leaves, besides her husband, a family of three small boys. Mr. Chubb was at once advised by cable, and is returning home at the earliest possible moment.

PERSONAL

R. De Vere Hope recently discharged from the United States Army, where he was stationed at Edgewood Arsenal in connection with the manufacture of mustard gases, has entered the organization of the Duratex Company, as Industrial Engineer. Prior to Mr. Hope's experience in the army, he was connected for a number of years with the Engineering Department of the New York Telephone Company.

John A. Ryan has been appointed Eastern Sales Manager for The Consolidated Belting Company, Philadelphia, Pa., manufacturers of leather belting for all transmission purposes.

Paul M. Lincoln, Past President of the A. I. E. E. and for years a member of the Board of Directors and upon the Transmission Committee of the Institute has resigned from his position with the Westinghouse Electric & Mfg. Co. to take active charge of motor application engineering for The Lincoln Electric Co. Mr. Lincoln designed and installed the first hydroelectric power plant at Niagara Falls and subsequently directed its operation for six years. He was connected with the development of the first high-voltage transmission lines and has patented many successful appliances in the electrical field.

W. C. Winterroth who for the past two years was sales engineer for The Mechanical Appliance Company, and located at Chicago, Ill., was recently appointed District Sales Manager for that company for the new district office in Buffalo, New York.

PAST SECTION MEETINGS

Baltimore.—October 24, 1919, Johns Hopkins University, Paper: "Signalling in War with Invisible Light" by Professor R. W. Wood. The paper was illustrated by many experiments, and several pieces of apparatus as used in the war were on exhibition. Attendance 120.

Boston.—October 14, 1919, Engineers Club. Subject: "Automatic Substations in Theory and Practise." Short illustrated talks by Messrs. W. C. Slade, Supt. of Power and Lines, Rhode Island Co., Providence, R. I.; L. B. Bonnett, C. M. Gilt, General Electric Co., Schenectady, N. Y.; and C. A. Butcher, Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa. Attendance 125.

Cleveland.—October 21, 1919, Hotel Statler Subject: "Thirty Years Development in the Electrical Industry." Speaker: Mr. Alexander Churchward, Consulting Engineer, Wilson Welder & Metals Co., N. Y. Attendance 29.

Denver.—October 18, 1919, Shirley Hotel. Subject: "Human Engineering." Speaker: Mr. Cowdrick. Past-President of the Institute, Mr. P. M. Lincoln, was present and made some remarks. Attendance 35.

November 6, 1919, El Jebel Temple. Address by Dr. Frank B. Jewett on "Some War-Time Developments in Electrical Communication." Address was illustrated by stereopticon and motion pictures. Attendance 706.

Fort Wayne.—October 16, 1919, G. E. Company Bldg. 16-2. Address by Professor John C. Parker on the present status of the engineer and also the probable future trend of engineering education. Attendance 48.

Los Angeles.—October 25, 1919, members of Los Angeles Section invited to visit the U. S. S. "New Mexico" (The Electric Ship). Ninety members and students took advantage of the inspection trip.

Lynn.—October 22, 1919, Lynn Classical High School. Subject: "Photographic Experiments in Air and on

Land." Speaker: Lieut. Parker H. Kemble, U. S. N. Lieut. Kemble dealt particularly with the photographic charting of the coast of New England. Attendance 300.

November 5, 1919. Lecture by Dr. Saul Dushman, of the Research Laboratory, G. E. Co., Schenectady, N. Y., on the "Structure of the Atom." The lecture was illustrated by lantern slides and a model. Attendance 160.

Panama.—September 6, 1919, Balboa Heights. Discussion of paper by A. E. Silver "Problems of 220-kv. Power Transmission." Attendance 31.

October 11, 1919, Balboa Heights. Talk by Mr. J. J. Henry, Senior Chief Engineer of the Dredging Division, on "Steam Turbines." Attendance 25.

Philadelphia.—November 10, 1919. Speaker: N. E. Funk. Subject: The Chester Generating Station of the P. E. Co. Illustrated by the use of lantern slides. Attendance 86.

Pittsburgh.—October 14, 1919, Chamber of Commerce Auditorium. Paper: "Some Experience in the Development and Introduction of Submarine Detection Devices" by C. E. Eveleth. Attendance 56.

St. Louis.—October 29, 1919, Engineers Club. Joint meeting with the Associated Engineering Societies of St. Louis. Illustrated talk on "Static Condensers" and their application to power factor correction. Attendance 51.

Schenectady.—October 17, 1919, Edison Club Hall. Address by Dr. C. P. Steinmetz on "Technical Education." Mr. L. T. Robinson, the Section's representative on the Committee on Development, gave a resumé of the work of the Committee on Development to date, which was followed by general discussion. Attendance 325.

November 7, 1919, Edison Club Hall. Address by F. G. R. Gordon, Secretary of the American Anti-Socialist League, on "A Study of Socialism." Attendance 275.

Toronto.—October 24, 1919, Engineers Club. Paper: "Turbine Design," presented by Mr. A. Aeberli. The paper was graphically illustrated by diagrams showing the methods employed in designing. Mr. F. R. Ewart gave a brief report on the work of the National Industrial Conference, which he attended as delegate of the Toronto Section. Attendance 77.

Washington.—October 14, 1919, Cosmos Club. Paper: "Submarine Detection" by Prof. John B. Whitehead. Attendance 110.

November 11, 1919, Cosmos Club. Paper: "The Motion Pictures of the Invisible" by Mr. James Hardy, Vice-President of the Bray Studios, N. Y. Attendance 160.

PAST BRANCH MEETINGS

Brooklyn Polytechnic Institute.—October 31, 1919, Polytechnic Institute. Paper: "Transformers" by Prof. D. M. Cushman. Attendance 35.

University of California.—October 8, 1919. Talk by H. C. Silent on "Principles and Development of the Radio Telephone." Attendance 29.

October 22, 1919. Talk by Mr. D. I. Cone on "Engineering Aspects of Telephonic Transmission." Attendance 32.

Carnegie Institute of Technology.—October 21, 1919, Machinery Hall. Election of officers as follows—Chairman K. K. Knaell, Vice-Chairman Wm. A. Keller, Treasurer W. J. Brennan, Permanent Secretary B. C. Dennison. Addresses: (1) "Purposes of the Organization by B. C. Dennison." (2) "Experimental Work at the Bureau of Mines" by W. V. Wolfe. (3) "Experiences with the Royal Flying Corps" by W. J. Blanko. (4) "My Experiences in the Service " by Messrs. H. T. Goldberg, L. H. Hale, F. I. Lawson and R. N. Jones. Attendance 20.

University of Cincinnati.—October 21, 1919, Eng. Bldg. Organization meeting. Attendance 87.

October 28, 1919, Eng. Bldg. Talk by Dr. R. C. Gowdy on "Some Problems in Physics Worked on During the War." Attendance 91.

Clemson College.—October 21, 1919, Electrical Engineering Class Room. Talks: (1) "Outdoor Illumination" by A. F. Holley. (2) "Life of Edison" by R. B. Bratton. (3) "Current Events" by M. J. Black.

Kansas State Agricultural College.—October 9, 1919. Papers: "Coal Mining in the Central States" by C. F. Joss. (2) "Uses of Small Motors" by G. M. Glendenning. (3) "X-Ray", Student Publication, by H. M. Duphorne. Attendance 76.

October 23, 1919. Papers: (1) "Industrial Relations" by R. G. Kloeffler. (2) "Cleaning of Blast Furnace Gases by Electrical Precipitation" by S. W. Honeywell. Attendance 72.

University of Kentucky.—October 30, 1919. Election of officers as follows—Chairman J. W. Coleman, Jr., Vice-chairman C. V. Garred, Secretary J. D. Wood, Treasurer N. T. Puckett.

University of Maine.—October 22, 1919, Hannibal Hamlin Hall. Address by Professor Barrows on the future and present fields of electrical engineering. Attendance 35.

Massachusetts Institute of Technology.—November 14, 1919. "X-Rays" by Dr. D. L. Webster. The lecture was illustrated by slides and experiments were performed with evacuated tubes showing conduction. Various interesting "toys" showing fluorescent effects were exhibited. Attendance 200.

Michigan Agricultural College.—November 6, 1919. Paper: "Automatic Telephones" by W. S. Bersey, a junior. Attendance 57.

School of Engineering of Milwaukee.—October 21, 1919. Organization meeting, at which John D. Ball was elected Chairman, J. L. Gordon Secretary, Henry Lowcock, Vice-Chairman and Merritt McCoy, Treasurer. Short talks on the purpose of the A. I. E. E. were given by Arthur Simon, Harrison Reed and Prof. F. A. Kartak. Attendance 122.

University of Missouri.—October 6, 1919, Engg. Bldg. Address by B. J. George on "Frequency Changers and their Parallel Operation". Attendance 20.

October 20, 1919, Engg. Bldg. Address by Mr. Sirian on "Improvements in Radio Communication." Attendance 25.

November 3, 1919. Paper: "Electric Furnaces" by B. J. Hungate. Attendance 13.

Montana State College.—October 15, 1919, Assembly Hall. Election of officers as follows—Chairman Jesse Flynn, and Secretary J. A. Thaler. Illustrated lecture by Dean Earl B. Norris on "Engineering Problems in Warfare." Attendance 58.

University of Nebraska.—October 15, 1919, Mechanical Engg. Bldg. Paper presented by Mr. J. B. Harvey, Vice-President of the Continental Gas and Electric Corporation on the qualities necessary for successful public utility work. Attendance 125.

University of North Carolina.—October 10, 1919, Chapel Hill. Election of officers as follows—Chairman W. W. Neal, Secretary M. E. Lake. Attendance 26.

October 17, 1919, Chapel Hill. Informal talks by Messrs. C. M. Hazelhurst, M. E. Lake, W. K. Harding, P. H. Daggett, J. E. Lear, I. H. Mustard, W. W. Neal. Attendance 72.

November 3, 1919, Chapel Hill. Introductory remarks on the advantages of electric ship propulsion by W. W. Neal, followed by the General Electric picture production "The Queen of the Waves." Attendance 202.

Ohio Northern University.—October 29, 1919, Dukes Memorial. Addresses: "Detail Testing" by Mr. Moses; "Variable Speed Generators" by Mr. Berry. Attendance 25.

Ohio State University.—October 29, 1919, Robinson Auditorium. Talk by Mr. C. P. Hoover, Columbus City Chemist, on the New Storage Dam and Water System, proposed for Columbus; and an illustrated talk on the method of water purification. Attendance 30.

November 12, 1919. Paper: "Automatic Reclosing Circuit Breakers" by Mr. Raney. Mr. Raney is a graduate of Ohio State and the inventor of the reclosing circuit breaker.

University of Pennsylvania.—November 6, 1919, Engineering Building. Papers: "Electric Arc Welding as a New Art", J. C. Carney; "House Wiring." P. Cooper. Attendance 52.

Stanford University.—October 23, 1919, Reorganization meeting, at which election of officers was held as follows: Chairman V. L. Tyndall, Secretary-Treasurer Hans O. Storm.

October 31, 1919, joint meeting with the Mechanical Engineering Society. Mr. Rathburn spoke on Arc Radio-Telegraphy with especial reference to the principles of the Poulsen Arc.

Syracuse University.—October 16, 1919. Address by Mr. Robert Jordan on "Electric Furnaces." The article was an original essay compiled from different references and experience. Attendance 11.

October 16, 1919. Address by E. P. Stewart on "Electrolysis." Attendance 14.

October 30, 1919. Address by Mr. Terry on "Telephone Transmission." The subject was taken from an article by Bancroft Gherardi in the *Telephone Engineer*. Attendance 12.

November 6, 1919. Address by Mr. Robert Jordan on "Electric Furnaces." Attendance 13.

November 13, 1919. Illustrated lecture by Mr. M. D. Low on "Alternators." Attendance 11.

Throop College of Technology.—November 6, 1919. Election of officers for college year 1919-1920, as follows: Chairman Russell M. Otis, Secretary Donald D. Smith.

Virginia Polytechnic Institute.—October 28, 1919. Lecture by Mr. Ray Smith on "The Electrification of the Norfolk and Western Railroads." Attendance 12.

University of Virginia.—October 21. 1919. Election of officers as follows, Chairman C. Henderson, Secretary W: W. Boyd. Program for the year discussed. Attendance 18.

November 6, 1919. Papers: "Graphic Recording Instruments;" "Structure of the Atom and its Position in Metals" by Professor Walter S. Rodman. Attendance 16.

Washington University.—October 22, 1919. Election of officers as follows: Honorary Chairman Prof. A. S. Langsdorf, Chairman Edward Bowles, Vice-Chairman Nick Skrainka, Secretary-Treasurer Fred W. Schramm. Attendance 21.

November 5, 1919. Meeting called for the purpose of instituting a membership campaign. Attendance 13.

ADDRESSES WANTED

Any reader knowing the present address of any of the following members is requested to communicate with the Secretary at 33 West 39th Street.

George H. Groce
(former address)
2857-59 S. Halstead St.,
McFell Signal Co.,
Chicago, Ill.

Ernest Kardos,
(former address)
156 E. 116th St.,
New York, N. Y.

A. B. McCollum,
(former address)
4030 Lindell Blvd.,
St. Louis, Mo.

Wm. A. Street,
(former address)
Gatun, C. Z.

ASSOCIATES ELECTED NOVEMBER 14, 1919

ALBRECHT, HARRY L., Meter Testing Dept., Commonwealth Edison Co., 28 No. Market St.; res., 837 No. Trumbull Ave., Chicago, Ill.

ANGELL, LAURENCE D., Sales Engineer, Ward Leonard Electric Company, Mt. Vernon; res., Douglaston, Long Island, N. Y.

ARFF, N., Electrical Inspector, Portland Railway, Light & Power Co.; res., 171 Green Ave., Portland, Ore.

AVANT, GEORGE G., Operating Engineer, Tide Water Power Co.; res., 418 South 2nd St., Wilmington, N. C.

*BARROWS, ARTHUR S., Inspector, Factory Insurance Association, Hartford, Conn.

BEAN, LESLIE P. R., State Supervising Engineer, Postmaster General's Dept., New South Wales, Aus.

BEASLEY, IRA EUGENE, The Newman Stern Co., Leader-News Bldg., Cleveland; res., 1417 Rockway Ave., Lakewood, Ohio.

BLAKELEY, GEORGE P. W., Electrical Engineer, N. Z. Refrigerating Co., Islington, N. Z.

BLAKEMORE, ERNEST, Engineer, Lancashire & Yorkshire Railway Loco Works; res., 31 Ramsbottom Road, Horwich, Lancashire, Eng.

BROOME, FRANK H., Laboratory Asst., Public Service Electric Co., Newark; res., 2684 Boulevard, Jersey City Heights, N. J.

BUTTON, HARRY W., Electrical Engineer, The American Railways Company, Witherspoon Bldg., Philadelphia; res., Narberth, Pa.

CAMPBELL, ARCHIBALD, Tester of Electrical Machinery, Westinghouse Elec. & Mfg. Co., E. Pittsburgh, Pa.

CARRILLO, CARLOS MARIO, Electric Tester, Westinghouse Elec. & Mfg. Co., E. Pittsburgh; res., 309 Barnes St., Wilkinsburg, Pa.

CHADBOURNE, HENRY W., Power & Mining Engg. Dept., General Electric Co., Schenectady, N. Y.

*CLARK, EDWIN E., Instructor in Physics & Electrical Engineering, So. Dakota State School of Mines, Rapid City, So. Dakota.

CLAUSER, WILLIAM H., Sales Dept., Electric Storage Battery Co., 1823 L St., N.W., Washington, D. C.

COBB, FRED W., LIEUTENANT, U. S. Navy, Bureau of Supplies & Accounts, Navy Dept., Washington, D. C.

CONWELL, ALBERT L., Power House Foreman, Cerro de Pasco Copper Corp., Oroya, Peru, S. A.

CREAGER, PAUL S., Instructor, Electrical Engineering, Rutgers College, New Brunswick, N. J.

CRISWELL, WILLIAM G., District Clerk, Duquesne Light Co., Broad & Beatty Sts., E. E., Pittsburgh, Pa.

CROSWELL, DANIEL R., Manager of Operation, Cuyuna Range Power Co., Ironton, Minn.

CROY, HARRY C., Chief Draftsman, Distribution Engg. Dept., Commonwealth Edison Co., 72 W. Adams St., Chicago, Ill.

DAWKINS, R. D., Load Dispatcher, Alabama Power Co., Birmingham, Ala.

DILLON, STEWART J., Master Mechanic, N. J. & S. R. R., Penn. R. R. Co., Camden, N. J.

DING, FRANK G., Salesman, Commercial Dept., Portland Railway, Light & Power Co.; res., 570 Fourth St., Portland, Ore.

DRIVER, HAROLD EDGAR, Asst. to District Manager, Westinghouse Elec. & Mfg. Co., 32 S. Peoria St., Chicago, Ill.

DUPONT, PIERRE LOUIS, Toll Equipment Supervisor, Cumberland Tel. & Tel. Co.; res., 2224 Marengo St., New Orleans, La.

FOOTE, WILLIAM W., Pearson Engineering Corp., 115 Broadway, New York, N. Y.

FOURNIER, DANIEL J., Galvanometer Testman, Michigan State Telephone Co., 185 Cass Ave., Detroit, Mich.

FUNDAMANT, WALLACE, Member, Southern Electric Works, 110 E. Freemason Street, Norfolk, Va.

*GLOVER, RAY PRICE, Telephone Engineer, American Tel. & Tel. Co., 1422 Hurt Bldg., Atlanta, Ga.

GROBE, JULIUS JOSEPH, Supt., Victor Electric Corp., 236 So. Robey St., Chicago, Ill.

HAMMEL, FRANK JOHN, Electrical Engineer, Forestall & Robison, 21 Park Row, New York, N. Y.

HANSEN, PETER B., Salesman, Northern Electric Co., 21 No. 6th St.; res., 4505 Washburn Ave. South, Minneapolis, Minn.

HOLLANDER, GEORGE J., Electrical Contractor, 143 W. 9th St., Erie, Pa.

HUMPHREY, ARTHUR LEE, Asst. Engineer, Tide Water Power Co., Wilmington, N. C.

HUSTON, FREDERICK P., Engineer, Metropolitan Edison Co., 16 So. 5th St., Reading, Pa.; res., Sweet Springs, Mo.

JACKSON, ROBERT A. F., Electrical Engineer, Motherwell Iron & Steel Co., Motherwell, Scotland.

JONES, HARRY EVAN, Telephone Engineer, Mountain States Telephone & Telegraph Co., Denver, Colo.

KAHAI, HARDEV SINGH, Asst. Elec. Engr., Sir William Beardmore & Co., Mossend Steel Works, Lanarkshire, Scotland.

KAHLER, GEORGE WILLIAM, Asst. Elec. Engineer, Schaw-Batcher Co. Ship Works, So. San Francisco; res., 628 Jackson St., Oakland, Cal.

KILPATRICK, JAMES GEORGE, Supervising Engineer, Commonwealth Public Service Co., Melbourne, Australia.

*KISHLAR, LAMAR M., Electrical Engineer, Wagner Electrical Mfg. Co., 6400 Plymouth Ave., St. Louis, Mo.

LEDERER, MELVIN E., Estimator & Electrical Draftsman, Harry Alexander, Inc., Munsey Bldg., Washington, D. C.

MARTIN, ALEXANDER, Electrical Engineer, 977 Multnomah St., Portland, Ore.

MASON, HENRY C., Electrician, J. G. White Engg. Corp., Nitrate No. 2, Muscle Shoals, Ala.

MATTHEWS, CHAS., Chief Electrician, Camp Curry, Yosemite Valley, Cal.

McPHAIL, HARVEY F., Chief Operator, U. S. Reclamation Service, Lingel, Wyoming.

McPHERSON, ROY BURDICK, Chief Load Dispatcher, Utica Gas & Electric Co., Utica; res., 547 Main St., New York Mills, N. Y.

NELSON, HENRY J., Electrician, U. S. Navy Yard. Bremerton; res., 125-15th Ave., Seattle, Wash.

PAINE, EDWARD ALLEN, Property Valuation & Engg. Work, Portland Railway, Light & Power Co., Electric Bldg., Portland, Ore.

PARISH, HAL LYNCH, Electrical Engineer, Durham Traction Company, Durham, N. C.

PARKER, JOHN ACTON, Draftsman, Niagara, Lockport & Ontario Power Company, 1638 Marine Trust Bldg., Buffalo, N. Y.

PARKER, William, Chief Electrician, Mercer Iron & Coal Co., Stoneboro, Penn.

*PAXSON, OLIVER H., JR., 1st Lieutenant, U. S. A., 2414 Bryn Mawr Ave., W. Philadelphia, Pa.

PETERSON, ARNOLD HERMAN, Ensign, U. S. N. R. F.; res., 7347 Princeton Ave., Chicago, Ill.

PFEIFER, WALTER S., District Manager, Allen-Bradley Co., 161 Devonshire St., Boston, Mass.

PIZZORNO, PETER P., Electrical Draftsman, The American Railways Co., Witherspoon Bldg., Philadelphia, Pa.

REQUENA, ENRIQUE G., Westinghouse Elec. & Mfg. Co., Newark, N. J.

ROGERS, FRED ARNOLD, Chief Electrician, Woonsocket Rubber Co.; res., 246 So. Main St., Woonsocket, R. I.

SCHADE, WILLIAM HENRY, Telephone Switchboard Engineer, Pacific Tel. & Tel. Co., 623 Sheldon Bldg., San Francisco, Cal.

SCHUHLER, ALBERT A., Elec. Instructor, David Rankin School of Mechanical Trades; res., 4700 Newberry Terrace, St. Louis, Mo.

SINCLAIR, CARROLL T., Asst. to Testing Engr., Pennsylvania Water & Power Co., Holtwood, Pa.

*__SCOTT, LEROY ELLSWORTH__, 2nd Lieut., U. S. A., Instructor, Signal School of Second Corps; res., 7 Mansfield St., New Haven, Conn.

SCOTT-TAGGART, JOHN, Head, Vacuum Tube Dept., Edison Swan Electric Co., 89 High St., Pondlers End, Middlesex, England.

SMALL, NATHAN B., Electrical Draftsman, with T. E. Murray, 124 East 15th St.; res., 833 East 167th St., New York, N. Y.

SMITH, HERRICK ANGELL, Automatic Chief, Western Union Telegraph Co.; res., 222 South 3rd St., Richmond, Va.

SPRARAGEN, LOUIS, Instructor in Elec. Engg. Dept., Sibley College, Cornell Univ.; res., Sheldon Court, Ithaca, N. Y.

STOWE, FRED FISHER, 1st Class Electrician, Navy Yard; res., 801 Allison St., N.W., Washington, D. C.

THORNTON, WILLIAM NELSON, Ensign, U. S. Navy, U. S. S. L-11, Norfolk, Va.

TIMMONS, JOHN S., Engineer & Supt., Callophone Co. of New York, 151 Grand St., New York; res., 604 Warburton Ave., Yonkers, N. Y.

TREAT, GUY BRADFORD, Chief Engineer & Asst. Manager, Oklahoma Railway Co., 213 Terminal Bldg., Oklahoma City, Okla.

TWITT, FRANK S., Elec. & Mech. Draftsman, McMyler Interstate Co.; res., 79 Columbus St., Bedford, Ohio.

*__WEIGT, JOHN W.__, Engineer, Electric Furnace Dept., John Thomson Press Co., 253 Broadway, New York; res., 107 Wilson Ave., Flushing, N. Y.

WILL, JAMES B., Lieut-Commander, U. S. N., Navy Yard, Boston, Mass.

WOESSNER, MATTHEW J., Lieut. (j.g.), U. S. Navy, Asst. Electrical Officer, U. S. Pennsylvania, New York, N. Y.

WOOD, HARRY LEE, Electrical Engineer, Stone & Webster Engineering Corp., 409 Electric Bldg., Seattle, Wash.

WOOD, JAMES E., District Manager, Roller-Smith Co., 711 Williamson Bldg.; res., 1931 E. 101st St., Cleveland, Ohio.

YOKOTA, TETSUJIRO, Westinghouse Elec. & Mfg. Co., Newark, N. J.

ZOOK, RICHARD M., Electrical Maintenance Dept., Western Electric Co., Hawthorne, Ill.

Total 80

*Former Enrolled Students.

ASSOCIATES RE-ELECTED NOVEMBER 14, 1919

FULLERTON, RUTHERFORD, Director, Kilbourne & Jacobs Mfg. Co., Columbus, Ohio.

LEUREY, LOUIS F., Consulting Electrical Engineer, Holbrook Bldg., 58 Sutter St., San Francisco, Cal.

MEMBERS ELECTED NOVEMBER 14, 1919

BAKER, IVAN F., Engineer, Westinghouse Electric International Co., 165 Broadway, New York, N. Y.; res., Mountain Lakes, N. J.

BROWN, HARRY L., Associate Editor, *Electric Railway Journal;* res., 555 W. 170th St., New York, N. Y.

CARR, SIDNEY T., Power Engineer, Central Hudson Gas & Electric Company, Poughkeepsie, N. Y.

FOSTER, E. G., Tramway Manager & Borough Electrical Engineer, Tramways & Electricity Dept., 19 Duke St., Invercargill, N. Z.

JEFFERSON, HERBERT FERRIER, Acting Chief Engineer, Kilbourne & Clark Mfg. Co., 3450 East Marginal Way, Seattle, Wash.

*__KEIL, RAYMOND H.__, Power Engineer, Jones & Laughlin Steel Co., 1001 B. F. Jones Bldg., Pittsburgh, Pa.

LAUPER, FRED A., Electrical Engineer & Designer, Empress Works; res., 43 Trinity St., Huddersfield, Eng.

McCLURE, J. HARVEY, General Supt., The Citizens Traction Co.; res., 810 West First St., Oil City, Pa.

Pillsbury, E. S., President, Century Electric Co., 1827 Pine St., St. Louis, Mo.

Quackenbush, Edward J., Chief Assistant Electrical Engineer, Havana Central Railroad Co., Havana, Cuba.

Rohman, Henry D., Chief Electrical Engineer, Stone-Franklin Company, 18 E. 41st St.; res., 884 Riverside Drive, New York, N. Y.

Sillcox, Lewis K., Master Car Builder, Chicago, Milwaukee & St. Paul R. R. System, W. Milwaukee Shops; res., 169-26th St., Milwaukee, Wis.

Smith, Robert Lewis, Factory Manager, Baxter D. Whitney & Son; res., 31 High St., Winchendon, Mass.

Smith, Roger Thomas, Electrical Engineer, Great Western Railway, 66 Porchester Road, London W. 2., England.

Stephenson, Ernest J., Chief Electrical Engineer, Lantaro Nitrate Co., Ltd., Taltal, Chile, S. A.

Whitsit, Lyle A., Clarendon, Va.

FELLOW ELECTED NOVEMBER 14, 1919

Crowley, Henry J., General Manager, The American Railways Co., 1321 Walnut St., Philadelphia, Pa.

TRANSFERRED TO THE GRADE OF MEMBER NOVEMBER 14, 1919

Arana, Victor M., Consulting Electrical Engineer, Head of Electrical Dept., National School of Arts and Crafts, Lima, Peru, S. A.

RECOMMENDED FOR TRANSFER

The Board of Examiners, at its regular monthly meeting, held on November 3, 1919, recommended the following members of the Institute for transfer to the grade of membership indicated. Any objection to these transfers should be filed at once with the Secretary.

To Grade of Fellow

Alexander, Harry, Electrical and Mechanical Engineer, New York, N. Y.

Alexanderson, E. F. W., Consulting Engineer, General Electric Co., Schenectady, N. Y.

To Grade of Member

Burnham, Roy R., Consulting Engineer Boston, Mass.

Corney, Chester A., Electrical Engineer, Stone & Webster, Boston, Mass.

Dillon, Theodore H., Professor of Electrical Engineering, Massachusetts Institute of Technology, Cambridge, Mass.

Eldredge, Mark, Engineer, Ludlow Mfg. Associates, Ludlow, Mass.

Howe, William M., First Lieut., Corps of Engineers, U. S. Army, Washington, D. C.

Namba, Masashi, Professor of Electrical Engineering, Imperial University, Kioto, Japan.

Nikiforoff, Basil, Electrical Engineer, Operating Dept., Alabama Power Co., Birmingham, Ala.

Robison, Arch, Assistant Construction Supt., J. G. White Engineering Corp., Muscle Shoals, Ala.

Schmid, Ernest E., Vice-President and Manager, Shield Electric Co., New York, N. Y.

Wood, Frank W., Vice-President and Chief Engineer, Chas. Cory & Son, Inc., New York, N. Y.

APPLICATIONS FOR ELECTION

Applications have been received by the Secretary from the following candidates for election to membership in the Institute. Unless otherwise indicated the applicant has applied for admission as an Associate. If the applicant has applied for direct admission to a higher grade than Associate the grade follows immediately after the name. Any member objecting to the election of any of these candidates should so inform the Secretary before December 31, 1919.

Anthony, H. M., Muncie, Ind.
Arnold, J. C., Seattle, Wash.
Ashbrook, R. B., San Gabriel, Cal.
Askue, A. R., Cleveland, Ohio.
Beiswenger, O. L., Akron, Ohio

Birk, J. W., Annapolis, Md.
Bishop, J., Toronto, Ont.
Bitner, R. E., New York, N. Y.
Bowen, W. C., Pittsburgh, Pa.
Bozzi, M. T., New Haven, Conn.
Braff, J., New York, N. Y.
Brill, A. T., Annapolis, Md.

STUDENTS ENROLLED NOVEMBER 14, 1919

10478 Baxter, R. H., Missouri State Univ.
10479 Hane, W. S., N. Y. Elec. School
10480 Orr, R. C., Jr., Penn. State Coll.
10481 Scholz, E. G. O., N. Y. Elec. School
10482 Eshelman, W. S., Penn. State Coll.
10483 Moeslein, E. D. W., Penn. State Coll.
10484 Barber, J. L., A.&M. Coll. of Tex.
10485 Stewart, C. E., Univ. of Wash.
10486 Miller, LeR. V., Stevens Inst. of Tech.
10487 Hollister, G. E., Purdue Univ.
10488 Hume, C. D., Purdue Univ.
10489 Whitford, R. A., Purdue Univ.
10490 Harvey, H., Purdue Univ.
10491 Hartley, T. K., Purdue Univ.
10492 Gotschall, P. H., Purdue Univ.
10493 Vaile, H. S., Purdue Univ.
10494 Garver, A. O., Purdue Univ.
10495 Elder, M. E., Ohio No. Univ.
10496 Barrett, W. J., Brooklyn Poly. Inst.
10497 Erdman, E. A., Ohio No. Univ.
10498 Starrett, J. S., Brooklyn Poly. Inst.
10499 Bowles, E. L., Washington Univ.
10500 Rosenberg, T. LeC., Univ. of Cal.
10501 Robbins, C. W., Univ. of Cal.
10502 King, C. S., Univ. of Cal.
10503 Hansen, E. B., Univ. of Cal.
10504 Scheer, G. B., Univ. of Cal.
10505 McIntire, M. M., Univ. of Cal.
10506 Woodruff, E. T., Univ. of Cal.
10507 Pressley, J. H., Univ. of Cal.
10508 Wilhelmi, R. B., Univ. of Cal.
10509 Beaty, W. H., Univ. of Cal.
10510 Wood, T. A., Univ. of Cal.
10511 Boerner, L. F., Univ. of Cal.
10512 Holm, H. F., Univ. of Cal.
10513 Meyer, H. B., Univ. of Cal.
10514 Wehle, A. H., Brooklyn, Poly. Inst.
10515 Kelsey, H. D., Syracuse Univ.
10516 Cole, K. J., Syracuse Univ.
10517 Greiner, R. E., Syracuse Univ.
10518 Hayford, B. I., Syracuse Univ.
10519 Langan, J. A., Syracuse Univ.
10520 Low M. D., Syracuse Univ.
10521 Quinlan, T. F., Syracuse Univ.
10522 Schroeder, A. C., Syracuse Univ.
10523 Stewart, E. P., Syracuse Univ.
10524 Terry, G. W., Syracuse Univ.
10525 Swam, R. E. S., Penn. State Coll.
10526 Snow, H. B., Cornell Univ.
10527 Race, H. H., Cornell Univ.
10528 Knox, R. S., Kansas State Agr. Coll.
10529 Honeywell, S. W., Kansas State Agr. Coll.
10530 Lucas, M. J., Kansas State Agr. Coll.
10531 Simmons, G. H., Univ. of Ill.
10533 Knox, A. D., Sheffield Scientific School
10534 Misrach, J. S., Univ. of Ky.
10535 Nisbet, K. R., Univ. of Ky.
10536 Bailey, J. H., Univ. of Ky.
10537 Choate, D. C., Univ. of Ky.
10538 Garred, U. V., Univ. of Ky.
10539 Park, R. S., Univ. of Ky.
10540 Coleman, J. W., Jr., Univ. of Ky.
10541 Gordon, C. W., Univ. of Ky.
10542 Hargraves, C. M., Univ. of Ky.
10543 McClure, C. R., Univ. of Ky.
10544 Wood, J. D., Univ. of Ky.
10545 Puckett, N. T., Univ. of Ky.
10546 Waterfill, R. W., Univ. of Ky.
10547 Boone, H. P., Univ. of Ky.
10548 Marrs, W. C., Kansas State Agr. Coll.
10549 Zimmerman, C. L., Kansas State Agr. Coll.
10550 Hilliard, R. D., Kansas State Agr. Coll.
10551 Randolph, G. L. F., Univ of Ill.
10552 Wright, H. L., Univ. of Ill.
10553 Winchel, P. B., Kansas State Agr. Coll.
10554 Morris, C. F., Kansas State Agr. Coll.
10555 Storey, T. G., Kansas State Agr. Coll.
10556 La Mont, J. E., Kansas State Agr. Coll.
10557 Berg, L. R., Univ. of Wash.

10558 Williams, S. E., Univ. of Ill.
10559 Doyle, F. B., Univ. of Ill.
10560 Metzger, H. A., Cornell Univ.
10561 Tennygold, K., Cornell Univ.
10562 McClure, D. F., Cornell Univ.
10563 Molinet, E., Cornell Univ.
10564 Spencer, R. V., Univ. of Wash.
10565 Bebb, E. L., Kansas State Agr. Coll.
10566 Amsden, B. R., Worcester Poly, Inst.
10567 Jemmett, D. M., Mass. Inst. of Tech.
10568 Smith, F. H., Univ. of Ill.
10569 Wenzel, W. L., Univ. of Notre Dame
10570 Rosenthal, G. D., Washington Univ.
10571 Meador, B. F., Washington Univ
10572 Watts, W. R., Washington Univ.
10573 Briner, H. F., Washington Univ.
10574 Tripodi, D., Washington Univ.
10575 Lewis, W., Washington Univ.
10576 Maupin, R. L., Jr., Washington Univ.
10577 Bosworth, H. R., Univ. of Ill.
10578 Baukson, R. L., Washington Univ.
10579 Skrainka, R. M., Washington Univ.
10580 Suransky, P., Univ. of Wash.
10581 Mathison, D., Brooklyn, Poly. Inst.
10582 Haug, A. J., Univ. of Wash.
10583 Axman, E., Univ. of Wash.
10584 Burrough, E. L., Univ. of Wash.
10585 Luft, E. W., Univ. of Wash.
10586 Maney, W. L., Univ. of Wash.
10587 Heacock, W. J., Univ. of Wash.
10588 McCandless, C. H., Kansas State Agr. Coll.
10589 Huether, J. J., Univ. of Notre Dame
10590 Duphorne, M., Kansas State Agr. Coll.
10591 Deghuee, R. P., Stevens Inst. of Tech.
10592 Murphy, M. F., Univ. of Wash.
10593 Rice, A., Univ. of Wis.
10594 Anderson, N. M., Univ. of Cal.
10595 Mott, E. V., Penn. State Coll.
10596 Shaw, A. E., Brooklyn Poly. Inst.
10597 Michell, H. G., Univ. of Manitoba.
10598 Fellows, H. A., Michigan Agr. Coll.
10599 Kinney, R. C., Michigan Agr. Coll.
10600 Rann, M. B., Michigan Agr. Coll.
10601 Lankton, G. E., Michigan Agr. Coll.
10602 Rayner, R. L., Michigan Agr. Coll.
10603 Keely, L. F., Michigan Agr. Coll.
10604 Jacobs, F. S., Michigan Agr. Coll.
10605 Heasley, R. M., Michigan Agr. Coll.
10606 Stelzer, J. G., Michigan Agr. Coll.
10607 Davidson, J. B., Michigan Agr. Coll.
10608 Sumarlidason, F., Univ. of Wash.
10609 Salley, J. D., Clemson Agr. Coll.
10610 Schroeder, J. H., Clemson Agr. Coll.
10611 Abernathy, W. H., Clemson Agr. Coll.
10612 Sarratt, R. C., Jr., Clemson Agr. Coll.
10613 Ricker, G. F., Clemson Agr. Coll.
10614 Graves, C. C., Clemson Agr. Coll.
10615 Leigler, T. J., Clemson Agr. Coll.
10616 Yougul, C., Clemson Agr. Coll.
10617 Epps, A. R., Clemson Agr. Coll.
10618 Mace, S. N., Clemson Agr. Coll.
10619 Gower, A. G., Jr., Clemson Agr. Coll.
10620 DuRant, C. O., Clemson Agr. Coll.
10621 Lachieott, L. H., Clemson Agr. Coll.
10622 Refo, H. C., Clemson Agr. Coll.
10623 Childs, L. H., Clemson Agr. Coll.
10624 Watkins, W. W., Clemson Agr. Coll.
10625 Riley, G. M., Jr., Clemson Agr. Coll.
10626 Givner, S., Clemson Agr. Coll.
10627 Haas, C. I., Clemson, Agr Coll.
10628 Hoffmeyer, H. F. C., Jr., Clemson Agr. Coll.
10629 Cullum, U. X., Clemson Agr. Coll.
10630 Tyler, C. L., Clemson Agr. Coll.
10631 Kempson, J. M., Clemson Agr. Coll.

10632 Shedd, R. L., Clemson Agr. Coll.
10633 Banks, W. D., Clemson Agr. Coll.
10634 Leland, R. E., Clemson Agr. Coll.
10635 Rentz, N. G., Clemson Agr. Coll.
10636 Cobb, C. C., Clemson Agr. Coll.
10637 Fowler, W. W., Clemson Agr. Coll.
10638 Blume, W. E., Casino Tech, Night School
10639 Weiss, L., N. Y. Elec. School
10640 Parsons, R. J., Casino Tech. Night School
10641 Horton, L. V., Yale Univ.
10642 Hubbell, F. J., Yale Univ.
10643 Hallabaugh, S. E., Jr., Univ. of Ark.
10644 Hart, R. P., Univ. of Ark.
10645 Gardner, O. D., Kansas State Agr. Coll.
10646 Breese, R. S., Kansas State Agr. Coll.
10647 Hirata, M., Univ. of Neb.
10648 Minnich, C. T., Univ. of Neb.
10649 Strom, A. P., Univ. of Neb.
10650 Corson, LeR., N. Y. Elec. School
10651 Jickling, R. W., Univ. of Manitoba
10652 Boesen, P. J., Univ. of Ill.
10653 Clark, W. C., Univ. of Okla.
10654 Creel, W. H., Univ. of Okla.
10655 Gilbert, M. G., Univ. of Okla.
10656 Harris, F. K., Univ. of Okla.
10657 Howell, J. O., Univ. of Okla.
10658 Huckaby, F. F., Univ. of Okla.
10659 Humphrey, J. E., Univ. of Okla.
10660 Lewis, A. L., Univ. of Okla.
10661 McLane, C. L., Univ. of Okla.
10662 McQuown, K. C., Univ. of Okla.
10663 Nonweile, O. C., Univ. of Okla.
10664 Pendleton, O. A., Univ. of Okla.
10665 Pendleton, V. A., Univ. of Okla.
10666 Ross, M. C., Univ. of Okla.
10667 Swaze, J. E., Univ. of Okla.
10668 Wallace, A. McM., Univ. of Okla.
10669 Wann, G. S., Univ. of Okla.
10670 Wells, J. L., Univ. of Okla.

Total 191

OFFICERS AND BOARD OF DIRECTORS 1919-1920

President

Calvert Townley

Junior Past-Presidents

E W. Rice, Jr.
Comfort A. Adams

Vice-Presidents

A. M. Schoen
C. E. Skinner
John B. Fisken
L. R. Jorgensen
N. A. Carle
Wills Maclachlan

Managers

Charles S. Ruffner
Charles Robbins
E. H. Martindale
Walter A. Hall
William A. Del Mar
Wilfred Sykes
Walter I. Slichter
G. Faccioli
Frank D. Newbury
L. E. Imlay
F. F. Fowle
L. F. Morehouse

Treasurer

George A. Hamilton

Secretary

F. L. Hutchinson

*GENERAL STANDING COMMITTEES

Chairmen

Executive, Calvert Townley
Finance, N. A. Carle
Meetings and Papers, W. I. Slichter
Editing, Henry H. Norris
Publication, W. I. Slichter
Safety Codes, Farley Osgood.
Board of Examiners, F. L. Rhodes
Sections, Walter A. Hall
Student Branches, C. Francis Harding
Membership, R. W. Krass
Public Policy, H. W. Buck

Chairmen

Law, Samuel Sheldon
Headquarters, N. A. Carle
U. S. National Committee, I. E. C., C. O. Mailloux
Code of Principles of Professional Conduct, George F. Sever
Edison Medal, Carl Hering.
Standards, L. T. Robinson
Board's Committee on Technical Activities, Wilfred Sykes

SPECIAL COMMITTEE

Development Committee, Charles F. Scott, *Chairman*

*TECHNICAL COMMITTEES

Chairmen

Economics of Electric Service, C. S. Ruffner
Educational, J. C. Parker
Electrical Machinery, B. A. Behrend
Electrochemistry and Electrometallurgy, F. A. J. FitzGerald
Electrophysics, F. W. Peek, Jr.
Industrial and Domestic Power, A. G. Pierce
Instruments and Measurements, S. G. Rhodes
Iron and Steel Industry, W. F. James

Chairmen

Lighting and Illumination, C. E. Clewell
Marine, Arthur Parker
Mines, W. A. Chandler
Power Stations, Philip Torchio
Protective Devices, D. W. Roper
Telegraphy and Telephony, Donald McNicol
Traction and Transportation, W. S. Murray
Transmission and Distribution, Edward B. Meyer

*INSTITUTE REPRESENTATION ON

American Bureau of Welding
Board of Award, John Fritz Medal
Board of Trustees, United Engineering Society
Library Board of United Engineering Society
Electrical Committee of National Fire Protection Association
Joint Committee on Engineering Education
Council of American Association for the Advancement of Science
Advisory Board of American Year-Book
U. S. National Committee of the International Illumination Commission
Franco-American Engineering Committee
National Joint Committee on Overhead and Underground Line Construction
American Committee on Electrolysis
Engineering Council
Engineering Division, National Research Council
Engineering Foundation Board
Naval Consulting Board
American Engineering Standards
Commission of Washington Award
Joint Committee on Standard Thread for Insulators and Insulator Pins
Special Joint Committee on Determination of Power Factor in Polyphase Circuits

---

*A complete list of the officers, committees and representatives of the Institute will be found in the October, 1919, issue of the Proceedings.

LIST OF SECTIONS

Chairmen and Secretaries

Atlanta, A. M. Schoen, T. C. Taliaferro.
Baltimore, J. B. Whitehead, L. M. Potts.
Boston, I. E. Moultrop, I. M. Cushing.
Chicago, A. F. Riggs, A. C. King
Cleveland, B. W. David, W. D. Smoot
Denver, H. S. Evans, R. B. Bonney.
Detroit-Ann Arbor, J. C. Parker, C. E. Wise
Erie, J. C. Barry, P. B. Mansfield
Fort Wayne, C. I. Hall, O. B. Rinehart
Indianapolis-Lafayette, J. Lloyd Wayne, D. C. Pyke
Ithaca, Alex. M. Gray, J. G. Pertsch, Jr.
Kansas City, Mo., W. F. Barnes, W. F. Barnes
Los Angeles, Clem A. Copeland, R. W. Sorensen
Lynn, A. K. Warren, Fred E. Ewart.
Madison, C. M. Jansky, L. E. A. Kelso.
Milwaukee, H. P. Reed, F. J. Mayer
Minnesota, Fred Dustin, Leo H. Cooper

Chairmen and Secretaries

Panama, Wm. T. O'Connell, M. P. Benninger
Philadelphia, C. E. Clewell, Ross B. Mateer
Pittsburgh, J. G. Carroll, W. L. Shafer.
Pittsfield, R. E. Wagner, N. F. Hanley.
Portland, Ore., W. D. Scott, E. H. LeTourneau
Rochester, J. W. Morrison, H. J. Schiefer, Jr.
St. Louis, J. L. Hamilton, H. G. Hake.
San Francisco, W. G. Vincent, A. G. Jones
Schenectady, C. S. Van Dyke, L. F. Millham
Seattle, J. Harisberger, T. C. Smith.
Spokane, J. E. E. Royer, Foster Russell.
Toledo, W. A. Hill, Max Neuber
Toronto, Ashton B. Cooper, Daniel M. Fraser.
Utah, Markham Cheever, T. A. Purton
Urbana, Morgan Brooks, E. A. Reid
Vancouver, R. F. Hayward, T. H. Crosby
Washington, D. C., Milton M. Flanders, R. Karl Honaman

LIST OF BRANCHES

Chairmen and Secretaries

Alabama Poly. Inst., W. W. Hill, E. E. Terry
Alabama, University of, J. P. Thomas, R. W. Wilkerson
Arkansas, Univ. of, J. C. Black, S. E. Hollabough
Armour Inst., W. M. Seyferlich, H. D. Stevers
Brooklyn Poly. Inst., T. C. Shwab, A. H.Wehle
Bucknell Univ., H. H. Angell.
California, Univ. of, H. C. Silent, M. L. Almquist
Carnegie Inst. Tech., K. K. Knaell, B. C. Dennison
Cincinnati, Univ. of, C. S. Meyer, C. B. Hoffmann
Clarkson College of Technology
Clemson Agri. Coll.,* J. B. Fitzgerald, J. F. McHugh
Colorado State Agr. Coll.,
Colorado, Univ. of, A. S. Anderson, T. C. Smith
Drexel Inst., F. J. Hartmann
Georgia School of Tech., R. S. Griffith, G. L. Jones
*Idaho, University of
*Iowa, University of
Kansas State Agri. Coll., J. S. Gulledge, M. J. Lucas
*Kansas, University of
Kentucky, State Univ. of, J. W. Coleman, Jr., J. D. Wood
Lafayette College, F. W. Ross, C. S. Allen
Lehigh University, B. R. Nevins, S. C.Townsend
Lewis Institute
Maine, Univ. of, Samuel E. Jones, Wesley C. Plumer
Mass. Inst. Tech., H. B. Deal, Florence Fogler
Michigan Agri. Coll., R. D. Wyckoff, R. B. Kling
Michigan, Univ. of, L. M. Ilgenfritz, Ross Gunn
Milwaukee, Engg. School of, John D. Ball, J. L. Gordon
Minnesota, Univ. of, Norman Kingsley, C. L. Nelson
Missouri, Univ. of, A. C. Lanier, F. H. Miller

Chairmen and Secretaries

Montana State Coll., Jesse Flynn, J. A. Thaler
Nebraska, Univ. of, O. J. Ferguson, O. E.Edison
North Carolina State Coll., W. W. Neal, M. E. Lake
North Carolina, Univ. of, W. W. Neal, M. E. Lake
*North Dakota, University of
*Norwich University
Notre Dame, Univ. of, J. M. Reid, J. A. Caparo
Ohio Northern Univ., Mark Jepson, W. A. Lynde
Ohio State Univ., C. H. Hoover, Harry A. Lott
*Oklahoma A. & M. Coll.
Oklahoma, Univ. of, W. A. Kitchen, O. W. Walter
Oregon Agri. Coll., A. L. Manning, Ray Avrit.
Penn., State Coll., E. W. Taylor, C. K. Mast
Penn., Univ. of, W. H. McIntyre, J. M. Ryan
Pittsburgh, Univ. of, L. P. Kennedy, H. Q. Chan.
Purdue Univ., L. A. Malott, T. K. Hartley
Queen's University
Rensselaer Poly. Inst., W. J. Williams, L. B. Raynor
Rose Poly. Inst., Frank M. Stone, H. L. Kessler
Stanford University, V. L. Tyndall, Hans O. Storm
Syracuse Univ., Wm. P. Graham, R. D.Whitney
Texas A. & M. Coll., L. E. Cook, D. D. Murphree
*Texas, University of
Throop Coll. of Tech., Russell Otis, Donald D. Smith
Virginia Poly. Inst., L. D. Fry, R. W. Harvey
Virginia, Univ. of, C. Henderson, W. W. Boyd
Wash., State Coll. of, C. E. Guse, R. C. Guse
Washington Univ., Edw. Bowles, F. W. Schramm
Washington, Univ. of, George R. Rice, McKinley Donovan
West Virginia University
*Worcester Poly. Inst.
Yale Univ., T. V. Dickens, F. J. Hubbell

***Inactive at present, due to the war.**

PROCEEDINGS

OF THE

AMERICAN INSTITUTE OF ELECTRICAL ENGINEERS

INDEX TO VOLUME XXXVIII

JANUARY 1, TO DECEMBER 31, 1919

INDEX TO SUBJECTS

Page

Abnormal Voltages within Transformers, (L. F. Blume and A. Boyajian)................*February*, 211

Absolute Measurement of the Intensity of Sound, The, (A. G. Webster)................*July*, 889

Aeronautics in the United States, 1918, (George O. Squier), *February*, 53

Airplane Antenna Constants,................*November*, 390

Aldred Lectures on Engineering Practise,................*April*, 130

American Engineering Standards Association,................*June*, 213

American Engineering Standards Committee, Statement Regarding Reorganization,................*July*, 260

American Engineering Research, (*W. R. Whitney*)......*February*, 115

American Engineers go to France, ...*January*, 4

American Meteorological Society, Formation of........*December*, 423

An Appeal to the Membership of the Institute,..........*February*, 74

Annual Meeting—Edison Medal Presentation,...*May*, 163; *June*, 206

Annual Meeting of Society for Promotion of Engineering Education,................*June*, 206

Annual Reports of Technical Committees,................*July*, 901

Applicability of Automatic Switching to all Classes of Telephone Service, (A. B. Smith)................*December*, 1335

Applications for Election, *January*, 9; *February*, 68; *March*, 112; *April*, 149; *May*, 187; *June*, 232; *July*, 288; *August* 307; *September*, 317; *October*, 367; *November*, 408; *December*, 439

A. S. C. E. Meeting,................*November*, 377

Associates Elected, *January*, 6; *February*, 64; *March*, 104; *April*, 143; *May*, 178; *June*, 225; *July*, 275; *September*, 318; *November*, 401; *December*, 436

Associates Reelected, *January*, 8; *February*, 67; *March*, 111; *April*, 148; *May*, 186; *June*, 231; *July*, 287; *November*, 406; *December*, 438

REVIEW OF WORK OF SUB-COMMITTEE ON WAVE SHAPE STANDARD OF THE STANDARDS COMMITTEE*

BY HAROLD S. OSBORNE

ABSTRACT OF PAPER

The paper gives a review of the work done during the past three years by a sub-committee of the Standards Committee of the Institute appointed to make recommendations for changes in the Institute's rules regarding the wave shape of alternators. After a very careful consideration of the question and a large amount of experimental work the Sub-Committee last spring made recommendations that for the present the ten per cent deviation rule should be retained without change (except in wording), and that trial use should be made of a supplementary wave shape factor. The new factor, based on the relation between voltage wave shape and interfering effect in telephone circuits, when power and telephone lines parallel each other, is called the "telephone interference factor." The committee invites the broadest discussion and trial use of the new factor. No attempt will be made to decide upon limiting values of the factor until after wide experience shall have been obtained in its use, and the committee will welcome assistance on the part of any interested in collecting information to this end.

THIS paper is presented at the request of the sub-committee on Wave Shape Standard to encourage "the trial use of telephone interference factor and the collection of information by any who are interested."

Introduction. Until the past year the only standard of wave-shape included in standardization rules of the American Institute of Electrical Engineers has been the rule that the maximum deviation from the equivalent sine wave should not exceed 10 per cent of the amplitude of the equivalent sine wave. This provision has been in the standardization rules for many years and has done excellent service in preventing the use of machines having grossly distorted wave-shapes.

On a number of occasions papers and discussions have been presented to the Institute criticising the 10 per cent deviation

---

*The author acknowledges the assistance of the other members of the Sub-Committee on Wave Shape Standard. The members of this Sub-committee are: C. A. Adams, Frederick Bedell, L. W. Chubb, A. W. Copley, F. M. Farmer, H. S. Osborne, L. T. Robinson and A. E. Silver.

Manuscript of this paper was received December 14, 1918.

rule. In two papers presented to the Institute in 1913 (*Wave-Form Distortions and Their Effects on Electrical Apparatus,* by P. M. Lincoln, and *Proposed Wave-Shape Standard,* by C. M. Davis) it was pointed out that the deviation standard has two marked disadvantages in that it sets approximately the same limit for harmonics of all frequencies and is relatively difficult of application.

The discussion of these papers has led to the consideration of wave-shape factors other than the deviation and of more convenient means for determining them. The simplest method so far suggested of determining a wave factor is by devising an electrical network such that the current in one branch resulting from a complex voltage wave at the terminals of the network is an indication of the distortion of the voltage wave in question. The harmonics of the wave may be given a desired relative weighting by using a suitable network.

The wave-shape standard proposed by Mr. Davis in the paper cited above employed for its determination the simplest form of such a network. He suggested that the weighting of the harmonics be proportional to their frequency, and that this weighting be obtained by using as a measure of wave shape the ratio of the admittance of a condenser to the complex wave to the admittance of the condenser to a sine wave of the same frequency. The factor so measured is called the differential distortion factor. This and several other means of measuring wave shape were discussed again before the Institute in 1915 (*Distortion Factors,* by Professor Bedell). The attention which had been directed to the subject led in December, 1915, to the appointment by the Standards Committee of a sub-committee to consider this subject and make recommendations.

Outline of the Work of the Sub-committee. The form of wave-shape standard which was suggested by Mr. Davis has a number of characteristics which recommend it. In the form suggested, however, it would be exceedingly difficult of practical application, largely because of errors in measurement caused by the inductance and resistance of the machines under test and of the measuring instrument. The committee first turned its attention to the possibility of developing a satisfactory standard by simple modifications of that proposed by Mr. Davis formed by adding a series resistance or a resistance and inductance to the condenser which is the measuring circuit in that standard. It was hoped that a satisfactory standard of this sort could be developed that would be so simple that it could be set up from standard coils, condensers and meters available in any well equipped laboratory.

The different methods of measuring wave shape, which under these limitations could be given serious consideration, are discussed in a paper presented to the Institute in 1916 by Professor Bedell reporting the progress of the sub-committee's work (TRANSACTIONS, 1916, page 1154). However, it was the conclusion of the sub-committee, based on a large amount of experimental work,—that whatever form of network might be adopted it would need to be set up as a special piece of apparatus with the constants carefully specified. It was also found necessary to use with the apparatus a highly sensitive indicating instrument, such as a vacuum thermocouple with a direct current milliammeter or a very sensitive alternating-current dynamometer milliammeter. Moreover, a network of any of the forms discussed in the progress report was felt to be not entirely satisfactory because the readings obtained would not vary rapidly with changes in wave shape and also because the relative penalizing of different harmonics was arbitrarily determined by the constants of the network.

These conclusions led the committee to consider the development of a rating of wave shape or wave-shape factor, unrestricted by the requirement of a simple series arrangement of measuring network, which would give as accurately as practicable a measure of the detrimental effect of any wave, taking into account effects on power systems and inductive effects on communication circuits. To such a factor the harmonics of different frequencies would contribute both in proportion to their magnitude and in proportion to the amount of the disturbance which they would individually cause if of the same magnitude.

The committee has found that but very little definite information is available regarding the relative effect of harmonics of different frequencies on the operation of power systems. For the present any modification of the 10 per cent deviation standard for the purpose of weighting the harmonics with reference to their effect on the operation of power systems would have to be based on general judgment and does not seem to be necessary.

On the other hand when telephone systems come within the inductive influence of power systems more trouble has been experienced, and this trouble bears a definite relation to the frequencies of the harmonics in the wave form. Consequently the committee has collected definite experimental data regarding the relative effect of harmonics of different frequencies in producing interference in telephone systems.

In view of these facts, the committee has proposed as a first step in a revision of the rules regarding wave shape and pending the obtaining of further information, that the present deviation factor be retained for all alternators and that an additional factor be adopted to be applied to alternators which will be used on open-wire * transmission and distribution systems. This additional factor is based entirely on the effect of the harmonics in producing interference in telephone circuits when the power and telephone circuits are parallel. In accordance with this conclusion the sub-committee has developed, and the Standards Committee has adopted for trial use, a new wave-shape factor which is called the telephone-interference factor. No attempt has been made to set values of the telephone-interference factor which should be used as limits, it being considered important that a large amount of data and experience be obtained before values are set. The purpose of this paper is to call attention to the new factor, to tell how it was obtained and to describe in detail the apparatus by which it may be measured so that any one interested can assist the committee in obtaining experience with the use of the new factor and in determining what would be the best limiting values of the factor to be adopted as standard.

New Standardization Rules. In the new standardization rules regarding wave-shape the old rule for maximum deviation remains unchanged except in the wording. The new rules are as follows:

Section 17 (new)

The deviation factor of a wave is the ratio of the maximum difference between corresponding ordinates of the wave and of the equivalent sine wave of equal length to the maximum ordinate of the equivalent sine wave when the waves are superposed in such a way as to make this maximum difference as small as possible. (See Section 406)

Section 406 (new)

A deviation factor, as defined in Section 17, of the terminal voltage wave on open-circuit of all synchronous machinery not exceeding 10 per cent is permissible except when otherwise specified.

The new factor, called a telephone-interference factor, is covered by new sections in the Standards' rules, reading as follows:

---

*By open-wire system is meant one which is not in cable.

Section 17 A (new)

The interference factor of a wave is a measure of its departure from the sinusoidal shape based upon its disturbing effects when acting by induction on other circuits. (See Sections 407 and 408).

Section 407 (new)

The telephone interference factor is the ratio of the square root of the sum of the squares of the weighted values of all the sine-wave components (including in alternating waves both fundamental and harmonics) to the r.m.s. value of the wave.

Section 408 (new) (*For trial only*)

The weighting of the sine-wave components of different frequencies is as given in the following curve. (Fig. 1). The telephone interference factor of a voltage wave, corresponding to this weighting, may be measured by the use of the network shown in the following diagram (Fig. 2). With this network the telephone interference factor is the ratio of the current *I* in micro-amperes in the meter branch of the network to the voltage *E* applied to the external terminals of the network. The measurement may be made on the low tension side of a potential transformer. A sensitive vacuum thermo-couple provided with a shunt, and a direct-current milliammeter have been found convenient for measuring the current.

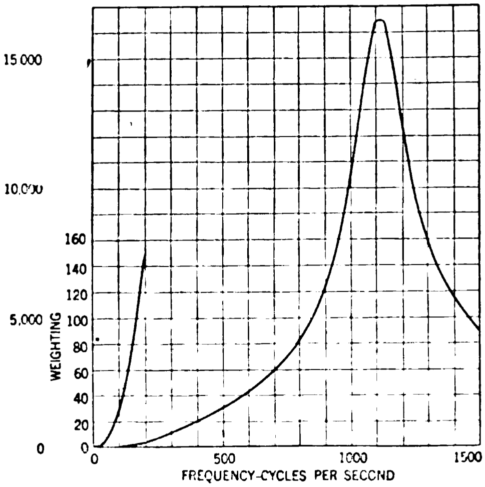

Fig. 1—Frequency-Weighting Curve for Interference Wave Factor

Section 409 (new)

A telephone interference factor (See Sections 17A and 407) of the open-circuit terminal voltage wave not exceeding * . . . is permissible except when otherwise specified. This rule shall apply in cases where synchronous machinery is required for use in connection with open-wire transmission or distribution circuits and shall be supplementary to 406. The purchaser shall in each case indicate whether or not the conditions are such that this section applies.

---

*The appropriate limiting value of this factor has not yet been determined, but will be recommended after further experience shall have been obtained.

Relation Between Wave Shape and Telephone Interference. The great importance of the harmonics in voltage and current waves of the power system in determining how much interference the power circuit will cause in parallel telephone circuits is well illustrated by the curve given in Rule 408. This curve represents the relative amount of interference caused by voltages of the same magnitude but different frequencies in the power circuit. From the curve it is estimated that at 1100 cycles the interference per volt is approximately 9000 times that at 60 cycles and 60,000 times that at 25 cycles.

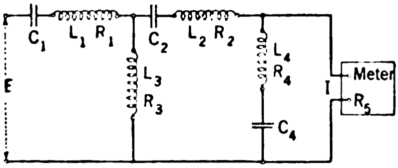

FIG. 2—NETWORK FOR MEASUREMENT OF INTERFERENCE WAVE FACTOR

NETWORK CONSTANTS.

$C_1 = 0.9$ mf.	± 0.5%	$L_1 = 0.023$ henry	± 0.5%	$R_1 = 5$ ohms ± 2%
$C_2 = 0.9$ "		$L_2 = 0.0205$ "		$R_2 = 12$ " ± 2%
		$L_3 = 0.068$ "		$R_3 = 73$ " ± 1%
$C_4 = 7.5$ "		$L_4 = 0.019$ "		$R_4 = 22.5$ " ± 2%
				$R_5 = 43$ " ± 1%

This means that if the harmonics were entirely absent from a 25-or 60-cycle power system, the problem of inductive interference from the system with telephone service would practically vanish. Although this condition cannot, of course, be obtained, anything which causes an approach to it causes a reduction in the amount of interference under conditions otherwise the same and therefore makes possible a reduction in the expense which is necessary in the plants of the power and telephone systems in order to avoid excessive interference. There is therefore a direct economic advantage from the standpoint of present day conditions in designing and building alternators with as low a telephone interference factor as practicable; provided no material increase in cost is involved.

Determination of the Relative Importance of Frequencies in Telephone Interference. The curve given in new Rule 408 has been developed to represent the variation with frequency of the amount of interference in parallel telephone circuits from a given voltage applied to the power circuit, other conditions being the same. It is based on experimental work carried out under the direction of the chairman of the Sub-committee and which is described in Appendix A. The methods by which these results were obtained may be briefly summarized as follows:

Two methods have been used. In each case known amounts of current of different frequencies have been inserted in the telephone receiver of an ordinary telephone circuit, using for convenience artificial lines. With one method the observers listened to the reading of ordinary news matter over the noisy circuit and then over a quiet circuit of greater length and indicated over which circuit they could understand better. This method, is of course, crude if the results of a single observer be considered and the results obtained by different observers vary widely. However, averaging the results obtained in large numbers of observations the results obtained in two distinct sets of tests check closely. The two sets of tests were made four years apart, with different observers and under somewhat different conditions, and the check of the results obtained indicates strongly that the method is sound.

The second method is based on articulation tests. With this method the goodness of transmission over the telephone circuit is measured by the percentage of syllables spoken over the circuit which are correctly apprehended by the listener. The syllables are arranged in groups which are so selected that each group represents ordinary speech both in the relative number and in the arrangement of the fundamental sounds of which speech is composed. Therefore, the percentage of correctly received syllables is a measure of the degree of intelligibility of the conversations held over the circuit. The percentage of words correctly understood in an actual conversation is, of course, very much higher than that obtained in the articulation tests because the syllables used in the test are without context and, in general, without meaning. The articulation tests made in connection with this experimental work involve 60,000 observations, considering each syllable as an observation.

The articulation tests do not necessarily give a measure of the complete detrimental effect of the noise caused by extraneous currents because in addition to the reduction of intelligibility in the telephone circuit, there is a factor of annoyance to the person using the telephone. It is interesting to note that the relative results obtained by the articulation tests check those obtained by the reading tests for low frequencies, and then with frequencies above 1000 cycles, show progressively less effect. This indicated that the reading tests include in part the factor of annoyance which becomes relatively more important with the high frequencies.

The experimental work which is briefly discussed above gives a curve representing in relative terms the combined effect of varying sensitiveness of the telephone receiver and of the human ear. The shape of the curve depends much, of course, on the constants of the receiver. The receiver used in this work, however, was typical in this respect of all receivers in general use in the country and the curve represents a relation between sensitiveness and frequency of current which will probably be approximately maintained for a number of years.

In developing from this experimental work a curve to be made the basis of a new wave-shape factor, consideration has been given to other elements which help to determine the relative amount of noise caused by generator voltages and currents of different frequencies. The more important of these are outlined below:

a. The current induced in telephone circuits by a given voltage or current in the power circuit is approximately proportional to the frequency. This effect was taken into account in determining the weighting curve.

b. The attenuation of the harmonic components of the current as they are propagated along the power and telephone circuits varies with the frequency. Except in rare instances, this effect is small compared with the others which are taken into account. It was therefore omitted.

c. In some forms of telephone apparatus, there may be appreciable selective action tending to change the relative amount of currents of different frequencies which reach the receiver. Loaded telephone lines generally do not transmit currents above about 2500 cycles, but the effect of these currents is normally inappreciable in the production of noise because of their almost complete absence from the power system. Some forms of telephone apparatus tend to eliminate the currents of low frequencies. These currents have a very small effect on the amount of noise, however, except when present in very large volume. In general, the condition for a good telephone apparatus requires that it transmit with approximately equal efficiency all frequencies important in the reproduction of speech and it is just these frequencies which are important in the production of noise from extraneous sources. The effect of the apparatus is therefore in general small compared with the other factors which have been included and this effect has been neglected in determining the weighting curve.

In accordance with (a) the curve which is presented in Rule 408 was obtained by multiplying the experimental curve of relative interference of currents of different frequencies by a factor proportional to the frequency. As a result of the experimental work which has been done and of the above considerations the committee believes that the curve selected is the best curve for use at this time.

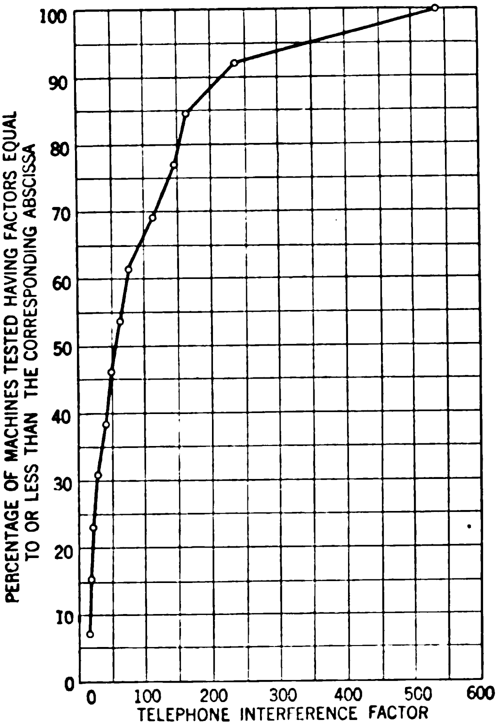

Fig. 3

Description of Apparatus and Method of Use. In order to make the use of the new telephone interference factor a simple matter, the committee has developed apparatus in which the ratio of current through one branch of a network to the voltage applied at its terminals gives a measure of the telephone inter-

ference factor. The essential electrical constants of the network are given in the diagram in Rule 406. A detailed description and specification of the apparatus is given in Appendix B to this paper.

The measuring instrument of the apparatus consists of a vacuum thermocouple connected to a direct-current milli-ammeter. When there are a number of harmonics in the voltage wave applied to the apparatus, this instrument gives a reading proportional to the square root of the sum of the squares of the effects of the individual harmonics. The data which have been obtained regarding the law of combination of the detrimental effects of a number of sources of noise disturbance in a telephone circuit, indicate that this law varies under different extreme conditions. It seems probable that the root-sum-square law best represents the average condition and it is far more practicable for use than any other law because of the characteristics of measuring instruments. It has therefore been adopted.

Summary of Results Obtained with Network. The sub-committee has used this network for measurements of the wave-factor of the open-circuit voltage of a considerable number of machines. Some of the results which have been obtained are given in Table I—Results of Measurements with Network. These results are summarized in the curve of Fig. 3.

In the last column of Table I are given the results obtained in the case of the machines in checking the reading of the network by computing the telephone interference factor from the analysis of oscillograms. In order to obtain this check it is necessary to carry the analysis out to the 25th harmonic, and in some cases higher, in order to include the tooth harmonics. These analyses have shown that the use of the network involves not only much less work but also gives greater accuracy than the computation of the factors from the analysis of the oscillograms.

Approximate analyses which were made in a number of cases show very clearly that in general the machines with high telephone interference factors are machines with large slot harmonics. It is evident that this should be so from the shape of the admittance curve of the network. This is illustrated by the following table which gives the relative amounts of harmonics of different orders which would give the same value of telephone interference factor assuming that one harmonic only in addition to the fundamental is present in the wave.

Harmonic	Approximate relative amount
3	100
5	26.7
7	10.4
9	6.6
11	4.4
13	3.0
15	1.86
17	..96
19	.73
21	1.25
23	1.90
25	2.57

Determination of Limiting Values. The question of what limiting values of telephone-interference factor should be adopted for the construction of new machinery will, of course, be an economic one. There will be a point beyond which further reduction in the telephone-interference factor of machines, would involve an increase in cost greater than would be warranted by the damage caused or greater than the cost of outside-plant methods of obtaining equally effective results. It is proposed by the sub-committee not to recommend any limiting values for use until adequate data shall have been obtained. In the meanwhile, the sub-committee wishes to enlist the cooperation of any who are interested in the work of gathering as much information as possible which can contribute to the result Practicability in application seems to require that the measurements of telephone-interference factor be made with the machines operating on open-circuit. Load on a generator modifies the wave-form and results obtained indicate that in general, the telephone-interference factor of the voltage wave of the power system is less than the no-load factor of the worst machine connected to it.

The sub-committee is particularly anxious to get from the operating engineers data regarding the relation between the telephone-interference factor of the system voltage under the usual load conditions and the factors of the individual generators and motors connected to it, as measured on open circuit. Valuable information can thus be obtained by measuring the wave factors of the generators and other important pieces of rotating machinery on open-circuit and at rated speed, and recording also the measurements of resultant interference factor on the system at regular intervals, and as far as it can be determined, the load conditions of all generators at the time the measurements are made and other conditions on the system which would affect the results. The data submitted should, when possible, include the following information regarding individual machines:

1. Telephone interference factor.
2. Complete name plate data and name of manufacturer.
3. Terminal voltage at time of measurement.
4. Speed at time of measurement.
5. Load condition at time of measurement.

Attention is particularly called to the fact that in many cases the telephone-interference factor varies rapidly with the speed. The speed should therefore be carefully controlled and should be as accurately measured as possible.

The members of the sub-committee will be pleased to hear from anyone who is willing to cooperate in this work, and to supply any desired information regarding apparatus and methods.

Future Work. Future work will involve the collection of the information necessary for recommendations regarding the limiting values of telephone-interference factor to be applied to new alternating current rotating apparatus. Such values should not be recommended until a large amount of information shall have been obtained and full opportunity given all interested to acquaint themselves with the new factor and to offer comments. Furthermore, the application of the new rules should be so timed that manufacturers will not be inconvenienced in adjusting themselves to them. Future work should include also the collection of any available information regarding the effect of different harmonics on the operation of power systems in order that the desirability of modifying the present deviation factor may be reviewed.

In the present rules, the deviation factor and the telephone interference factor are applied only to synchronous machinery. A complete consideration of the subject would require a study of the effect of other classes of electrical machinery upon the wave forms of the currents and voltages of the systems to which they are connected.

APPENDIX A

RELATIVE INTERFERING EFFECTS OF SINGLE-FREQUENCY CURRENTS IN THE TELEPHONE RECEIVER

The frequency-weighting curve for the telephone-interference factor (Fig. 1) is based upon several experimental investigations to determine the relative interfering effect of single-frequency currents in a telephone receiver. These investigations were conducted at different times, and by different methods, by the Engineering Department of the American Telephone and Telegraph Company. The general principles of the different methods are given in the body of the paper. Details of procedure and data are given in this appendix.

"Reading" Tests of 1914. In the first series of tests* a typical telephone circuit was set up, using artificial cable, and arranged so that different single-frequency currents could be separately introduced in the telephone receiver at the listening end of the circuit, simultaneously with the normal telephone current. By throwing a switch the listener could remove the disturbing current from the circuit and at the same time reduce the volume of sound output from the receiver, the amount of this reduction and the amount of the disturbing current being set by the reader or caller and being unknown to the listener.

---

*Made in 1914 at the request of the (California) Joint Committee on Inductive Interference.

The procedure was for the caller to read over the circuit while the listener switched from the noisy condition to the quiet condition and the reverse, until the latter made his judgment as to which of the two circuits would be preferable for carrying on a conversation. This judgment was signaled to the caller, who then changed the amount of volume-reduction or the noise and the procedure was repeated. By this means, and after an average of about five different settings of reduction in volume, the listener's opinion as to what reduction equaled in effect the given amount of single-frequency disturbing current was indicated. In these tests frequencies of 60, 180, 400, 800, and 1500 cycles were used. Four strengths of disturbing current of each frequency were employed, with an average of eight observers. This involved a total of 160 determinations, each of which was based on an average of five separate judgments, making a total of 800 judgments. The results obtained in these tests indicated a linear relationship between the amount of disturbing current and the volume reduction expressed in terms of miles of cable added to the standard testing circuit. The relative interfering effects of equal currents of the different frequencies employed in these tests are shown by the points marked "X" in Fig. 4.

"Reading" Tests of 1918. The tests made in 1914 were not considered final and in 1918 they were supplemented by further studies. In these latter tests it was felt that particular regard should be paid to 1100 cycles because the resonance point of telephone receivers is in the neighborhood of this frequency. The circuit was arranged, by using an amplifier, so that receivers for a number of observers were connected to the same circuit simultaneously while someone at the calling end switched from the noisy condition to the quiet condition with reduced volume, or the reverse, every 15 seconds. After some experimenting, it was found satisfactory to have the caller read for a total of 2 minutes, thus giving four periods of 15 seconds each for each condition. At the end of this time each observer recorded his judgment as to the relative desirability of the two conditions. For each frequency of interfering current, similar comparisons were made with two callers and for five reductions in volume on the quiet circuit. In this series of tests the comparisons were made for frequencies of 180, 400, 800, 1100, and 1500 cycles with from 8 to 11 observers, involving in all over 1000 judgments. For three of these

frequencies more than one value of current was used but for the other two only one value was used. As the previous tests established a linear relationship between current strength and reduction in volume expressed in miles of standard cable, the data could all be reduced to loss per unit current. The results obtained in this series of tests, together with those obtained in 1914, are represented by curve *A* of Fig. 4. It should be noted that for the frequencies common to the two series of tests, namely 180, 400, 800, and 1500 cyles, the results check very closely.*

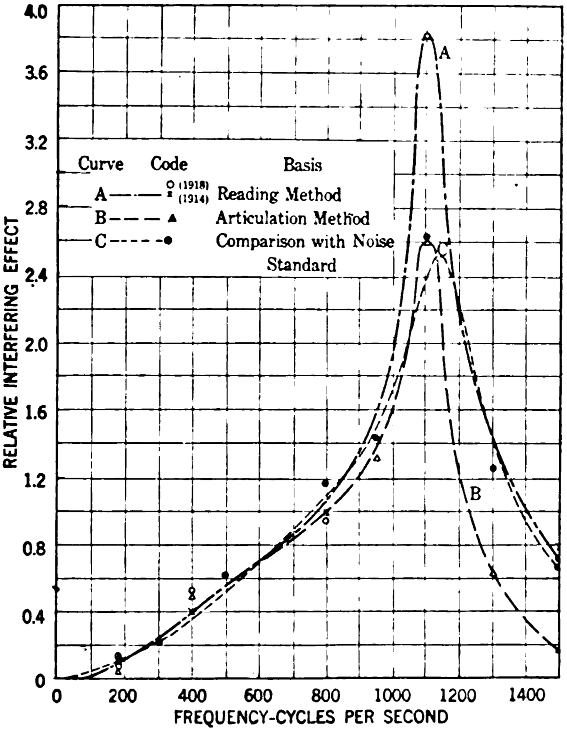

FIG. 4—RELATIVE INTERFERING EFFECT OF SINGLE FREQUENCY CURRENTS IN A TELEPHONE RECEIVER

---

*The preliminary results obtained in 1914 have been presented to the Institute in the form of a curve (TRANSACTIONS, Vol. 34, page 1182, Fig. 4, Curve *C*). Within the precision of the data, this tentative curve agrees with the curve given here below 800 cycles, but is quite different in the range, between 800 and 1500 cycles, in which no observations had been made in the 1914 tests.

"Articulation" Tests. These tests were made by having a caller at the transmitting end of a typical telephone circuit speak into the transmitter lists of syllables which were phonetically balanced in groups of 50, while a number of observers, with receivers connected to the receiving end of the circuit through an amplifier, recorded the sounds which they heard. A comparison of these records with the lists of sounds called shows the percentage of syllables correctly received, and this is taken as the measure of the articulation for the condition of the circuit at the time. Articulation measurements of this sort were made with different single-frequency disturbing currents in the receivers at the listening end of the circuit and also without these disturbing currents but with conditions otherwise the same. Tests of this nature were made for values of disturbing currents of the following frequencies: 180, 400, 800, 950, 1100, 1300, 1500 and 1700 cycles. Two callers and five observers were employed. Using the percentage articulation over the quiet circuit as the basis of reference, the effects of the disturbing currents are expressed as the differences in the percentage articulation for the noisy and quiet circuits. The ratio of these differences for equal values of disturbing currents then gives a measure of the relative effects of currents of different frequencies. Curve *B* of Fig. 4 is a plot of these results.

With the articulation method, tests were made for two different lengths of circuit which gave a variation in the telephone energy delivered to the receivers at the listening end in the ratio of approximately 9:1. The results obtained with the two lengths of circuit varied in their absolute values, but the relative effect of different frequencies was practically the same for both circuits. In the whole series of articulation tests about 270 lists of 50 syllables each were called over the circuits, and about 60,000 syllables were recorded.

"Noise" Comparisons. Since the adoption of a frequency-weighting curve by the sub-committee, some tests have been made to compare the relative noise-producing powers of equal single-frequency currents in the telephone receiver with their relative interfering effects as determined by the methods just described.

In brief, these tests comprised measurements of the "noise" caused by the different single-frequency currents in a telephone receiver using the apparatus ordinarily employed by the telephone companies for measuring the magnitude of the noise on circuits subject to induction. In measuring the noise on a given circuit the observer listens with the receiver connected alternately to the noisy circuit and to a source of standard noise and adjusts the amount of the standard noise until in his opinion the noise from the actual circuit and from the standard would produce equal interference with a conversation if carried on over the circuit. By this method much is left to the judgment of the observer and the results obtained by any one observation can be only approximate. For convenience in this series of tests the method was slightly modified in that the setting of the noise standard shunt was fixed and the observer allowed to vary the magnitude of the single-frequency current until he judged the two of equal interfering effect. Nine observers were used, each making the comparison for

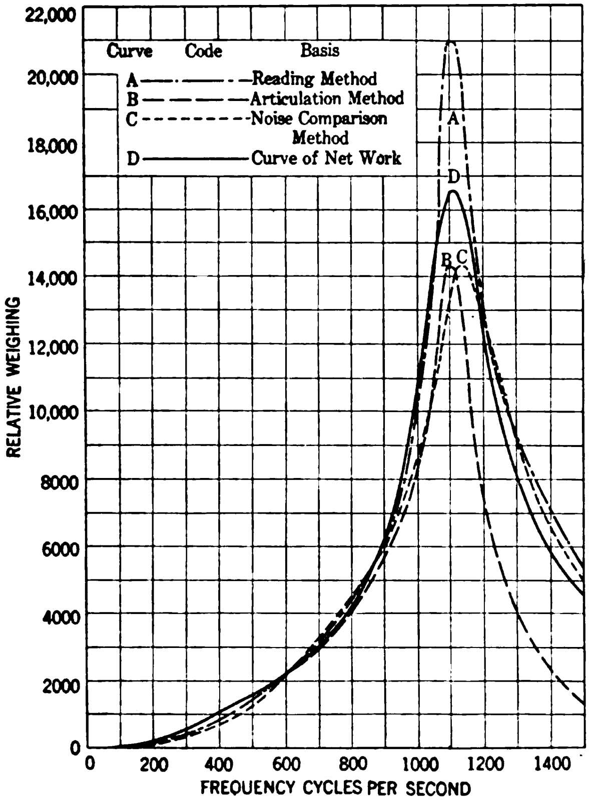

FIG. 5—COMPARISON OF FREQUENCY WEIGHTING CURVES

three different values of noise and for single-frequency currents of 180, 300, 500, 800, 950, 1100, 1300 and 1500 cycles per second. The results are shown by curve C of Fig. 4.

Comparison of Results. The different methods above described afford relative measures of the effects of different frequencies. In plotting the results thus obtained to a common scale, as shown by Fig. 4, the reduction factors were chosen so as to make the different curves coincide as nearly as practicable through the range of frequencies below 800 cycles. The results obtained in the several tests are in surprisingly good agreement.

To facilitate a comparison of all these results with the frequency-weighting curve given by the network, which was chosen with curves A and B as a basis, the ordinates of all the curves of Fig. 4 multiplied by a factor proportional to the frequency are used as the ordinates of the corresponding curves of Fig. 5, together with the frequency-weighting curve adopted.

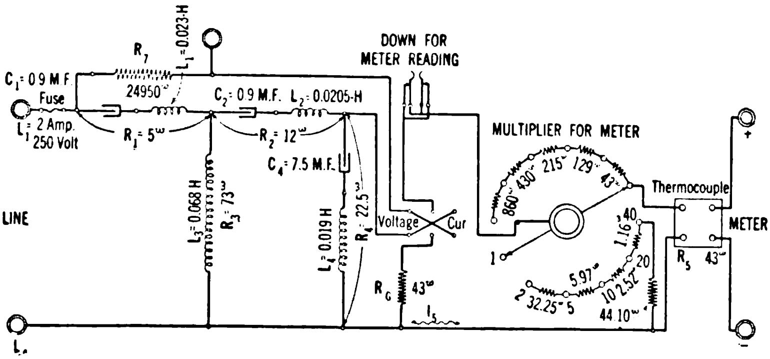

FIG. 6—APPARATUS FOR MEASUREMENT OF TELEPHONE INTERFERENCE FACTOR-DIAGRAM OF CONNECTIONS

APPENDIX B

SPECIFICATIONS OF APPARATUS FOR MEASURING TELEPHONE INTERFERENCE FACTOR

These specifications describe in greater detail the electrical requirements for the network designed to measure the telephone-interference factor which is described in Rule 408 and illustrated in Fig. 2. In addition to the electrical requirements of the essential parts of the network, certain auxiliaries are also described which have been found to be very useful. The network including auxiliaries consists of the following parts: three condensers, four inductance coils, two resistances, one multiplier composed of a six-position dial switch and ten resistances, one vacuum thermocouple, one double-pole double throw switch, one voltmeter contact key and one fuse. These parts are connected electrically as shown in the wiring diagram of Fig. 6.

In a series of fine print notes are given data regarding a network which has been constructed and which satisfactorily meets all of the requirements specified. This network has been designed to give the most satisfactory results at 110 volts as most of the measurements will be made on the low-voltage side of the potential transformers. It may be used however for any voltage not exceeding 700.

Condensers. C_1 should be a mica type condenser having a capacitance of 0.9 microfarad, which should be correct to within 0.5 per cent at 900 cycles. At this frequency the deviation of its phase-angle from 90 degrees should not exceed two minutes. The condenser should be rigidly mounted so that its constants will not change, and should be dipped in some suitable moisture-proof compound. The voltage rating of this condenser should equal that of the maximum voltage with which the network is to be used and should include a reasonable factor of safety.

> This condenser consists of alternate sheets of tin-foil and mica securely fastened between brass mounting plates. It is rated to withstand 1000 volts direct. Its outside dimensions are 3¼ by 3⅝ by 3⅞ in. Its capacitance measures 0.901 microfarads at 900 cycles, and its effective resistance 0.09 ohms corresponding to a phase angle deviation of 1.7 minutes.

C_2 is a mica type condenser having the same requirements as C_1 except that the voltage rating need not exceed 500.

> This condenser is constructed similarly to C_1. It is rated to withstand 500 volts direct. Its outside dimensions are 1⅛ by 3⅝ by 3⅞ in. Its capacitance measures 0.898 microfarads at 900 cycles and its effective resistance 0.09 ohms corresponding to a phase angle deviation of 1.7 minutes.

C_4 may be a paper type condenser having a capacity of 7.5 microfarads, and should be correct to within 0.5 per cent at 900 cycles and at a temperature of 25 deg. cent. The deviation of its phase angle from 90 degrees should not exceed 30 minutes at 900 cycles. The condenser should be suitably mounted in a container which will protect it from mechanical injury and which should be sealed with a suitable moisture-proof compound.

This condenser is made up of selected standard rolled paper units of nominal 2 microfarads and 0.5 microfarads sizes. Each unit is mounted in standard sheet metal containers of the following over-all dimensions: 2 microfarads: 1 25/32 by 1 21/32 by 5 in.

0.5 microfarad: 1¾ by 1 7/32 by 4⅞ in. and sealed with suitable moisture proof compound. The total capacitance measures 7.49 microfarads at 900 cycles and the effective resistance 0.12 ohms at 900 cycles and a temperature of 25 deg. cent. This effective resistance corresponds to a phase angle deviation of 18 minutes.

Inductance Coils. All of the four inductance coils should have non-metallic cores. It is quite desirable that one at least should be of the toroidal type, preferably L_3. In specifying the resistance of the coils allowance is made for the effective resistance of the associated condensers.

L_1 should have an inductance of 0.023 henry which should be correct to within 0.5 per cent at 1100 cycles, and an effective resistance of 4.9±0.1 ohms at 1100 cycles. If this coil is constructed of stranded wire it may be adjusted at 900 cycles.

This coil as constructed is of the solenoid type wound with approximately 550 turns of single silk-covered stranded conductor, composed of 25 strands of No. 32 B. & S. gage black enameled copper wire, and has the following approximate dimensions:

Inside diameter	2 7/12	in.
Outside "	5	in.
Winding length	1 ½	in.

The measured value of the inductance is 0.0230 henry and the effective resistance 4.9 ohms at 900 cycles.

L_2 should have an inductance of 0.0205 henry which should be correct to within 0.5 per cent and an effective resistance of 11.9±0.2 ohms at 900 cycles.

This coil as constructed is of the solenoid type wound with approximately 700 turns of No. 24 B. & S. gage double cotton-covered copper wire and has the following approximate dimensions:

Inside diameter	1 7/16	in.
Outside "	3	in.
Winding length	1	in.

The measured value of the inductance is 0.0204 henry and the effective resistance 11.8 ohms at 900 cycles.

L_3 should have an inductance of 0.068 henry which should be correct to within 0.5 per cent and an effective resistance of 73.0±0.5 ohms at 900 cycles.

This coil as constructed is of the toroidal type. It is wound with approximately 4400 turns of No. 27 B. & S. gage double cotton-covered copper wire on a core of rectangular cross-section, having external and internal diameters of 2¾ in. and 1¾ in. respectively and a height of 1 in. The over-all dimensions of the coil are approximately as follows:

Outside diameter	3 5/16 in.
Axial height	1 11/16 in.

The measured value of the inductance is 0.0680 henry and the effective resistance 73.5 ohms at 900 cycles.

L_4 should have an inductance of 0.019 henry which should be correct to within 0.5 per cent and an effective resistance of 22.0±0.5 ohms at 900 cycles.

This coil as constructed is of the solenoid type wound with approximately 700 turns of No. 27 B. & S. gage double cotton-covered copper wire and has the following approximate dimensions.

Inside diameter	1 7/16 in.
Outside "	3 in.
Winding length	1 in.

The measured value of the inductance is 0.0190 henry and the effective resistance 21.9 ohms at 900 cycles.

Resistances. R_6 is provided so that for either position of the double-pole double-throw switch, the impedance of all branches of the network will remain the same. It should be non-inductively wound and have a resistance of 43 ohms which should be correct to within 0.5 ohm. It should have a continuous current carrying capacity of 0.1 ampere.

R_7 is provided as a multiplier for measuring the terminal voltage. It should have a d-c. resistance of 24,950 ohms which should be correct to within 0.5 per cent. Its inductance should not exceed 0.5 henry at 60 cycles. The unit should be designed to withstand the maximum voltage with which the network is to be used, and to dissipate 20 watts intermittently.

This resistance as constructed consists of approximately 2360 feet of No. 37 B. & S. gage double silk covered manganium wire wound in two sections on a wooden spool. The over-all dimensions of the completed coil are as follows:

Outside diameter	1½ in.
Length	4⅛ in.
Winding depth	½ in.

The resistance and inductance of this unit as measured are 24,960 ohms and 0.5 henry respectively.

Multiplier for Meter. This multiplier should consist of suitable shunt and series resistances so arranged that the input resistance will be 43.0±0.2 ohms for all settings and the ratio of its input to output current variable by definite steps so as to give satisfactory meter readings for any current from 0.001 to 0.1 ampere. The actual ratios of input to output currents should not differ by more than 1 per cent from the nominal values marked on the multiplier.

The multiplier as constructed consists of a six-position dial switch, together with 10 non-inductive units having the following resistances; 860, 430, 215, 129, 43, 32.25, 5.97, 2.52, 1.16, and 44.1 ohms. These should be connected as shown in the wiring diagram of Fig. 6.

Meter. The measuring instrument used with this network should consist of a non-inductive meter having a resistance of 43.0±0.2 ohms at all frequencies and all current values. It should measure the effective value of currents having any wave-shape and should, together with the multiplier give satisfactory readings for all currents from 0.001 to 0.1 ampere.

The measuring instrument used consists of a vacuum thermocouple whose heater is composed of material having a very low temperature coefficient, and which has a resistance of 43.0 ohms. The thermocouple is quite substantial in construction and should be able to withstand without a material change in calibration a heater current three times as large as that which gives a full scale deflection on the meter. The meter used with the thermocouple is a d-c. milliammeter having a sensitiveness which will give, with the thermocouple the current range specified.

Switches. The double-pole double-throw switch shown in Fig. 6 should be of such a design that there will be very little possibility of appreciable contact resistance developing as a result of extensive use. The voltmeter contact key should be inserted as shown in Fig. 6. This key will add materially to the protection of the thermocouple in reducing the possibility of overheating due to excessive currents.

Fuse. The fuse should be designed to operate on a voltage equal to the maximum for which the meter is to be used and with a sustained current of not over 2 amperes.

The fuse as used with the instrument has the following rating:

250 volts
2 amperes.

It is of the cartridge type and is mounted inside the box. When the network is used for a voltage higher than that of the

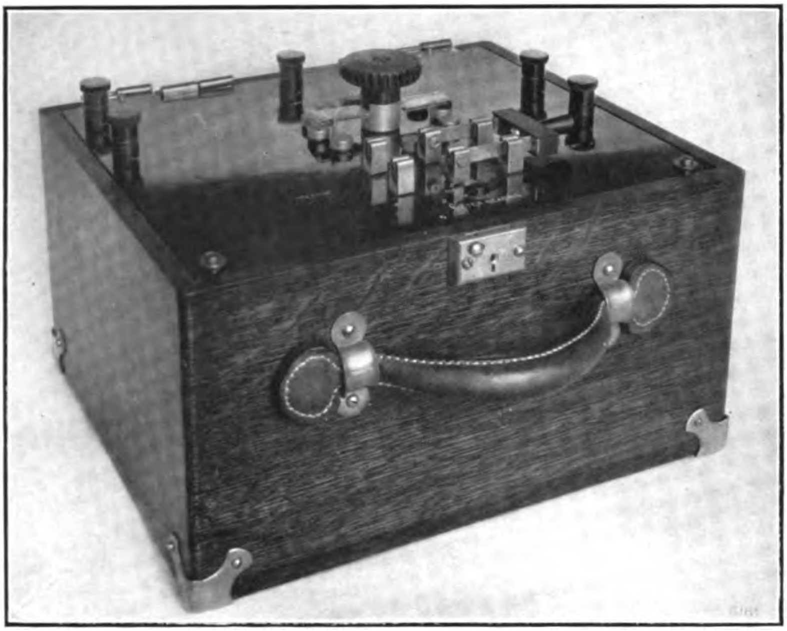

FIG. 8

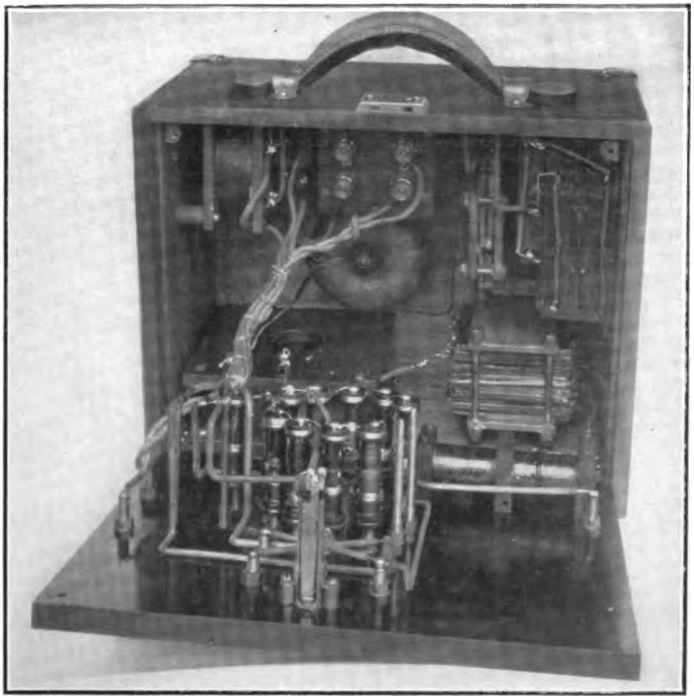

FIG. 9

[OSBORNE]

fuse rating, this fuse should be short-circuited and an external fuse of the proper size used.

Binding Post R. This terminal is provided so that R_7 may be shunted by a resistance connected between R and L_1. This permits the measurement of a lower terminal voltage than would otherwise be possible, which is particularly desirable in calibrating the network. In addition, with the switch in the voltage position, the posts R and L_G provide terminals directly connected to the multiplier. This arrangement is very useful in calibrating the multiplier and the thermocouple.

Assembly. The parts should be securely mounted in a suitable box which should be as small as possible to make the instrument convenient for field use. All parts should be as accessible as possible. The coils should be arranged so that there is practically no mutual inductance between any two of them and also so that their inductance and effective resistance will not be appreciably increased due to the presence of iron or other metal in their magnetic fields. The wiring should be well insulated and arranged as simply as possible.

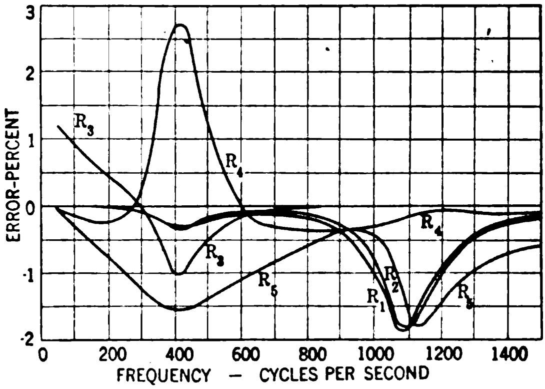

Fig. 10—Effect of a One-ohm Increase in Resistance of Branches of Network

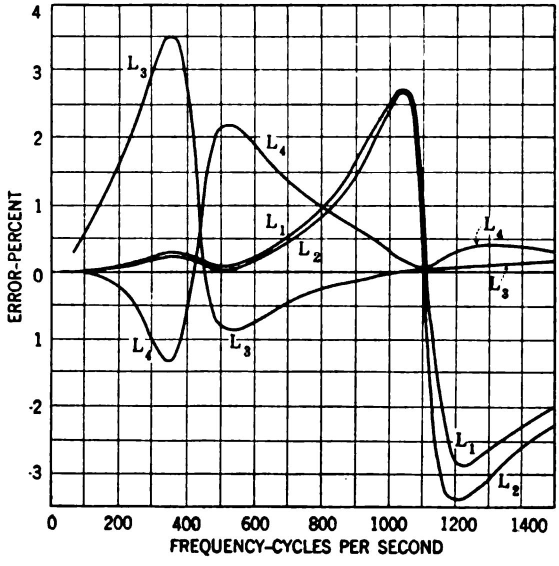

Fig. 11—Effect of a Two-Percent Increase in Inductance of Coils

In Fig. 7 are given working drawings of the apparatus as constructed showing the general arrangement of the parts. All switches are mounted on a hinged top which may be easily lifted to facilitate the inspection of the various parts. The solenoid-type coils are mounted with their axes mutually perpendicular so as to reduce mutual inductance between them. The fourth coil is of the toroidal type which has a negligible stray field. All coils are kept as far as possible from the condensers to reduce any effect which might be produced by their mounting plates or containers. Figs. 8 and 9 are from photographs of the completed apparatus. Its weight is 27 pounds.

Calibration. The network should be calibrated by connecting it to a source of single-frequency alternating current of known and variable frequency. The calibration of the network should include a curve showing the ratio of the current input to the multiplier to the terminal voltage for all frequencies from 0 to 1500 cycles which should agree with the theoretical curve shown in Fig. 1 and described in Section 408 of the Standardization Rules to within 5 per cent at all frequencies. In addition to this frequency-weighting curve the calibration curve of the thermocouple and meter should be given in case the combination is not direct reading. Care should be taken that all higher harmonics are practically eliminated from the testing voltage by the use of filters.

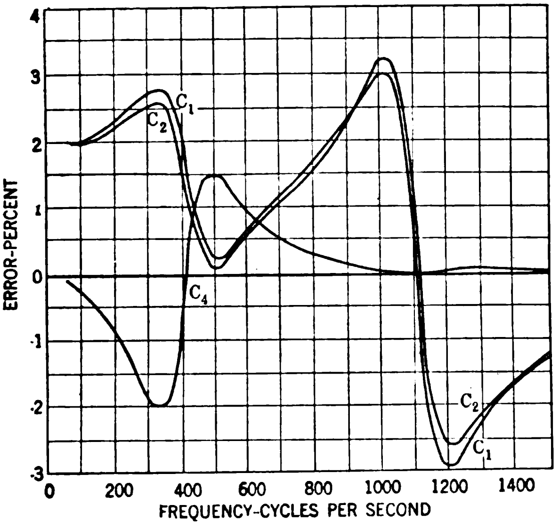

FIG. 12—EFFECT OF A TWO-PER CENT INCREASE IN CAPACITANCE OF CONDENSERS

The following table shows the calibration of the network constructed as described above, together with a comparison with thoretical values.

RATIO OF CURRENT TO TERMINAL VOLTAGE.
MICROAMPERES PER VOLT

Frequency	Theoretical	Actual*	Error per cent.
200	147.8	142.2	3.6
400	998.1	1,010	0.3
600	2,109	2,117	0.4

900	6,264	6,340	1.2
1,000	10,530	10,630	0.9
1,100	16,490	16,670	1.1
1,200	12 400	12,350	0.4
1,300	7,983	7,960	0.2
1,500	4,526	4,440	1.8

*At temperature of 21.0 deg. cent.

Effects of Errors in Network Constants. In Fig. 10, 11 and 12 are shown the effects on the measured value of the telephone-interference factor of small changes in the constants of the different elements of the network taken separately. In every case the ordinates represent the percentage increase in the indicated interference factor. In Fig. 10 is shown the effect of an increase of 1 ohm in the resistance of each of the five branches of the network. Fig. 11 shows the effect of a 2 per cent increase in each of the four inductances, and Fig. 12 the effect of a 2 per cent increase in each of the three capacitances. As may be seen from the figures the percentage effect on the interference factor is, in general, less than the percentage error in the element involved.

Presented at the 344th meeting of the American Institute of Electrical Engineers, Toronto, Canada, November 22, 1918.

ELECTRIC POWER GENERATION IN ONTARIO ON SYSTEMS OF HYDROELECTRIC POWER COMMISSION†

BY ARTHUR H. HULL

THE Province of Ontario is the largest and most populous of the Provinces in the Dominion of Canada, having an area of 407,262 square miles and a population (census 1911) of 2,523,274. Ontario's population is about 35 per cent of the total of Canada's population, and its area is 10.9 per cent of the total area of the Dominion. Ten per cent of its area is water.

Ontario has developed into the greatest manufacturing Province in Canada and as there are no coal deposits in the Province, its abundant water power resources are being more and more utilized to furnish the power required for its varied and increasing industrial development. Other fuels, such as natural gas and petroleum are found in the southern part of the Province, gas along the north shore of Lake Erie and petroleum near Sarnia. The natural gas supply, however, is insufficient for present purposes and the quantity of petroleum produced does not begin to meet the needs of the Province. The demand for electric power has increased during the past ten years to such an extent, that, with the war industries in operation, it became necessary to impose restrictions on private and municipal consumers in order to provide the power required by the war industries. The great saving in coal effected by the use of electric power in Ontario's industries is one of the most important aspects of the electric power situation, and further great savings can be, and will be before long, brought about by the electrification of the steam railroads.

Mr. H. G. Acres* in a monograph on Water-Powers of the Province of Ontario, written in 1915, gives the following summation of water power capable of development, and of water power already developed in the Province.

---

*Hydraulic Engineer, Hydroelectric Power Commission.

†The illustrations for this paper have been omitted from these advance copies as they were not supplied in time for publication. They will be shown at the meeting by means of lantern slides.

Division	Potentiality	Developed.
Ottawa River & Tributaries	688,000 h.p.	71,000 h.p.
Great Lakes Tributaries	446,000 "	137,000 "
Hudson Bay Slope	250,000 "	22,000 "
James Bay Slope	1,500,000 "	70,000 "
International Boundary Rivers	2,045,000 "	462,000 "
	4,929,000 h.p.	702,000 h.p.

Of the above total for power developed, about 69,000 horse power is used in pulp and paper manufacture, about 59,000 horse power is used as hydraulic power directly applied, and the balance 574,000 horse power is converted into electric energy for light and power.

This paper will deal only with the generation of electric power by the Hydro Electric Power Commission of Ontario which is now the largest producer and distributer of electric energy in the Province.

The Hydro Electric Power Commission of Ontario, which will be referred to hereafter as the Commission, was formed by the Ontario Government in 1906, and first furnished power over its 110,000-volt lines from Niagara Falls in October 1910, the power being purchased from the Ontario Power Company of Niagara Falls, Ontario. It was not until August 1st, 1917, that the Commission obtained direct control of the generation of power at Niagara Falls, through the Ontario Power Company, but in other parts of the Province, the Commission had started to develop its own power by constructing a hydro-electric plant at Eugenia Falls on the Beaver River near Flesherton, which was put into operation in November 1915, and one at Wasdell's Falls on the Severn River which was started in service in October 1914. In 1914 the Commission acquired by purchase the Simcoe Railway and Power Company, whose generating station at Big Chute on the Severn River had previously supplied power under contract to the Commission's Severn System, supplying the district around the southern part of Georgian Bay. In March 1916 the Government of Ontario purchased the entire holdings of the Electric Power Company which, through subsidiary Companies, was generating power on the South River near Nipissing, on the Otanabee River

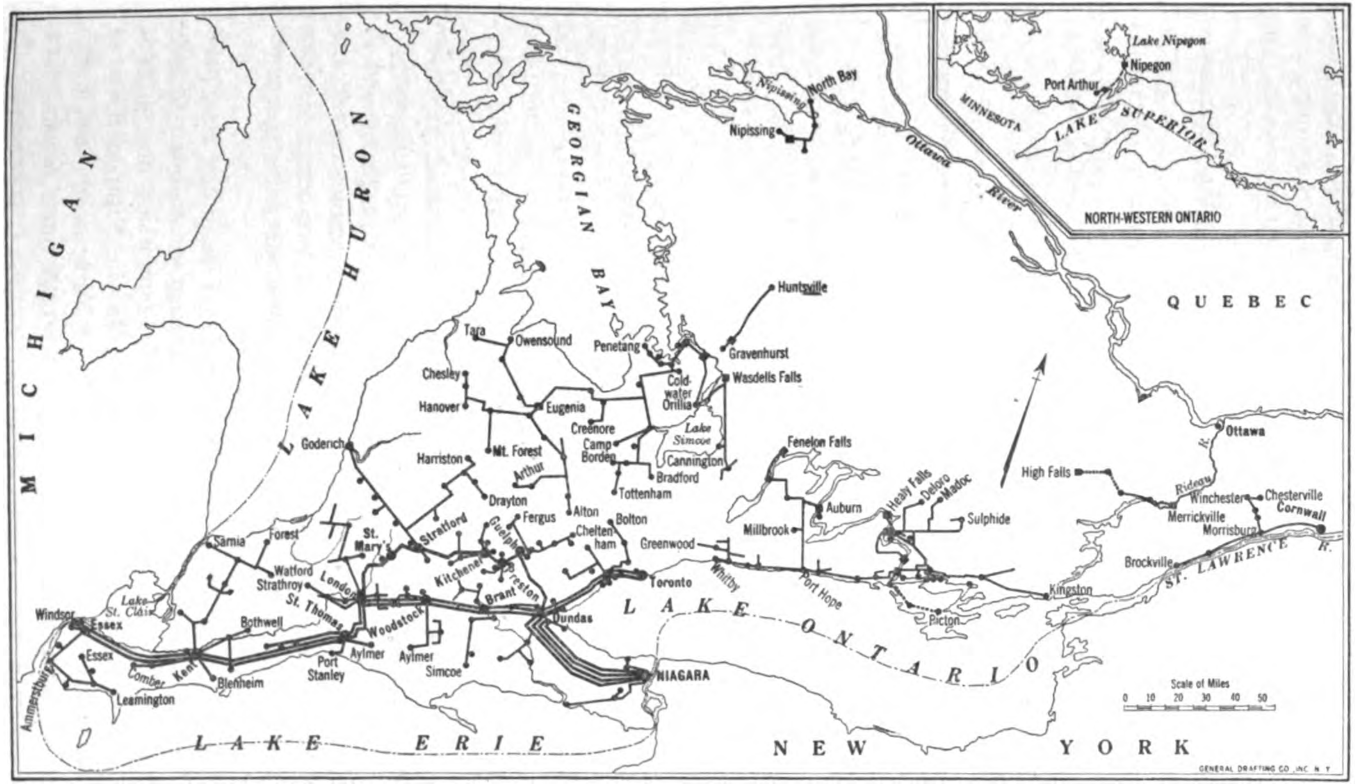

FIG. 1—ELECTRIC GENERATING AND TRANSMISSION SYSTEMS OF THE HYDRO-ELECTRIC POWER COMMISSION OF ONTARIO

at Peterboro, and on Trent River at Healy Falls, Frankford, Campbellford, and Trenton. The operation of the equipments thus acquired was placed in charge of the Commission in June 1916.

The various areas in the Province served by the Commission are designated by Systems as follows

System	Main transmission voltage	Frequency	Phase	Power obtained from
Port Arthur System	22,000	60	3	Kaministiquia Power Company
Nipissing System	22,000	60	3	Commission's Nipissing Station

Eugenia System	22 000	60	3	Com. Eugenia Station
Central Ontario System	44,000	60	3	Com. Healy Falls Station Com. Auburn Station Com. Campbellford Station Com. Frankford Station Com. Trenton Station
St. Lawrence System	26,400	60	3	M. F. Beach Company
Rideau System	25,700	60	3	Rideau Power Co.
Niagara System	110,000	25	3	Comm's Ontario Power Co's Station Canadian Niagara Co. Electrical Development Co. Queenston Development (future)

PORT ARTHUR SYSTEM

In the Port Arthur System, power is purchased at 22,000 volts, three phase, 60 cycles from the Kaministiquia Power Co., and is delivered to the City of Port Arthur at 22,000 and at 2200 volts, part being transformed in the Commission's Transforming Station in Port Arthur, containing two banks of transformers, each consisting of three 750-kv-a. units connected star-delta with neutral ungrounded.

The first delivery of power was made on December 21st, 1910. The demand has been steadily increasing and in order to take care of the future requirements, the Commission now propose to construct a hydroelectric station on the Nipigon River at Cameron's Pool, about 80 miles from Port Arthur, which will have an ultimate capacity of about 50,000 horse power. The engineering work is now under way for this development. It is proposed to transmit the power at 110,000 volts, three phase, 60 cycles, to Port Arthur. Three other power sites on this same river, when developed, will, together with the Cameron's Pool site, give a total of 150,000 horse power. The needs of the Port Arthur district should, therefore, be amply provided for, but if additional power should be required for this district, another site is capable of development at Silver Falls on the Kaministiquia River about 25 miles from Fort William where with a 350-ft. head a total of 25,000 horse power can be developed. At the present time the electric energy supplied at Port Arthur is used for operation of the street railway, for public and domestic lighting, and for large grain elevators, ship yards, coal docks and miscellaneous industrial purposes.

Nipissing System

The Nipissing System, formerly controlled by the Nipissing Power Company, comprises a generating station on the South River near Nipissing Village, sub-stations in Callander, Powassan and North Bay. The Transmission system comprises 26.5 miles of 22,000-volt, three-phase, circuit on wooden poles. The generating station contains two 450-kw. three-phase 2200-volt 60-cycle 450-rev. per min., horizontal generators with 12.5-kw. 125-volt direct-connected exciters, each unit direct coupled to a water wheel of 925 b.h.p. at 86 ft. head. A 37.5-kw. 125-volt motor-driven exciter is also provided. Three 300-kv-a., 2200/22000-volt single-phase water-cooled transformers connected delta-delta are installed, with one 22,000-volt outgoing feeder.

Water for this plant is taken from the South River through an open canal 900 ft. long, then through a wood stave pipe 6 ft. diameter 2300 ft. long to a differential surge tank 72.5 feet high, close to the power house, a steel penstock connecting thence to the turbines. The storage pond has an area of about 100 acres and the drainage area of the river is about 350 square miles.

Provision was made for extension, and by additional storage works, it is possible to increase the capacity to 2500 horse power.

Muskoka System

The power house on the south branch of the Muskoka River at Muskoka Village was formerly owned by the Municipality of Gravenhurst and was taken over by the Commission in the latter part of 1915, and has been remodelled and enlarged, and now supplies power over a single circuit 22,000-volt, three-phase, 60-cycle line about 26 miles long to Huntsville, and at 6600 volts three phase, 60 cycles, to the Municipality of Gravenhurst over the Municipality's line.

The equipment in this station now comprises one 450-kv-a., three-phase, 6600-volt, 720-rev. per min., 60-cycle generator, direct connected to a 500 b.h.p. turbine; one 750-kv-a. similar 720-rev. per min. generator, direct connected to a 1000 b.h.p. turbine; one bank of three 400-kv-a., 6600/22,000-volt transformers connected delta-delta; double low-tension bus, and single high-tension bus. Four outgoing 6600-volt feeders are provided, two feeding to Gravenhurst and two for future use. One 22,000-volt feeder leaves the station to supply Huntsville. Provision is made in the existing building for a second high-tension feeder.

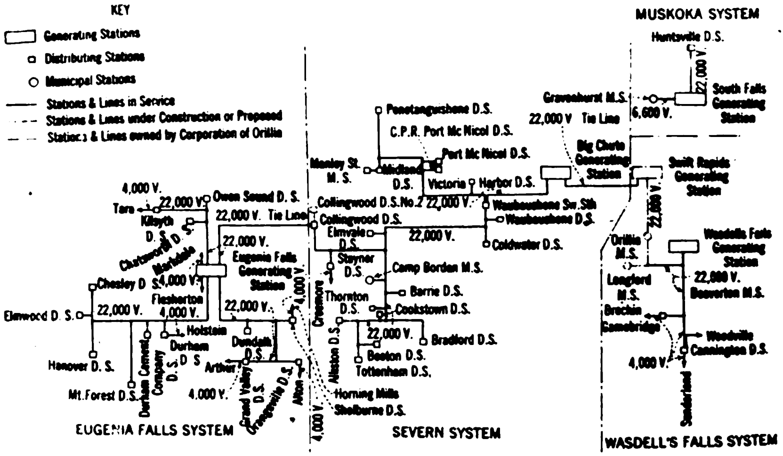

FIG. 2—DIAGRAM OF EUGENIA FALLS, SEVERN, WASDELL'S FALLS, AND MUSKOKA SYSTEMS—60 CYCLES

When this station was taken over by the Commission, only one 450-kv-a. generator was installed. The station was remodelled and enlarged for the larger unit mentioned above, and provision was made for the extension of the building at a future date and for the replacing of existing units so that, when future load conditions require it, there will ultimately be three 1500-kv-a. generators with a turbine capacity of 6000 horse power installed.

The present excitation at this plant is provided by a turbine-driven exciter for the 450-kv-a. unit, a motor-driven exciter for the 750-kv-a. unit, which also has a belted exciter for emergency use, which is so arranged that it may excite either generator.

The hydraulic head at this plant is 102 ft. The water is conducted through one steel and one wood stave pipe, each 946 ft. long to the turbines.

WASDELL'S FALLS SYSTEM

This system comprises a hydraulic generating station on the Severn River at Wasdells' Falls near Severn Bridge, and substations at Beaverton and Cannington. Power is transmitted to Beaverton and Cannington over a single-circuit steel-conductor line at 22,000 volts, three phase 60 cycles, and over a single circuit aluminum tie line at the same voltage to the Commission's Severn System, connecting at Longford with the Town of Orillia 22,000-volt lines from Longford via Orillia to the Big Chute generating station.

The generating station which was constructed by the Commission in 1914 is interesting on account of the low hydraulic head. The normal head is 12 ft., but variations from 9 to 15 ft. occur. The equipment consists of two 400-kv-a., 90-rev. per min., vertical type 60-cycles, three-phase, 2300-volt generators connected through flexible couplings to turbines rated at 600 horse power at 100 per cent gate opening with 12-ft. head. Two exciters, one 20-kw. turbine-driven, and one 30-kw. motor-driven are provided. Two banks of transformers, each consisting of three 2200/22,000-volt 150-kv-a. units connected delta-delta are installed. Two outgoing 22,000-volt lines were provided.

There are in this system, 37 miles of 22,000-volt circuit and 23 miles of 4000-volt circuits from the two sub-stations.

SEVERN SYSTEM

This system comprises a hydraulic generating station on Severn River at Big Chute with substations as shown in the diagram.

The generating station as originally built in 1909 by the Simcoe Railway and Power Company contained three 900-kv-a., three-phase, 2200-volt, 60-cycle, 300-rev. per min., horizontal-shaft generators direct connected to turbines each rated at 1300 horse power under 56-ft. head; two 100-kw. 580-rev. per min., 125-volt exciters direct connected to 200-h.p. turbines; two transformer banks each consisting of three 600-kv-a., 2200/25,000-volt water-cooled transformers connected delta-delta, with two outgoing 25,000-volt lines. An extension to the building has been made by the Commission during the past year, and there is now being installed one 1600-kv-a., three-phase, 60-cycle, 2200-volt 300-rev. per min. horizontal generator direct-connected to a 2300-h. p. turbine. The switching equipment is being rearranged to provide a double high-tension bus for greater flexibility in operation. Space is left for a third bank of transformers, and for two future 22,000-volt line equipments. A double low-tension bus is installed. All power is transmitted at 22,000 volts, three phase, over four lines.

An interesting feature of the transmisssion lines of this system is the long spans across Matchedash Bay at Waubaushene, one being 1135 ft. long and one 858 ft. long. The west shore tower is 175 ft. high, the middle and east shore towers are 88 ft. high. No. 00 B. & S. 19-strand copper conductors are used on these spans.

The water is taken from the river through a canal 500 ft. long to the head works and then through two steel penstocks 170 ft. long to the turbines.

EUGENIA SYSTEM

This system obtains power from a hydraulic generating station constructed by the Commission at Eugenia on the Beaver River which was placed in service in November 1915. Extensions are now almost completed to provide double the output. This development is one of the most interesting in Ontario, and has the distinction of having with one exception, the highest hydraulic head of any plant in Canada, being 552 ft. gross. It is also one of the highest heads in the world using reaction wheels.

The first installation consisted of two 2250-h.p. turbines each direct connected to 1410-kv-a., three-phase, 4000-volt, 60-cycle 900-rev. per min., horizontal-shaft generators having neutral grounded without resistance; one bank of three 900-kv-a., 4000/25,000-volt transformers connected delta-delta, single high-tension and low-tension busses, two outgoing 25,000-volt feeders and two 4000-volt feeders, one each to Markdale and Flesherton. The extensions cover enlargement of the

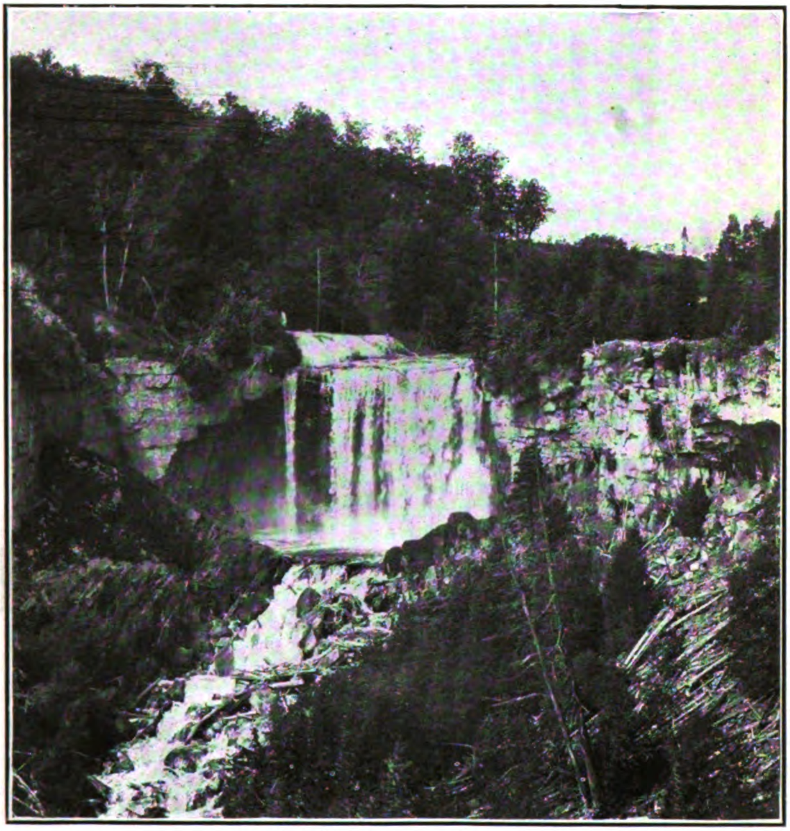

FIG. 3—EUGENIA FALLS [HULL]

building to accommodate two additional generating units, one of which is now being installed, and for double high-tension and low-tension busses, and for six 25,000-volt feeders. The new unit consists of a 2810-kv-a., three-phase, 60-cycle, 720-rev. per min. horizontal maximum-rated generator direct connected to a 4000-h. p. turbine. Each generator has a direct-connected 125-volt exciter of sufficient capacity to excite two generators.

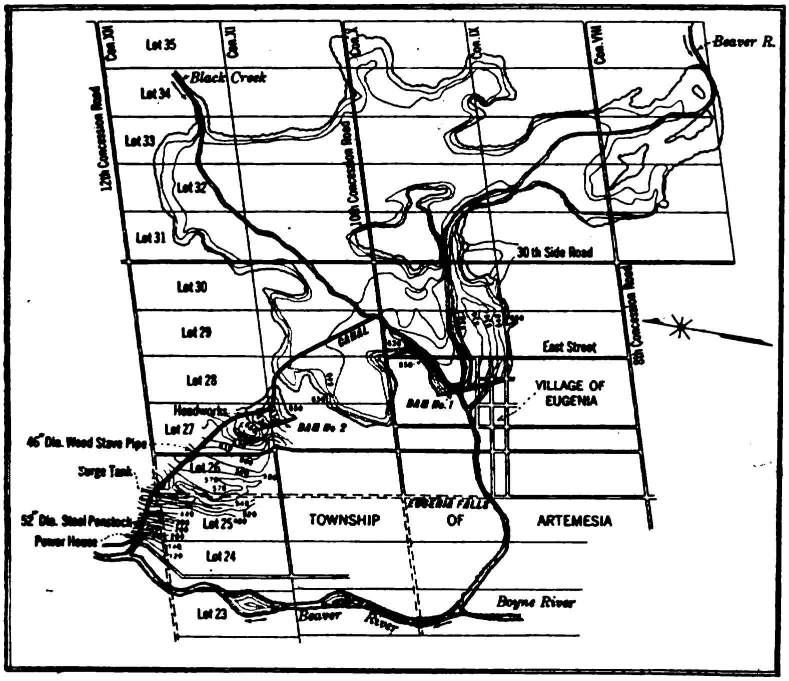

FIG. 4—EUGENIA FALLS—GENERAL PLAN OF POWER DEVELOPMENT ON BEAVER RIVER

The success of the development depended upon the storage of the water of the Beaver River and for this purpose two large storage dams were constructed as shown on accompanying plan. From the head works, a wood stave pipe 46 in. in diameter conducts the water 3400 ft. to the Johnson differential surge tank which is 105 ft. high. From this tank a 52-in. diameter steel pipe is carried 1550 ft. to the power house, which is a brick building 69 ft. wide, 112 ft. long and 34 ft. high above the generator room floor. Actual tests made at this station after the first installation was completed in 1915 gave an overall full load efficiency of 80 per cent which shows how carefully the design was worked out.

Additional power for the Eugenia System will be obtained, when required, by the construction of further water storage systems and of a second pipe line at the Eugenia Falls development and the installation of a fourth unit, also by the construction of a station on the Saugeen River near Lake Huron which operating in parallel with the Eugenia Station will make available a total output for the system of 15,000 h. p.

The Eugenia System comprises 245 miles of 22,000-volt circuit (176 miles of lines) supplying substations at the points shown on accompanying diagram, and 50 miles of 4000-volt circuits. This system is connected to the Severn System by means of a single-circuit three-phase tie line from the Eugenia generating station to Collingwood, a distance of 24 miles.

By means of this tie line and the tie line from Wasdells' Falls to Big Chute mentioned above, the Eugenia, Severn, and Wasdells' systems are paralleled. The generating station of the Town of Orillia on the Severn River at Swift Rapids near Big Chute is also connected into the Severn system.

CENTRAL ONTARIO SYSTEM

Five main generating stations, one on the Otonabee River and four on the Trent River, all operating in parallel, supply this System. These are now fully loaded and plans are being prepared for new stations near Campbellford to provide additional power. The five exciting stations were built by the subsidiary companies of the Electric Power Company. Immediately after the operation of this system was placed under the Commission by the Ontario Government, arrangements were made to install a new unit in the Healy Falls generating station and work on the same is now nearing completion.

The following table gives the data relative to the existing developments, all generators being three-phase, 60 cycles, with 25 per cent overload guarantees:

In addition to the above stations, a 1000-kv-a., three-phase, 60-cycle, 120-rev. per min. horizontal generator owned by the Town of Campbellford in its generating station, a short distance north of the Campbellford station, delivers its output to the 2400-volt bus in this station. Also at Fenelon Falls, a small generating station is operated, containing two 400-kw., 600-volt,

*One unit now being installed.

three-phase 60-cycle, 200 rev. per min. generators connected to two 700-h. p. turbines. These feed into the 44,000-volt net work of the Central Ontario system at Lindsay the voltage being stepped up in the generating station through two banks of transformers to 11,000 volts for transmission to Lindsay.

All these stations are on the route of the Trent Valley Canal, the dams having been constructed by the Government of the Dominion of Canada.

The Trenton station, known as Sidney Dam 2 development, being at Dam 2, section 1 of Trent Valley Canal, about one mile north of the Town of Trenton, was placed in operation by the Sidney Electric Power Co. in August 1911. The four generators feed into a single sectionalized bus, and two 6600-volt feeders conduct the current to a transforming station across the road, which station also receives the output of the Frankford generating station at 6600 volts. Two 75-kw. 125-volt exciter units are installed, one being a vertical turbine-driven unit and the other a motor-driven unit. Each of these exciters is capable of exciting all generators at 25 per cent overload with 65 per cent power factor current lagging.

The Frankford station, known as Sidney Dam 5 development, is located at Dam 5 on Section 1 of Trent Canal, about four miles north of Dam 2. This station was constructed by the Sidney Electric Power Company and placed in operation a short time after the Trenton station. It has a single unsectionalized 6600-volt bus and its entire output is fed over two 6600-volt circuits to the transforming station at Dam 2.

The Trenton transforming station contains three 3000-kv-a., 6600/44,000-volt, three-phase, 60-cycle, shell-type transformers connected delta-star with ungrounded neutral, double high-tension and low-tension buses, switching equipment for three 44,000-volt lines and for six 6600-volt lines.

The Campbellford station, known as the Stephen's Dam station, was first placed in operation in 1909 and is near Dam 1, Section 5 of Trent Valley Canal. This station contains four 1125-kv-a., three-phase, core-type, 2400/44,000-volt transformers and two outgoing 44,000-volt line equipments. Excitation for the generators is obtained from two 60-kw. 125-volt exciters, one turbine-driven and one motor-driven, with two 17½-kw. belted exciters for emergency use. The station is situated some distance below the dam, the water being conducted to it through an open head race.

The station at Healy Falls is situated about seven miles above Campbellford. Water is conducted through steel penstocks from the head gates to the turbines. A long tail race excavation through rock was necessary and the enlargement of this tail race, necessitated by the installation of the third generator, is now being completed. This excavation work has been slow and difficult on account of the nature of the rock.

There are three 3750-kv-a., three-phase, shell-type, 6600/44,000-volt transformers installed, with very flexible switching equipment consisting of double 6600-volt buses, two 44,000-volt outgoing lines, a sectionalized 44,000-volt single transfer bus, with a transformer and an outgoing line forming a unit which may be operated independent of the bus. Provision is made for a fourth generator and transformer and for two additional high-tension line equipments. Excitation is provided by two 160-kw. 125-volt exciters, one being turbine-driven and one motor-driven.

The Auburn generating station is located in the north of Peterboro, on the Otonabee River 1200 ft. below the Auburn Dam. Water is taken to the turbines through an open head race 1200 ft. long paralleling the river. This station was built by the Auburn Power Co. and placed in operation in 1912 and no extensions have been made. The turbines are of the four runner type in open wheel pits 40 ft. long, 16 ft. wide and 14 ft. deep. A travelling steel gate 15 ft. 3⅜ in. by 14 ft. 3 in. is provided with motor-driven lowering and hoisting mechanism. The gate is designed to be lowered against the running water in 2½ minutes. Two 90-kw., 125-volt exciters, one being turbine driven and one motor-driven, furnish the excitation of this plant. One generator is wound for 2400 volts and feeds a section of the bus from which 2400-volt feeders may be taken. This section of bus is connected to the 6600-volt section of the bus through a bank of three 200-kv-a., 2400/6600-volt transformers. Feeders at 6600 volts, three-phase, connect this station to the transformer station adjacent which contains two 1875-kv-a., three-phase, core-type 6600/44,000-volt transformers and one outgoing 44,000-volt line connecting into the 44,000-volt net work of the Central Ontario System. Some power is also delivered to Peterboro at 6600 volts from the generating station.

The accompanying map, Fig. 1, and the diagram, Fig. 5, show the location of the generating stations of the Central

Ontario System, and the extent of the transmission net work with substations. Other power sites along the Trent Valley Canal together with those described briefly above will, when developed, provide about 60,000 electrical h. p. with a maximum capacity of 75,000 electrical h.p. The present power output of the system is used for lighting, street railway and manufacturing purposes, a considerable quantity being required at Campbellford for a pulp and paper mill, and near Belleville for cement mills. All transmission lines are constructed on wood poles. The total mileage of 44,000-volt circuits is 372, with 15 miles of 11,000-volt circuit, 16.4 miles of 6600-volt circuits and 52 miles of 4000-volt circuits.

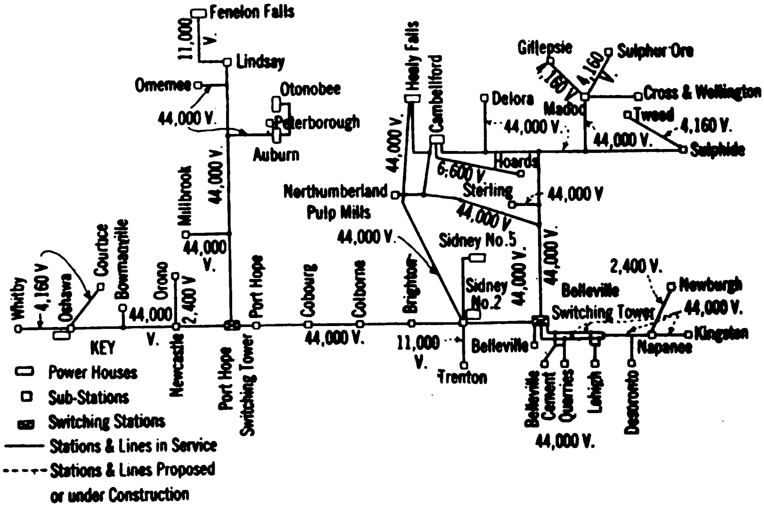

FIG. 5—CENTRAL ONTARIO SYSTEM

ST. LAWRENCE SYSTEM

This system at the present time has no generating station owned by the Commission. Power is secured by contract from the hydraulic station of the M. F. Beach Company at Iroquois, but the amount obtainable proved inadequate and was supplemented by power obtained from the steam generating station of the town of Brockville. As additional power is needed arrangements are now being made to obtain an adequate supply from another source, near Cornwall. To take this power the Commission is now constructing a transforming station near Cornwall which will contain one bank of three 1250-kv-a., single-phase, 63,500/26,400-volt, 60-cycle transformers connected star-delta and switching equipment for two incoming 110,000-volt circuits and for two outgoing 26,400-volt circuits.

This system now supplies power to Brockville, Prescott, Morrisburg, Winchester and Chesterville. Fig. 6 shows this system together with the Rideau system.

RIDEAU SYSTEM

A new net work is being developed called the Rideau system and covering a district in the neighborhood of the Rideau River. Plans are now being prepared for a hydraulic generating station at High Falls on the Mississippi River near Clarendon, a point about 50 miles northerly from Kingston, Ontario. The installation at this point will consist of four 350-kw., 2200-volt, three-phase, 60-cycle, 300-rev. per min. horizontal generators connected to two turbines, one generator being at each end of turbine; and one 875-kv-a. 80 per cent power factor, three-phase, 60-cycle, 2200-volt, 300-rev. per min. generator direct-connected to its turbine with necessary switching and transformer equipment to transmit the full 2100-kw. output, at 26,400 volts to the Rideau system.

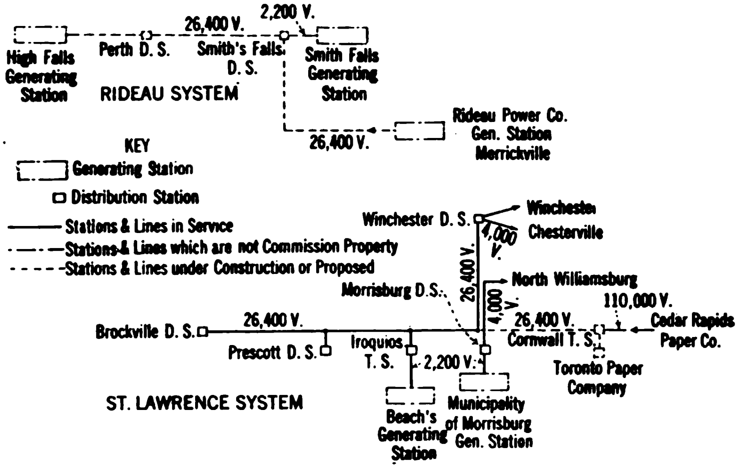

FIG. 6—ST. LAWRENCE AND RIDEAU SYSTEMS—60 CYCLES

A portion of this system is now in operation, power being obtained at 26,400 volts, three-phase, 60-cycles, under contract from the Rideau Power Co. at Merrickville, and transmitted to Smith Falls where at the substation the municipality's own generating stations are paralleled with this system on the low-tension bus.

This system may ultimately be connected with the St. Lawrence System.

NIAGARA SYSTEM

The Niagara System comprises all lines and substations that receive power from Niagara Falls, and covers the entire district from Niagara River to the Detroit River and River St. Clair and north to Goderich and Harriston and east to Toronto. Power is received at a transformer station at Niagara Falls from the Ontario Power Co. (now controlled and operated by the Commission) and fom the Canadian Niagara Power Company, at 12,000 volts, three-phase, 25 cycles and is transformed to 110,000 volts and to 45,700 volts for transmission.

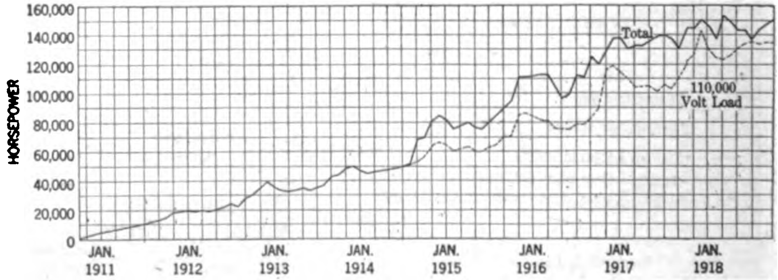

FIG. 9—CURVE SHOWING MONTHLY INCREASE OF POWER LOAD OF MUNICIPALITIES NIAGARA SYSTEM OCTOBER 1910 TO OCTOBER 1918

There is now installed in the Niagara Transformer station 132,000 kv-a. of 110,000-volt transformers in eight banks and 42,000 kv-a. of 45,700-volt transformers in four banks, not including spare units. Four banks of 110,000-volt units are composed of twelve 7500-kv-a., single-phase, shell-type 12,000/63,500-volt transformers, all other transformers being of 3500-kv-a. rating. This station, in point of transformer capacity. is the largest in the world, having a total capacity of 174,000-kv-a, with 7000 kv-a. in spare units additional. Figs. 7 and 8 show two views of this Niagara transformer station.

Four outgoing 110,000-volt circuits feed to Dundas transformer and switching station and from there power is distributed to thirteen 110,000-volt transformer stations. Four 45,700-volt lines feed to Welland to the substations of the Electric Steel & Metals Company, the Union Carbide Co. and

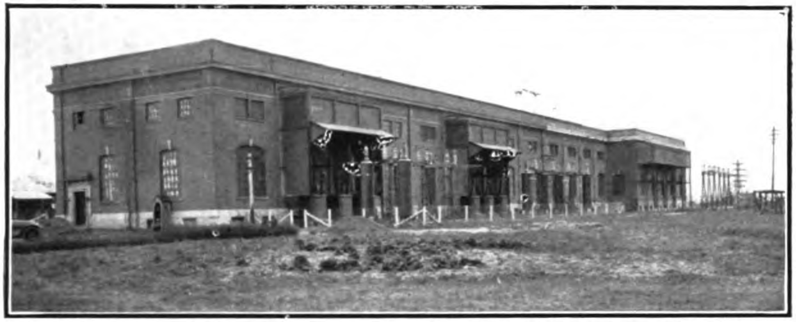

FIG. 7—VIEW OF NIAGARA TRANSFORMER STATION LOOKING SOUTHEAST

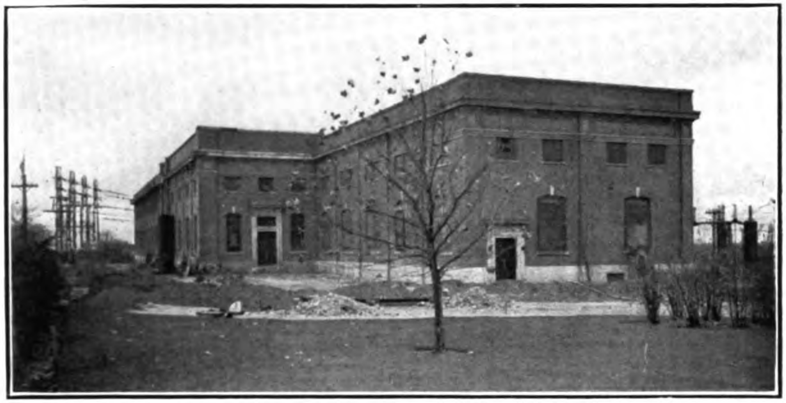

FIG. 8—VIEW OF NIAGARA TRANSFORMER STATION LOOKING SOUTHWEST

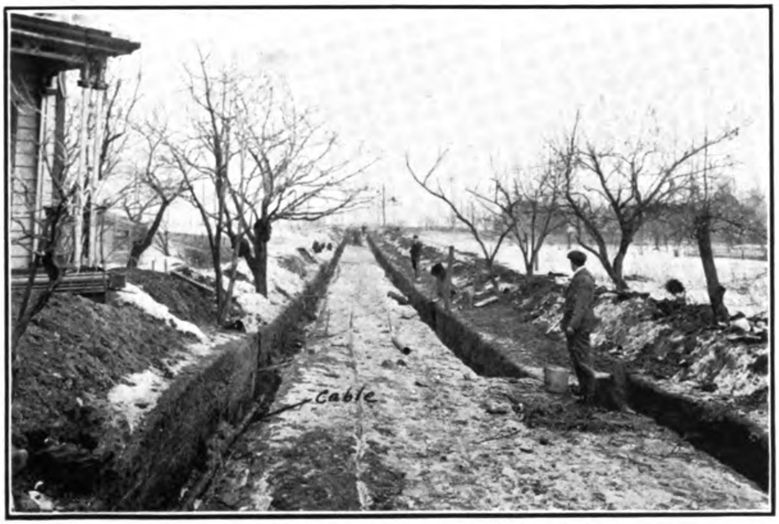

FIG. 11—ARMORED CABLE INSTALLATION [HULL]

the city of Welland. From this latter point a single-circuit, 45,700-volt line runs to Dunnville.

This system was placed in operation in October 1910. The curve in Fig. 9 shows the monthly increase in power load of Municipalities on this System from October 1910 to October 1918. This gives some idea of the growth of the system in this period but the latter portion of the curve cannot be regarded as normal owing to the increase in power required for munitions manufacture and the consequent restrictions on other uses to cut their requirements to a minimum.

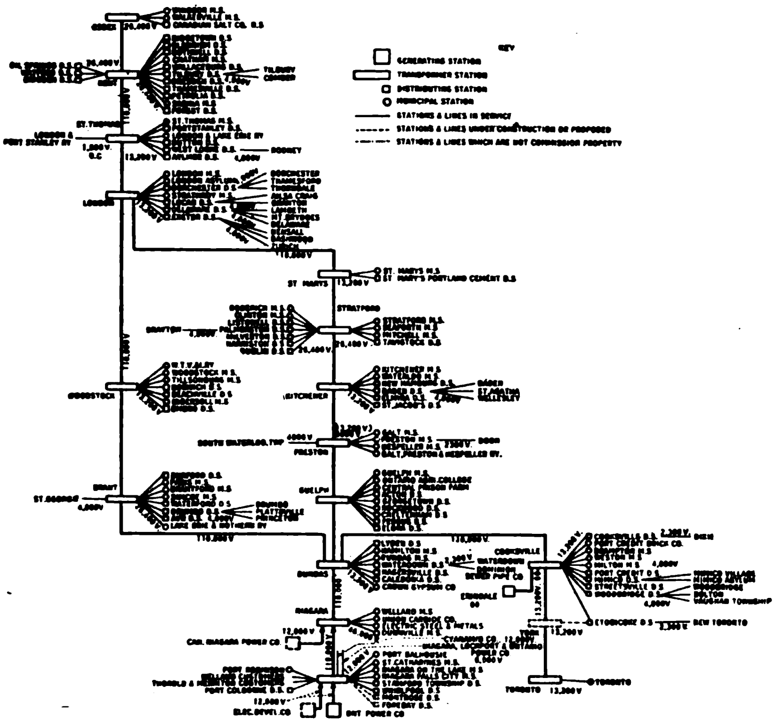

FIG. 10—DIAGRAM OF STATIONS—NIAGARA SYSTEM

The transmission net work, see Fig. 1 and Fig. 10, on this system contains 760 miles of 110,000-volt circuits; 65 miles of 45,700-volt circuits; 529 miles of 26,400-volt circuits; 489 miles of 13,200-volt circuits; 27 miles of 6600-volt circuits; 180 miles of 4000-volt circuits; and 20 miles of 2200-volt circuits. The 110,000-volt and 45,700-volt circuits are carried on steel towers (with exception of one 45,700-volt line from Welland to Dunnville), while the other circuits mentioned above are standard wood pole line construction.

The Commission early in 917 purchased the Erindale Power Company which had a hydraulic generating station on the Credit River at Erindale, 14 miles west of Toronto, containing two 600-kw. three-phase, 60-cycle, 13,200-volt, 200-rev. per min. generators, each direct-connected to a 1000-h. p. turbine designed for a 60-ft. head. The present operating head is about 50 ft. Water is carried from the dam to the power house through a 12 ft. 6 in. diameter tunnel 900 ft. long. Two 60-kw. belted exciters furnish the excitation.

The output of this generating station is now transmitted to the Cooksville transformer station at 13,200 volts, 60 cycles, and is fed into the 13,200-volt, 25-cycle bus in that station through a 1000-kv-a. 60/25-cycle frequency changer set, augmenting the power supply on the Niagara system, and serving also to raise the power factor at the Cooksville station.

It is not the writer's intention to describe the plant of the Ontario Power Co. as descriptions of this plant have appeared in the A. I. E. E. TRANSACTIONS (See Volume XXIV 1905, p. 807). Extensions to the plant have been made since then until, when the operation was taken over by the Commission in 1917, the generating station contained 14 generator units, generating 12,000-volt, three-phase, 25-cycle power with a total rating of 149,012-kv-a. The original excitation scheme had been changed by the Ontario Power Company and a very complete description of this scheme as it now exists may be found in the *Electric Journal* Vol. 1914 p. 612 in article by Mr. J. A. Johnston. The distributing station of the Company contains the 12,000- 30,000- and 60,000-volt buses, the transformer banks and the outgoing line equipments and the control room for the plant. The switching scheme as originally laid out has been considerably re-arranged the buses being sectionalized and connected through reactors, these changes being due to the great amount of power generated and to the large proportion leaving the station at generator voltage.

The Commission, on behalf of the company, is now making extensions to the generating station. The building is being extended north about 90 ft. and a third pipe line of temporary nature consisting of wood stave pipe is being constructed. Two additional generating units are being installed each rated at 15,000 kv-a. maximum rating at 75 per cent power factor.

These new generators are the same speed as the previous units namely 187.5 rev. per min. and the frames are the same size as the 8775-kv-a. units most recently installed. They have however a higher temperature guarantee and are so designed that they may be operated as synchronous condenser at zero power factor if it ever becomes necessary to remove them from this station. These generators were made in Canada, under war conditions, and all parts, except the laminated steel and the insulation, were produced in this country. This speaks well for Canadian industry in these trying times.

Each of these new units is excited by a 125-kw. 250-volt, motor-driven exciter, thus extending the excitation scheme referred to above.

The Ontario Power Company obtain some power from the Electrical Development Company's generating station at Niagara, this being brought into the distributing station on two incoming 12,000-volt feeders. When the present extensions to the distributing station are completed, there will be six main bus sections connected together through reactors. Three of these bus sections will supply the power delivered to the 12,000-volt bus in the Commission's transformer station to which the feeders from the Canadian Niagara Power Company are also connected through a bus reactor. The concentration of generator capacity on this 12,000-volt bus is consequently very great and has necessitated material changes in the switching equipment and bus construction. The studies covering the installation of reactors on this 12,000-volt system have been most interesting. As these studies are still not fully completed, no diagram of the connections for the Ontario Power Company stations and the Commission's Niagara transformer station can be shown at this time. It will be sufficient to state that there is no 12,000-volt bus in the generating station, and that each generator feeds through an automatic oil circuit breaker in the generating station to its individual cables in the cable tunnels up the hill, thence to its group of circuit breakers in the distributing station where switching arrangement are such that each generator and each feeder may be connected to either of two bus sections. In the Commission's Niagara transformer station there is a single sectionalized 12,000-volt transfer bus system so arranged that feeders are connected through an auxiliary bus to the main bus or direct to a transformer bank.

It is of interest to note that the cables for the two new 15,000-

kv-a. generators were purchased after laboratory tests were made on manufacturers' samples to determine the dielectric losses and tendency of compound to flow, and guarantees on dielectric losses were obtained from the contractor.

Another interesting point in connection with the feeders entering the Commission's transformer station is that eight of these are three-conductor, armored cables laid directly in the earth without ducts. These armored cables all have sector-shaped conductors, with 8/32-in. x 8/32-in. paper insulation, a lead sheath and a double steel tape armor with jute bedding and jute covering. They are placed three feet below the surface and two and three feet apart center to center on private right of way. Where these buried cables cross ducts containing other cables, arrangements are provided to moisten the surrounding earth either by sprays above the surface or by porous tile in the ground. Figs. 11 and 12 show views of this armored cable installation, Fig. 10 showing the ventilating pipes at street crossing, the cables being in 6-inch cast iron pipe across the street.

THE QUEENSTON DEVELOPMENT

When the Commission in March 1908 contracted with the Ontario Power Company for 100,000 horse power, it was thought by many that such amount of power would meet the requirement for many years. This supply was however exhausted in 1915 that is, in 5 years from date of first delivery of power, and the additional power secured by arrangements with the Canadian Niagara Power Company has proved insufficient to meet the demands. It became necessary therefore to look to a new development to secure a further supply and the final decision was to proceed with a development called the Queenston Development which is authorized by an Act passed by Ontario Government in April 1917 called The Ontario Niagara Development Act.

Between Lakes Erie and Ontario there is a difference in elevation of 330 feet. The greatest net head now utilized on the Canadian side at Niagara Falls is about 160 ft. Canada is entitled to divert 36,000 cu. ft. per second from the Niagara River, and of this amount, by an Ontario Government Order in Council in 1915, the Commission were allotted 6610 cu. ft. per second. The Ontario Power Company were allotted 11,180 cu. ft. per second, so that, within the control of the Commission, there is now available 17,799 cu. ft. per second.

Fig. 16—Electric Locomotive and Dump Cars [HULL]

To obtain the greatest amount of power from the water available, after careful surveys and studies, it was decided to locate the generating station just above Queenston, and to take water from the Niagara River, through the Welland River (reversing the flow in same) and canals encircling the City of Niagara Falls to Queenston. The first canal is now under construction and the accompanying map of the Niagara District, shows its location. Fig. 13 shows a general plan of this scheme.

The total length of waterway from the Niagara River to the generating station site is about 12½ miles, 4¼ miles of this distance being in the Welland River, and the balance in an excavated canal. The net effective head will be about 305 ft. and the first canal is normally designed for 10,000 cu. ft. per second at minimum low water.

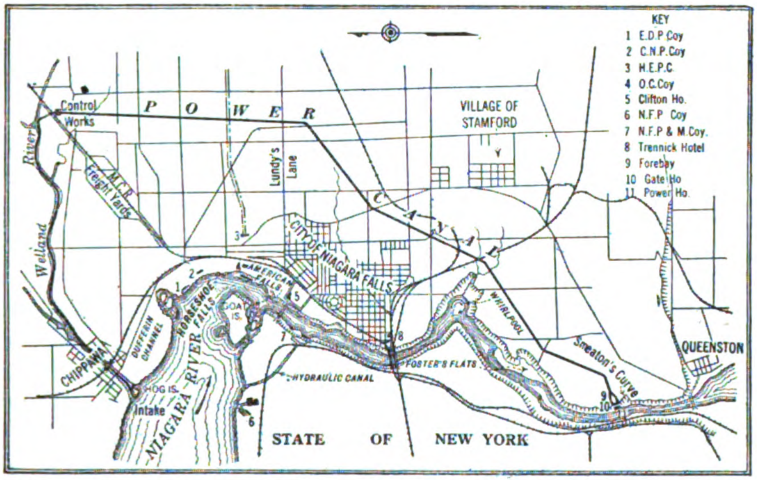

Fig. 13—General Plan of Niagara Power Development—Hydro-Electric Power Commission

The generating station will be located about one mile up stream from Queenston, in the Gorge just at the end of the last rapids in the river. At this point the banks are steep and short penstocks only will be required. Provision is being made for extensions, and right-of-way for two additional canals has been purchased. Fig. 14 shows a view of power house site.

To show the effect of utilizing the greatest possible head of water, it may be pointed out that about 30 h. p. will be developed for each cubic foot per second in this development, whereas about 14 h. p. is all that is obtained in existing plants at Niagara Falls.

The development now under construction is designed as regards canal, forebay, gate house sub-structure and power house substructure, for a capacity of 300,000 h. p. It is proposed to construct the gatehouse and power house superstructure for an initial installation of 200,000 h. p. in four units. The designs are made so that extensions of power house and gate house can be made to almost any extent. Future plans contemplate the use of 100,000-h. p. units.

The turbine speed has been fixed at 187.5 rev. per min. and specification for the generators are now being issued calling for 45,000-kv-a., 85 per cent power factor, 12,000-volt, three-phase, maximum-rated generators of vertical type equipped with thrust bearings to take the weight of the rotating part of the generator plus the downward thrust of the turbines. Direct-connected exciter mounted above the thrust bearings are proposed. The generators will be liberally equipped with embedded temperature detectors so that close and accurate observations may be kept of operating temperatures. The specified maximum temperature of any part of the generator at rated load is 100 deg. cent. with cooling air at 40 deg. cent. The ventilation problem for such units is of great importance, each unit requiring approximately 125,000 cu. ft. of air per minute. Plans for the switching equipment and transforming equipment are now being developed and as they are not in final form, it is not opportune to give any detail description. It is proposed to install double 12,000-volt sectionalized buses, banks of transformers consisting of three 15,000-kv-a., single-phase units, and to lay out the switching equipment so that one generator, one bank of transformers, and one outgoing high-tension line will be a unit. Bus tie reactors will be provided, and the short-circuit current will be limited to a value that can safely be handled on the circuits and circuit breakers.

It is proposed to install two small service generators to supply power required for the station services such as pumping, cranes, lighting, machine shop, ventilating, etc.

To carry on the construction work on this development it was decided to make an extensive use of electric power as possible. Two large electrically operated revolving shovels each fitted with an eight-cu. yd. bucket for earth excavation and of capacity to handle a five-ton bucket in rock were provided. See Fig. 15. The larger of these two shovels has a boom 90 ft. long and a dipper stick 80 ft. long, while the smaller shovel has a boom 80 ft. long and a dipper stick 58 ft. long. Each shovel has motors of a nominal total rating of 715 h. p. on a half hour rating. Three shovels weigh over 300 tons each and have a capacity of 5000 cu. yd. of earth per day. Five other electrically operated shovels are also provided having bucket capacities ranging from 7/8 to 4½ cu. yd.

The railway equipment of the construction work includes 150 dump cars of 20 cu. yd. capacity each, six 40-ton steam locomotives and twelve 50-ton electric locomotives, as shown in Fig. 16.

The electric power required for shovels, trains, air compressors etc., is obtained from the Ontario Power Company's station and is transmitted over two overhead feeders to the Whirlpool Substation located near the Whirlpool. A similar substation will shortly be erected near Montrose on the southerly section of the canal. The Whirlpool substation is of semi-permanent construction and contains switching equipment for the two 12,000-volt incoming lines, and for three 1500-kv-a., 12,000/4000-volt transformers, four 500-kw. 600-volt, d-c. synchronous converters with their 12,000-volt transformers. An adjoining room contains eight air compressors of 1000 cu. ft. per minute capacity each against 125 lb. pressure, belt driven from 550-volt motors, supplied through two banks of 200-kv-a., 2300/550-volt transformers. Air is distributed up and down the canal for a distance of three miles from this substation to operate rock drills, channellers and forges, etc.

Power is distributed up and down the canal by 4000-volt, 25-cycle, three-phase, four-wire, grounded-neutral circuits to which the shovels are connected through flexible armored cable. A double track railway has been built for the full length of the canal with a branch to the main dumping point at St. Davids. These railway lines are electrified, the trolley wires being offset to one side of the track so as not to interfere with the shovels.

The substation at Montrose will be identical with that at Whirlpool and it will similarly serve to supply power for the work on the upper end of the canal.

The extensive use of electric power on the construction of works of the magnitude of this development is working out well and is resulting in a great saving of coal.

The enormous amount of power to be transmitted from this Queenston development involves much engineering study to work out a solution particularly when it is borne in mind that a large amount of capital is invested in existing stations and lines operating at 110,000 volts. These studies are now under way and it is to be hoped that at some later date, there will be placed before the Institute a more complete description of this Queenston Development and its transmission lines connecting in to the Commission's Niagara System.

AERONAUTICS IN THE UNITED STATES, 1918

BY GEORGE O. SQUIER

Abstract of Paper

Major General George O. Squier, Chief Signal Officer of the United States Army, reviews in this address the development of Military Aeronautics in the United States up to the date of the armistice, November 11, 1918. The War Department's first heavier-than-air flying machine was produced approximately ten years ago, but for the eight years that followed, the development lagged—in fact less than a million dollars was appropriated for aeronautics in the entire eight years. Then under the pressure of war, the United States by necessity plunged into a gigantic aircraft program—and the accomplishments today are numbered by the score. The Liberty Engine, acknowledged now to be the standard for the world, was produced; an industry new to the United States was developed, and other tremendous strides taken in the science of aerial navigation.

I—Introduction

ALMOST exactly ten years ago (December, 1908) the undersigned had the honor of addressing, from this same platform, the American Society of Mechanical Engineers on the subject of Military Aeronautics, at its annual meeting. The preceding summer months had witnessed the first public flights of the Wright airplane at Fort Myer, Virginia.

The Signal Corps of the United States Army, under date of December 23, 1907, had issued an advertisement and specification for a heavier-than-air flying machine, and the sealed proposals under this specification were opened formally at Washington at twelve o'clock noon on February 1, 1908. The main requirement before acceptance, by the Government, was an endurance test in which the flying machine must remain continuously in the air for one hour without landing.

We all remember the world-wide interest which was aroused by the performance of this new and promising realization of the dream of the ages. During the continuance of the experiments, the eyes of the world were centered upon the little flying field just outside of Washington. The President and Cabinet Ministers were in frequent attendance, and the Congress adjourned from day to day whenever a flight was in prospect.

And then an almost inconceivable thing occurred. The Messrs. Wright having thoroughly demonstrated and fulfilled all of the conditions required by that specification, and the first machine having been duly purchased and paid for, during the eight years following the entire appropriations by this government for military aeronautics amounted to less than a million dollars.

European Powers, however, in their quest for military advantage, quickly interpreted what had happened at Fort Myer, and France, in particular, during these years was responsible for the principal advances in construction and design.

I shall not enter here into the causes, some military, some civil, of this utter unpreparedness, but the outbreak of war found the United States with but a handful of fliers and very few training planes. There was no aviation industry in this country, and the number of professional men trained as aeronautical engineers and designers was so small as to be practically negligible. In this respect the problem of developing the air program was unique. The United States had built ships before, had manufactured clothing, guns, munitions, built cantonments, etc.; and had a splendid body of men trained in these professions and employments, but, outside of a few men there was no one in the United States with experience in the design or building of even training planes.

Once the United States actually had entered the war, the pressure from our Allies and a sudden realization of our real situation in aeronautics led Congress to grant for this purpose, in the Act of May 12, 1917, $10,800,000; the Act of June 15, 1917, $31,846,000, and finally the appropriation of $640,000,000, the largest ever made by Congress for one specific purpose, which was put through the House of Representatives' Military Affairs Committee in two sittings, the House itself in one, the Senate Military Affairs Committee in forty-five minutes; and the Senate itself a week later, becoming a law on July 24, 1917, three months and a half after the outbreak of war.

The task you have given me of presenting within the present hour even an outline of the great undertaking which this nation has accomplished during the last nineteen months in developing the Air Service, is indeed impossible to meet.

I hasten to say at the outset that I can only hope to present to you some of the salient features and accomplishments of this effort. Of the hundreds and thousands of men and women who wrought valiantly and loyally to achieve these results, it will be impossible to mention specific names, or to give anything like just credit or mention to individuals or particular corporations.

Where names are mentioned in connection with certain features of the work, it must not be interpreted that there are not many others who are equally meritorious.

The Honor Roll of this Institute comprises no less than 1,317 men who participated in the Allied forces in the Great War. Of these, 976 were officers, 728 were officers in the American Army, 110 in the Signal Corps, and 52 in the Air Service.

Indeed, it is only in the long reaches of future history that we can form a just estimate of the many lines of endeavor which were set in motion in carrying out this enterprise, and which will, it is hoped, go forward into the future to bear their fruits in times of peace.

II—Statistical Résumé of Aircraft Production and Training

THE work involved in training aviators and obtaining aeronautical equipment in the United States has been of such magnitude as to preclude the possibility of presenting here anything more than a brief résumé of the major accomplishments.

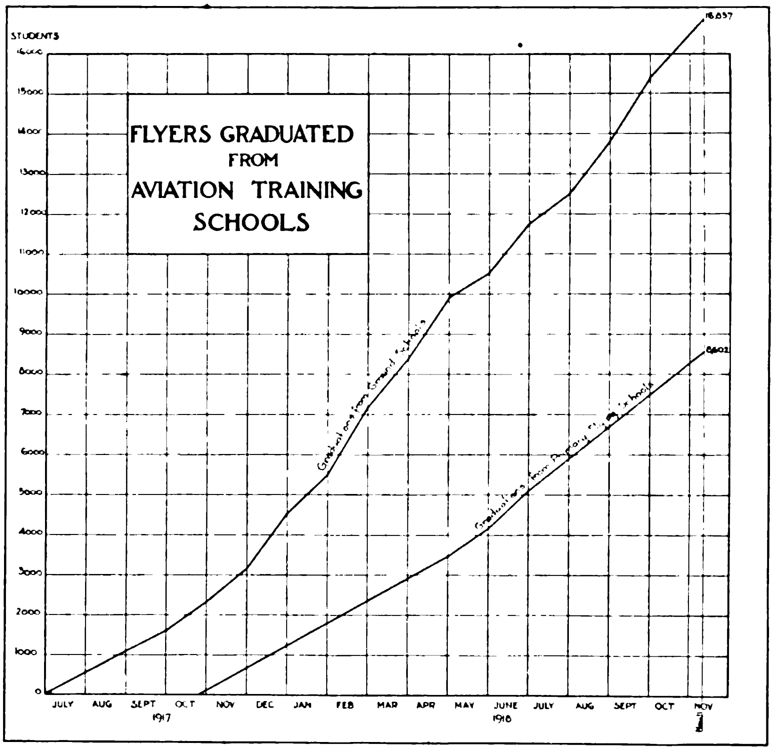

Fig. 1

The data is presented as of six o'clock a. m., November 11, 1918 (the date of the signing of the armistice).

Personnel

More than 8600 fliers have been trained in the United States since its entry into the war. Monthly graduations from ground and flying schools are shown on Fig. 1. The gradually increasing deviation between the two curves on this chart is caused largely by failure of graduates of ground schools to develop into fliers.

There have been training fatalities in the United States, as in all other countries where training has been conducted on a large scale. However, when the fact is realized that our students have flown more than 880,000 hours, which is the equivalent to more than 66,000,000 miles, it will be seen that our training casualties have been astonishingly few. Statistics show that the United States has a lower percentage of fatalities than any other of the allied countries. The monthly average in the United States has been only one fatality for each 3200 hours flown. Training fatalities by months are shown in Fig. 2, and in Fig. 3 are shown the analyzed causes of these fatalities. Two independent investigations made in connection with this paper have developed the fact that more than 90 per cent of training casualties are attributed to the aviator himself. Fig. 4 shows the actual distribution of our fliers overseas.

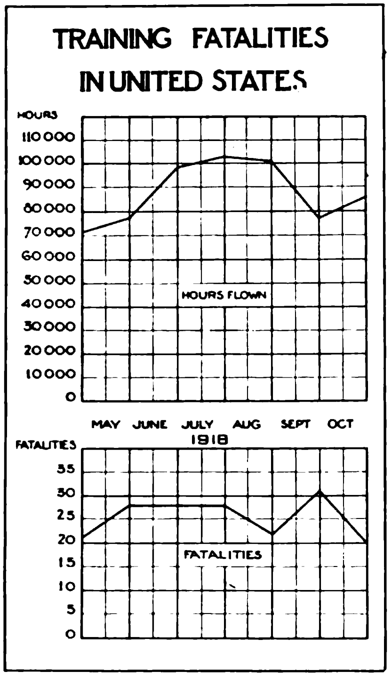

FIG. 2

TRAINING EQUIPMENT

Herewith is presented a tabulation showing the actual production of training material up to November 11, 1918:

Planes		Engines			Propellers
Type Elementary	Number furnished	Name	H.P.	Number furnished	Number furnished
JN-4D	3,762	OX-5		83,18	17,830
SJ-1	1,600	A-7-A		2,250	5,173
Advanced					
JN-4H	929				
JN-6H	803	Hispano	150	3,497	5,295
SE-5	6				
S-4B	100	Gnome	100	278	500
S-4C	384				
E-1	18	La Rhone	80	1,107	358
Total	7,602			15,450	29,156

RAW MATERIALS

Some idea of the quantity of wood necessary for airplane and propeller construction may be obtained from the following table of actual deliveries:

	Spruce Board Feet	Totals
U. S. Army	25,472,000	
U. S. Navy	8,667,000	
England	36,877,000	
France	22,929,000	
Italy	9,147,000	
		103,092,000
	Douglas Fir	
U. S. Army	19,193,000	
U. S. Navy	21,746,000	
England	21,226,000	
France	9,460,000	
		71,625,000
	Port Orford Cedar	
U. S. Army	30,000	
U. S. Navy	1,926,000	
England	2,557,000	
		4,513,000
	Mahogany, Central American	
U. S. Army & Navy	4,524,000	
Allies	4,197,815	
		8,721,815
	Mahogany, African	
U. S. Army & Navy	269,000	
Allies	200,935	
		469,935
	American Black Walnut	
U. S. Army & Navy	2,408,000	
Allies	2,096,876	
		4,504,876
	Quartered White Oak	
U. S. Army & Navy	308,000	308,000
	Cherry	
U. S. Army & Navy	618,000	618,000
	Ash	
U. S. Army & Navy	87,000	
Allies	33,565	
		120,565
	Birch	
U. S. Army & Navy	663,000	663,000

In addition to airplane wood, it was found necessary to maintain strict supervision over the production of airplanes and balloon fabrics. Of this class of material there had been produced to November 11, 1918, 3,187,000 yards of linen; 7,000,000 yards of cotton airplane fabric; 2,647,000 yards of balloon fabric.

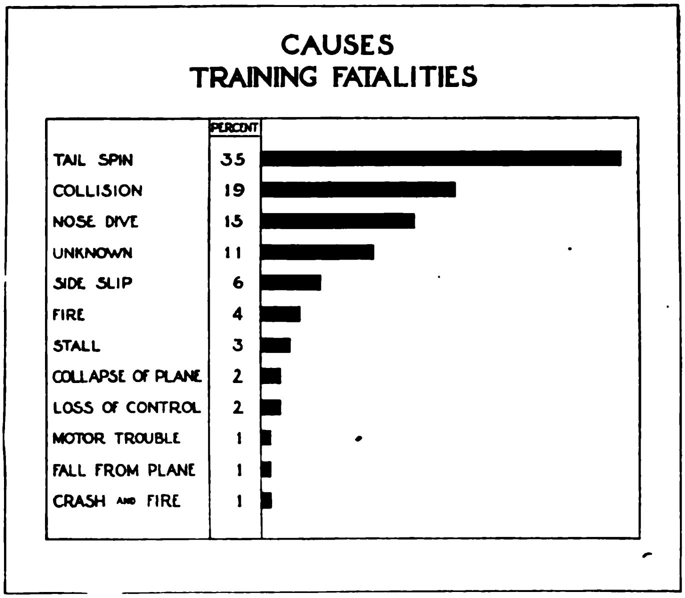

Fig. 3

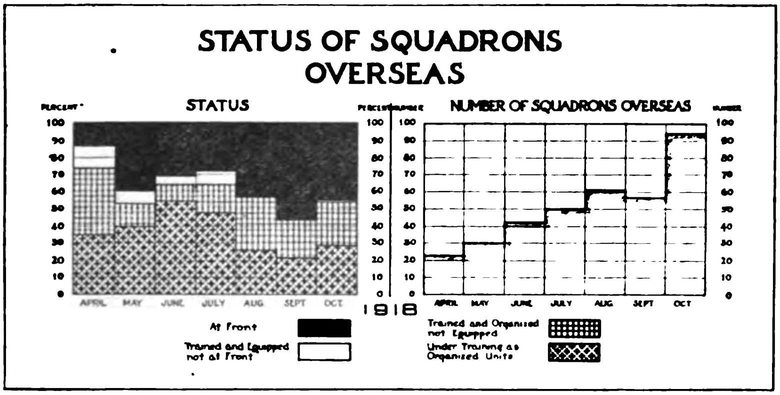

Fig. 4

Accessories

The production of airplane accessories to November 11, 1918 was as follows:

Air Pressure Gages	9,994
Air Speed Indicators	9,051
Altimeters	19,657

Clocks	17,593
Compasses Type "B"	10,179
Fire Extinguishers	12,209
Gasoline Gages	550
Inclinometers	40
Map Cases Rotating	2,417
Oil Pressure Gages	12,187
Oxygen Apparatus	4,318
Oxygen Masks	3,341

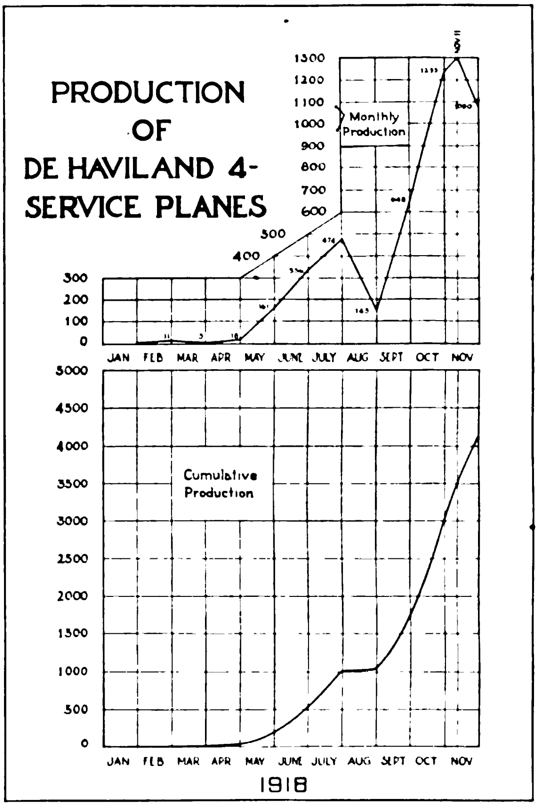

FIG. 5

Oxygen Tanks	12,000
Panels Switch	15,466
Radiator Thermometers	11,984
Tachometers	20,549

Ordnance for use in connection with the air service, such as aircraft machine guns, bombs, etc. were produced under the direction of the Air Service of the Army. Of this type of

incendiary bombs; 386,543 were high-capacity demolition bombs, and 8,919 were high-capacity fragmentation bombs.

SERVICE PLANES

DE HAVILAND 4

The production of the De Haviland 4 service plane is shown by months in Fig. 5. It was found necessary to delay production during the month of August 1918 that certain important changes, based on overseas experience with this plane, might be incorporated.

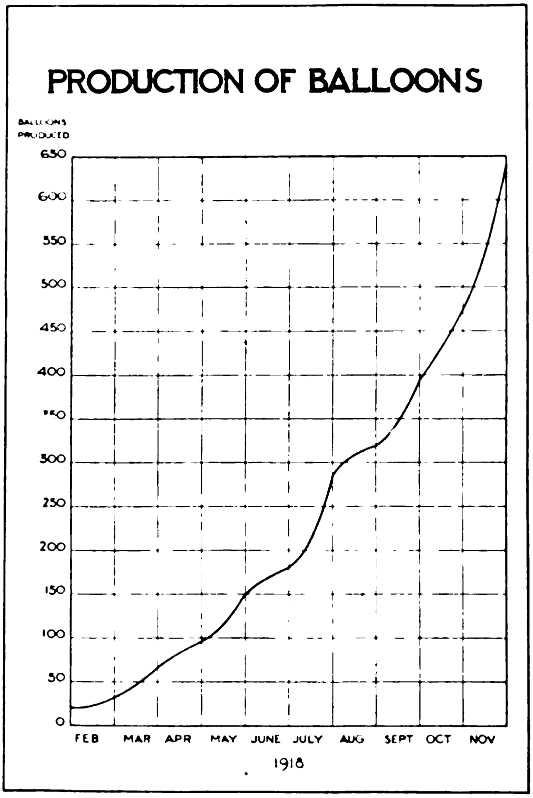

FIG. 11

HANDLEY-PAGE

The production of Handley-Page planes is found in Fig. 6. It should be noted that this production is for planes 85 per cent completed. In other words, planes shipped from this country were not assembled. Fifteen per cent was allowed for assembling abroad. The reason for shipping these planes abroad unassembled is obvious when the size of the assem plane is taken into consideration. An interesting compa of the American Handley-Page plane with its British pr type will be found in Fig. 7.

SERVICE ENGINES

More than 16,000 Liberty engines were produced du the calendar year 1918. To November 11, 1918, more 14,000 Liberty engines were produced, equivalent to 5,700 brake horse-power. Fig. 8 shows the production of Lib engines by months.

A comparison of the weight of the Liberty engine some of the better known foreign airplane engines is show Fig. 9, and fuel consumption in Fig. 10. The basic dat Figs. 9 and 10 came from official communiques from abr In the case of the Liberty engine the results of more than th tests were averaged.

BALLOONS

The production of service balloons met all service req ments. Fig. 11 presents the production of balloons by mor

TYPES OF AMERICAN MACHINES

DEVELOPED, TESTED AND ADOPTED FOR PRODUCTION

On November 11, 1918, there had been developed, te and adopted by the Army four airplanes, on which produc would have started early in the present calendar year. T were the Lepere or L. U. S. A. C.-11 equipped with the Lib engine, the U. S. De Haviland 9-A equipped with the Lib engine, the Martin Bomber equipped with two Liberty eng and the Loening two-seater fighter equipped with the 300- Hispano-Suiza engine. The characteristics of these airplanes are as follows:

Lepere or L. U. S. A. C. 11

Type: Two seater fighter   Engine: One Liberty

Weight empty with water	2468	pounds
Fuel and oil	475.	"
Crew	360	"
Guns, ammunition, etc.	352	"
Gross weight	3655	"
Pounds per b. h. p.	10.15	"
Pounds per square foot	9.33	"
Speed at ground	136	mi. per hr.
Climb to 6500 feet	6	minutes

U. S. De Haviland 9–A

Type: Day bombing and reconnaissance Engine: One Liberty

As a Day Bomber

Weight empty with water	2815	pounds
Fuel and oil	933	"
Crew	360	"
Guns, ammunition, etc.	764	"
Gross weight	4872	"
Pounds per b. h. p.	13.5	"
Pounds per square foot	9.5	"
Speed at ground	121.5	mi. per hr.
Climb to 6500 feet	11	minutes 40 seconds

As Reconnaissance Plane

Weight empty with water	2815	pounds
Fuel and oil	933	"
Crew	360	"
Guns, ammunition, etc.	214	"
Gross weight	4322	"
Pounds per b. h. p.	12	"
Pounds per square foot	8.4	"
Speed at ground	126.2	mi. per hr.
Climb to 6500 feet	7	minutes 30 seconds

Loening

Type: Two seater fighter Engine: One 300 HP Hispano

Weight empty with water	1130	pounds
Fuel and oil	290	"
Crew	360	"
Guns, ammunition, etc.	828	"
Gross weight	2608	"
Pounds per b. h. p.	8.7	pounds
Pounds per square foot	12.1	"
Speed at ground	143.5	mi. per hr.
Climb to 6500 feet	5	minutes 12 seconds

Martin Bomber

Type: Night Bomber Engine: Two Libertys

Weight empty with water	5862	pounds
Fuel and oil	1492	"
Crew	540	"
Guns, ammunition, etc.	1769	"
Gross weight	9663	"
Pounds per b. h. p.	13.4	"
Pounds per square foot	9	"
Speed at ground	113.3	mi. per hr.
Climb to 6500 feet	10	minutes 45 seconds

In order that intelligent comparisons may be made, there are submitted below characteristics of the De Haviland 4 plane:

Engine	One Liberty	
Weight empty with water	2391	pounds
Fuel and oil	457	"
Crew	360	"
Guns, ammunition, etc.	374	"
Gross weight	3582	"
Pounds per b. h. p.	8.95	"
Pounds per square foot	7.12	"
Speed at ground	124.7	mi. per hr.
Climb to 6500 feet	8	minutes

THE NAVAL SEA-PLANE NC-1

One of the most striking accomplishments of the United States in airplane design has been the development by the Navy of the Naval Seaplane or flying boat NC-1. This plane has a central float 46 feet long, a wing span of 126 feet and a total wing area of 2400 square feet. This plane is equipped with three Liberty engines with tractor screws. Fully loaded the plane weighs 22,000 pounds. The weight empty with water is 14,000 pounds.

This plane is the largest seaplane in the world, at the moment, and is an American product throughout. The hull was designed after tank experiments on models. On a recent test this plane made a flight at Rockaway Beach, New York, with fifty-one passengers aboard, getting off in fifty-three seconds. Upon landing it was discovered that the fifty-first passenger was a "stowaway" on board the plane.

III—Remarks on Instruments, Raw Materials and the Training of Personnel

INSTRUMENTS

THE facilities for the manufacture of instruments necessary to give airplanes, pilots and observers their greatest usefulness were extremely limited at the outbreak of the war. The making of these instruments involved practically the formation of an industry new to this country. By June, 1918, twenty types of instruments were in production and being supplied for installation in training, bombing and fighting planes. The list included airspeed indicators, altimeters, compasses, safety belts, oxygen apparatus, radio sets and all other necessary adjuncts for the navigation of the air, and for the safety and comfort of the pilot.

Looking into the future, a reliable and simple "turning indicator" for airplanes is much desired. Furthermore, the development of some form of gyroscopic compass to meet the severe conditions of aircraft service is a problem of great importance. It has been said that the magnetic needle has sense but no power, and the gyroscope has power but no sense.

SPRUCE PRODUCTION

Some idea of the magnitude of the task involved in the procurement of the principal raw material used in the construction of the plane proper, namely spruce, may be obtained from the following figures on production and personnel. On June 30, 1918, the spruce production personnel consisted of 18,305 officers, enlisted men and civilians. Railroads were constructed into the forests of the West Coast and a cut-up plant having a maximum capacity of 9,000,000 board feet of lumber a month was erected at Vancouver Barracks near Portland, Oregon. To November 11, 1918, approximately 174,000,000 board feet of spruce and fir, as shown above, had been shipped of which more than two-thirds went to our Allies.

LINEN, DOPE AND OIL

As it was impossible to produce the millions of yards of linen fabric required for airplane wing and body covering, a suitable cotton substitute was developed and manufactured in this country in quantities sufficient to meet the needs of both

America and the Allies, and at a cost slightly more than half that of the linen fabric formerly used. This accomplishment, theretofore thought impossible, ranks among achievements of the first importance. The dope used on the fabric of airplanes presented many difficulties not only to us but to our Allies. This and other chemicals required soon were being produced in this country in quantities sufficient for their requirements as well as our own.

To meet the extensive demands for a high-grade lubricating oil, castor bean seeds were imported from India and about 108,000 acres planted in this country. Meanwhile, research work with mineral oils was carried on intensively, with the result that lubricant was developed which proved satisfactory in practically every type of airplane engine, except the rotary engine, in which castor oil still is preferred.

TRAINING OF PERSONNEL

The personnel side of the Air Service, including the selection, training, organization, and operation of the flying forces, developed within the fiscal year 1917-18 into an educational system on a scale infinitely larger and more diverse than anyone had anticipated. Teaching men to fly, to send messages by wireless, to operate machine guns in the air, to know artillery fire by its bursts, and to travel hundreds of miles by compass, teaching other men to read the enemy's strategy from aerial photographs, and still others to repair instruments, ignition systems, propellers, airplane wings, and motors, has required a network of flying fields and schools, a large instructional force, and a maze of equipment and curricula.

IV—Some Remarks on the Physical Conception of the Air.

IN a very condensed form I have endeavored to present in the above outline, the salient facts and figures of actual production and deliveries in connection with the air program in the United States up to the moment of signing the armistice. These figures are the cold facts of actual accomplishment of finished product.

I have made no exterpolations to these production curves which would show what flow of Liberty engines and combat planes for instance, we reasonably could expect would result in the succeeding months following the signing of the armistice. I leave this exterpolation to those of you who may be curious.

Behind the production figures of November 11 was mobilized in the United States an industrial army of about 350 firms and corporations employing more than 200,000 men and women. A huge imaginary conduit leading from the factories and assembly shops of America to the fighting front in France was in operation. At any given moment, the number of engines, planes and accessories distributed along the 3000 miles of this imaginary conduit were known accurately and organized in such a way that the flow throughout should be continuous, or that minimum congestion should occur at any point, be it factory door, railway train, embarkation depot, steamship, or debarkation point in Europe.

In order, however, to give an adequate idea of our whole effort, it will be necessary to refer now to certain lines of development, some physical, some chemical and some physiological, which have been set in motion during the progress of this work.

I think we will admit that no world-movement such as we now are witnessing in the development of aerial navigation demands such a close union between science and art. To make a machine to go into the air to transport man is a task set for the hand and brain as never before.

Fifteen years seems a short time when we contemplate what has been accomplished; yet, it was only fifteen years ago, on December 17, 1903, that Wilbur Wright made the first successful flight in a heavier-than-air machine at Kitty Hawk, N. C. To-day Government airplanes have carried the mail between

Washington and New York for seven months, and few of us take the trouble even to watch for these daily flights.

The advent of the first heavier-than-air flying machine begat, as a consequence, a period of intensive interest and study of the physical and dynamical properties of the medium, which are only now in the early beginning, and whose ultimate extensions we can only dimly perceive.

In November, 1916, I had the honor of addressing the National Academy of Sciences at Boston and outlining at that time some outstanding problems for research in connection with aeronautics. Although this was only two years ago, such has been the activity in research in studying air problems that fully two-thirds of the subjects suggested at that time now have been satisfactorily solved and are in actual use in the art.

Technical courses have been established at universities and colleges, and the new profession of Air Engineering is at the moment vying with the older engineering branches.

Everyone knows, of course, that if there were no air there could be no life, but probably very few fully realize its immense importance in almost everything we do. In one condition it is invigorating and gives us a zest for hard work whether mental or physical; in another it leaves us depressed and incapacitated for efficient labor. Numerous manufacturing processes are radically affected by the amount of moisture in the air, and many others by its temperature. Power is transmitted by it; we communicate our thoughts to one another by vibrations of the air; and by its aid we recently have acquired our swiftest mode of travel. Obviously then, a knowledge of the composition, structure, and physical properties of this universal medium is of such vital importance as to justify most painstaking study and research.

In the last few years, for instance, several elements: helium, argon, neon, krypton, xenon, have been found in the atmosphere that previously were unknown and even unsuspected, for they were not required by the Mendeleoff table of the elements as then understood. One of these, argon, amounts to nearly one part in a hundred of the whole atmosphere, and yet through decade after decade of chemical investigations involving countless thousands of air analyses, it, and all its family of gases, remained undiscovered.

Recently, too, means have been found for drawing directly on the atmosphere for an inexhaustible supply of nitrogen compounds used in the production of powerful explosives, fertilizers, and many other things of industrial value.

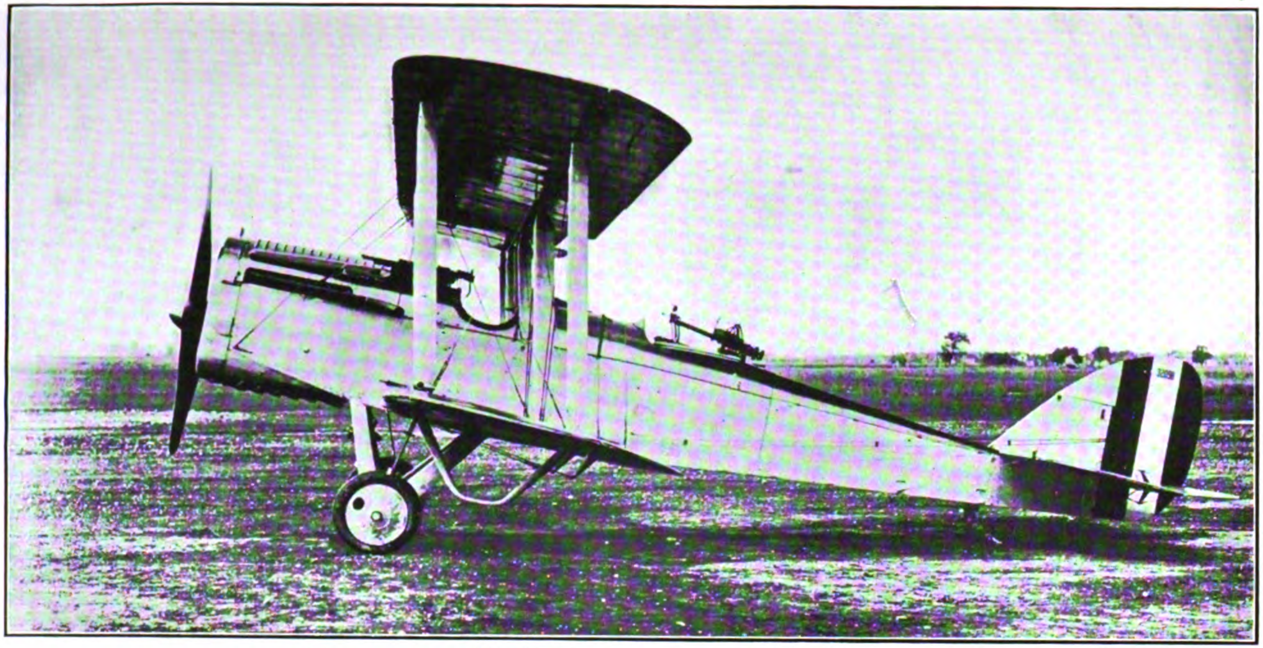
The first eighteen years of the present century have witnessed a wholly new and startling flood of physical knowledge which has resulted in profoundly modifying our conceptions of electricity and matter, as developed in the nineteenth century. These two great subjects have been brought together and now are recognized as one and the same subject.

What we called self-induction now is considered to be only inertia. Mass is supposed to be wholly electrical and a vector instead of a scalor quantity. The most fundamental of all physical constants, the electron, has been isolated and its charge measured. Electricity from whatever source is made up of these electrons and even metallic conduction consists of the actual projection of these granular units along the conductor.

A gas like the air, on the present view, is not a continuous medium, but is composed of many individual structures which preserve their indentity and individuality during the normal life of the gas. These largest units are known as molecules, and they are each moving with considerable velocity on the average, the path of each being for the greater part a straight line until two approach near to each other. The forces that these two exert upon each other reach out into the medium which surround them both, creating a region of intense field at sufficient distance away from each so that their integrity is not disturbed.

When the two molecules approach each other, they are deflected off without collision, preventing a catastrophe much as a comet coming into the solar system is merely deflected by the action of the sun, and does not fall into it unless it makes a direct hit, the chances of which are extremely small. The gas pressure of the air upon the walls of the containing vessel merely is the reaction of these deflected molecules that come into close proximity with the more fixed molecules of the container.

If we consider for a moment a cubic centimeter of air under standard conditions, we know that the number of the largest structures therein, the molecules, is a constant, and is about 2.705×10^{19}. It does not matter what kind of a gas we have, whether hydrogen, oxygen, nitrogen or compounds like methane carbonic acid, etc; the number of molecules remains fixed. In fact, we probably can determine the number of molecules in a



DE HAVILAND 4—LIBERTY ENGINE

[SQUIER]

cubic centimeter of a gas more accurately than we can determine the number of inhabitants in New York City, in spite of the fact that the number is slightly more than twenty-seven billion billion.

By measuring the weight of the cubic centimeter of air and dividing this by the number of molecules contained therein, we obtain the weight of the largest structure composing the air, namely, the molecule. The structure of the molecule, while sufficiently enduring to remain together as a unit in the normal condition of the gas, yet is not strong enough to withstand forces that may be easily brought to bear upon it by chemical means to cause it to separate into still smaller units known as atoms. In the nitrogen and the oxygen of the air there are but two atoms making up each molecule, so that each structure in air can only be divided into two by any means at the disposal of the chemist.

The atoms, however, have been broken up into still smaller units, but it can be done only with great difficulty, comparatively speaking, and until recently, the difficulty was so great that they earned the name atom, signifying that they could not be cut in two. They are far more enduring structures than the molecule.

The only two kinds of things that ever have been obtained thus far by the breaking up of the atoms, of all kinds, are the so-called positive ions and negative electrons, and these remain today as things which never have been broken up into smaller components. Whereas the negative electron has been isolated from gross matter the positive charge never has been dissociated from matter. The present idea of physicists is that we have found an ultimate constituent of all gross matter. The mass of this negative electron has been measured, and the mass of the smallest atom, hydrogen, is 1845 times greater than that of the electron.

We regard the atom as consisting of a positive nucleus about which negative electrons are ceaselessly revolving. The dimensions of the negative and positive constituents of atoms, in comparison with the dimensions of the atoms themselves are like the dimensions of the planets and asteroids in comparison with the size of the solar system. Here then the master physicists with consummate skill have built up for us an alluring conception of miniature solar systems of which all gross matter is composed "A mighty maze! but not without a plan."

In the light of the foregoing conception of a cubic centimeter of air, imagine if you can, what a compilcated thing is the result of an orchestra playing perhaps one hundred instruments and two hundred voices singing in chorus, accompanied by the orchestra. The cubic centimeter of atomic worlds, in this case, becomes subjected from without to a great number of superimposed frequencies representing each and all of the individual instruments, as well as the innumerable harmonics required to indicate the qualities of the human voices; yet our medium is sensitive enough to respond accurately to each and every one of these frequencies simultaneously, and synthetically adds them together and produces a resultant envelope curve of pressure which the marvels of the human ear are able to analyze and interpret into its elements. A medium which has such qualities as to be capable of acting and reacting in this delicate manner, and at the same time when moved bodily with the velocity of a tornado may cut down trees and buildings as if by a giant steel knife, is a medium the possibilities of which for future research we, at present, only dimly perceive.

V—The Production of Helium on a Commercial Scale

ONE of the greatest scientific achievements of the present war from a technical standpoint is the production of helium in balloon quantities. This gas is non-inflammable and has about 92 per cent of the buoyant effect of hydrogen. Its name is due to its having been discovered in the sun's atmosphere through a characteristic line in the solar spectrum, before its presence on the earth, or any of its properties were known. It first was obtained in minute quantities by Ramsay in England some twenty years ago by heating certain radioactive minerals, in which it occurs because it is a disintegration product of radium. Its pre-war scarcity may be appreciated from the fact that, up to two years ago, not more than 100 cubic feet ever had been obtained, and the usual selling price was about $1700 a cubic foot.

Notwithstanding so discouraging an outlook someone in the British Admiralty had imagination enough to propose the large scale separation of helium from certain natural gases in Canada, that contain about one-third of one per cent of it, and experiments were undertaken at the University of Toronto. Soon after the entry of the United States into the war, the Bureau of Mines, learning of the problem from a British confidential memorandum, persuaded the Signal Corps and the Bureau of Steam Engineering of the Navy to approve and finance jointly an experimental program on a large scale. Thanks partly to the unusually rich sources of supply in this country, and partly to the skill of the two commercial companies whose services were enlisted, and to the enthusiasm of the Bureau of Mines Staff and of Mr. Carter, of the Navy, who for a time represented the Army as well in the project, such success was achieved that, at the cessation of hostilities, there was compressed and on the dock ready for floating 147,000 cu. ft. of nearly pure helium, and plants were under construction to give at least 50,000 cu. ft. a day at an estimated cost of not more than ten cents a cubic foot.

The production of a balloon gas that assures safety from fire opens up a new era for the dirigible balloon. In November, 1917, a Zeppelin made the trip from Bulgaria to German East Africa with twenty five tons of medicines and munitions, only to find that the German forces already had been dispersed, and returned safely to its base without landing. With a non-inflammable gas, not only comfortable and expeditious, but also safe transcontinental and transatlantic travel in dirigibles will, it is believed, soon be commonplace.

VI—Meteorological Service of the Army

IN August, 1917, the Chief Signal Officer directed Lieut. Colonel R. A. Millikan to organize an Army Meteorological and Aerological Service, the purpose of which was three-fold:

a. To provide the American Expeditionary Forces with all the meteorological and aerological information needed.

b. To supply the aviation fields, the coast artillery stations, the ordnance proving grounds, and the gas warfare service within the United States with such meteorological and aerological data as might be useful to them.

c. To undertake for the first time in the history of the world the problem of mapping the upper air currents over the United States, the Atlantic, and Western Europe in aid of aviation, and particularly with reference to transatlantic flight.

In carrying out the first of these projects, there were selected approximately 550 men of high qualifications, most of them physicists or engineers who were given a two months' course in meteorological and aerological theory and observations at College Station, Texas. Three hundred and fourteen of these men were sent overseas where they have been operating as an effective and well organized branch of the work of the A. E. F. In addition to furnishing a general weather forecast for the A. E. F., this service has supplied a meteorological unit to each aviation post, each gas service post, each artillery post, and each sound-ranging post of the American Army in France. Under the effective direction of Major W. R. Blair, one of the most experienced aerologists of the United States, commissioned for the service from the Weather Bureau, about twenty upper-air stations were established in France and England and a forecast based on data furnished by these stations made regularly to the A. E. F.

For the accomplishment of the second element of the program, twenty eight stations manned by 150 men, all carefully picked at the start and well trained at College Station, have been established for furnishing local data as to either surface or upper-air conditions, or both, to the flying fields, artillery posts, and proving grounds in this country. The largest of these stations is that at the Aberdeen Proving Ground, which is manned by twenty two men and furnished to the Bureau

[SQUIER]

of Ordnance all necessary data for the determination of ballistic wind which, in view of the development of high angle fire, has become altogether indispensable for the construction of range tables needed for obtaining accuracy in the work of the artillery.

In carrying out the third element of the program, twenty-six meteorological stations were established, placed at carefully selected points over the whole of the United States, which stations have been manned by trained observers who telegraph to Washington each day observations on wind velocities at all altitudes up to 35,000 feet. In one instance these observations have been carried to 65,000 feet. On the basis of these observations, a daily forecast of upper-air winds is now being issued. The use which such forecasts may serve, both in connection with the aviation mail service and ultimately with the trans-atlantic service, may be seen from the fact that above the level of 10,000 feet, 95 per cent of the winds in both the United States and Europe are from West to East and often attain velocities in excess of 100 miles an hour. On November 6, 1918, at Chattanooga, Tennessee, a velocity of 154 miles an hour at an altitude of 28,000 feet was observed. It is because of this easterly direction of these upper air currents that all of the long flights thus far made have been from West to East. The importance of a forecast of such currents for the purpose of long flights will be appreciated as soon as the foregoing facts are understood. An airplane capable of a velocity of 154 miles an hour in still air either would remain stationary or travel at 308 miles an hour depending on whether it was headed into or with a wind of the velocity of that observed at Chattanooga.

All of the aerological work so far mentioned has been done with the aid of theodolites especially designed by Major W. R. Blair for this service. Sixty of these have been built for the work in this country and twenty shipped abroad.

The problem of exploring the upper-air currents over the Atlantic was at first thought insoluble on account of the absence of fixed bases, but the Meterological Service has developed propaganda balloons which already have flown at an average altitude of 18,000 feet from Omaha to New Jersey, a distance of more than a thousand miles. The success of the project now has made possible the mapping of the upper-air highways across the Atlantic; for arrangements are being made to send up from both coastal stations and from transatlantic steamers, these long-range balloons designed for from two to three-thousand-mile flights, and adjusted to maintain a constant altitude and to drop in Western Europe their records of average winds in these heretofore unchartable regions. The importance of this work for the future of aviation needs no emphasis.

The success which the Meteorological Service has attained would have been wholly impossible had it not been for the intimate and effective cooperation which has been extended to it in all of its projects by Director C. F. Marvin and the entire staff of the United States Weather Bureau.

VII—Physiological Study of the Flier

UNTIL a year and a half ago, interest centered in the development of aircraft and not in the flier. There was little regard for the special fitness of the man on the day and hour he drove his machine.

This was true, not only in the United States, but also in the Allied countries. The pilot was not selected because of any peculiar fitness for flying. It simply was a question of whether or not he had the nerve.

But, about the time the United States entered the war, it became clear that the science of physiology could be applied with advantage to the selection, classification and maintenance of the aviator. Each of the countries in the war now has a fully established air medical service, as an integral part of the air forces. In the British Army there is a separate air medical service with a Surgeon General of Aeronautics. In the American Army this work has been handled effectively by a division of the Surgeon General's office, assigned as part of the Air Service.

The early view that any one who "had the nerve" could fly caused enormous avoidable wastage of life and material. The lesson learned from bitter experience was that it is essential to obtain fliers who are especially fitted for particular work and to keep them in condition to perform their duties at all times.

Nature never intended man to fly in the same sense that she did not intend him for life in a submarine. Conditions are unnatural from the time he leaves the ground until he returns. There are many obstacles to overcome. He flies in an atmosphere deficient in that oxygen which is the "breath of life;" he is subjected in war to the shells of anti-aircraft guns and enemy aircraft; he travels through space high above the ground at rates well in excess of 100 miles an hour. In attaining altitudes and breathing rarefied air, the flier is defying nature.

The pilot is the heart and brain of the whole flying apparatus. Parts of the airplane may break without serious result, but when the pilot breaks, even momentarily, nothing is left to direct the flight. The man and the machine come crashing to the earth.

All this the Air Medical Service had to consider. The service had the advantage of a series of reports of the air medical services of our Allies, which enabled it to attain self-footing in a remarkably brief time. A medical research laboratory, fully equipped, was established by the Army Air Service at the flying fields on Long Island, N. Y.

The keynote of the American Air Medical Service is the handling of the flier as an individual, which naturally brings the work into three main divisions:

First, the selection of the flier:

Second, the classification of the flier, and

Third, the maintenance of the physical efficiency of the flier.

THE SELECTION OF THE FLIER

The outset of the war made it necessary to obtain a large number of military aviators in the shortest possible space of time. The medical problem consisted of selecting men who were physically fit.

It is possible for men to fly in spite of one or more physical handicaps, such as having only one leg or one eye or even being cross-eyed, but such men are not desirable fliers, since men with complete endowments naturally have superior advantages. The man in the flying service would be called upon to negotiate critical emergencies in the air. Instant decision and action, therefore, would be essential for success. So it was seen that only those men with exceptional mental and physical capabilities should be chosen.

In order to accomplish the best results, a comprehensive program was undertaken, providing for the standardization of both tests and examiners. Sixty-seven military units were established, each examining from ten to sixty applicants a day. The figures show that 70.7 per cent of the applicants were qualified. The large number of applicants made it possible to maintain the highest standard in selecting men.

In the same spirit with which the United States determined to supply the American air fighters with as good, if not better, planes than those used by the enemy, it was decided that the American aviators must be as good if not better than those of the enemy. The outcome of any encounter might easily depend upon which combatant possessed the better vision and other special senses, the better nervous system, and the better mental and physical equipment in general.

Each applicant received a complete physical examination embracing all the features ordinarily required of men entering the military service, and, in addition, comprehensive and extensive tests of the special senses of vision, hearing and motion sensing.

CLASSIFICATION OF THE FLIER

It is important to classify the flier for the kind of work he is physically capable of performing. Some men are not able to fly at higher levels than a few thousand feet without serious deleterious effects, while others may operate at much higher altitudes. It is necessary to know a flier's limitations before his training is specialized, for the saving of time and money, and, in fact, the flier himself. It would be an evident waste to train a pilot for combat work and then find he was physically capable of doing only bombing at a relatively low level. To accomplish this classification, branch medical research laboratories were placed in the flying fields, which by appropriate tests on the rebreather machine, developed at the parent institution at Mineola, classified the fliers.

The work of these laboratories demonstrated that sixty-one per cent are capable of flying to 20,000 feet or more, twenty-five per cent should not fly above 15,000 feet, and fourteen per cent were unsafe above 8,000 feet.

The re-breather is used also to determine temporary unfitness for altitudes, due to some intercurrent illness, dietary indiscretion and staleness from prolonged flying.

The necessity for altitude classification is readily understood from the fact that whereas in 1915 flying rarely exceeded 8000 or 10,000 feet, through improved design, scouts of today climb to altitudes of 25,000 feet within a very short time.

Night bombing is carried out at altitudes as low as 300 feet. Day bombing, in order not to reveal the objective of the flight and to guard against concentrated anti-aircraft fire, may call for flights at extremely high altitudes. Reconnaissance machines rarely get to high altitudes, owing to the necessity for more or less close observation of the ground, and machines doing this work accomplish low flying even in the face of highly concentrated anti-aircraft fire, and other enemy activity. Machines cooperating with the artillery making range corrections for batteries, do not often work above 6000 or 8000 feet.

Owing to the fact that all this work is widely diversified, it is essential that each man be placed in that division for which he is best suited. A knowledge of the limitations of a valuable man spells increased efficiency. Just as the pilot is provided with a certain type of plane adapted to the work in hand, so the plane must be provided with a pilot adapted to the work.

Fliers who are forced to undergo abrupt changes in atmospheric pressure and oxygen supply must be singled out. Atmospheric pressure plays an unimportant role; the whole problem resolves itself into a deprivation of the normal oxygen supply.

The Flack bag was the prototype of the rebreathing apparatus which has been developed in the medical research laboratory. By means of this apparatus the aviator rebreathes air confined in a tank, from which he gradually consumes the oxygen. As the percentage of oxygen decreases, the flier, in effect, is slowly ascending to higher altitudes. In the course of twenty-five to thirty minutes he lowers the oxygen content of the air in this tank to 8 or 7 per cent, which is equivalent to attaining altitudes of 25,000 to 28,000 feet.

Another means of attaining the same result is by the diluting apparatus, which supplies directly to a mask over the face a mixture of air and nitrogen in whatever proportion is desired. All of these tests have been standardized and confirmed by the low-pressure tank, in which the air is rarefied to correspond to any given altitude.

By a comparison of the percentage of oxygen to which the flier succumbs when on the low-oxygen test, it is possible to determine the altitude at which he would fail were he in the air. This determination is made on the ground, without danger either to the flier or to his machine.

The effect of low oxygen upon the mental processes varies greatly in the individual. He usually becomes mentally inefficient at an altitude at which there is as yet no serious failure of his vital bodily functions. By simple tests of mental alertness during rebreathing it is easy to determine that one flier becomes mentally inefficient at 15,000 feet, in sharp contrast to another who has his full mental powers up to and beyond an altitude of 25,000 feet.

Oxygen-want exaggerates any latent defect of the eyes. Crash reports have demonstrated that a large proportion are due to eye defects.

"Stunting" essentially is an internal-ear problem. During and after rapid turning the flier's brain is receiving impulses from his semicircular canals. In a normal individual nothing can control or alter the sending or receiving of these impulses, which produce sensations of motion. Fliers vary greatly in their ability to interpret correctly the significance of these impulses. Experience alone enables them to familiarize themselves with their meaning. Those who develop the greatest ability in their interpretation naturally fall into the scout-pursuit class. Those who, in spite of training, are still disturbed or bewildered by stunting are reserved exclusively for straight flying.

THE MAINTENANCE OF EFFICIENCY

When the work of selection and classification is completed, the great problem of the Air Medical Service is to maintain the fliers on a basis of high physical efficiency.

After a certain amount of continuous service the flier begins to show unmistakable signs of deterioration. Until the Air Medical Service went to work, fliers were permitted to continue until they broke. Their breaking was signalized sometimes by simple failure to return from behind the enemy lines; sometimes by becoming mentally and nervously exhausted to the extent of permanently unfitting them for flying.

The rebreathing test also is valuable in determining this staleness in fliers, caused by frequent exposure to high altitudes. Incipient cases of the deterioration of efficiency caused by oxygen-want are detected easily by means of the rebreather. Then it is possible to ground a man for a certain period to enable him to recover entirely, whereas if this condition were not detected, it might progress to a point where it would be impossible for the man to regain his former efficiency. When staleness becomes marked the flier is liable to faint in the air, thus losing his life and wrecking his machine. Periodical examinations are made to detect staleness.

There are three and only three means by which the flier's usefulness may be terminated; first, by the enemy; second, by the failure of the machine; and third, by the failure of the flier himself.

While it was not possible to arrive at exact percentages, estimates made at the time of our entrance into the war, based upon information from Italy, France and Great Britain, indicated that not more than two per cent. of the aviation losses in active service were caused by the enemy. Failures of the airplane were responsible for only slight losses, due, of course, to the rigid inspection of the machines. Statements from all sources agreed that of the total number of fliers permanently out of the flying service, not more than 8 per cent could be attributed to mechanical shortcomings of the airplane or engine.

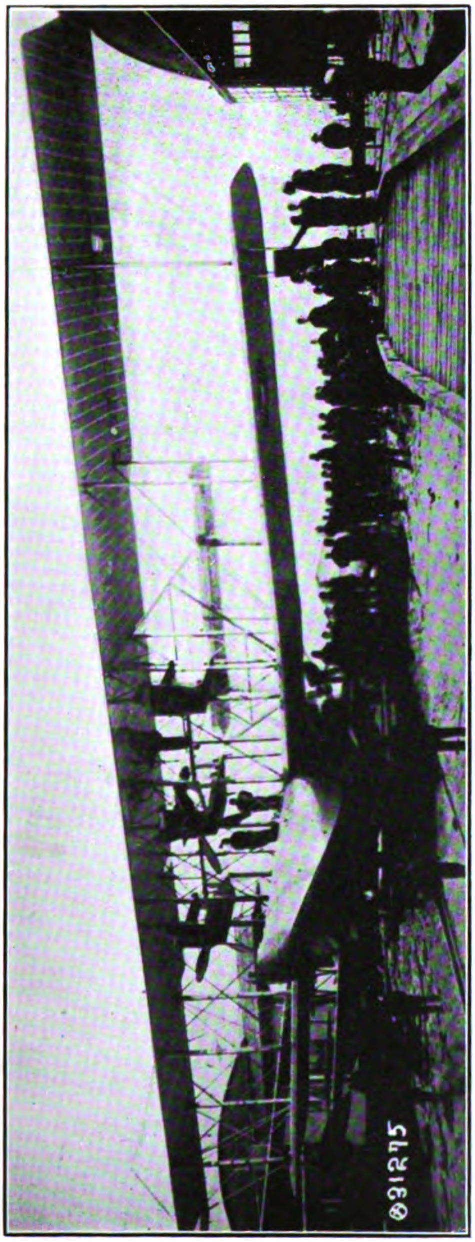
The remaining 90 per cent loomed large when it was realized that this proportion represented trouble in the flier himself.

Therefore the "Flight Surgeon" was authorized to keep aviators physically fit and to study the causes of accidents attributed to the failure of the man.

Keeping the flier fit embraces the amount of physical exercise necessary; the provision of proper recreation; the state of fatigue of the individual; the amount of sleep; the provisions for leave or furlough; the food problems; the field conditions bearing on his welfare, and his reexamination at frequent intervals.

It was observed that more than half the injuries in crashes were caused by the flier striking his head against the cowl. The cowl was cut out to give the flier more room in front, and this change has practically eliminated the head injuries. A safety belt was lashed to the machine by a simple rubber shock absorber, and since this has been done the number and extent of injuries to the upper abdomen and ribs have been reduced decidedly. The problem of protecting the flier against the extreme cold of high altitudes in winter was solved by designing electrically warmed clothing. The problem of enabling the flier to withstand the glare reflected sunlight above cloud banks was solved by furnishing him with the "Noviol" type of goggles. The Dreyer oxygen apparatus is used to compensate for his lack of sufficient oxygen in high altitudes. This apparatus has been so modified and perfected that it is now possible to automatically supply a flier with the correct amount of oxygen for the altitude at which he is flying.

All this has been done toward reducing this "ninety per cent," and much more is being developed. Within the last few months an apparatus has been perfected whereby students may acquire flying experience and training without leaving the ground. This machine, known as the Ruggles Orientator, is a modification of the universal joint, composed of three concentric rings so pivoted as to permit the fuselage, which is pivoted within the innermost ring, to be put through every possible evolution experienced in actual flying, except forward progression.



N. C. 1 NAVY SEAPLANE (OR FLYING BOAT)—THREE LIBERTY ENGINES

[SQUIER]

An analysis of "crash reports" shows that a large number are due solely to failure to come out of the spinning nose dive or tail spin. The student failed in these maneuvers because he had not learned to compensate by sufficient previous experience for his dizziness. The new apparatus gives the flier experience until he becomes familiar with the various sensations.

Another method of educating the student is by means of flying calisthenics. By daily turning and tumbling exercises he becomes accustomed to positions and movements in which at first he is awkward and bewildered.

It has become evident during the last nine months through activities of nutritional survey parties of the Food Division, Surgeon General's Office, that there is a great need in each aviation camp for a nutrition officer. The nervous system is more highly differentiated than the muscular system, and more easily upset by improper food. It has been shown that a nutrition officer with special knowledge of food values should supervise the messes of all cadets and officer fliers in order to keep up efficiency.

Under date of November 20, 1918, General Pershing says in a report to the Secretary of War: "Our aviators have no equals in daring or in fighting ability, and have left a record of courageous deeds that will ever remain a brilliant page in the annals of our Army."

The work of the Air Service Division of the Surgeon General's Office was instituted by Major, now Brigadier General T. C. Lyster, with the assistance of such specialists as Colonel George H. Crabtree, Colonel William H. Wilmer, Lt. Col. E. G. Seibert, Lt. Col. Isaac H. Jones, Lt. Col. Eugene R. Lewis, and Lt. Col. Ralph H. Goldthwaite.

VIII—Activities of the Bureau of Standards for the Air Service

RADIO INVESTIGATIONS

A THOROUGH study of vacuum tubes for use in transmitting, receiving, and amplifying is in progress; a study of insulating materials used in radio apparatus; the development of a permanent contact crystal detector; the development of a high-frequency oscillographic equipment; the furnishing of standards for use in radio development are among the subjects handled in connection with the production of radio apparatus for military purposes.

The facilities of the laboratory and working quarters have been provided for the Research Laboratory of the Science and Research Division of the Signal Corps, and the Intelligence Division of the Signal Corps.

AERODYNAMIC INVESTIGATIONS

The wind tunnel of the Bureau of Standards has been employed in a wide variety of military problems, among which may be mentioned the following:

Bomb-dropping devices have been tested and compared. The head resistance and other characteristics of airplane bombs have been measured in order to provide data for computing the trajectories. Machine gun sights for airplane use, with automatic adjustments for speed have been tested and adjusted in the wind tunnel. Hundreds of Pitot tubes and Pitot-Venturi combinations for measuring the speed of the airplane have been calibrated. The head resistance of many types of engine-radiator sections has been measured. Small variable-pitch propellers for driving at constant speed the generator used in radio signaling, independently of the speed of the airplane or engine were perfected through wind tunnel tests and later tested in large numbers. Finally, the characteristics of new wing-sections and new airplane designs have been determined from wind tunnel tests on models.

AERONAUTIC POWER PLANTS

An altitude laboratory for the study of airplane engine characteristics and performance at all flying altitudes was begun in August, 1917, completed in January, 1918, and has been in service since that time.

Studies have been made of the Liberty "8" and Liberty "12", Hispano Suiza 150 h. p., Hispano-Suiza 180 h. p., and Hispano-Suiza 300 h. p. models.

The results include complete data as to the power developed, fuel consumptions and heat balances at all practicable engine speeds and altitudes up to 30,000 feet; the demonstration of causes of bad carburetion at high altitudes and of the requirements for the best results, together with the development of means for producing these results automatically; the analysis of the effect of fuel composition on engine performance, the results of which served as the basis of specifications for aviation gasolines; the securing of necessary data for the establishment of standard flight test specifications for engines, including variations of horse power with the pressure, density and temperature of the air supplied the carburetor; the measurements of the effect of different compression ratios on engine power at different altitudes; the increase in power possible when using supercharging devices designed to supply the engine with air at pressures greater than that at which the airplane is flying.

Airplane Radiators

The necessary apparatus has been designed and constructed to study the heat transfer characteristics of radiator cores used in airplanes. The performance of more than 85 different types of cores has been studied in this apparatus at reduced pressure and high rates of air flow. Head resistance measurements have been made on these cores in the 54-inch wind tunnel. The results of these experiments have shown that certain types of cores in use today may absorb twice or three times as much of the engine power as other types and as much as 25 per cent of the total power developed by the engine.

Experiments on the head resistance of a model fuselage fitted with a nose radiator have shown that the power absorbed by the resistance of a nose radiator may be as much as 40 per cent greater than that absorbed by a radiator more suitably placed. To afford maximum efficiency, a radiator must be designed for its particular air speed and position on the airplane. The results of this investigation give the necessary data for the design or selection of radiators for all air speeds and for various locations.

IGNITION PROBLEMS

Investigations have been made on various problems connected with spark plugs and other ignition apparatus used on airplane engines. This work has resulted in the development of a new porcelain for spark plug insulators which is definitely superior electrically and mechanically to any previous commercial product. Methods of test for spark plugs have been developed as a basis for Bureau of Aircraft Production specifications and several thousand spark plugs have been tested by these methods. The results have led to the use for aviation work of several high-grade commercial porcelains not previously considered for this purpose.

CARBURETION

In the carburetor testing plant the work has included a detail study of the changes in mixture proportions that occur with throttle manipulation under the conditions of atmospheric pressure and temperature existing at and between ground level and 33,000 feet altitude. This work has resulted in the development of suitable control of the mixture under throttle manipulation at any level above the earth's surface; and in the development of methods and devices for automatic correction of the variations in mixture proportions ordinarily occurring in passing from ground level to an altitude of 33,000 feet.

LIGHT ALLOYS

An important group of problems which engaged the attention of the Bureau was that relating to the production of light aluminum alloys and the improvement of their mechanical properties. Thus, new manufacturing methods were developed for a well-known rolling and forging alloy by which both the ease of its production was increased and its physical properties improved. Studies were made of the corrodibility of various alloys, while mechanical and metallurgical tests were made of a variety of different compositions of alloys giving most valuable information for the guidance of the designer of engines and planes.

A light alloys committee was organized to act as a clearing house for information along these lines and to oversee and direct the research work proceeding throughout the country.

AIRPLANE DOPES AND VARNISHES

Specifications for acetate and nitrate dopes were prepared at the Bureau with the cooperation of dope manufacturers, airplane constructors, and representatives of the government. Simultaneously, dopes manufactured in the country were examined in accordance with the specifications and list of products prepared which were approved for use on government aircraft. After much controversy, the use of acetate dopes containing tetrachlorethane was forbidden because of the toxicity of the above compound. Many proposed methods of fireproofing dopes and fabrics have also been examined. A commerical method of preparing and stabilizing lactic acid esters was devised for use in acetate dopes, in order to conserve the products of acetate of lime. A transparent silk fabric for possible use in obtaining low visibility has recently been perfected. Lately work has been in progress on the pigmentation of dopes with a view to protecting the dope film from the deteriorating action of sunlight, and thus prolonging its life, at the same time dispensing with the use of enamels, thus saving one step in production. The use of pigmented dopes will also conserve cellulose acetate.

Investigations of methods of making wooden parts of airplanes water resistant showed that a good grade of spar varnish was satisfactory, and a specification for such a varnish that could be produced at low cost was prepared. The same varnish has been found to be a satisfactory coating for doped linen or cotton, used either as a transparent varnish or as the basis of a vehicle for pigmented coatings. These may be used on both wood and metal.

AIRPLANE FABRICS

Previous to 1916 linen fabric was used exclusively in the covering of airplane wings and found to be satisfactory in every respect. During the present crisis, it became evident that the available supply of linen would not suffice for the demands of the military programs of the Allies, and it became necessary to find a material which would form a satisfactory substitute for linen. The urgency was emphasized by the conditions in Russia, from which the larger portion of the flax formerly had been derived.

As early as January, 1916, the Bureau started investigating the possibilities of substituting cotton for linen airplane fabric and found that the general consensus of opinion among manufacturers and investigators here and abroad was that cotton fabric could not be used for wing coverings. Their difficulties were due to the fact that they attempted to substitute structure of fabric rather than physical properties. The linen fiber has radically different properties from the cotton fiber, and the only hope for successful cotton airplane fabrics was so to change their structure that the ultimate fabric had the same properties as the linen fabric.

The investigation was confined to the study of stresses and stress distribution in fabrics, together with the factors covering the properties of cotton fabric as related to wing covering.

This phase of cotton manufacturing was an entirely new one, and great difficulty was experienced in studying the manufacture from a new angle, on account of the limited time available. Upon the entrance of this country into the war all the facilities of the manufacturers were made available to the Bureau's experts.

In March, 1917, the Bureau was in a position to issue instructions covering the construction of cotton fabrics, some of which proved quite successful. The next important step was to determine the actual performance of these fabrics and to this end samples were placed on Army planes at Langley Field and Navy planes at Pensacola during August, 1917. Later these fabrics were placed on planes manufactured by the Canadian Aeroplane Company of Toronto about the middle of October, 1917, in all cases with the most satisfactory results.

The Grade A cotton fabric now being supplied to the Air Service compares favorably with the linen regarding weight, has a much higher factor of safety, a greater tear resistance, and dopes up to satisfactory tautness. The life of any fabric is dependent entirely upon the life of the dope, and therefore the cotton has as long a life as the linen.

The English Government became concerned about its linen supply, and also adopted the fabrics designed by the Bureau.

As a result of more recent investigations by the Bureau of Standards, another distinct fabric has been evolved which is 25 per cent lighter than any linen fabric now in use, and is materially stronger.

Director S. W. Stratton has placed the services of the entire Bureau of Standard's staff at all times at the disposal of the Air Services of both the Army and Navy in attacking and solving new problems which have constantly been presented, and in fact the Bureau has been during the war practically an adjunct of the War and Navy Departments.

IX—National Advisory Committee for Aeronautics

THE National Advisory Committee for Aeronautics was established by Congress by Act approved March 3, 1915. Under the law the Committee is charged with the supervision and direction of the scientific study of the problems of flight with a view to their practical solution, the determination of the problems which should be experimentally attacked, their investigation and application to practical questions of aeronautics. The Committee is also authorized to direct and conduct research and experiment in aeronautics in such laboratory or laboratories, in whole or in part, as may be placed under its direction.

In addition to its specific duties, the Committee has acted as a clearing house for inventions submitted to the War and Navy Departments with a view to their possible usefulness in the field of aeronautics. These inventions have been studied carefully by the Committee's technical staff and those deemed worthy of development have been called to the attention of the Military branches of the Government. During the last year, the Committee has examined approximately seven thousand such inventions and suggestions.

The Committee is recognized by the Aircraft industry as an authoritative source of technical information and as a court of arbitration whose weighed judgment obtains. The National Advisory Committee for Aeronautics is today the only official agency for the development of aeronautics which numbers among its members officers of both the Army and the Navy thus assisting in the coordination of the air activities of these services.

The scope of activity for aeronautical research to be carried out by the Committee in the future has been outlined to include the following investigations:

1. Propellers; 2. Aerofoils, or elementary supporting and controlling surfaces; 3. Combinations of supporting and controlling surfaces; 4. Reaction between the airplane and the propeller system; 5. Structure; 6. Investigations to improve the present instruments for use in airplanes and to develop new instruments to meet future needs; 7. In connection with aviation engines, the problem of supercharging to maintain power at different altitudes; 8. Improvement of engine details, radiation, carburetors, ignition, and fuels and lubricants;

9. Standardization and investigation of materials for aircraft construction; 10. Free flight tests; 11. The study of the relation of the atmosphere to aeronautics.

Some of the more important reports rendered during the last year are:

1. Behavior of Airplanes in Gusts. 2. General Theory of the Blade Screw. 3. The Testing of Balloon Fabrics. 4. Aluminum and its Light Alloys. 5. Carbureting Conditions Characteristic of Aircraft Engines. 6. General Analysis of Airplane Radiator Problems. 7. Effect of Compression Ratio, Pressure, Temperature, and Humidity on Power. 8. Properties and Preparation of Ceramic Insulators for Spark Plugs. 9. Heat Energy of Various Ignition Sparks. 10. A New Process for the Production of Aircraft Engine Fuels.

With the completion of the Committee's aeronautical laboratory at Langley Field, the Army Experimental Air Station, the work of aeronautical research will be expanded, it is hoped, to cover present and future problems vital to the Science and Art of Aeronautics.

The National Advisory Committee for Aeronautics gave valuable service to the Army and Navy both before and especially during the early months of the war. This body of selected men, reporting directly to the Congress, furnished to the Chief Signal Officer a medium for counsel and advice. This Committee inaugurated and recommended the establishment of the Aircraft Board. Prior to the establishment of the Aircraft Board, the Chief Signal Officer enjoyed the counsel of the Advisory Committee which was always ready to assemble without regard to time or place.

Although the statute creating this Committee contemplated a general supervision of aeronautical research, all manner of questions were submitted to its deliberation and judgment during the early period of the war. Whether it was the founding of a permanent aeronautical experimental station which should be a sort of West Point for aeronautics, the assembling of University Presidents to establish curricula for our ground schools, or the search for a practical solution to the stifling situation confronting the Government as a result of the airplane patent controversy, the National Advisory Committee was at all times available to the Army and Navy authorities for counsel and decisions.

X—Work of the Science and Research Division of the Signal Corps

THE Science and Research Division of the Signal Corps was established by order of the Chief Signal Officer on October 22, 1917, and Lieut. Colonel R. A. Millikan placed at its head.

Its personnel, exclusive of the Meteorological Section, consisted on November 11, 1918, of twenty-one commissioned officers, 118 enlisted men, and sixteen civilian employes of scientific and technical qualifications. Four of these officers are abroad and seventeen in the United States.

At the time of the signing of the armistice, the Science and Research Division had in progress sixty-four problems.

A summary of the most important results actually achieved up to that time is given herewith:

1. The Aeronautic Instruments Section, in addition to fulfilling the function specifically assigned to it of writing all the initial specifications for aeronautical instruments in use on planes, and in working continually with the instruments in production in order to detect imperfections and make suggestions for improvement, designed and developed wholly within its organization, through the activity of its chief, Major C. E. Mendenhall, a new and improved Pitot-Venturi tube for use in the determinations of airplane air speed. This instrument was actually put into production and thirty-seven thousand ordered.

2. Major Mendenhall and Lieut. R. C. Williamson have cooperated with the General Electric Company in the development of a new and improved compass, ten thousand of which were produced. This compass is now in use on planes for the American Army.

3. The Science & Research Division cooperated with the Eastman Kodak Company in the development of an entirely new film camera which is in production and which is the only film camera in existence capable of taking the standard size 18 by 24-cm. pictures. This camera is entirely automatic and capable of taking one hundred pictures without refilling.

4. The Science and Research Division with the assistance of the Burke & James Company of Chicago developed a new plate camera which is a modification of the French De Ram. It is

semi-automatic, carrying fifty plates. It has been accepted and is in production now. Both this photographic development and the one mentioned under (3) were made possible solely by the bringing together of a highly trained scientific group in the Photographic Section of the Science & Research Division.

There would have been practically no possibility of the attainment of these results without such a group. This photographic group constituted one of the Sections of the Science & Research Division until about July 1, 1918, when it was transferred to the Production Division. The development of photography during the present war, due to the advent of the airplane has placed it permanently among the indispensable agencies for successful military operations. The older methods of recording personal observations have been superseded entirely by the far more accurate and reliable photographic record. A complete detailed photographic map must now be made daily of each sector immediately in front of an army, and by carefully matching these maps and by intensive study of each individual area, the maze of trenches, entanglements, machine-gun nests and shell-holes can be accurately analyzed. It is worthy of notice that 17,000 photographs were taken by the British army before the operations at St. Quentin in order that a relief map of the sector might be made before the drive against the Germans. By means of this map, every detail of the work to be performed by the British troops was planned. By a series of consecutive photographs taken at regular intervals by a moving-picture camera an accurate and reliable picture of a military road, for instance, showing all details to scale may now be made in a few minutes. With the aid of the camera the detection of camouflage is possible where the human eye would fail. This highly specialized photographic work has now taken its permanent place in the waging of modern warfare.

5. Dr. Gordon S. Fulcher, working in collaboration with the Miller Rubber Company, developed a leak proof tank simultaneously with the development of a similar tank in England—achievements of the utmost importance for the lives of Allied aviators. The Fulcher Tank was ordered placed upon all fighting planes.

6. Major C. E. Mendenhall and Lieut. John T. Tate, with the assistance of the General Electric Company, perfected a trench signalling lamp which, after test at the front, was

ordered sent over in considerable numbers and will probably constitute a standard American projector for the United States Army.

7. Major R. W. Wood developed a telescopic signaling device using a six-volt, two-ampere lamp. This lamp was tested at the front and favorably passed upon by the A.E.F. It has made possible light signaling in broad daylight over a distance of eighteen miles. General Pershing ordered a considerable number of these sent to the A.E.F.

8. Major Wood also developed a secret daylight signaling lamp which has a range of five miles. This also was ready for shipment abroad at the time of the signing of the armistice.

9. Secret signaling at night, with the aid of ultra-violet light, was perfected by this department, working in collaboration with Mr. Norman Marshall. With simple signaling telescopes of the sort mentioned above, using only a six-volt, two-ampere lamp, secret signals have easily been sent six miles. Major Wood also developed new means of adapting this method to the problems of signaling to airplanes, and secret signaling between convoys, and obtained thereby a device which will be of much use in peace as well as in war.

10. W. J. Lester, S. R. Williams, Capt B. J. Sherry and Sergt. W. H. Redman of this Department developed propaganda balloons which have a range of more than a thousand miles. This is an accomplishment which is invaluable to the future development of aviation, particularly with reference to transatlantic flights, whether in peace or in war.

11. Dr. W. F. G. Swann and Dr. Gordon S. Fulcher of the Science and Research Division gave invaluable service to the Balloon Section by making an elaborate and highly important study of the causes of fires in balloons and sending to the balloon officers in the Balloon Section directions for the prevention of such fires.

12. Dr. H. N. Russell of the Science and Research Division and Capt. J. P. Ault developed means for navigating airplanes with the aid of the sextant and an artificial horizon. They also developed means of speedy reduction of observations so that an observer in a plane can locate himself with an average error of not more than ten nautical miles within five minutes after he makes his observation. This achievement is of great value for the problem of long flights.

13. Lieut. John T. Tate and Otto Mohr developed a port-

able landing light for use on aviation fields. This device was officially tested and favorably reported upon by the division of Military Aeronautics. It is now in use at some fields and recommendation has been made by the Division of Military Aeronautics that two complete units be made a part of the permanent equipment of all aviation fields.

14. Dr. Harvey N. Davis of this Division represented the army in the development of the helium program and contributed in a large measure to the great success which has been attained in that work.

15. The Chemical Section under Dr. H. D. Gibbs developed new methods of producing acetone, which will make it possible to obtain this substance for one-fourth the price which the Government is now paying.

16. The Chemical Section, through the activity and energy of Dr. L. E. Wise, developed sensitizing dyes which previously had not been obtainable at all in the United States and which were urgently needed in airplane photography.

17. Capt. Herbert E. Ives and Dr. F. A. Saunders of this Department, in collaboration with I. W. Priest of the Bureau of Standards, made notable contributions in the development of color filters for detecting camouflage and increasing visibility. Forty thousand of these devices now are in use in the Army and Navy.

18. Dr. Wilmer A. Duff's Section worked out the only method which has been developed thus far for the accurate, experimental determination of bomb-trajectories. This is of primary importance in obtaining precision in bombing. It will have peace uses as well as war uses.

19. Dr. Duff's section also developed a bombsight stabilizer which has reduced the main error now made in bombing, namely, the error in the determination of the vertical, by more than three-fold. When it is remembered that a three-fold increase in the accuracy of bombing is precisely equivalent to the multiplication by three of the production of bombing planes, the importance of work of this kind scarcely needs comment.

There are probably a dozen of the nineteen developments mentioned above, each one of which is worth more to this country than the total amount spent upon the establishment and maintenance of the Science and Research Division from its inception up to the present time.

XI—Radio Development Work

IN the question of the engineering achievements of the Signal Corps during the war, the development of radio apparatus forms a large part. Inasmuch as the vacuum tube occupies so prominent a role in almost every kind of radio apparatus, an outline of its development logically precedes discussion of the radio sets.

VACUUM TUBES

The application to radio inter-communication of the vacuum tube—perhaps more properly called the thermionic tube or bulb—is one of the most interesting developments in the whole field of applied science. For not only has it made possible what has been justly heralded as one of the most spectacular achievements of the whole war—the airplane radiophone— but the confidence growing out of the extensive experience with the vacuum tube in warfare, coupled with its extreme adaptability, have resulted in a rapidly increasing amount of radio development involving its use.

PRE-WAR HISTORY

The vacuum tube was known in various forms before the war. Following extensive experiments with the so-called "Edison effect", Fleming, some years ago, produced the well known Fleming valve—a current rectifying device, capable therefore of being used as a detector of radio signals. This device contains two elements: an incandescent filament emitting electrons, and a plate upon which an alternating voltage is impressed, both placed within an evacuated bulb. Later Dr. Lee DeForest introduced an important modification by placing a wire mesh or "grid" between the filament and the plate. A small voltage variation on this grid produces the same current change through the tube as would a much larger voltage variation on the plate, thus adding amplifying properties to the detector characteristics of the Fleming valve. DeForest called his device the "audion". Later, with superior facilities for evacuation available and with a more intimate knowledge of the laws of thermionic emission from hot bodies, improvements and modifications were made in the audion or vacuum tube by both the General Electric Company and the Western Electric

Company, the latter designating their product as "vacuum tube", and the former the "pliotron".

In addition to acting as detectors and amplifiers, as mentioned above, vacuum tubes can function in two other important ways:

> 1. As Oscillators. In properly designed circuits containing inductance and capacity they will act as radio frequency generators, for use in transmitting or receiving radio signals.
>
> 2. As Modulators. By suitable connection to an oscillator circuit or antenna, they can be made to vary the power radiated so that the envelopes of the waves transmitted shall have any desired wave form, as for example, the speech waves from an ordinary telephone transmitter.

The most striking use made of vacuum tubes prior to the time we entered the war was the transmission of speech by radio from Washington to Paris and Honolulu, during the experiments carried out by the American Telephone and Telegraph Company and the Navy Department. Vacuum tubes were used as the radio frequency generator for transmitting, and for detector and amplifier in receiving.

When the United States entered the war, vacuum tubes already were in use by the Allied forces for various signaling purposes. The French particularly had been quick to recognize the military value of vacuum tubes and had, previous to June, 1917, developed very creditable tubes and apparatus. In America, tubes were in limited use as "repeaters" on telephone lines, and as detectors and amplifiers in laboratories and radio stations. The total production, however, in this country did not exceed three or four hundred a week.

DEVELOPMENTS DURING THE WAR

Early in our participation in the war, it became evident that vacuum tubes would be required in very large quantities in order to meet the growing demands for radio communication and signaling. It was equally evident that service conditions, not hitherto anticipated, would require great mechanical strength, freedom from disturbance under extreme vibration, and uniformity of product sufficient to make possible absolute interchangeability of the tubes in sets, without the necessity of readjusting when changing tubes. To these conditions must be added that of minimum size consistent with dependable operation.

To make such a device, with its complicated, yet accurately constructed metallic system, within a practically perfect vaccum, is no small problem even when made in the laboratory, on the individual unit basis, by a skilled operator who appreciates the delicacy of the job. To turn out tubes by the thousands by factory methods involves almost infinitely greater difficulties. How well certain companies, in collaboration with the Signal Corps, have succeeded in solving these difficulties is indicated by the fact that recently the total rate of production in the United States of high quality standardized tubes was considerably in excess of one million a year. This rate of production could be made many times greater on short notice.

As an example of the difficulties which this quantity production has involved may be mentioned that of evacuation. The degree of vacuum required is such that unusual methods of exhaust are necessary. The heating of the tubes in electric ovens is supplemented by heating of the elements of the tube by excessive filament and plate electrical power input. Molecular pumps are employed, necessitating an extremely large number of pumps to handle quantity production. Special treatment of metal parts prior to assembly is employed to reduce the gas given off by them during the exhaust process.

Another problem is that of making the complicated metallic structure of all tubes exactly alike, in order to insure identical electrical properties. As an indication of progress in this direction, it may be stated that one company is prepared to manufacture, in quantity, a certain tube in which the clearance between filament and grid is only three hundredths of an inch, the allowable variation being of course only a small percentage of this.

Manufacturing in quantity involves careful inspection. The problem of specifying definitely the required performance of tubes, the development of adequate testing specifications, the placing of standardized testing and inspection methods, personnel, and equipment in the various factories so that tubes manufactured at different times and places would, after passing inspection, be uniform and interchangeable—these questions were entirely new and have been solved almost entirely by the Signal Corps Engineers.

PRESENT STATE OF THE ART

Tubes developed by the Signal Corps may be divided into two general classes: the tungsten filament types as developed and manufactured by the General Electric Company and the De Forest Radio Telephone and Telegraph Company, and the coated filament or Wehnelt Cathode types as developed and manufactured by the Western Electric Company. The coated filament tubes so far have proven superior to the tungsten filament tubes for Signal Corps use. Both classes have been standardized as regards base, exterior dimensions, filament current and voltage, and in addition, plate voltage and output for transmitting tubes; and amplifying power and detecting power for receiving tubes. Except in certain special cases, the Signal Corps uses two types of tubes, one for transmitting, and another for receiving. The French and the British have been using one type for both transmitting and receiving, but present tendencies of the British are toward different tubes for different duties.

Vacuum tubes are now employed for electric wave detection, radio frequency and audio frequency amplification, radio telephony, particularly in the airplane radiophone, continuous wave radio telegraphy, voltage and current regulators on generators, and for other miscellaneous purposes. However, varied as are the applications at present, the uses, actual and potential, growing out of war development work have proved that the art of Vaccum Tube Engineering, and the application of its products to radio engineering, telephone and telegraph engineering, and particularly to electrical engineering in general, are still in their early infancy. That vacuum tubes in various forms and sizes will, within a few years, become widely used in every field of electrical development and application is not to be denied.

The engineering advancement accomplished in less than two years represents at least a decade under the normal conditions of peace, and our profession will, it is hoped, profit by this particular salvage of war which offers perhaps the most striking example extant of a minimum "time-lag" between the advanced "firing line" of so-called pure physics, and applied engineering.

The Chief Signal Officer considers that the work of standardization and quantity production of vacuum tubes accomplished during the last eighteen months under the pressure of military necessity, represents an advance in the art of electrical engineering which will prove of inestimable industrial and scientific value to this country, and to the engineering world at large.

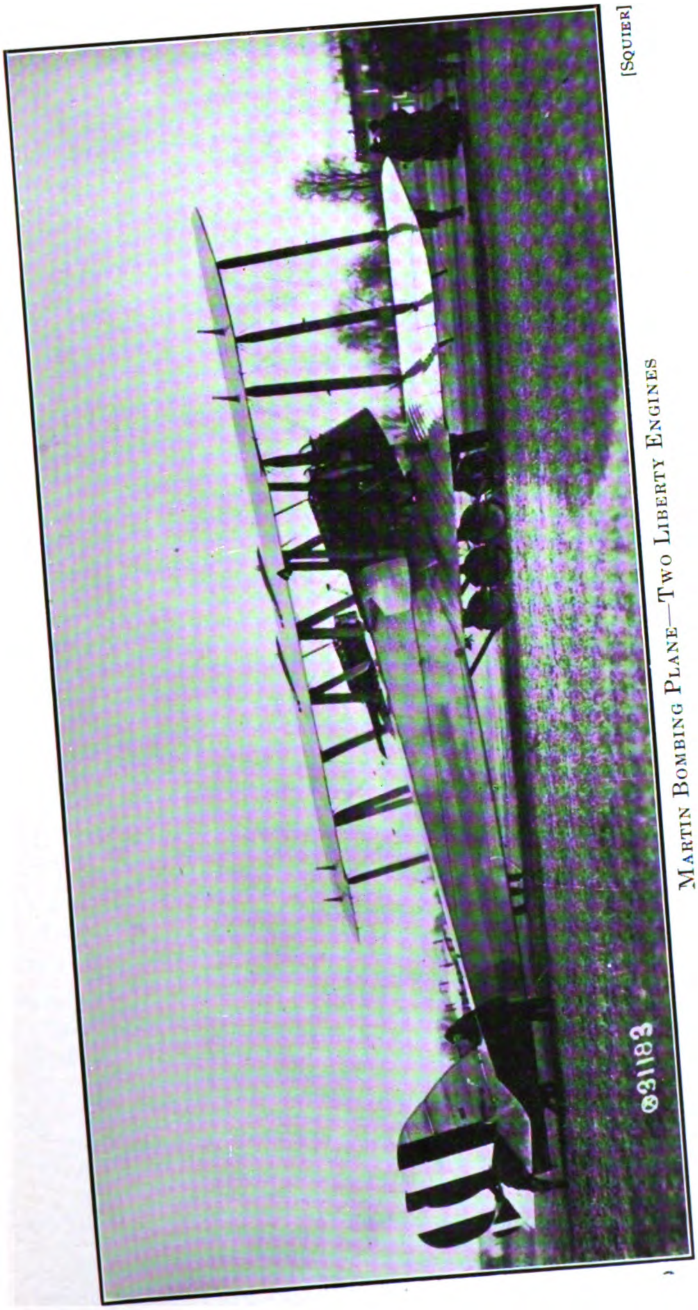
VOL. XXXVIII, NO. 2



[SQUIER]

MARTIN BOMBING PLANE—TWO LIBERTY ENGINES

AIRPLANE RADIO TELEPHONE SET

Prior to April, 1917, a few experiments had been made, in which speech had been transmitted from airplane to ground by radio methods; but the apparatus involved was hopelessly crude. On May 22, 1917, the Chief Signal Officer called a conference in his office at which the project of evolving a "voice command" equipment for airplanes, which should meet all the severe requirements of the military service, and which should be thoroughly standardized for quantity production, was definitely set in motion against time. The plan for accomplishing this was the same as in the evolution of the Liberty engine, and from the beginning this project was regarded as one of the major creative efforts in the development of the American Air Service. The present airplane radiophone, therefore, is the result of a period of intensive development work began shortly after we entered the war. The services of the Western Electric engineers were enlisted, and under the direction of the Signal Corps, rapid development resulted in successful tests as early as August, 1917. Speech was exchanged between airplanes twenty-five miles apart in October, and sample sets were sent at once to the Army in France for trial. Several thousands sets were ordered and have been completed and distributed to flying fields here and to the Air Service in France.

The satisfactory performance of this apparatus has resulted in a new type of military unit known as a voice-commanded squadron. The commander of an air fleet directs the movements of the individual units in any manner desired; the effectiveness of the squadron as a military machine is thereby enormously increased.

Other uses are in communicating information from airplanes to ground stations, and in directing one or more airplanes from a ground station. Innumerable applications will be evolved as the possibilities are realized.

The essential elements of the Airplane Radiophone are the power equipment, the radio equipment, and the antenna.

a. The power equipment includes a double-voltage direct-current generator driven by an air fan, with a vacuum-tube voltage regulator.

b. The radio equipment consists of the vacuum tube transmitting and receiving set, and the special telephone transmitters and receivers. Those of you who have heard the terrific roar of a Liberty engine will realize the difficulty of talking in an airplane in flight. The development of a transmitter which is affected by the human voice, and not by the enormously greater engine and wind noises, is one of the principal features of this set. Similarly, to shield the ears of the aviator from the same noises required a special combination of sound-insulating materials surrounding the telephone receivers and suitable for use within an aviator's helmet.

c. The antenna originally consisted of a flexible copper wire several hundred feet long, unreeled by the aviator and trailing almost horizontally behind the airplane. Modified antenna using much shorter wires fixed to the framework are now used.

The operation of the sets is extremely simple, all adjustments being made before leaving the ground. The only manipulation required of the aviator is that of the change-over switch to change from talking to listening.

AIRPLANE RADIO TELEGRAPH SET

The principal use of radio communication made during the war was in sending radio telegraph signals from observation airplaines, for controlling artillery fire. The French developed a set which consisted of several units, making the installation and operation complicated. The Signal Corps developed a self-contained set, which has been demonstrated to be far superior to any other airplane set.

It consists of three units—first, the 200-watt, 900-cycle alternator, driven by a regulating air fan, and containing in a stream line case attached to the generator, all the elements of the radio set. This radio apparatus is of the synchronous spark type, with four spark tones and nine wave lengths. The weight of the complete unit is only twenty three pounds, and size only six inches by six inches by twenty-six inches. The regulating air fan maintains the speed of the generator within four per cent of 4500 rev. per min., with air velocities between 60 and 200 miles an hour.

The remaining units in the complete set are a variometer or tuning coil, with antenna ammeter attached, and the antenna system, comprising a reel, insulated bushing, and training antenna. When it is realized that voltages of thirty thousand or more are produced by this set, the difficulties of insulation in such restricted spaces will be appreciated.

Ranges of communication of one hundred miles have been accomplished with this set.

AIRPLANE DIRECTION FINDER

One of the principal problems of airplane navigation has been the evolution of a suitable compass, particularly for night bombing work. Magnetic and gyroscopic compasses have limitations at present which make impossible reliable air navigation by dead reckoning.

The use of directional effects of loops or coils for receiving radio signals have resulted in the development of a radio compass for airplanes which gives positive information to the aerial navigator, and enables him either to locate his position by triangulation with respect to two beacon land stations, or to fly at any given angle with respect to a certain beacon station.

The apparatus consists of two principal parts—the antenna coils, and the tuning and amplifying apparatus. The antenna coils are mounted in the fuselage of the Handley-Page airplane, with suitable means for rotating in azimuth. The amplifier is extremely sensitive, consisting of a detector and six-stage amplifier. A novel feature of the amplifier is the use of iron-core transformers for frequencies of 100,000 cycles.

The direction of the beacon land radio station is determined by maximum strength of signals, in a highly ingenious manner developed originally by the British. The precission of the directional effect is remarkable. In fact the radio direction finder may well be called a radio eye, by which the aerial navigator sees one or more radio lighthouses which are sending identifying signals to guide him on this way. These lighthouses, furthermore, have certain advantages over the normal light-house in that their ranges may be much greater, and they are not invisible in the day time nor obscured by fog and mist.

The remarkable advances made during the last eighteen months have resulted in the application of radio communication to practically every phase of military aviation. Commercial and military possibilities have, however, hardly been touched as yet. It is believed that radio apparatus soon will be as essential on aircraft as it now is on ocean going steamships, and that its use will enormously increase the effectiveness of aircraft for all purposes.

XII—The Liberty Aircraft Engine

FOREWORD

AS we look back on the record of accomplishment in the problem of obtaining large numbers of high powered aviation engines for our Army and Navy Air Services both in this country and abroad, it seems to those of us who were in close contact with the work and the difficulties more like a fairy tale than the statement of hard facts which it is in reality. On the face of things, it certainly would seem to be the height of presumption to assume that this country could, following its almost total neglect of aviation development in previous years, hope to design, develop and produce in unprecedented quantities an acceptable aircraft engine of greater power than had yet been evolved by any of the European nations, even under their spurs of governmental encouragement and tremendous war demands. Yet just that and nothing else was the only thing to do, and the story of its doing is one of the most brilliant chapters in the history of our Country's part in the Great War.

INITIAL SITUATION

At the time this country entered the war, in April 1917, there were being built in the United States only four makes of engines that were developed so far as to be considered of any military value, and even these were useful only for primary training. We had no engines at all suitable for services on the battle front, or even for the advanced training of pilots. The largest engine of domestic manufacture developed about 220 horse power and had not proved satisfactory when judged from the standpoint of combat service requirements. The others ranged in power from 90 h. p. to 135 h. p. It, therefore, was evident that the existing American engines could be used for preliminary instruction purposes only, and that their further manufacture should be limited to the training requirements. This was done, with the result that by far the greater portion of the primary training of pilots has been conducted with the Curtis OX-5 90-h. p. engine, the quantity production of which was early obtained. This engine was particularly valuable, owing to the very satisfactory training plane which had been designed around it. The Hall-Scott A7-A 100-h. p. engine was also extensively used at first until the production of the Curtiss engine could be brought to a point to meet all demands for primary training.

Two European engines, the Gnome 100-h. p. and the Hispano-Suiza 150-h. p., were being put into production in this country early in 1917, by the General Vehicle Company and the Wright-Martin Aircraft Corporation respectively. These concerns had obtained contracts with Great Britain and France, but were experiencing considerable difficulty in getting production under way. The production of the first Gnome engine was not completed until a period of more than nine months had elapsed, during all of which time English experts were present in the contractor's plant and aiding the manufacture. In the case of the Hispano-Suiza, notwithstanding the assistance of a group of French experts sent over to help get it into production in the minimum time, thirteen months were required to get the first production engine on the test block, and another month before the first delivery was made. Preparation periods were filled with the most costly experiments and the development of methods and tools for performing the intricate operations required by the design of these engines. All of which expense and delay had cost our Allies dearly.

The Gnome and Hispano-Suiza engines represented the highest product of European design and were in a perfected and standardized state, according to foreign practise and conditions, when their production was undertaken in this country. Nevertheless, the changes involved in adapting them to manufacture by American methods, and the development of expert workers for those operations which could not readily be so adapted, required so much time that the advances made in aeronautical engineering rendered such engines largely obsolete for service at the front, by the time they could be produced in sufficient numbers to supply any material portion of the requirements.

These two engines were, however, of unquestioned value for advanced training purposes, the Hispano-Suiza in particular being a dominant factor in this work. Later the Le Rhone 80-h. p. was put into production by the Union Switch & Signal Company and, by proper utilization of the lessons learned in the case of the other two foreign engines, reasonably satisfactory progress was made in manufacture. This engine, too, was used for advanced training work.

LIBERTY ENGINE INCEPTION AND EXPERIMENTAL DEVELOPMENT

One of the serious mistakes which the Allies had fallen into at the time the United States entered the war was the development of a multiplicity of types of engines and planes which made it impossible to have a large number of any one of these types. As a further consequence, the trained personnel on the ground to operate and repair the machines had grown to such a proportion that it was estimated that from thirty to fifty men were required on the ground to keep each one of the many types of planes in the air on the fighting line. Manifestly, unless this large number of trained men per fighting plane could be reduced by some means it would be hopeless to expect within a reasonable time to put into the air thousands of flying planes, because a single thousand planes on this basis would require from 30,000 to 50,000 men in attendance.

The experience obtained in getting two foreign engines into production in this country and under our manufacturing methods, so thoroughly demonstrated the futility of attempting any such solution of our service engine problem as to at once eliminate its continued consideration. It was realized that copies of foreign designs could not be available in time and in adequate size or numbers to answer the demand for an overwhelming air force at the front. American air performance would have been very small indeed if limited by such a handicap as this.

Moreover, in spite of the fact that a technical commission was at once organized and despatched for the purpose of getting first hand information on the front and in the aircraft centers of Europe, it was unthinkable that this country should sit idly by and wait perhaps months for the final definite report which should decide the nature and extent of our part in the Allied aircraft program. Since the most successful airplanes are designed around specific engines, and the engine involves the greatest expenditure of time and effort in development, it was apparent to a few of us who were in close contact with the situation that it would in all likelihood be possible to design, develop and produce an entirely new American engine, embodying characteristics which would render it particularly adapted to manufacture under American conditions, in less time than would be required by the commission to determine the particular European engines that offered the best approximation to the various exacting requirements of service and production, plus the time to get it in production in this country. It was decided, therefore, that our efforts should be directed along both these channels simultaneously and in addition to purchase in Europe whatever service equipment might be available, to tide over the interval while we were getting into production.

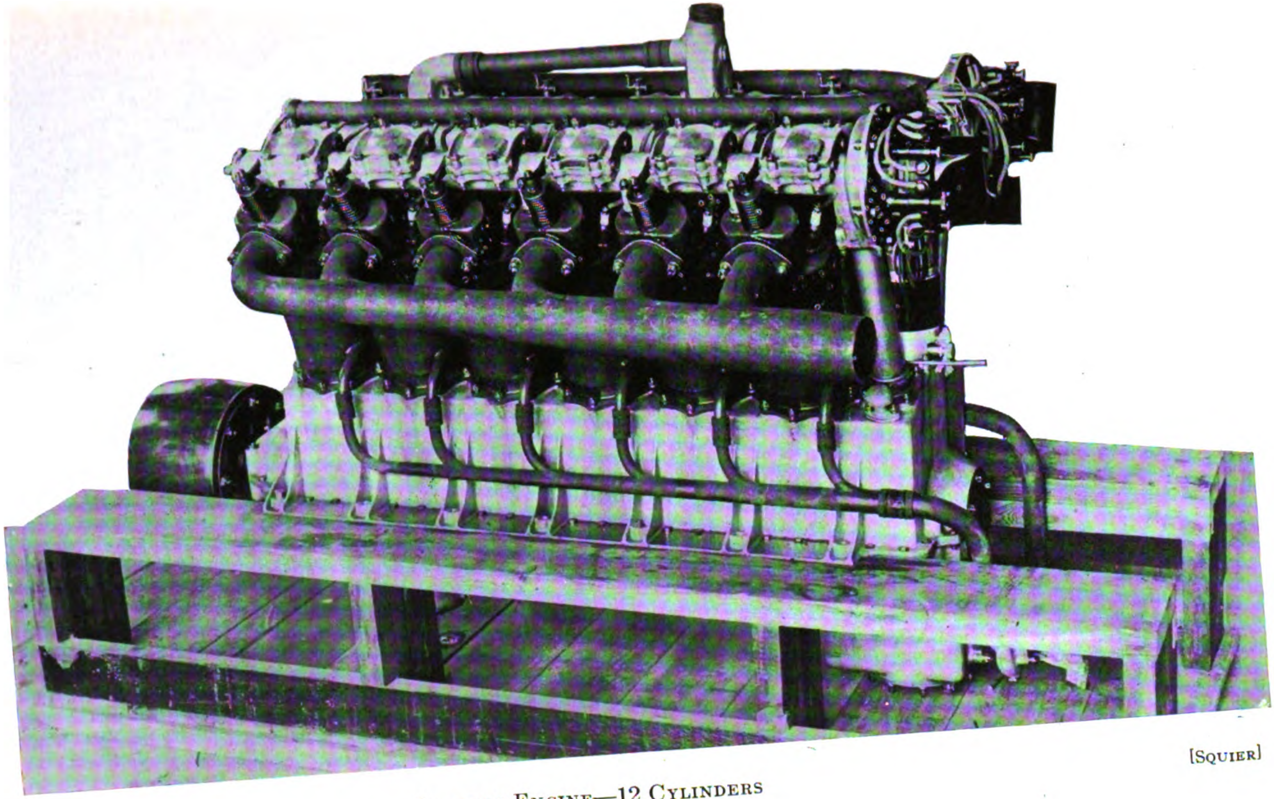
It is apparent that the fundamental unit of engine design or construction is the cylinder, and that the evolution of engine power rested mainly with the unit power capacity of that cylinder which could be taken as representing the largest practicable size sanctioned by the state of the art at that time. Starting with the foundation of this cylinder then, it was the most direct reasoning to conclude that all requirements of the service for engines of varying power capacities could be most logically met by combining these unit cylinders into groups of whatever number were required to produce the several sizes of engines desired. This was done, and the cylinder size of five inches bore by seven inches stroke was selected, after a careful examination of the performance of both American and European engines of the then most modern design, as being the largest that could be relied upon to give satisfactory service. While originally designed to produce approximately 28 h. p., this cylinder has been so developed as to yield at present more than 40 h. p. as the result of somewhat increasing the speed and altering the functioning characteristics. The standard unit cylinders were to be used in engines having four or more cylinders each and yielding the following power output:

Number of Cylinders.	Original Rated h.p.
4	110
6	165
8	225
12	335

Thus, for the first time in the history of the aeronautic engine for military uses, a truly comprehensive design plan was evolved which in a simple and direct manner provided for the production of a whole line of engines of wide power capacities, but composed of units that were highly standardized and therefore could be really manufactured, instead of being merely built. This was, and is, the only way in which this country could meet the requirements of this most vital part of the program.

It must not be thought, however, that such a revolutionary decision was easy to make, or adhere to when made, in the face of all kinds of adverse criticism, some of which seemed to be based upon adequate grounds. The development of new types of aircraft engines heretofore had been such a time-consuming matter that it was generally regarded as a thing to be avoided if any ready-developed engine could be found anywhere which would at all answer the requirements. Thus the numerical preponderance of opinion was against the possibility of a standardized American engine being designed, developed, and produced in large numbers, in anything like as short a time as would be required to duplicate some European engine. The nation may well render thanks that its destinies in this particular were guided by such a far-seeing and courageous group of men, who had the ability to formulate such plans and then to enforce their realization.

You are all familiar to some extent with the history of the design and construction of this engine:—how Lieutenant Colonels J. G. Vincent, of the Packard Co., and E. J. Hall, of the Hall-Scott Motor Car Co., laid down the general features and got out the first assembly drawings personally between mid-day of May 29 and the afternoon of May 31, 1917, working in Col. E. A. Deed's apartment in a Washington hotel in response to a request for a report on the aircraft engine situation, which came from Howard E. Coffin, Chairman of the Aircraft Production Board; the Chief Signal Officer of the Army; Colonel Edward A. Deeds, Chief of the Equipment Division, Signal Corps, and Colonel Sidney D. Waldon, Assistant Chief:—how the order to build ten sample eights and twelves was given as the result of the approval by the joint conference of the Army and Navy Technical Board and the Aircraft Production Board:—how the first engine, an eight-cylinder, was built in one month as a result of the enthusiastic cooperation of some ten manufacturers, each of whom produced those parts for which they were best fitted:—how the first sample twelve-cylinder finished its official fifty-hour endurance test eighty-two days from the time the order for samples was given, and that the total elapsed time during this test was only about fifty five hours, a record-breaking performance:—and how the success of this endurance test definitely removed the engine from the experimental stage to the realm of proved engines.



[SQUIER]

LIBERTY ENGINE—12 CYLINDERS

A very gratifying endorsement of this standardized engine project came from the late Colonel R. C. Bolling, whose untimely death in France cost the American Air Service one of its most valuable officers, and Col. V. E. Clark, and Lieut. Col. Howard C. Marmon, members of the commission sent abroad to ascertain the requirements, and which returned about this time, to the effect that a 400 h. p. engine was absolutely demanded at the front for the types of airplanes which it had been decided this country should supply, and that no engine of this size then existed in Europe.

Those of us who are familiar with the difficulties and disappointments involved in the design, development and perfection of any form of intricate mechanical device can readily appreciate the really remarkable accomplishment represented in the Liberty. Therefore, it is not at all surprising that the representatives of the Allies were for some time unable to believe the full truth of this accomplishment. They never had been able to obtain such action and were, naturally, only fully convinced after many varied and exhaustive tests. So well recognized did the value of the Liberty engine become, however, that the Allies had on order at the time of signing the armistice 16,741 Liberty engines, and were constantly endeavoring each to increase their rate of monthly delivery. Airplanes were being designed around this engine in all Allied countries and it was fast becoming the predominating aeronautical engine of the Allied cause.

It is of interest in this connection to note that this standardized engine already has been tested in the twenty-four cylinder model, and shown results which prove that the original basic idea will provide for engines of any size which would have been required for any probable increase in airplane size during years of continuation of the war. The sixteen cylinder was also proved by the success of the larger engine.

The experimental development of the Liberty has been in charge of a department entirely separate from that dealing with its production, the Airplane Engineering Department under Lieut. Col. J. C. Vincent and Lieut. Col. Howard C. Marmon. The work of this department has resulted in a continuous improvement of the power output and performance characteristics of the Liberty twelve cylinder, to such an extent that 526 h. p. have been obtained with special fuel and detail changes; certainly a remarkable increase from the

335 h. p. which the original design was intended to yield. While the weight of the service engine per horse power has remained at approximately two pounds, the maximum present development had reduced this figure to one and two thirds pounds.

LIBERTY PRODUCTION—DEVELOPMENT AND PRODUCTION

The record of production and production-development of the Liberty conclusively proves the wisdom of the decision to concentrate all efforts on this one engine for the major part of our program of combat engines. In common with all similar machines, many possible improvements and cost reductions become evident as the manufacturing processes and tools are being evolved and as experience is being acquired in the actual production. Also, experience in the operating and adjustment of these engines led to alterations being made which resulted in increasing the power output; so that when we were advised that more power was desired than the 335 h. p. which the original Liberty was designed to produce, the necessary steps already were known and the delay incidental to putting them into effect was small. The resulting power increase to about 375 h. p. answered requirements for several months when advices were again received that more power was needed, and we then again made such alterations as were required to increase the power to around 420 h. p. The weight of some of the parts was increased at this time in order that the reliability might not be reduced.

The problem of production was placed in the hands of a separate department in charge of Lieut. H. H. Emmons, U.S.N., and the continuous assistance of such men as Henry M. Leland, of the Lincoln Motors Co.; C. Harold Wills, of the Ford Motor Co.; F. F. Beall, O. E. Hunt and Edward Roberts, all of the Packard Motor Co., were obtained by Major J. G. Heaslet, in charge of the Detroit district. The work of Mr. Wills which has the greatest value was the perfection of a new process for the forging of cylinder blanks in sufficient quantities to supply all manufacturers, and which was so very effective that the problem of cylinder forging supply and cost was reduced to a minor consideration. The wisdom of the action taken is evidenced by the production of 1100 Liberty 12s in one year from the day when Messrs. Vincent and Hall first met and started a preliminary drawing, and over 15,000 by the end of another six months.

It is perhaps to be expected that many criticisms would be leveled at an engine evolved under the conditions obtaining at that time, and registering the large success which it represents, but all such have proved to be the result of misinformation regarding the conditions to be met, the fundamental ideas of design, or of lack of appreciation of the difficulties encountered in creating at a single stroke and without previous experience, an aeronautical power plant so much larger than was then in existence.

The Liberty engine stands today as an achievement which for daring, constructive imagination and farsightedness will ever be a cause of pride to the American people.

XIII—A Granular Theory of Armies

IN these days we are face to face with the so-called granular theory of electricity and matter, whose fundamental unit is the electron. From one angle of view, as I shall hope to show, there is also a granular theory of armies.

The history of the military operations of the past disclose the fact that the actual combatant troops are specially selected men most fit physically for the hardships of war. In general terms the actual fighting has been restricted to selected persons from the male population with definite maximum and minimum limits for age and also definite requirements for the vital physical functions.

In the language of the physicist we may say that the male population of a nation is carefully segregated by a sort of "band filter" which picks out for combatant warfare only those whose age cycles fall between say eighteen and thirty years. These selected men are then brought to a further common standard by intensive physical training before they are permitted actual combatant service. This elevation of the military unit to a common physical standard makes possible, as will be readily seen, the formation of larger units such as companies, battalions, brigades, divisions, corps and armies and their direction by a centralized command in the tactics of war.

Invoking the law of averages, we may say furthermore that,—*the one unchanging factor in warfare is the individual physical strength of a man.*

The soldiers of Ceasar's army were physically no stronger nor weaker than our own. On the average, a battalion or company of soldiers from one nation can march, for instance, just as far in a day as a battalion or company from any other nation, and this statement was equally true before the Christian era, and is not likely to change in the future.

In consequence of this fact, military supremacy must be looked for primarily in the weapons and agencies provided by scientists and engineers and placed in the hands of these combatant units to multiply their military strength.

To illustrate, the day in the fourteenth century, when Berthold Schwartz or whoever actually invented gunpowder, put together charcoal, sulphur and saltpeter, he, by a scientific act, and at a single stroke, exerted more influence upon the development of warfare and indeed the history of the world since that time, than many armies could accomplish by any mere physical qualities which they possessed.

Stated in another way, if our enemies in the recent great conflict had been made up wholly of civilizations like those of Turkey and Bulgaria, nearly all of the agencies which I have been describing during the past hour would have been utterly impossible of either development or production by them. There were no Liberty engines nor airplane radio sets evolved or made in this quarter, nor could there be such without outside aid.

It follows from this, that those civilizations which by their scientific and engineering training can create and manufacture these agencies, will and must control the fortunes of war in the future, or far better, apply these same agencies, in a potential way, to banish war from the world for all time.

The present war has made aviation in four years what it would have taken two decades at least to accomplish in times of peace, and has multiplied the reach and capabilities of the physical military unit to an extent which is only now in the beginning. May we not fervently hope that the further development of aerial navigation will place in our hands such potential destructive powers as to go a long way toward making war impossible again?

I can say no more at the present time.

* * * * * *

IN conclusion, the courteous invitation of the Board of Directors of this Institute to address you on this occasion, suggested that I may have some message to deliver to the American Engineer.

The organization of the American Air Service requiring, *inter alia*, the foundation of a new industry under the adverse conditions above outlined, involved a creative project worthy of the broad conceptions for which the United States is noted.

When the United States entered the war, it was evident that the time was fast approaching when the reservoirs of raw material for the allies were to be found only in the United States and that America's effort should be so organized from the beginning as to furnish a continuous flow of this necessary raw material, not only for our own air program but for those of our Allies as well. It was clear, for instance, that the spruce, the fabric, the dope and the oil must be produced as a part of our program on a scale to supply also the air programs of our Allies. It was always the general Allied cause therefore which controlled the decisions in founding this industry, rather than the needs of the United States alone, and this is obviously the only correct point of view.

It is believed that the major decisions which had to be made by those in authority were accurately made, and promptly executed, and that as a consequence the record of the United States Air Service during the war shows a creditable performance. If America will but press on into the future, building upon the sound foundations now erected, she may lead the world in the development and utilization of aerial navigation for the triumphs of peace.

By a wise policy of readjustment, utilizing immediately our machines and our surplus aviators for the rapid expansion of the aerial mail and special passenger services, it will be possible to salvage for the nation a greater percentage of the money and energy invested for strictly war purposes than from any other feature of our war activities.

As a steward of the people, and in all humility therefore, I must not shrink from answering, as best I may, your request for a message which applies equally to peace and war.

The general principles which governed in the making of this enterprise in all of its ramifications of material and personnel, and to which the success attained must be attributed, may perhaps be formulated as follows:

VICTORY CREED

To foster individual talent, imagination and initiative, to couple with this a high degree of cooperation, and to subject these to a not too minute direction; the whole vitalized by a supreme purpose which serves as the magic key to unlock the upper strata of the energies of men.

Presented at the 342d Meeting of the American Institute of Electrical Engineers, Philadelphia, Pa., December 13, 1918.

AMERICAN ENGINEERING RESEARCH

BY W. R. WHITNEY

THE purpose of this paper is to call attention to our national condition in relation to engineering research, in the hope that the desire among engineers to advance the sciences may be discussed and crystallized into the most acceptable form. The subject must have some sharpness of definition, and so I will give the meanings I attach to the title.

I am using the word research, to cover painstaking investigations which *add* to knowledge. Research alone may be too general a term to interest all engineers, so I limit my use of the term by the adjective "engineering", and mean by that, the study of matter. Much research may be done in fields not connected with engineering, but I am not referring now to archaeological, geographical, psychological research, or other similar fields where study and experiment also add to human knowledge. For the sake of a simple and clear field I am omitting such sciences. I use the prefix American, to call attention to one of the most burning questions which confronts us today. We have been so keen in engineering that American engineering is unsurpassed in the world, but we never made a fair start in American engineering research. Moreover, we have no plan for producing research men, though we have plenty of plans for consuming them.

Research is the foundation of engineering, whether it be electrical, physical, chemical, biological, or what not. It sometimes seems as though much of our best engineering is only very slightly removed from the original research in time or space. If the research forms the foundation, then engineers quickly add the first story. When the investigators showed the value of typhus vaccination, the Army doctors used it on a million soldiers. General Gorgas recently wrote Dr. Keen that of over 1½ million soldiers, there were only 18 deaths from this disease in 1917. At the Civil War rate there would have been 7200 deaths. That is good American engineering research. But who is responsible for the research men? How may we procure and support them? A part of this responsibility is your own.

During a certain period of our American history there was a Puritan atmosphere in research. It hung like a fog over the territory of the Pilgrims, and even now it clouds the issues between engineering and research. It meant purity to the extent of sterility. It was with interest that I recently read, with the above geographical thought in mind, one of Emerson's Essays. He puts our duty in such a clear light that, before going into problems of detail, I want to quote him. His use of exactly the right word to give clearness to his thought seems very wonderful and his words will bear a more careful analysis than anything I can say.

> The destiny of organized nature is amelioration and who can tell its limits? It is for man to tame the chaos. On every side while he lives, to scatter the seeds of science and of song, that climate, corn, animals and men may be milder and the germs of love and benefit may be multiplied.

If we could all learn that by heart, I could well stop my talk at this point.

The experience of the past few months developed in the mind of practically every intelligent man a desire to do something to advance the country's interest. This was not confined to scientists and engineers, but was marked in those cases. The number of scientific and engineering organizations which evinced this desirable spirit is too long to read. Our leading societies united in committees representing all the sciences, and they in turn formed many sub-committees. The National Research Council enlisted in one committee or another almost all the scientists of the country. The Council of National Defense established scores of committees on engineering and allied lines. Inventories of everything conceivable were taken, including most of the material and personnel of our colleges and engineering schools.

Now there is one defect in this system of rapid utilization of our resources. It does not produce any new material, though it may organize the old. We needed organized engineering research long before the war. We needed it more during the war, and we shall certainly need it after the war. It is the duty of engineers to study this matter and take active steps to correct it. The problem is: how shall we insure the preparation of plenty of American men of science by some system which makes us independent of foreign assistance? My belief is that it can well be done in our existing colleges by greater attention to new material truth. Experimental work in the sciences best prepares and preserves those desirable qualities in teachers: interest and enthusiasm. Any plan which would insure properly supported investigators whose vocation was experiment and whose avocation was teaching, where students could *work* with them, would be a most natural development. It is a way already thoroughly tested abroad and would be a step of the greatest value to this country.

It is unfortunate that we have no generally acceptable plan for insuring our scientific work and our engineering research. There has been little better than chaos on this subject thus far in America: No one's life work was research, though to a few it was a by-product. Within the past few years, and in a few lines in certain universities, investigations into the laws or properties of matter have been under way. This has been poorly appreciated. The *exceptions* are those successes which led to rapid physical amelioration, as of death or pain (naturally the first places for such appreciation). The value of research on the hook worm is readily understood. Heredity-studies in corn or cattle are recognized as worth while, but there are many researches undertaken whose value is not so apparent on the surface, and yet whose ultimate potency is warrant for their consummation. But for us at present, while the product of research work is desirable, the preparation of the men is of greater importance.

Because our condition has been described before and remedies suggested, is no reason why attention should not be called to it again. Something should be done. Important steps in a democracy call for repeated attempts to inform the interested people. Perhaps scores of addresses on general preparedness delivered before the war were wasted, but it was safer to assume that the reiteration was necessary.

It is owing to our Yankee inventiveness that I am interested in seeing much greater attention given to the problems of our engineering research. We are inclined to be so elated by our apparent successes in industry, that we imagine that there is some way to build without foundation, to practise without experience, to reap where we have never sown. Hundreds of thousands of inventors are choking our patent offices with ideas which can have but one end, the unhappy end of the inventor. This condition is wrong. We cannot wish to perpetuate it. It may be greatly ameliorated by careful planning of engineering and research education in America. This planning falls as a duty on the engineers themselves.

There is a general opinion that discovery of truth is very prevalent here, and that somewhere in our national archives there lie buried a lot of wonderful but undeveloped possibilities. You have probably received notices from different groups of people who want to bring to light and life some such desirable inventions. As a matter of fact, there are probably very few such things in existence. One reason is that there is actually more capital to develop new ideas and more capitalists who see possibilities which do not exist, than are justified by works. In fact, while we lack training and knowledge as inventors, we more sorely lack men who are sufficiently expert to pass with certainty on suggestions of abnormal minds. The reason the steam engine and the submarine were not earlier recognized was due to the scarcity of men who knew science. When we had one Langley on aeronautics we needed 100. Paucity of knowledge is our present trouble, not superabundance of inventions. The point in this illustration is that we badly need more highly trained quantitative men of science. Our National planning for research, except for research in agriculture (which planning, strange to say, was done during the Civil War), has been entirely neglected. Agriculture is not our only interest, but even in that field, the future lies in the hands of the young research chemists and engineers who should do the work on potash and fixed nitrogen.

It is on this point of the special need for planning that I want to lay stress. Ways to accomplish the end have been tested and proved. Particularly during the past century there have appeared in other countries men who devoted their entire time to study in fields of new knowledge which by contact had attracted them. We might possibly have called them specialists, high brows, hobbyists, or men of large interrogation. They were very valuable.

These men were found in many walks of life, but by far the greater part of them were, or soon became, attached to foreign universities. They gave fully of their products to one another and took extreme and careful steps to give to the world accurate and detailed reports of their researches. Davy and Faraday were of this type, Liebig and Wöhler were like them, and it is safe to say that such benefactors of the race could be cited by the hundred. In most cases their entire lives were spent in their laboratories and all that they learned was freely published. Still more important; in the laboratories of these men, particularly promising students were allowed to work, and these teachers illustrated for them scientific research by example. They did not confine their teaching to talks about the work of others. The men referred to, and others, such as Helmholtz, Kelvin, Berthelot, and more recent prototypes, such as Ramsay, Moissan, and Haber, were alike in these respects. We have produced altogether too few of them in America, and supported none. They became unusual men, but they started much like others. They were developed by a system or plan. As they developed in interest, in knowledge of new things, and grew abnormal in this respect, the opportunity for further development was provided, usually by the state. There is no reason to assume that the product they represent cannot be grown on American soil. They were the result of a policy almost identical in all cases. Each was freed by some planned system to evolve himself and follow his studies along the lines he chose, and he was given the assistance of students who were at the same time learning the value and rare power of careful thought and painstaking investigation. They created atmospheres of scientific pioneering. The teacher was the leader. He was exploring. His interest was transferred to others by that most direct way—close contact. The lines of scientific endeavor were not chosen by some remote director, or committee of experiment, but the subject itself led the investigator along, and new truth was the sole aim. The professor then became the leader in the university, because he was following a new line of action and not because, at the request of a faculty committee, he was perhaps trying to solve some particular indigenous problem, or reducing the cost of some existing factory product. He was being led by Nature, instead of trying, as the industrial laboratories so often do, to force Nature along lines which we think most desirable.

Someone has suggested that possibly our industrial research laboratories could supply the country's deficiency in scientific research and its teaching. Many industrial laboratories have been established recently, but, to my mind, there does not seem the slightest possibility of thus meeting the real need of the country. It is neither natural, nor desirable, and most recent writers on the subject have been clear on this point. The interesting papers by Colonel Carty, Dr. Jewett, and Mr.

Skinner, in the TRANSACTIONS of the A. I. E. E., are in good accord on this point.

It may be asked, do you consider it a good plan to arrange our colleges so that every teacher with a hobby may develop it by the aid of the students? If all our teachers had enjoyed good training in science and were good scientific investigators, the answer would certainly be "yes", but this is not always the case. Therefore we must lend our aid in helping to establish a condition which will insure a greater number of scientific teachers who are also trained as productive scientists. This is in reality the method employed in those countries where scientific education has been most advanced.

In other words, our great American engineering problem today is not, how shall we make use of our trained investigators? Shall we organize a few large centers of research and solve there the industrial problems of the country, or, shall we encourage and assist the industries to give more attention to research work? But it is rather: how may we produce annually active young students of matter at a greater rate but of higher quality than any other country? We must think in terms of thousands per year of the type of trained men represented, say by the doctor's degree, or by two or more years of individual experimental work.

The direct object of this paper is not to ask for the appointment of some committee to cooperate in planning American engineering training and knowledge. We do not need more committees for this work, but more constructive activity on a dozen existing committees. In other words, enough machinery already exists to do the work, and we need but a clear view of the necessary steps. Probably no one person has completed a perfect plan, but many have advanced suggestions, all of which seem to have failed to meet sufficient acceptance to move the wheels. My own ideas are not presented as new and original. They are plans of others, but they seem most natural and desirable because they accept higher education as our common right. They seem democratic.

Several years ago the American Association for the Advancement of Science appointed a Committee of One Hundred to bring about cooperation between universities and industries along the line of improving our work in science, its growth, and its use. Other organizations undertook similar studies, but at that time most of the effort was expended in arranging for the use of, rather than for the production of facts, or of useful men. It was a shortsighted plan, helpful but not broad enough. In several colleges, research fellowships have been established, but these were generally for the solution of definite manufacturing problems where private interests seemed justified in paying for the work. This was done because scientific research which was aimed solely towards new physical truth could not be thus supported. Such methods are doubtless useful, but their aim is low. They advance single industries but are not intended to establish and make known new truths. Such organizations will only rarely become research centers where new leads in science will be persistently followed by groups of intensely interested investigators. There is greater value and attraction in disclosure of new physical phenomena than in any probable financial returns, and the atmosphere in a laboratory of scientific research is a thing by itself. But it cannot evolve of itself, and it is for practical beneficiaries, such as engineers and the public, to find the way.

Central bureaus of science and research have been repeatedly advocated and many are still being planned. The plans vary from separate departmental government laboratories like those of the Department of Agriculture, the Bureau of Mines, and the Bureau of Standards, to those of separate groups of colleges, groups of industries, societies, and finally, groups of men. One such is the most recent plan of the National Institute of Inventors. None of these is probably perfect. Most of them would consume (possibly ossify), but not produce men. Perhaps all of them should be studied by engineers and some of them developed, but if many were carried out, it would immediately become evident that our crying need is for general college research work to prepare trained investigators.

A few years ago a bill was prepared for Congress which had for its object the establishment of engineering research work in the federally assisted colleges of the country, and this called for additional federal support. One of the criticisms of the plan was that it did not include all colleges. It had been thought that the precedent having been established in 1862 of giving governmental aid to these institutions for their research and teaching work in agriculture, it might not be difficult to extend this line of activity to other scientific research work. One of the reasons this bill was not sufficiently supported was that a large number of struggling state universities and other colleges objected to the distinction which would be made. This finally led to other proposals being drafted, and one, known as the Smith-Howard Bill, seems to be the most satisfactory suggestion yet made. Others are also appearing. It is not my intention to go into the details of this bill here. But its existence and its fundamental concept deserves your careful attention and your active interest. It called for funds for research in the colleges; $15,000. for a college in each state. Fifteen minutes of our present year's war cost would care for that plan a whole year. The plan seems a good experiment, but needs support. This line of thought raises the question whether our democracy should pay for its education and its standing in science and engineering, or whether it should be left to accidental philanthropy, to the begging ability of college presidents, or be neglected altogether.

President Shurman, of Cornell, said a few months ago:

> Germany has the advantage over all her opponents, especially Great Britain and the United States, in the solid fabric she has constructed during the last generation by means of generous government encouragement of, and appreciation for, scientific research and instruction. Our Government today, instructed by the war, is ready to spend billions of dollars for new scientific truths in which, prior to the war, it felt no concern and for which it would make no provisions.

This same thought has been expressed by others in many ways. The facts are pretty well known, but are still not entirely digested. We are such creatures of habit that we may never awaken to the fact that we are a slow but sanguine people. Slow, because our rate of advance as measured over the last century is less than Japan's; sanguine, because we hope for the best without being willing to provide for it.

If you consult the university president or engineering educator who is well acquainted with higher education in America and ask him why we have been so backward in the highest class of scientific teaching, he will generally reply, "lack of money". We are forced to train so many men to reach a certain stage of preparedness for standard vocations that we cannot afford to encourage advanced work nor can we obtain teachers who are primarily workers in their science. Our conditions in America are still in that stage of teaching where our energies must be exclusively used to repeat to students annually certain knowledge already acquired, but we cannot provide for acquirement of new knowledge nor for the training of men to obtain it. As far as our collective powers and plans go, the sciences would remain stationary.

Apparently persons of highest intelligence believe that while our schools should be supported by taxation, this should apply only up to a certain grade. Above that grade we should beg private interests for our advance in knowledge and for our most highly trained men, for our studies of disease and our search for cures. This fact accounts for the difficulty of the college president. It is merely a bad habit. Certainly no one really approves of it. Everyone who thinks carefully can find plenty of fault with it, but the engineering of a better plan is left undone. That is an engineer's job. In the past few decades intelligent men of wealth have fortunately recognized some of the needs of higher education in our country where our pioneer activities have not developed any satisfactory system. By this means, great good has certainly been accomplished, but the philanthropic method can scarcely be a strengthening one. It cannot lead to proper appreciation of the value of the advancement of knowledge by the people.

One of our greatest dangers is that, knowing how Germany arranged her higher education, quickly advanced and reaped those returns which were so harmful to us, we may spurn the adoption of some similar scheme because of the degraded utility she finally made of it.

What do we want? We want our democracy to do as well in science as German autocracy did, until we learn to do better. I do not care to compare the scientific work of different countries, but I want to call attention to the peculiar way science was treated in Germany for the half century preceding the war. I want to show that some of her ablest men were life-long workers in and teachers of science; that they were leaders in their civil groups, that they were appreciated by the country and given the widest support and honor. We have too little to compare with it, and we collectively, or our Government, are not making sufficient effort to support new scientific work.

Let me once more warn you against the fear that material truth and experimental knowledge are a menace. Only indolent people think this, but it is frequently expressed. Professor Richards, of Harvard, says on this point (1916):

> Science has recently been blamed by superficial critics, but she is not at fault if her great potentialities are distorted to serve malignant ends. Is not this calamity (war) due rather to the fact that the spiritual enlightenment of humanity has not kept pace with the progress of science? The study of nature can lead an upright and humane civilization even higher

and higher to greater health and comfort and a sounder philosophy, but that same study can teach the ruthless and selfish how to destroy more efficiently than to create.

There are many European cities which owe their reputations to their scientific work. Most of them are university towns. Their renown is not based on the nine, nor on the eleven, nor on the local glee club. Freiburg, Bonn, Heidelberg, Jena, Charlottenburg, Leipzig, Halle, Karlsruhe, Gottingen, are such places. They recall scientific accomplishments. Some of our corresponding towns are Columbus, Ithaca, New Haven, Urbana, Madison, Princeton, Lawrence, Pittsburg, Burlington, Ames, and Lincoln. Does each remind you of scientific work? We are not yet doing our duty by them. Can we not help the scientific work in such towns?

Good scientists grow in all countries, but the support which investigators received in Germany is a point I want to emphasize. To the average physicist, chemist, or biologist, most of the following teachers recall fundamental advances in the sciences. I refer to men like Pettenkeffer, Liebig, Wöhler, Voit, Ludwig, Kühne, Hoppe-Seyler, Weber, Helmholtz, du Bois Reymond, Fechner, Engelmann, Pfluger, Hertwig, Leuckart, Ehrlich, Virchow, Hering, Emil Fisher, Buchner, Pfeffer, Weissman, Koch, Quincke, Hofmeister, Pringsheim, Boveri, Richter, Kekulé, Wislicenus, Kolbe, Hofman, Bunsen, Victor, Lothar and J. R. Meyer, Bayer, Clausius, Ostwald, Kolrausch, Planck, Nernst, Hertz, Boltzmann, Roentgen, Wien, and Haber.

Are we to suppose that America could not do as well? In my opinion, we should try the method already tested, and modify it from time to time as we see indicative developments.

The German universities operate under charters granted by the Government, which supports them. The faculty practically manages the institution, though the Government is represented by the curator, who manages the finances. The full professors regulate the internal affairs by their votes, and they elect their various officers, the rector, deans, etc.

On the other hand, we in America ask certain unprepared civilians to serve as our college trustees. They soon find that the condition of finances calls for help, and, together with the president, they must solve the almost insoluble problem of the year's budget. There is little chance for new work.- Practically every college has all it can possibly do to meet the demands of large classes of undergraduate students, and the trustees, despite their sympathy with scientific developments, cannot possibly care for demands which are less dominant. We have about 500 universities or colleges in this country. Many of them are equipped with everything necessary for good scientific work except the encouragement. Many laboratories are better equipped than those abroad. Would it not be worth while to arrange for the modest addition to our educational expenses which a fair trial of American university research would entail?

The Students' Army Training Corps has recently thrown all our colleges into an unsatisfactory and an unstable condition. Had that work continued, it is possible that permanent improvements in education would have resulted. It was too radical to continue, and the pressing need has disappeared, but we have all seen the possibilities of quickly effecting such changes, and we ought now to work and hope for some justifiable improvements. Is it good engineering to force the presumed leaders of our highest education to spend their best energies in perpetual scrambles for funds, instead of directing education? Probably no one thinks so, but everyone waits for the change to be forced by someone else.

The recent report on Engineering Education, published through the Carnegie Foundation, to which we are greatly indebted, leaves me with the thought that the past aim of our engineering education was to teach carefully selected men to merely repeat certain standard processes and thereby earn a livelihood. This is not enough. Watch good, experienced engineers at work and see them plan. Is their work repetition of old steps they were taught? It is nearer right to say that they were always trying experiments. We read daily of the newest and largest building, the most novel or the longest bridge, new types of tunnels or subways, longer range guns and new armor plates, lighter aero engines, larger turbines, heavier locomotives, Armco iron, Tantiron, Duriron, Monel, Stellite, etc., etc. There is certainly no limit to this line. Therefore I would not teach fixity, but right change, and do it by precept and *example.* I would increase for the engineer, during his college years, the facility with which he could begin to learn the elasticity and nobility of his calling, and that by contact with men interested in experiment.

What will be done to continue more men in advanced scientific lines in college? Can you engineers not help here? Is it not a good plan to arrange for the highest possible training on the part of a selected few? Is it not the duty of organized engineers and scientists to take part in activities which influence legislation and to make our country the foremost for new finds in nature and in the development of men? Engineers will then be co-products with investigators.

I would be better satisfied with this suggestion if I did not know that very few realize how much the strength of a whole people depends on its scientific novelties. The facts are frequently something like this: some searcher for new truth in natural phenomena uncovers a fact. He gets a few dollars or a little mental satisfaction out of it. A few industries then base the work and the living of many people upon it, and its value, there, may be expressed in, say, many thousands of dollars. But it is not so readily seen that the people at large get most of the return and are therefore most highly interested in the advance. Their earnings in such cases are in millions and their advantages incalculable. The telegraph and telephone, the gas engine, the aeroplane, wireless, artificial lights, and all engineering improvements have this in common. The ratios may be 1 to 1000 to 1,000,000 for the three groups, but the largest group does least planning. It is not organized for it. Engineering societies might do this.

Large central laboratories of research recently suggested for industrial chemistry are worth good trial, and are being tried in England, but to be most effective they would have to follow somewhat the lines of other smaller laboratories. We have knowledge in such cases which may be of value. Several now exist in which scores of experimenters are employed. A group of one hundred working on miscellaneous research would probably represent between one-half and one million dollars a year outlay. The return would be problematical and cannot be estimated, but would seem very promising in various lines of federal interest. One result is, however, certain. Manned at once with any hundred investigators now available, it would be very much less useful than if manned with well trained research men, of whom we have too few. Our already extensive use of trained men such as electricians, chemists, and physicists is exceeding the supply.

That the young men of our colleges and engineering schools early quit school and went into war work is not a cause for complaint. That in itself was a splendid thing and accomplished wonders. Over a thousand young chemists have done the work of our gas mask development, our poisonous gases, our smoke screens, our new explosives, etc., and the physicists went into the wireless, the submarine defense work, and similar problems in large numbers and with marked success. They have done things which older men would not have undertaken. Therefore this is rather a complaint that we had so few young engineers, and is a petition that in the future the supply be insured and the energies directed to peace time needs.

I do not see any possible way of insuring our future commercial and engineering supremacy that can compare with utilizing our colleges more perfectly. When barbarous war methods are forever stopped, science and engineering should be the main factors recognized by the League of Nations as the legitimate ground for a nation's supremacy. How can we better insure our position than by taking care of that amelioration which tames the chaos for all the people?

Presented at the 342d Meeting of the American Institute of Electrical Engineers, Philadelphia, Pa., December 13, 1918.

RESEARCH IN AMERICA AFTER THE WAR

BY R. A. MILLIKAN

IT takes no statement from the chairman nor admission from myself, to apprise most of you of the fact that I belong to the genus "Damn professor," as we are affectionately called in Washington.

It may interest you, however, and perhaps be a little diverting too, to know how nearly we professors have to come to acting like real soldiers once in a while when we get on suitable clothes. About four weeks ago I chanced to go from Waterbury, Conn., to New Haven, on a trolley, starting about half past eleven o'clock at night. At a small station between the two towns, there boarded the trolley a couple of well-filled soldiers. They took seats on opposite sides of the car and began quarreling loudly. The conductor was quite unable to cope with the situation; finally the men arose and began hammering each other back and forth across the car. The passengers were in an uproar, when someone called "Here's an officer, let him attend to it." So with the aid of a couple of privates, I had to take part in getting these men into their seats, a task which we succeeded in accomplishing, thanks to the respect inspired by my uniform, and a certain muscular efficiency which the privates showed. We later succeeded in getting the drunks off the train.

Another incident, which has elements almost as heroic, occurred one night last summer when I was on the way from Washington to New York. I stopped off in Baltimore, for no ulterior or interior reasons, although it might have looked as if I had such motives from the fact that I missed the train at Baltimore and had to sit down in the station and wait for another train. In order to utilize my time, I took out my brief case and began writing. In doing so, I pulled my fountain pen from my pocket, and the cap fell off on the floor. Before I had time to recover it, an elderly lady, about sixty years old, rushed from her seat and brought it back to me saying, "Oh, let me do something for a soldier."

To experiences like these should be added the sweet delight which a soldier hero feels as he passes through Indiana and Illinois (as I did yesterday) of not only being permitted, but of actually being forced to take from fair young hands reached up to the windows of the train, sandwiches made of thin slices of bread and thick slices of chicken, with a dill pickle added, all free to the man in uniform.

But the tragedies and the comedies of the war are ended. To use the memorable words of the official announcement of the British War Office—words so brief, so modest, so tactful that they contrast strangely with the vulgar boastings of both our press and our statesmen. "In the fifty-second month of a war without precedent in history, the French Army, aided by the Allies, has achieved the defeat of the enemy," And with the ending of the war all of our war activities either have ceased already or will soon do so.

But there are things that the war has done which should not, which fortunately will not, cease. Men like Dr. Whitney and like myself have been pulled out of the ruts in which our lives had been running and have been thrown into completely new surroundings; men from England have come to this country to teach our young soldiers, and to participate in our war researches; millions of our own men have gone to France and Italy, and to England, so that, if ever there was a time in the history of the world, when men were in a position to begin to see things as the other fellow sees them, to get a little larger outlook than they normally have, that time is surely the present. The country is just now in a state of fluidity, and before the crystallization process has set in great things may be accomplished. Movements which the inertia of mankind make it normally impossible to bring to fruition in any reasonable time, can now be put across with relative ease; for we are all seeing how things look from some other angle than that from which we have been in the habit of looking at them. So that the next few months, so it seems to me, are going to be pregnant months for the history of the United States and of the world.

I wish, then, to call attention to a few of the lessons which from my point of view, the war has taught, and I trust I shall be able to do something more than to make a mere academic recital of them, for I hope that I may bring something before you which will inspire to action.

In the research activities in the aid of the war in which I have been associated, one thing has stood out exceedingly strikingly; namely, that the distinctions between the man whom you commonly call the pure scientist and the man whom you call the applied scientist have absolutely disappeared. In every one of the eighty or ninety researches with which I have had connection there have been associated physicists from the colleges, engineers from the General Electric Company, the Westinghouse Electric and Manufacturing Company, the Western Electric Company, and other companies, and they have all worked as one, and you could no more make one of these men say, "This problem belongs to physicists," or, "This belongs to engineers," than you could say that a man's head belongs to one being and his body to another. The pure and applied scientists have functioned as one single group as they have never done before, and I hope very much that we may be able to do something right now to keep bridged the chasm between the academic group and the industrial group. This chasm is unquestionably a detriment to both groups and an effective bar to progress—a bar which Germany had removed in some fields, at least, much better than we have. If the process of forming societies has already gone so far in this country that for the purposes of organization and classification—which are to be looked upon always as necessary evils—the Physical Society and the Engineering Societies must continue to exist as distinct units, at any rate I certainly feel that it is possible to bring about such an interlocking of committees within these societies that the two organizations may act in many respects as one, and I hope that this possibility will soon become a reality.

You noticed in Dr. Whitney's address that engineering research was defined as "anything which had to do with matter." That is fairly broad, isn't it, and it wipes out completely all of these distinctions about which I have been speaking. I am quite willing to accept his definition, and I would not object to being called an engineer if that is what it means to be one. As a matter of fact, I presume I should have had more satisfaction in my war work if I could have been called an engineer instead of a "damn scientist." You certainly cannot draw any distinction between scientists and engineers on the basis of the utilities of their work, and you all know that you cannot.

I know of hardly an investigation in so-called pure science which has not sooner or later found its utility, nor do I know of any so-called pure scientist whose motives are not utilitarian, in the sense that he believes that he is doing something which will sooner or later contribute to human good. But what I am aiming at is after all not mere words. A change of name alone is of no importance. What I want is rather an actual fusion of groups of men who are now further apart than they ought to be.

My second lesson is one of even greater importance. If there is anything which has been demonstrated by the experiences not only of America, but of all other countries in this war, it is that one cannot safely depend upon the so-called undirected inventive genius of a people to obtain large results. Advances have been made in this war almost exclusively by one method, namely that of bringing together groups of well trained thoroughly competent men and setting them upon the problems needing solution. In other words large and rapid progress has been made in this war and in my judgment it can in general be made only by adopting the strictly research method of approach. In this war every one of the major belligerent countries has had its Board of Inventions, and it has been the uniform experience in all of them, in Italy, France, England, and the United States, that not one suggestion in ten thousand which is of any value comes in through these bodies. Further, the chance is about 100 to 1 that the good suggestion which does occasionally come in this way has already been thought of, and worked upon, by the groups of trained men who have been giving their attention and skill exclusively to these research matters.

But how much in the past have we used this method? How much have we done in this country during the last hundred years in organizing such research groups? Dr. Remsen told me the other day that in 1872, when he was first called to Johns Hopkins, there was not a place in the United States where there was any research atmosphere or where any serious research work was being done. Perhaps some one may wish to raise a question as to the literal accuracy of that statement, but on the whole it gives a correct picture of the research development and the research interest in this country at the time of which Dr. Remsen spoke. I would not cast any dimness over the luster of names like those of Franklin and Henry and men of that type whom this country had produced before that time, but, after all, these were individual geniuses. They were not the leaders of research groups and yet they accomplished wonderful things. But we have passed from the stage of the world's development in which we could depend solely on individual geniuses for advancing the wheels of progress. If these wheels are to move forward rapidly we must do in peace exactly as we have done in this war, namely, call together groups of research men in our industries, in our educational institutions—I do not care where—give them the problems, and let them push them forward. In this way these wheels will move forward ten times as rapidly, yes, a hundred times as rapidly, as will be the case if we depend upon the exceptional inventive genius of the country, however valuable that may have been to us in the past.

These are the two lessons which I would draw from the war.

Let me next ask you to consider how we may profit by them, and perhaps the path which we ought to take may be made more clear if we analyze ourselves somewhat objectively, and try to look, for the time being at least, not at our virtues but at our weaknesses, however disagreeable such introspection may be. Let me begin by asserting that in spite of our boasted inventiveness, we are as yet, from the scientific standpoint, a second rate people, whether we look at our accomplishments in war or in peace. I am certainly well within the bounds of the truth when I say that the contributions of the United States to this war in research and development lines have been less, far less, than is proportionate to our resources and our population. I think Dr. Whitney will agree that that is not an overstatement, and he knows fairly well what we have been doing, for he has been associated with much of it. England and France have both done far, far more effective war research than we have done. True, they have had more time, but they have not had either the men or the facilities which we have had. With almost every available man in France at the front, with most of her manufacturing facilities in the hands of the enemy, is it not an extraordinary tribute to the French scientific mind that the two most novel and most promising weapons which we had at the close of the war for combating the submarine came out of France. We have done some creditable work in this country on submarine detection, but in comparison with the number of men engaged on the work and the facilities at command, both France and England did vastly more than we. The other day an officer who had

had exceptional opportunity to appraise our contribution to the war was in my office and I was bewailing the fact that a particular device which we had been developing had not been completed in time to be of actual use on the front. But said I—"I do not know that I ought to complain, because I presume that it is in the same boat with approximately 96 per cent of all American effort." Said he—"I think you overestimate the amount that got across."

Now that is an impression which one does not gain from the newspapers. I would not unduly belittle the American effort, but I would like to do something to combat the lethal poison which is being introduced into the American system by the vain-glorious boasting in which our newspapers and politicians are indulging. We did indeed cast the deciding vote. It is true that save for us the Kaiser might not perhaps have been so easily persuaded to call out "Don't shoot Boss, I'll come down," but let us at least remember that 20 Frenchmen gave up their lives for every American boy who died, that more than ten Englishmen "died for France" to one American. These figures show the real pressure of our contribution, and let us not forget them.

Again I state that whether one measures our position by our contributions to the war, or, what is more to the point to-night, by our accomplishments in science in times of peace, I think that every American who is perfectly honest with himself will admit that we have no claim as yet to being anything more than a second rate people. Second rate whether you take as the criterion of first rate-ness either the number of men of outstanding ability and reputation which we possess, or the total output of the country in proportion to our population, or the general appreciation and respect in which science is held in the community at large. Look at the first criterion; who would for a moment claim that we can show a list of names comparable with these? Faraday, Maxwell, Kelvin, Stokes, Rayleigh, Thomson, Larmor, Schuster, Rutherford, Jeans. Or going to the field of chemistry, in which we have done as well perhaps as in any science, who would undertake to present such a list of illustrious American names as that which Dr. Whitney has just presented for Germany?

When we look at the second criterion and reflect that we have 100,000,000 population against England's 45,000,000 and Holland's 4,000,000, no man who is at all familiar with our relative outputs would claim for a moment our equality with either of them. It will be generally admitted that as measured by this criterion we cannot think of claiming to be in the first rank. Such a statement may not be palatable to our pride, but it is true in spite of the fact that you see so much in our newspapers and elsewhere which might lead you to think otherwise. Here is something fairly typical. There is a tablet erected in Dayton, Ohio, which gives a list of twenty of the world's greatest inventions, and attributes thirteen of them to the United States, just one to England, the locomotive, one to Scotland, the steam engine, two to Germany, the Fahrenheit thermometer and the X-Ray, only one to France, the daguerreotype, but two to Italy, the pendulum clock and wireless, and two to Dayton, the cash register and the airplane. Such claims need no comment. Unfortunately they are more or less typical. I wish they were not typical, and perhaps we may do something to make them less so.

As for the third criterion, the public appreciation of science in any country may be gaged first by the general respect and honor in which the calling of the scientist is held, and second by the character of the general scientific journals which that country supports. Now it is a matter of common knowledge that in all European countries the scientist is held in greater respect than in this country, and as for journals, let me just mention the names of three English publications in different fields and see what kind of comparisons they bring up in your minds. The *Philosophical Magazine, The London Electrician and Nature.* Have we journals which are of a full equality with any of these?

I am presenting these unpleasant truths not because I think our situation is hopeless, but just exactly because I think these conditions are remediable, and because I think that you and I can assist in changing them. I say them because I believe in all my heart in the effectiveness in the long run of our American democracy. I say them because I believe with all my heart that when you once get the public opinion of the United States aroused it will set about changing bad conditions and will do it rapidly. You and I have already seen it doing certain things which a few years ago nobody believed a democracy could do. We have seen it handling the liquor problem for example in a better way, as it seems to me, than that in which it is being handled in any country in the world, and this is the last problem which you would expect that a democracy could handle. I am pointing out conditions which ought not to exist because I believe at the bottom of my heart that our method, the democratic method, is capable of rectifying bad conditions more rapidly on the whole than is any other method, if only we can once get the real situation and the real need before the consciousness of the American people.

What we need then if we would become a first-rate rather than a second-rate people from the standpoint of our scientific development is, first, the development of more highly trained and more able scientific personnel in this country than we now have. Second, we need the development of a new public opinion on scientific matters. We need appreciation of what science is and what it can do. We do not need any more so-called "Popular Science Monthlys," but we do need a better educated, scientific intelligence than we have at the present time.

How are we going to get these things? Dr. Whitney has said that we have enough organizations. Maybe we have, at any rate we have not enough of concerted action among existing organizations. This is precisely what the National Research Council is endeavoring now to bring about, and if the Research Council cannot succeed in this work which it has been organized to do, then some other organization must arise which will do it. In other words, we must in some way get the scientific men of the country pulling together. I think this can be done and that it is the biggest, most worth while enterprise which any of us have ever had an opportunity to take part in. The problem is to persuade the engineering societies, and the physical societies, and the biological societies, and the medical fraternities, no longer to work all by themselves, but instead to pull all together in one common effort, first to educate the American public to a larger appreciation of the possibilities of science, second, to make the present American scientist more effective than he now is, and third and most important, to find means by which we may develop more and better scientific men.

The education of the public is of course a slow process, but it can be accomplished by directed effort and concerted action such as the Council is now attempting to bring about. The stimulation to greater effectiveness of existing scientific men also cannot fail to result from all of these new activities. But the producing of a continuous new crop of able scientific men is a problem to which I should like to give a little more detailed consideration. *The result aimed at can be attained only through the agency of the American Universities.* These however cannot possibly make the kind of men Dr. Whitney wants out of poor material. Something can be done to a man by education alone, and yet there is no one who knows as well as the college professor how little merely going through the routine of getting an education amounts to. Our primary need is to find a way of getting a better *selection* of men than we now have, that is, a way of diverting the brains that now exist in the country into research channels. How is that to be done? The answer is to my mind very direct though perhaps not so simple, since it involves funds. It is to deliberately and consciously set about the task of creating more opportunities for research careers than we now have, and giving greater dignity to such careers. In connection with American Universities, I see ways in which this can be done, first by persuading philanthropic men and institutions to endow a considerable number of scholarships similar to the so-called 1851 Exhibition Scholarship of the British Universities, second, by the creation through private means of many more partial research professorships than we now have. I say partial research professorships because I think that the research man needs the broadening influence of a small amount of advanced teaching even for the greatest effectiveness in his research work. The creation of more pure research institutes like the Rockefeller Institute for Medical Research or the various research laboratories of the Carnegie Institution of Washington, may also be encouraged though I am myself a strong believer in building up research enterprises in connection with educational institutions so that the atmosphere of research may be inhaled by the young blood which is continually passing through these institutions. Create a real research atmosphere in a score of American Universities and a new generation of research men will quickly be created which will place America in the front rank in the fields of science. I should regard it as a calamity if the research funds available in America went exclusively or even primarily into the founding of central research laboratories. This country already has scores of magnificently equipped laboratories which produce one tenth as much as European laboratories one fourth as well equipped. We do not want more brick and mortar, more physical facilities, *we want more and better men*. As Dr. Whitney has so well said, *we want a man-producing program, not merely a man-consuming program. The man-producing agencies are primarily the universities.*

Funds which are donated to colleges or universities for research work should be devoted by the terms of gift to research purposes and made altogether undivertable into the purely educational budget. One of the chief aims of the Research Council has been from the start to stimulate this sort of giving. The finest outgrowth of our democratic, individualistic civilization has been the development of a great multitude of public spirited men who devote their means to public ends and it will probably continue to be true in the future as it has in the past that our biggest and most important public enterprises will be inaugurated not by public but by private initiative. I see no reason therefore for not using the method which has been most successful in the past in many fields and which is most characteristic of the genius of Anglo-Saxon institutions —viz., the method of the private foundation of research scholarships and professorships.

But I agree with Dr Whitney that in a country like this, there is no reason why the federal government, as well as private persons and institutions, should not promote the development of research. The whole world has been aroused by the war to the importance of this sort of activity. England has appropriated governmental funds for scientific and industrial research, and Canada has done the same, and so has Australia, and Italy, and I think Japan also. The United States is almost the only large country which has not thus far done anything in this direction. But there is now before Congress a bill—the so-called Smith-Howard Bill—which in its original form had most unfortunate features, but which is apparently now in process of being changed into a really valuable measure. I am permitted to say that the authors and sponsors of this bill recently asked the National Research Council to appoint a committee to give it thorough study and make possible recommendations. A fairly representative committee of some ten men, including Dr. Whitney and the Director of the Bureau of Standards and the author of the bill, Mr. P. V. Stephens, has met and reported unanimously upon certain types of modifications in that bill. The most essential of these changes consist in the setting up of the principle, different from that incorporated in the original bill, that the funds appropriated by the federal government to each state shall be allotted to institutions within the state *by a board composed of at least five of the most eminent available scientists and engineers of the state, upon the basis of programs of research submitted annually by these institutions to this scientific board.* It was the judgment of the Committee, and also of the executive board of the National Research Council which unanimously approved this report, that if the allottment of research funds within each state can be placed in the hands of men who know what research is, and if the institutions of a state can be stimulated to a rivalry in the development of research programs there will develop in existing laboratories of which we have already an abundance, an atmosphere of research which is now wanting. *It is only through the creation of such atmospheres that research men can be developed.* This sort of a plan seems to make it possible to plant men all over the country who will be creating such atmospheres. It provides for the stimulation of research throughout the country in both industrial and pure science lines much better than any scheme for federal aid which I have seen discussed.

There is very grave danger, however, that the desire of public officials, legislators and private individuals to leave brick and mortar *monuments* to themselves will divert funds which ought to go to the development of men to the creation of more elaborately equipped laboratories without men, such as already constitute a reflection upon American judgment and American brains. If the Smith-Howard Bill modified in some such vital way as I have indicated does not pass then I have little doubt that the National Research Council will in time itself establish within the states research boards which may then obtain state funds to be used in some such way. California has already such a State Board, working in cooperation with the National Research Council and this board has within the past year received and appropriated more than $50,000 for research within California.

I have said enough to suggest many ways in which research in industrial and pure science lines is likely to be stimulated in the near future. Let me close with a brief word on the organization of the National Research Council which is occupying itself with these large problems of the promotion of research in the United States by a method which is compatible with the genius of our Anglo-Saxon institutions, namely, by the democratic method of the voluntary associations of research men, societies and institutions into a great body which can effectively create public sentiment and stimulate in a large way research enterprises.

The Council is, in a word, simply a federation of the research organizations and activities of the United States for the purpose of obtaining concerted action, mapping out new lines of progress, establishing the cross connections between different fields, acting as a central bureau of information and coordination, and promoting research in general. It has for the past year had a so-called war organization, because one of the most important problems which confronted our country was to get the scientific and engineering brains of the country effectively at work upon its war problems. The National Research Council has been one of the influential and effective agencies which has been doing this and it has thrown all its energies into the task. Now the time has come when it must reorganize so as to adapt itself as completely as possible to the problems of peace, which are more important even than those of war. The present tentative plan is to have the Council a thoroughly representative body in that at least a majority of its membership is essentially elected by the constitutent societies for a period of say three years. Each of the seven or eight divisions, namely, the division of Engineering, the division of Physics, Geophysics, Astronomy, Mathematics, the division of Chemistry and Chemical Technology, the division of Medicine and related sciences, the division of Biology, the division of Geology and related sciences, etc., to consist of 25 to 35 men presided over by a chairman elected by the group. The most essential feature of the proposed organization is the Executive Board which consists of these eight chairmen, eight vice-chairman and say ten members at large. The Board would meet at least once a month in Washington. The eight chairmen are to give up, in general, all other activities for their term of office, of probably a year's duration, to be paid suitable salaries, say $6,000 a year, are to be resident in Washington, and to devote their whole time while in office to the promotion of research in the United States. With eight of the best and most influential scientific men in the country devoting themselves each year to the large problems of surveying, stimulating, and coordinating the research activities of the country, the United States can I believe very soon be placed in the front of the nations of the earth in scientific discovery and its application to the arts and industries.

The National Research Council bespeaks your active cooperation and support in this great new democratic and characteristically American program.

To be presented at the 7th Midwinter Convention of the American Institute of Electrical Engineers, New York, February 21, 1919.

THE DIELECTRIC STRENGTH OF AIR FILMS ENTRAPPED IN SOLID INSULATION AND A PRACTICAL APPLICATION OF THE PROBLEM FOR ALTERNATOR COILS AND CABLES

BY F. DUBSKY

ABSTRACT OF PAPER

It is of theoretical importance, as well as of practical importance in design, to be able to predetermine the dielectric strength of air films or bubbles entrapped in solid insulation.

If such films are over-stressed the solid insulation may be damaged by chemical action, local heating, mechanical action etc., due to corona.

An experimental investigation was made of the strength of air films of various thicknesses between glass plates. In the arrangement used, the breakdown of the air or the starting point of corona could be readily observed. Tests were also made of the dielectric strength of air films between other solid insulations.

It was found that the dielectric strength of air films between insulations was practically the same as the dielectric strength of air films between conductors.

The second part of the paper is devoted to the practical application of the data to the design of armature coils and cables, and several specific examples are given.

Part I

THE DIELECTRIC STRENGTH OF AIR FILMS

THIN air films or bubbles are often entrapped in the solid insulation used in coils, cables and other electrical apparatus. Air is weaker than solid insulations, and when placed in series with them in an electric field, as is usually the case for entrapped air, it takes a much greater unit stress. This follows because the same flux passes through the different dielectrics and the air has the lowest permittivity or offers the highest resistance to the flux.

It becomes of great practical importance to be able to predict the behavior of these films and the voltage at which their break-down occurs. The break-down of an air bubble or film usually will not cause immediate break-down of the solid insulation; it may result, however, in gradual deterioration for the following reasons:

1. Heating due to the losses in corona.
2. Chemical action due to the formation of ozone and nitric acid.
3. Mechanical action due to a rapid movement of the corona streamers.
4. The formation of conducting paths by chemical action and carbonization.

The dielectric strength of air in the form of very thin spacings or films *between conductors* has been studied by a number of investigators†; it has recently been treated very thoroughly by F. W. Peek, Jr. and the resulting laws and data are published in several papers and in his book‡.

It is the object of the present investigation to determine experimentally if the laws and data referred to apply when the air films are not between metallic conductors, but exist as pockets in the solid insulation. For this reason, in the tests which will be described later, the break down strength of air was measured on films between glass plates and between insulated conductors.

The data on air films between metal surfaces referred to above will first be discussed.

Air Films Between Metal Surfaces. The dielectric strength of air is the voltage gradient or the volts per unit distance which must be reached before the spark-over of an air space in a uniform electric field can occur. For the thin films, or small spacings under consideration here, the field may be considered as uniform.

The dielectric strength of air is proportional to the air density, which varies directly with the pressure and inversely as the absolute temperature. If the air density at a temperature of 25 deg. cent. and a barometric pressure of 76 cm. is taken as unity, the relative air density δ at other temperatures and pressures may be expressed in terms of it, thus:

$$\delta = \frac{3.92\, b}{273 + t} \qquad (1)$$

†Harris J. Ryan, TRANS. A. I. E. E., 1911, Vol. XXX, Part I, page 8, Fig. 6, giving the Baille-Paschen-Schuster results.

‡F. W. Peek, Jr., TRANS. A. I. E. E., 1913, Vol. XXXII, Part II, pages 1335 to 1355, *Law of Corona and Dielectric Strength of Air.*

F. W. Peek, Jr., In his book "Dielectric Phenomena in High Voltage Engineering", Chap. III on Visual Corona, Chap. X on Design of Apparatus where Solid, Liquid and Gaseous Insulations enter in Combinations, where $b =$ barometric pressure in centimeters,

$t =$ temperature in degrees centigrade.

If $G_0 =$ dielectric strength of air in effective volts per mil in a uniform electric field at 25 deg. cent. and 76 cm. barometric pressure, and

$G =$ dielectric strength of air in effective volts per mil in a uniform electric field at temperature of t deg. cent. and barometric pressure of b cm.

$$G = G_0 \delta \tag{2}$$

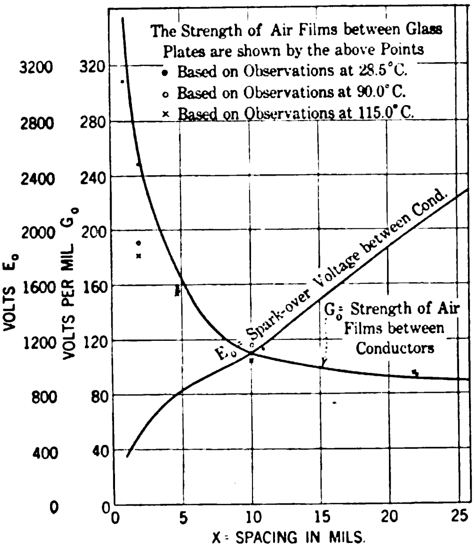

FIG. 1A—DIELECTRIC STRENGTH AND SPARK-OVER VOLTAGE OF AIR FILMS AT $t = 25$ DEG. CENT. AND $b = 76$ CM.

Further, if $X =$ air space in mils, since the field is uniform,

$$E_0 = X G_0 \tag{3}$$

$$E = X G \tag{4}$$

where E_0 and E are respectively the effective sine-wave spark-over voltages of the air space.

In Figs. 1A and 1B are plotted two curves showing the strength G_0 and the spark-over voltage E_0 for different thicknesses of air films between metal surfaces at 25 deg. cent. and 76 cm. barometer. This data was obtained from the investigation referred to above*; the spacing is expressed in terms of mils to be more conveniently applied.

It would be expected that this strength of air would hold also whenever thin air spacings occur in combination with layers of various solid insulations. In order to apply this data, however, it is first necessary to calculate the stress or gradient on the entrapped air. That this may be simply done is shown below.

Calculation of the Stress or Gradient in Air Films in Solid Insulation. Taking a general case when n dielectrics of thicknesses $X_1, X_2 \ldots X_i \ldots X_n$ mils and of relative permittivities $k_1, k_2 \ldots k_i \ldots k_n$ respectively, are arranged in a uniform electric field in series so that the same dielectric flux density passes through each material, the expression for the gradient in any dielectric of the combination of the n insulations is

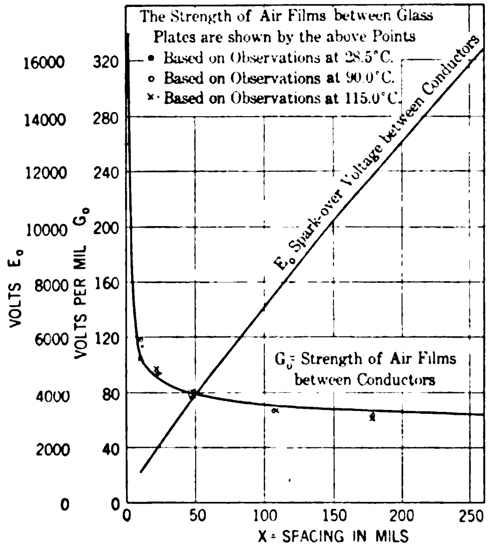

FIG. 1B—DIELECTRIC STRENGTH AND SPARK-OVER VOLTAGE OF AIR AIR FILMS AT $t = 25$ DEG. CENT. AND $b = 76$ CM.

$$g_i = \frac{E}{k_i\left(\frac{X_1}{k_1} + \frac{X_2}{k_2} + \ldots + \frac{X_i}{k_i} + \ldots + \frac{X_n}{k_n}\right)} \quad (5)$$

---

*F. W. Peek, Jr., TRANS. A. I. E. E., Vol. XXX, Part II, 1913, p. 1348.

where E = voltage across the terminals in volts.
If X_1, g_1 and k_1 are respectively the thickness, gradient and permittivity of the air film,
and hence $k_1 = 1$, it follows that

$$g_i = \frac{E}{k_i\left(X_1 + \frac{X_2}{k_2} + \ldots + \frac{X_i}{k_i} + \ldots + \frac{X_n}{k_n}\right)} \quad (6)$$

and

$$g_1 = \frac{E}{\left(X_1 + \frac{X_2}{k_2} + \ldots + \frac{X_i}{k_i} + \ldots + \frac{X_n}{k_n}\right)} \quad (7)$$

The latter equation is used to determine the dielectric stress in air whenever the air enters into combination with solid insulation. The stress on the relatively weak air will always be much greater than the stress on the solid insulation. When the dielectric stress reaches the critical value, the air film breaks down with the appearance of visual corona, characterized by a pale violet glow, a hissing noise and the odor of ozone.

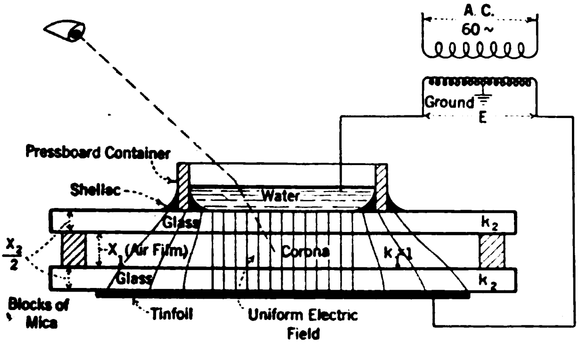

FIG. 2—CORONA TESTS ON AIR FILMS BETWEEN TWO GLASS PLATES

Description of Tests to Determine the Strength of Air Films between Solid Insulations. The corona tests were made with varying air space between two pieces of white French plate glass each 8 in. by 15 in. (see Fig. 2). Small blocks of mica were used to secure the desired space between the glass plates. The tests were made at practically sine-wave voltage, at a frequency of 60 cycles per second.

The lower terminal was a piece of tinfoil 6 in. by 12 in. pressed into intimate contact with the glass. The upper terminal consisted of water held in place by a container of pressboard fastened to the glass with shellac. Water was used as the upper electrode so that the start of corona could be readily observed through the water and the glass plate. The air film did not make contact with either electrode, but did with the glass plates.

The tests were made first at room temperature and then at higher temperatures by the use of an oven. In the latter case the same arrangement was used with the exception of the top terminal, to which calcium chloride was added in order to raise the boiling point of the water.

The voltage was very gradually increased and the start of corona was observed in a dark room by looking through the water terminal and the upper glass plate. The break-down point, as indicated by the pale violet glow in the air film, could be very accurately determined.

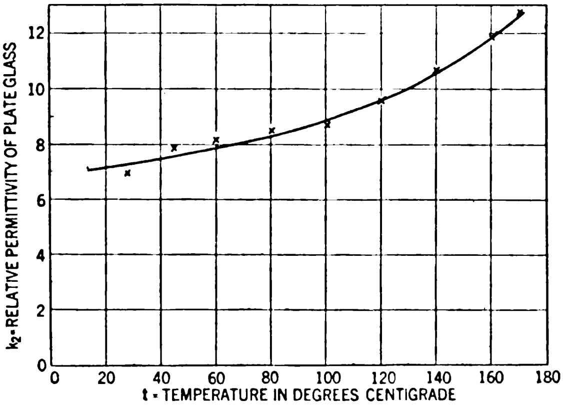

Fig. 3—Variation of Permittivity of Plate Glass with Temperature

This interesting experiment was suggested by Mr. F. W. Peek, Jr.

The observed data and the values calculated therefrom are given in Table I where the following designations are used:

X_1 = air space in mils,
X_2 = average thickness of both glass plates,
E = effective sine wave volts between terminals,
b = barometric pressure in cm.,
t = average temperature in deg. cent. of glass plates and air space,

k_2 = relative permittivity of the plate glass. In Fig. 3 is plotted a curve giving the relation between the relative permittivity of the plate glass (used in the above tests) and the temperature from 25 to 170 deg. cent. The data for this curve were obtained from capacitance measurements, on one of the 8 in. by 15 in. glass plates. A sheet of tinfoil 6.625 in. by 13.625 in. was pasted on each side of the glass plate with dry shellac and smoothed out with a hot iron. The maximum, minimum and average values of thickness in 20 measurements were 0.194 in., 0.160 in. and 0.176 in. Capacity measurements were made with a Hoxie capaciometer.

$g_2 = \dfrac{E}{k_2\left(X_1 + \dfrac{X_2}{k_2}\right)}$ = gradient in the glass at the start of corona, expressed in effective volts per mil at observed temperature and barometric pressure.

$g_1 = \dfrac{E}{X_1 + \dfrac{X_2}{k_2}}$ = critical gradient in the air between the glass plates at the start of corona, expressed in effective volts per mil at observed temperature and barometric pressure.

$\delta = \dfrac{3.92\,b}{273 + t}$ = relative air density at observed temperature t in deg. cent. and barometric pressure b in cm.

$g'_{1,0} = g_1\,\delta$ = critical gradient in air between glass plates at start of corona, expressed in effective volts per mil reduced to 25 deg. cent. temperature and 76 cm. barometric pressure = the dielectric strength of air between glass plates, expressed in effective volts per mil at 25 deg. cent. temperature and 76 cm. barometric pressure.

In the last column of Table I is given

G_0 = dielectric strength of air *between conductors* in effective volts per mil at 25 deg. cent. temperature and 76 cm. barometric pressure,

which values were taken for comparison from Figs. 1A and 1B for the air spacings X_1 referred to in Table I.

Finally it should be stated that the values $g_{1,0}$ obtained in Table I are plotted in Figs. 1A and 1B along the curve giving G_0. The three symbols represent points based on three different temperatures of observation, (all reduced to t = 25 deg. cent. and b = 76 cm.).

The points, (especially those based on observations at 28.5 deg. cent.), practically coincide with the curves if the relative accuracy due to small spacings between glass plates is taken in consideration.

The results from corona tests on air space between two insulated conductors are given in the lower part of Table I in which case X_2 designates the both sides thickness of the conductor insulation built up of tapings.

Conclusions from above Corona Tests. A comparison of the dielectric strength of *air films between conductors,* and *air films entrapped in solid insulation* shows as good agreement as could be expected; in a uniform electric field the phenomenon of start of corona in thin air films between layers of solid insulation apparently follows the same law as between conductors. It is important to show how practically to apply this data. This is done in Part II.

Part II

EFFECT OF AIR FILMS, AIR BUBBLES OR POCKETS, ENTRAPPED IN SOLID INSULATION UPON THE DESIGN OF ARMATURE COILS OF AIR-COOLED HIGH-VOLTAGE ALTERNATING-CURRENT MACHINES AND UPON THE DESIGN OF CABLES.

General Description of Coil Arrangement and Insulation in Alternators, Motors and Induction Regulators. The armature winding of air-cooled high-voltage alternating-current machines is usually of the barrel type. Three-phase windings are preferably connected in Y with grounded or ungrounded neutral. The form-wound coils are embedded in open slots; there are two coil-sections per slot.

There may be one or more turns per coil as shown in Fig. 4. Occasionally, when the number of turns per coil is large, the coil is wound with several layers and with several turns per layer.

The turns are often wound with several copper strands in multiple. Single-cotton covering, compound treatment, or both are used to insulate the strands so as to eliminate eddy current loss between strands.

The first coil of each phase, being connected to the line terminal, has full line potential to ground (volts between lines $/\sqrt{3}$); the potential of other coils to ground is less and decreases down to zero at the common neutral.

The potential difference between two coils and between top and botton leg of coils depends upon the location of the coils under consideration, and varies between a maximum value equal to the voltage between two line terminals and a minimum value equal to the induced voltage of two coils.

Usually all coils are wound and insulated alike. The insulation of each coil to ground must be designed for the line potential to ground, E, and the total insulation from copper to copper between two coils must stand a potential difference $\sqrt{3}\,E$.

Since there are two thicknesses of insulation between coils, it is possible to reduce the thickness of the coil insulation in the end portion of coils to about 87 per cent of the thickness of the coil insulation in the slot portion. The mechanical reenforcement rings supporting the end portion of the winding must then be sufficiently insulated and spaced from the insulated coils so as to give from copper to ground at least the same dielectric strength in the end portion as in the slot portion of the winding. The end portions of the insulated coils are properly spaced for ventilation of the winding, and this spacing helps to reduce the gradients in the coil insulation at these points.

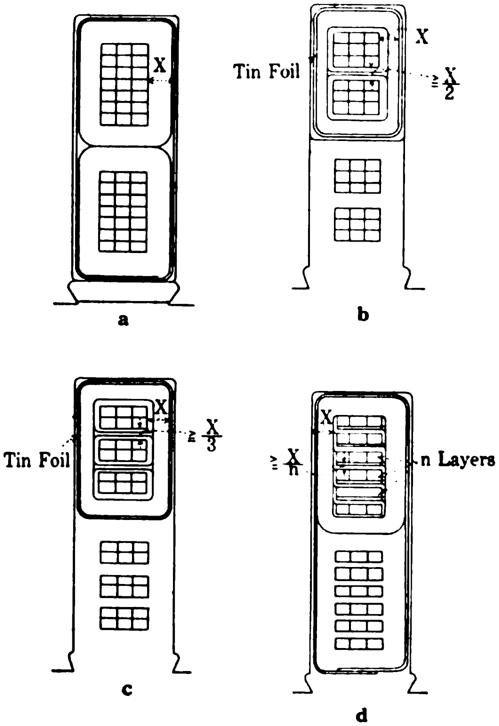

Fig. 4—Armature Coils of Barrel Type Winding

The coil insulation, being of laminated form, is built up of suitable materials, such as paper and mica, varnished cambric, oiled linen, or micanite, cemented together with some binding sticker and built up to the proper thickness to meet the operating voltage.

Method of Calculating the Stress on the Entrapped Air in Coils with Practical Example. As a simple example, take a coil insulated with a uniform, homogeneous insulation of a thickness X and permittivity k. It is sufficiently accurate to assume the conductor of the coil as a flat plate and the iron core or tinfoil as the other plate. The thickness of the entrapped air bubbles will then be so extremely small compared to X that the capacity or total flux will not be appreciably changed thereby.

If the voltage is E,

$$g_i = \frac{E}{X} = \text{gradient in the solid insulation,}$$

$$g_1 = k\frac{E}{X} = \text{gradient in the air bubbles.}$$

A coil, however, is not usually insulated in the above manner, but by a number of wrappings of a composite tape made up of laminae of various solid insulations, a "sticker", and possibly *very thin films of air,* usually much less than one mil thick, between the laminae. These very thin films need not be considered from the standpoint of dielectric strength, since they are very strong as can be ascertained by examining the curve giving the value of G_0 in Fig. 1A. One mil thickness of air has the strength of 354 volts per mil at $t = 25$ deg. cent. and $b = 76$ cm., a value which is approximately equal to the strength of the varnished cambric or paper and mica taping. There are other more or less avoidable local air bubbles, or pockets, of larger thickness, which are due to imperfect butt joints of the tape, due to occasional wrinkles produced by unequal tension during the taping, and due to bulging of the coil insulation, whose strength requires attention. The very thin air films between laminae must be considered, however, in calculating the resultant permittivity, K, since they reduce the dielectric flux density in the coil insulation.

Calculation of the stresses in any of the insulation materials of the combination may then be made from equation (5),

$$g_i = \frac{E}{k_i\left(\frac{X_1}{k_1} + \frac{X_2}{k_2} + \ldots + \frac{X_i}{k_i} + \ldots + \frac{X_n}{k_n}\right)} \tag{5}$$

For convenience let us substitute for the expression in the parenthesis in the above denominator

$$\left(\frac{X_1}{k_1} + \frac{X_2}{k_2} + \ldots + \frac{X_i}{k_i} + \ldots + \frac{X_n}{k_n}\right)$$

$$= \sum_1^n \frac{X_i}{k_i} = \frac{X}{K} \tag{8}$$

where X is the total thickness of insulation

$$X = X_1 + X_2 + \ldots + X_i + \ldots + X_n = \sum_1^n X_i \tag{9}$$

and K is the resultant permittivity

$$K = \frac{X}{\sum_1^n \frac{X_i}{k_i}} \tag{10}$$

The method of calculating the resultant permittivity, K is best shown by an example. Let a taping be made up as follows:

$X_1 = 1$ $X_2 = 4$ $X_3 = 6$ $X_4 = 1.5$ mils

$k_1 = 1$ $k_2 = 2.6$ $k_3 = 5.5$ $k_4 = 4.5$

$X = X_1 + X_2 + X_3 + X_4 = 1 + 4 + 6 + 1.5 = 12.5$

$$\sum_1^n \frac{X_i}{k_i} = \frac{X_1}{k_1} + \frac{X_2}{k_2} + \frac{X_3}{k_3} + \frac{X_4}{k_4}$$

$$= \frac{1}{1} + \frac{4}{2.6} + \frac{6}{5.5} + \frac{1.5}{4.5} = 3.96$$

$$K = \frac{X}{\sum_1^n \frac{X_i}{k_i}} = \frac{12.5}{3.96} = 3.15$$

The resultant permittivity is calculated in Table II for several insulation units. It will be seen that the resultant permittivity, K, of the coil insulation with reference to a temperature of 25 deg. cent. is about 3 to 3.5 for the various tapings and about 4 for micanite.

The resultant permittivities, K, in Table II apply for a

TABLE II

temperature of 25 deg. cent.; at higher temperatures these values become greater, because the permittivities of the solid dielectrics increase with temperature.

From equations (8) and (5) we obtain now

$$g_i = \frac{E}{k_i \frac{X}{K}} = \frac{K}{k_i} \frac{E}{X} \tag{11}$$

and for air $k_i = k_1 = 1$ and $g_i = g_1$

$$g_1 = K \frac{E}{X} \tag{12}$$

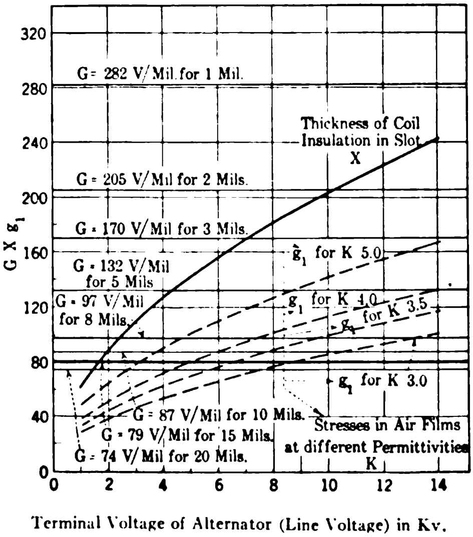

FIG. 5—INVESTIGATION OF START OF CORONA IN COIL INSULATION SHOWN BY A TYPICAL CURVE X

X = Thickness in mils of coil insulation in slot portion (from copper to ground).
g_1 = Dielectric stress in effective volts per mil of entrapped air pockets
G = Dielectric strength of air films at 100 deg. cent. expressed in effective volts per mil

where g_1 = dielectric stress or gradient in air bubbles or pockets, expressed in effective volts per mil;
K = resultant permittivity of the coil insulation;
E = effective sine wave voltage between line terminal and core or grounded tinfoil, expressed in volts = line voltage $/\sqrt{3}$;
X = thickness of coil insulation in slot portion measured from copper to core or grounded tinfoil and expressed in mils;

In case of composite coil insulation which is made up of several layers of different kind of insulation—units, as layer *A* next to the coil, then *B*, then *C*, having layer thicknesses X_A, X_B, and X_C and resultant permittivities K_A, K_B and K_C respectively, the resultant of the resultant permittivities is

$$K = \frac{X}{\frac{X_A}{K_A} + \frac{X_B}{K_B} + \frac{X_C}{K_C}} \qquad \textbf{(13)}$$

where K_A, K_B and K_C are obtained from equation (**10**) or from Table II for the corresponding insulation-unit in the layer *A*, *B* and *C* respectively.

In Fig. 5 is given a typical curve, *X*, showing the thickness of coil insulation in the slot portion of alternator windings—in relation to the terminal voltage (line voltage).*

In Table III this curve is analyzed with respect to the dielectric stresses in air pockets in the coil insulation, by applying equation (**12**) and using the resultant permittivities $K = 3$, 3.5, 4 and 5 respectively.

---

*See Standard Handbook for Electrical Engineers, Fourth Edition, Section 7, Alternating Current Generators and Motors by Comfort A. Adams and Henry M. Hobart, page 484, Fig 65.

The stresses g_1 in air bubbles for different resultant permittivities, K, are shown in the relation to the terminal voltage by the broken curves in Fig. 5.

In Fig. 6 is reproduced the curve of dielectric strength G_0 of air at $t = 25$ deg. cent. and $b = 76$ cm. in relation to spacing, (see also Fig. 1A), and therefrom is derived—by applying equations (**1**) and (**2**)—the curve of dielectric strength G of air films at $t = 100$ deg. cent. and $b = 76$ cm.

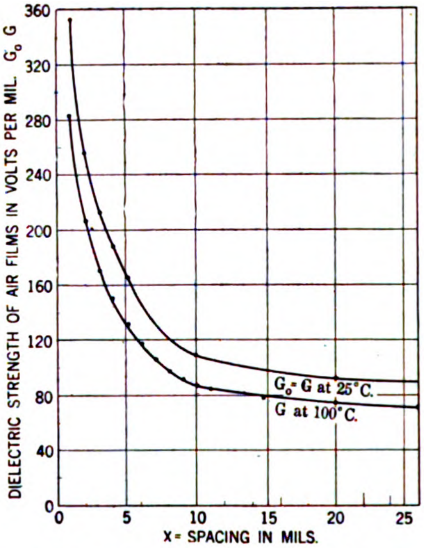

FIG. 6—DIELECTRIC STRENGTH OF AIR FILMS AT $b = 76$ CM. AND $t = 25$ AND 100 DEG. CENT. RESPECTIVELY

The following values of dielectric strength, G, of air at $t = 100$ deg. cent. and $b = 76$ cm. for spacings; $X_1 =$ 1, 2, 3, 5, 8, 10, 15, 20 mils; namely $G =$ 282, 205, 170, 132, 97, 87, 79, 74 volts per mil are shown by lines parallel to the abscissa axis in Fig. 5 and *their intersections with the broken curves* g_1 *indicate the starting points of the corona* in the entrapped air bubbles or pockets.

As stated above we have to consider the strength of entrapped air bubbles or pockets of larger thickness only, namely of such air bubbles or pockets which are due to imperfect butt joints of the tape, due to occasional wrinkles produced by unequal tension during the taping, and due to bulging of the coil insulation.

Since air has the lowest value of both permittivity and dielectric strength among the insulating materials which enter into the combination of the coil insulation, we should keep the dielectric stress of those air bubbles or pockets below the critical values which are plotted in Fig. 6 in relation to the air spacing. Both temperature and barometric pressure (altitude) of the location affect the strength of air pockets entrapped in coils, and should be taken into consideration. Tightly wound coils with very thin air pockets withstand higher dielectric stresses than loosely insulated coils.

Let us consider a practical example to illustrate the use of Fig. 5.

Take a 13,200-volt generator. Assume that $K = 3.5$ at 100 deg. cent. and that the method of manufacture is such that there is a probability of 10 mils air pockets in the coil insulation. From curve X the thickness of coil insulation for a 13,200-volt generator is 235 mils from copper to core or grounded tinfoil. The stress on the entrapped air for $K = 3.5$, from the broken curve g_1 for $K = 3.5$, is $g_1 = 113$ volts per mil.

The dielectric strength of 10 mils air pocket at 100 deg. cent., as indicated by the horizontal line $G = 87$ volts per mil for 10 mils, air film, is not strong enough to withstand a stress of $g_1 = 113$ volts per mil, with the result that there will be corona in the 10 mils air pockets.

If the method of manufacture can be improved so that the air bubbles in the coil insulation are all reduced to about 5 mils or less, there will be no internal corona, since the strength of a 5 mils pocket is then 132 volts per mil, as indicated by the horizontal line $G = 132$ volts per mil for 5 mils air film.

The above can, of course, also be calculated for any coil insulation directly from equation (**12**) and the conclusion reached by inspection of Fig. 6.

It should be borne in mind that we have considered so far the dielectric stresses in air in a uniform electric field, which is nearly the case for the sides of the coils adjacent to the core. At the edges produced in the slots by the air ventilating ducts in stator iron and at the edges of the coils, layers and turns, there are some concentrations of the dielectric field which produce somewhat higher local stresses on the coil insulation and the occluded air pockets than at the location of the uniform field.

The edges of stator ducts and stator teeth may produce external corona and cause pitting of the coil insulation at the coil surface. This danger can be guarded against by providing a grounded tinfoil armor extending 1½ to 2 in. at each end beyond the slot portion of the coil. The coil insulation must be properly reenforced under and above the edges at the ends of the tinfoil armor.

The edges of layers and turns are locations of increased stress for the internal coil insulation between layers and turns. The problem is comparatively simple for coils which have but few turns per coil with only one turn per layer. Here the turns may be heavily taped, as shown in Figs, 4B and 4C without much loss of space, because the turn insulation constitutes a part of the coil insulation. It is recommended that coils with n turns per coil receive an insulation between turns equal to at least $1/n$ of the thickness of the coil insulation to ground. Such turn insulation will stand up indefinitely under normal operating conditions and will also withstand occasional line surges when they penetrate the winding. It is in most cases the insufficient turn insulation that, after comparatively short operation, ages and deteriorates due to action of internal corona, and causes break down usually in the line coil.

Coils wound with several layers and several turns per layer are more delicate and must be insulated yet more liberally to withstand safely a long time service. Such coils are usually filled with compound before the insulation is applied; the purpose of this treatment is to eliminate so far as possible all the air between turns and layers inside the coil.

In conclusion it is evident that the dielectric stress on the air bubbles in solid insulation of armature coils should be calculated and kept below the dielectric strength by using suitable thickness of insulation for the required operating voltage and by applying the insulation as tightly as possible. The internal insulation of coils between layers and turns should be adequate and selected in proper relation to the coil insulation to withstand the increased dielectric stresses at the edges of layers and turns and to withstand the line surges.

General Description of Insulation in Cables and Leads. The insulation of cables and leads is also of laminated form, being built up of paper or varnished cambric tape, and occludes also thin air bubbles or pockets. The latter are, of course, much thinner than those in the coil insulation, because the taping of the cylindrical conductor can be done with uniform tension; and in the case of cables the taping is applied with a machine.

The dielectric problems with which we will deal here are, therefore, similar to those encountered in the coil insulation, except that the electric field in the cable insulation is not uniform, but radial,—as shown in Fig. 7.

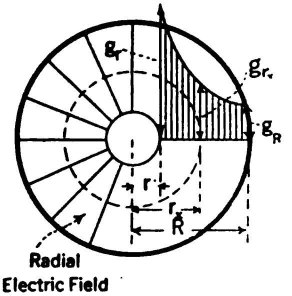

FIG. 7—SINGLE CONDUCTOR CABLE WITH LEAD SHEATH

Let

r = radius of wire in mils,

r_x = any radius of the insulation around the conductor in mils,

R = inside radius of the lead sheath in mils,

E = effective sine-wave voltage between the conductor and the grounded lead sheath,

g_r = gradient in effective volts per mil on the cable insulation at radius r,

g_{r_x} = gradient in effective volts per mil on the cable insulation at radius r_x.

g_R = gradient in effective volts per mil on the cable insulation at radius R.

The following equations hold for the gradients at different points in the radial electric field of a homogeneous insulation:

$$g_r = \frac{E}{r} \frac{1}{\log_e \frac{R}{r}} \tag{14}$$

$$g_{r_x} = \frac{E}{r_x} \frac{1}{\log_e \frac{R}{r}} \tag{15}$$

$$g_R = \frac{E}{K} \frac{1}{\log_e \frac{R}{r}} \tag{16}$$

If K is the resultant permittivity of the cable insulation, we may determine the dielectric stresses $g_{1,r}$, g_{1,r_x}, $g_{1,R}$ on occluded air pockets at different points in the radial electric field as follows:

$$g_{1,r} = K g_r = K \frac{E}{r} \frac{1}{\log_e \frac{R}{r}} \tag{17}$$

$$g_{1,r_x} = K g_{r_x} = K \frac{E}{r_x} \frac{1}{\log_e \frac{R}{r}} \tag{18}$$

$$g_{1,R} = K g_R = K \frac{E}{R} \frac{1}{\log_e \frac{R}{r}} \tag{19}$$

The gradient g_i, r_x, in any dielectric of permittivity k_i at any radius r_x, can be calculated from the following equation:

$$g_i, r_x = \frac{K}{k_i,} \frac{E}{r_x} \frac{1}{\log_e \frac{R}{r}} \tag{20}$$

In case that the cable insulation is made up of one insulation-unit the K for equations (**17**), (**18**), (**19**) and (**20**) can be obtained with sufficient approximation from equation (**10**) or from Table II for the corresponding insulation-unit.

In case that the cable insulation is graded by using several layers of different kind of insulation-units, as layer A next to the conductor of radius r, then B, then C, having outside radii R_A, R_B and R_C and resultant permittivities K_A, K_B and K_C respectively, the resultant of the resultant permittivities, K, for equations (**17**), (**18**), (**19**) and (**20**) is

$$K = \frac{\log_e \frac{R_C}{r}}{\frac{1}{K_A} \log_e \frac{R_A}{r} + \frac{1}{K_B} \log_e \frac{R_B}{R_A} + \frac{1}{K_C} \log_e \frac{R_C}{R_B}} \tag{21}$$

where K_A, K_B and K_C are obtained from equation (**10**) or from Table II for the corresponding insulation-unit in the layer A, B and C respectively.

The gradient $g_{1,r}$ on the air pockets at the conductor radius r has the maximum value because it occurs in the densest electric field.

From equation (**17**) it will be seen that the occluded air is subjected to a higher dielectric stress than the solid insulation. Because the dielectric strength of the air bubbles is lower than the dielectric strength of the solid insulating materials which enter into the combination of the cable insulation, we should, to avoid corona, keep the dielectric stress, $g_{1,r}$ on the air pockets, below the critical values which are plotted in Fig. 6 in relation to air spacing.

Conclusions from the Applications in Part II. To avoid corona in the insulation of armature coils, cables and other high-tension apparatus operating in air, it is necessary that under normal operating conditions the dielectric stress on air is below the dielectric strength of such air spaces, air bubbles or pockets which cannot be avoided in the process of manufacture.

A solid insulation which is not subjected to corona will show not an abnormal deterioration with time but will preserve practically its full dielectric strength and enable it to withstand exceptional high voltage stresses of very short duration, caused by surges and lightning.

This discussion does not cover, of course, the phenomenon generally known as "aging", that is the fatigue of solid insulations with time due to slow oxydation in the atmospheric air, or from effects of heating and dielectric stress below corona starting point.

It is not within the scope of this paper to deal with the difference in action between air films or thin pockets which have a practically uniform dielectric field and air bubbles or air spaces of such a shape as to distort the field. The latter may introduce additional phenomena as lateral stresses at the surface of division of air and taping.

To be presented at the 7th Mid-winter Convention of the American Institute of Electrical Engineers, New York, February 21, 1919.

IONIZATION OF OCCLUDED GASES IN HIGH-TENSION INSULATION

BY G. B. SHANKLIN AND J. J. MATSON

Abstract of Paper

This paper deals with the ionization of occluded gases in solid insulation from the standpoint that these gas spaces are the weakest part of an insulation design and should receive first consideration. The stress at which ionization starts in different types of built-up insulation, such as used in cables and coils, is measured and from these measurements a safe working stress determined. The paper brings out, more than anything else, the importance of reducing the gas spaces to a minimum size, and using materials of the lowest possible permittivity, since the higher the permittivity the greater the stress on the gas spaces.

If an insulation design is worked at a stress so high that internal ionization occurs it should be considered as "over-stressed" and its life will certainly be shortened. Just how much it will be shortened depends upon such factors as; type of insulation used, degree of over-stressing, looseness and porosity, etc. Roughly, the life of an over-stressed design is any where from six months to six years, judging from numerous tests made. This shows that the damage is very gradual.

Introduction

The selection of a safe voltage rating for high-tension equipment, such as cables and coils, or more properly speaking, the selection of a safe thickness of insulation, has not, like other factors in electrical engineering, been based on scientific grounds. The method of selection has been more a question of judgment and experience, than any thing else.

It is generally admitted that high-potential testing and dielectric strength data are very unsatisfactory criterions. They are of value only in testing for flaws and defects. But assuming the insulation in perfect condition physically and as having a dielectric energy loss sufficiently low at maximum operating temperature to assure against accumulative heating or undue rise in temperature, no satisfactory method of predetermining the proper thickness has been available.

In studying the service strength of any design the weakest

Manuscript of this paper was received January 8, 1919.

point has first consideration. Occluded gas is the weakest point of insulation designs, such as considered above. The solid insulation alone, always assuming, of course, that it is a good grade of material and workmanship, will safely withstand much greater stress than when occluded gases are present. When the stress is high enough to ionize these gases, the insulation should be considered "over stressed." This has been generally recognized but the fact that occluded gas is, almost without exception, inherent in organic insulation has received little recognition.

It is the purpose of this paper to present the results of an extensive study of these gas spaces and the effects they introduce. In doing so we do not wish to over emphasize the importance of this one factor. What we do wish to emphasize is that this method of study or test fills a breach in insulation engineering. The method of "judgment and experience" has, as is usually the case, given correct results. It is interesting to note in studying the data given in this paper how closely the maximum allowable working stress agrees with that which is accepted as good practise.

Occluded Gas and its Causes

There are so many variables that enter into the formation and characteristics of gas pockets, from the most minute pocket to the largest, that it is impossible to give a complete analysis at the present stage of the investigation. A certain amount of speculation, although an effort will be made to reduce it to a minimum, must be indulged in.

Each detail in the process of manufacture and application of materials introduces some new factor into the formation of gas spaces. Quite often the methods of installation and operation introduce additional factors.

Impregnated Paper Cable, is usually made by first wrapping dry paper tape around the conductor. To simplify the illustration, single-conductor, lead-sheath cable only will be considered.

The dry paper cable is put into a vacuum tank and the greater part of the moisture and air extracted under heat. It is not a perfect vacuum and a certain amount of impure air remains. Melted filling compound is then let into the tank until the cable is immersed. The compound acts as a valve and stops up all the exposed passages through the paper wrappings. Pressure is then applied and the compound forced thoroughly into the cross section. The slight amount of impure air remaining in the cable is driven back into the cross section and entrapped in the spaces or voids between wrappings. The applied pressure compresses these gas spaces to a most minute size.

After the cable has been in the tank long enough to assure complete impregnation the pressure is reduced to atmospheric and the heat cut off. The gas spaces thereby automatically expand to atmospheric pressure and remain at this pressure during cooling. After the cable has cooled down to a temperature at which the compound is somewhat thickened but still thin enough to drip it is lifted out and the excess compound cleaned off. The cable is lead jacketed while still warm and is then immune from external pressure except through the ends. Every one is familiar with the exuding of compound from the exposed ends of cable when heated. This is due to a tendency to equalize the pressure inside and out.

When the cable has cooled to a temperature of about 55 deg. cent. or lower, depending upon the type of filling compound, the compound has thickened to such an extent that pressure is not transmitted to the gas spaces and their size remains constant at lower temperatures, except for the slight enlargement that occurs due to shrinkage of the compound.

At room temperature, then, the pressure in the spaces must be something less than atmospheric. Assuming the temperature at which the compound thickens as 55 deg. cent. the pressure at 25 deg. cent. should be approximately,

$$\frac{760\ (273 + 25)}{273 + 55} = 690 \text{ mm.},$$

or allowing 4 per cent for shrinkage of compound, about 650 mm.

In speculating upon where these spaces are distributed we are inclined to believe that the greater percentage of them are initially down towards the center of the cross section, near the conductor. They are forced down into the cross section by the entrance of the impregnating compound. Either this is the case or the whole cross section contains a maze of gas spaces, for the test results invariably show spaces in the neighborhood of the conductor, where maximum stress occurs.

The aim should be always to keep these spaces reduced to a minimum, for the larger spaces are, the less the stress required to ionize the gas. It is obvious that the paper wrappings should be tight and compact. This prevents the gas from accumulating at one point in the filling compound and forming a bubble of appreciable size between loose layers of paper, or in creases or crinkles.

Varnished Tape and Sheet Materials. The conditions under which these are applied and treated is somewhat different from cable paper. Usually they are wrapped on while exposed to the room air. Varnish or shellac is brushed on between wrappings to stick them together and fill up space. It is reasonable to expect that some air will be entrapped during this application and is originally at atmospheric pressure. When the material is baked or dried out the volatile solvent joins with the air to set up considerable internal pressure and this forces passages through the thickness so that the gases can escape. A cured material is consequently more or less porous and the gas pockets all have small capillary passages to the surrounding atmosphere. They are, then, normally at atmospheric pressure and it is possible to supply fresh air through the outlet passages as the material cools down. This is called "breathing."

If the tapings or sheets are applied tightly to conductors of round cross section the thickness of the gas spaces should be about in the same order as those experienced in well wrapped paper cables. If, however, the material is applied to conductors of rectangular cross section the thickness of the spaces might vary anywhere between those found in round cross sections and values much greater, depending upon the type of insulation considered, the process of application, conditions of use, etc. There is a tendency for the insulation to bulge away from the rectangular sides, which accounts for the wider variation in thickness of gas space.

IONIZATION CURVES

The loss introduced by ionization of occluded gases is combined with the inherent dielectric loss of the solid material and in obtaining data it is necessary to measure the total loss. Fortunately the ionization loss is an appreciable part of the total and is easily and accurately distinguished.

The dielectric energy loss measurements were made by the "Compensated Dynamometer Wattmeter Method." This was described in detail in an article published previously.[1]

---

[1] "Compensated Dynamometer Wattmeter Method of Measuring Dielectric Energy Loss," G. B. Shanklin, *General Electric Review*, Oct. 1916.

A better conception of the method, its accuracy and the way the data are worked up and analyzed can be obtained from a paper read before the Institute in June, 1917.[2]

During the three years in which we have followed this work all possible precautions have been taken to eliminate external sources of loss, phase-angle errors and other forms of inaccuracy. Numerous checks have been made besides those described in the two publications referred to. Familiarity with the method and analysis of a mass of data make us feel that an accuracy better than 2 per cent is obtained at the lowest dielectric power factors ordinarily met with in solid materials.

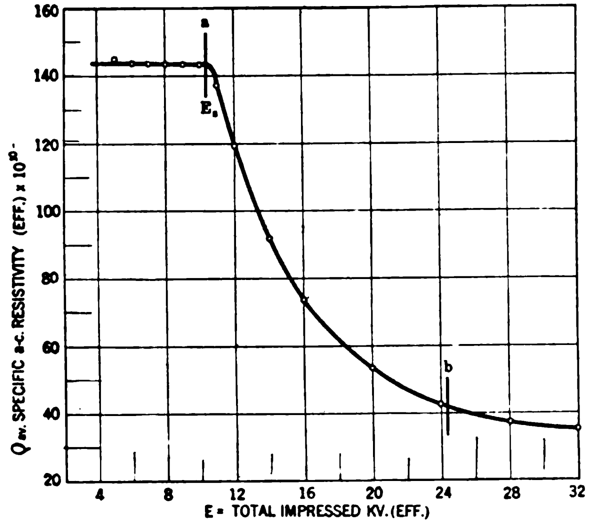

FIG. 1—TYPICAL IONIZATION CURVE

A typical ionization curve is given in Fig. 1. It is calculated from 60-cycle energy-loss data taken at room temperature on a 2/0 single-conductor cable with 9/32 in. thickness of impregnated paper and lead sheath. The watts and current were measured at the impressed voltages indicated. From these readings the effective a-c. restivity per cm^3 ($\rho_{av.}$, average through the thickness) was calculated by formula (1) in the Appendix.

Let it be assumed that there are gas spaces sparcely scattered throughout the cross section of cable and that the thicknesses of these spaces vary from zero to that of the largest met with. Up to 10.3 kv. (a) the loss represented by $\rho_{av.}$ is the inherent dielectric loss of the solid material and varies practically as the square of the voltage. The largest gas spaces next to the conductor are the first to be ionized. The voltage gradient at the conductor (in the solid material, not in the gas space) will be

---

[2] "Insulation Characteristics of High-Voltage Cables," Clark and Shanklin, A. I. E. E. TRANS., Vol. XXXVI, 1917, p. 447.

$$g_{max.} = \frac{E}{a \log_\epsilon b/a} = 2.218\ E,$$

and since $E_n = 10.3$ kv., $g_{max.} = 22.8$ kv. per cm.

As the voltage is gradually raised the gradient at the conductor increases and the smaller spaces at this point will be ionized. Likewise, the gradient 22.8 kv. per cm. is traveling out through the thickness ionizing the larger spaces until it finally reaches the sheath at an impressed voltage $E = 24.3$ kv. (b). Complete saturation is not yet reached but the curve is flattening out, showing that the majority of the gas spaces have been ionized. It is impossible to reach complete saturation before the cable breaks down as the extremely small gas spaces, those of microscopic dimensions, require excessive stress to ionize them.

Another factor that determines the slope of these curves is the increase in gas pressure after ionization once starts. This increase in pressure, or "ionization pressure" as it is called, is dealt with in books on gases by J. J. Thompson[3] and J. S. Townsend.[4] A paper by E. H. Warner[5] also covers the subject.

Since the gas pressure at the instant ionization starts is that with which we are dealing, the "ionization pressure" does not bear on our work, but it is mentioned merely as a matter of interest.

The relative permittivity ($K_{av.}$, average through thickness) is calculated from the energy-loss data by formula (**2**) in the Appendix. For a full description of these characteristics reference should be made to the Institute paper previously referred to.

[3] "Conduction of Electricity through Gases," by J. J. Thompson, Cambridge Press, 1906.

[4] "Electricity in Gases" by J. S. Townsend, Oxford Press, 1915.

[5] "Ionization Pressure, by E. H. Warner, *Phys. Review*, Vol. 8, 1916, p. 285.

$K_{av.}$ is not the true relative permittivity. In calculating $K_{av.}$ it is assumed that the dielectric circuit is a parallel circuit, that is, the leakage path (a-c.) and capacity are assumed in parallel. Actually the circuit is a maze of series-parallel paths. The series component determines the change in $K_{av.}$ with frequency, depending upon the type of material considered. For instance, in varnished cambric or impregnated paper the difference in $K_{av.}$ at 25 and 60 cycles is small, especially at higher temperatures, because the series component is small. In pasted mica the difference is greater due to the "barrier effect" of the mica flakes.

$K_{av.}$ is an average effective value through the whole thickness and is consequently the value needed in this work. It corresponds to the effective a-c. resistance of a conductor in which skin effect is appreciable. The true permittivity corresponds to the d-c. resistance of the conductor.

Knowing the effective permittivity of the solid insulation and the voltage at which ionization begins, curves can be calculated showing the stress across gas spaces of any assumed thickness. Also, knowing approximately the pressure of the gas and its dielectric strength, cross curves can be plotted and a comparison will indicate the maximum thickness of gas space. This method of dealing with the data will be followed throughout the paper. It would be impossible to present all of the energy-loss data or even the ionization curves alone, as hundreds of them were taken.

In a number of cases measurements were taken at both 25 and 60 cycles. The voltages at which ionization started agreed almost exactly. In other words, the ionization starting point is practically independent of frequency over the usual commercial range.

During the initial stages of this work considerable difficulty was experienced in obtaining uniformly smooth and consistent curves, such as that shown in Fig. 1. In particular, the points taken at the lower voltages would not line up on a smooth curve but plotted in a haphazard manner. We at first came to the conclusion that the ionization was inherently unstable and followed no simple law, but further investigation showed this trouble to be due to two causes:

1. The errors in voltage reading are squared in the calculation of $\rho_{av.}$ and come in once more in the abscissas of the curves. The greatest possible accuracy in voltage reading over the whole range is therefore necessary.

2. The wave shape varied slightly over the voltage range. This not only changed the values of ρ_{av}. but also gave an ionization starting point at variance with that of a sine wave. This error was corrected by connecting a relatively large capacity in parallel with the test sample. A pure sine wave over the whole voltage range resulted.

The effects of a badly distorted wave are shown in Fig. 2 the data being taken at 60 cycles, room temperature, on a sample of mica-paper insulation 0.16 in. thick, wrapped on a conductor of rectangular cross section. Baking at high temperature had caused the insulation to loosen up and form numerous gas spaces. Curve (*a*) shows measurements with a distorted wave and curve (*b*) with a sine wave. Oscillographic records of the two waves are shown in Fig. 3. The higher harmonics in (*a*) were caused by an iron core reactance in the low voltage side. Wave shape (*b*) was taken after 0.05 microfarads capacity was connected in parallel with the test sample.

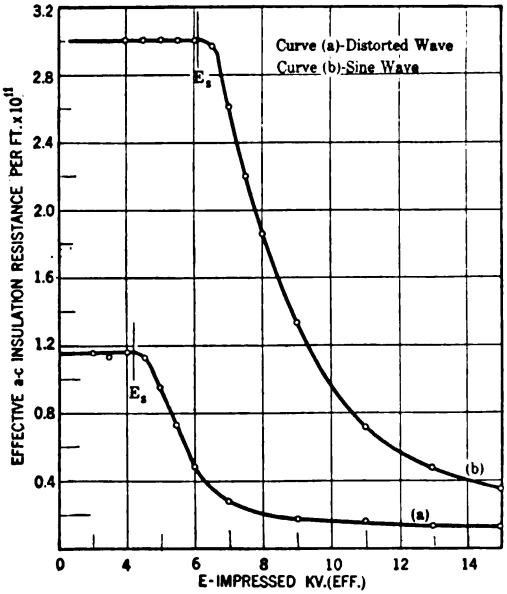

Fig. 2—Ionization Curves Showing Effect of Distorted Wave Shape

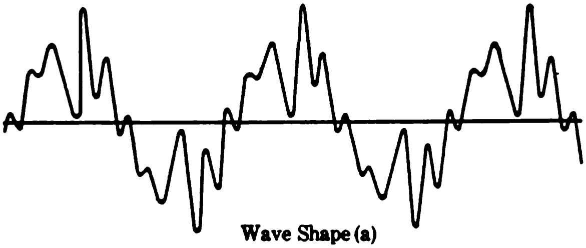
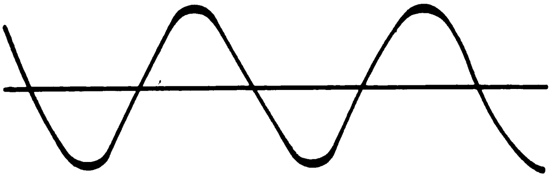
Ionization starts at 6.1 kv. effective with the sine wave, while with wave (*a*) it starts at 4.2 kv. The starting point with wave (*b*) is $6.1 \times \sqrt{2} = 8.62$ kv. maximum, with wave (*a*) it is $4.2 \times 2.03 = 8.53$ kv. maximum. These two values correspond closely.

STRENGTH OF AIR

Before the thickness of gas space in a test sample, can be determined the strength of gas under exactly the conditions, met with must be known. From the nature of these conditions the gas considered must be a mixture of air and the volatile organic contents of the insulation, the amount of impurity depending upon the vapor tension of the different components, the ability to supply fresh air to the gas spaces, etc.



Wave Shape (a)



Wave Shape (b)

FIG. 3—OSILLOGRAPH RECORDS OF WAVE SHAPES REFERRED TO IN FIG. 2

In those cases where components of low vapor tension, such as benzol, are present the nature of the conditions is such that passages are forced from the gas pockets to the outside air and the impurities mostly escape.

Impregnating compounds are heat or vacuum treated before using, and their components have a comparatively high vapor tension. When impregnating compound is admitted to the filling tank the vacuum decreases but little faster than the decrease in gas volume, which shows that the amount of impurity liberated is not great.

We can say roughly, that, the occluded gas in insulation is a mixture of air and from zero to about 50 per cent impurity, the impurity as a general rule being an organic vapor. The best that can be done is to consider the strength of air alone. The amount of impurity will vary in different cases and complete ionization data is available only for air.

On pages 466 to 471 of J. J. Thompson's book he discusses and analyzes data on various gases and vapors. The strength of CO_2 and water vapor is about equal to that of air over the range of pressure and gap spacing needed in our work. The strength of benzol vapor varies from about 1.0 to 2.5 times that of air.

8.00	252.0	140.0	937.0		

In discussing Bouty's tests on different gases between glass plates, Thompson concludes that the nature of the electrodes (whether metal or dielectric material) has no effect unless the spacing is comparable with the mean free path of the gas molecules. Tests in our laboratory at 60 cycles, atmospheric pressure, showed no difference in the strength of air between brass electrodes and glass plate electrodes down to the minimum spacing (0.05 cm.) that could be measured accurately.

Table No. 1 gives the strength of air in terms of Pachen's Law;

$$Pt = \text{a constant voltage.}$$

where P = mm. pressure, and
t = mm. gap spacing.

The data in this table represent an average of the values obtained by a number of investigators with both direct and alternating voltages. Most of the data were taken from the books by J. J. Thompson and J. S. Townsend. In some cases original sources were referred to.[6]

Pashen's Law as given above is based on the assumption that $P \times t =$ a constant mass of gas per unit area of gap. Also, the figures in Table I are based on an air density equivalent to a temperature of 25 deg. cent.

It is obvious that when increasing the temperature of a test sample above 25 deg. cent. this condition is not met with. A correction can be made, however, if the gas pressure and temperature are known. Harris[7] has shown that a change in air density produced the same effect on dielectric strength whether due to temperature or pressure.

In paper cables, for instance, the gas pressure is assumed as 650 mm. at 25 deg. cent. and 760 mm. above 55 deg. cent., as previously discussed. This can be corrected for by assuming "equivalent pressures" proportional to the absolute temperatures, instead of the actual pressure. The "equivalent pressures" are:

650 mm. at 25 deg. cent.
760 mm. at 55 deg. cent.

$$760 \times \frac{328}{373} = 668 \text{ mm. at 100 deg. cent.}$$

In wrapped insulation that has been cured the gas pressure is assumed as 760 mm. over the whole temperature range. The "equivalent pressures" therefore are:

760 mm. at 25 deg. cent.

$$760 \times \frac{298}{373} = 607 \text{ mm. at 100 deg. cent.}$$

$$760 \times \frac{298}{473} = 479 \text{ mm. at 200 deg. cent.}$$

When determining the strength of air from Table I the "equivalent pressures" should be used instead of the actual pressures.

IONIZATION DATA

Single-Conductor Paper Cable: Filled with Mineral Hydrocarbon Base Compound. Lead Sheath. In Table No. 2 data are given for samples of single-conductor paper cable filled with mineral hydro-carbon base compound. The various cross sections cover a wide range. The voltage at which ionization starts (E_s) was taken from measured curves similar to that in Fig. 1. In every case it is the minimum value measured on two or more separate samples.

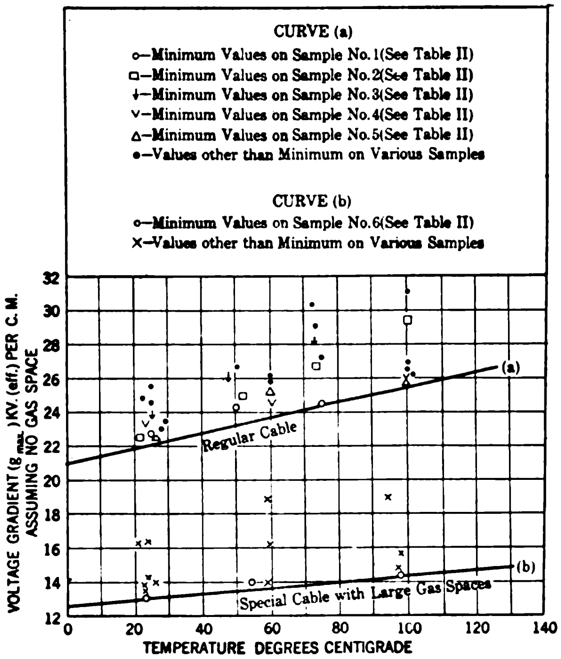

FIG. 4—MAXIMUM VOLTAGE GRADIENT BETWEEN CONDUCTOR AND SHEATH (ASSUMING NO GAS SPACE) AT START OF IONIZATION

Single conductor paper cable—filled with mineral hydro-carbon base compound— new cable; never in service

In Fig. 4 the voltage gradient (effective kv. per cm.) in the solid insulation at the conductor, that is, assuming no gas spaces present, is given for the different cables at the instant ionization starts. The assumption of no gas spaces is allowable, for even when present they are so small as not greatly to effect the distribution of stress in the solid material. Also, it would be expected that the larger number of the stress lines between conductor and sheath pass only through solid material without encountering gas spaces.

The gradient (g_{max}) agrees surprisingly well for the different cross sections. All of the points above curve (*a*) in Fig. 4 are representative of the values met with in ordinary commercial cable of this type. In a number of cases we found values of g_{max} higher than those given in Table II. These are given in Fig. 4 but are not included in the table, as the minimum values are of greater importance. Occasionally there would apparently be no ionization at all above 70 deg. cent.

Extending the minimum curve (*a*) in Fig. 4 back to 0 deg. cent., a temperature lower than would be met with in operation, gives a value of 21. kv. per cm. Allowing a further margin of safety it would appear that 19 or 20 kv. per cm. should be selected as the maximum allowable working stress in a cable of this type, assuming, of course, that the cable is compactly made up and in good condition and further that the working voltage has approximately a sine wave.

Ionization starts in sample No. 5 at the same value of g_{max} as in the other samples. This sample had a smooth surfaced conductor while the others had stranded conductors. We have made a close study of smooth and stranded conductors and have never found any difference between their effects. Either the gas spaces occur slightly out through the thickness of insulation from the conductor, or stranded conductors give a uniform radial stress without appreciable distortion next to the conductor.

It now remains to determine approximately the maximum thickness of gas space met with in this type of cable. Taking sample No. 5 as a representative sample the stress across gas spaces of assumed thicknesses was calculated at 26 deg. and 100 deg. cent. using formula (3) in the Appendix. The stress (g_a) across the gas space is calculated as the average by making $x = a + 1/2\ t_a$ when the gas space is assumed next to the conductor, or $x = b_1 + 1/2\ t_a$ when the space is assumed out in the thickness of insulation, which is allowable because there is only one or two per cent difference between the maximum and minimum stress across the gas space. In other words, the lines of stress across the gas space are practically parallel. This is due to its extreme thinness when compared with radius *a*.

The calculated curves discussed above are given in Fig. 5. The gas space (t_a) is first assumed as next to the conductor and then 5 and 15 per cent out in the thickness of insulation from the conductor. The difference in the permittivities of gas and solid material makes the stress much higher in the gas space, as can be seen by comparing Figs. 4 and 5.

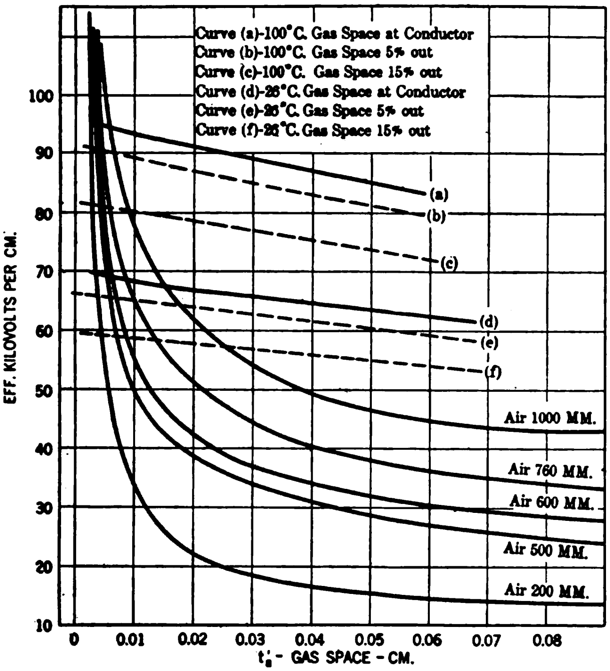

Fig. 5—Cross Curves for Determining Thickness of Gas Space—Sample No. 5 (See Table II)

The strength of air, taken from Table I, is cross plotted in Fig. 5 at various assumed pressures. It is questionable whether the strength of pure air is closely representative of the impure mixture in the gas spaces. However, it serves the purpose of approximation and comparison of the different materials considered. It is interesting to note that according to Thompson the strength of the impure mixture must be higher, not lower, than that of pure air.

Assuming a gas pressure of 650 mm. at 25 deg. cent. and 760 mm. at 100 deg. cent., as previously considered, the corresponding "equivalent pressures" are;

650 mm. at 25 deg. cent.
668 mm. at 100 deg. cent.

With the gas space assumed next to conductor the values of t_a, estimated from Fig. 5 at points where the curves cross are:

0.0068 cm. at 25 deg. cent.
0.0036 cm. at 100 deg. cent.

This decrease of t_a with increase in temperature apparently does not check up with the assumption that the gas pressure is only 760 mm. at 100 deg. cent. for the gas is totally enclosed and must expand or the pressure must increase.

This discrepancy might be accounted for in the following way; t_a measures between adjacent bare surfaces of the slightly loose paper wrappings, or between the under surface of the first wrapping and the conductor. In the general re-adjustment which occurs when the solid material, liquid filler and gas expand the paper wrappings are pressed closer together and the gas allowed to expand in a lateral direction between the paper surfaces, giving greater area but less thickness. This could also account for the disappearance of ionization at higher temperatures that is sometimes met with. The thickness of gas space (t_a) may in these cases be so slight that the stress across it is insufficient to ionize the gas.

Similar curves for sample No. 2 of much smaller cross section are given in Fig. 6. The values of t_a measured from the curves in Figs. 5 and 6 are only slightly different and this is due to the difference in permittivities and starting gradient (g_{max}). The values of t_a are independent of cross section as long as t_a is small compared with the thickness of insulation.

Cable With Large Gas Spaces. Sample No. 6 in Table II was a special length made up with comparatively large gas spaces for test. The first 5 per cent of the paper wrappings were applied loose and crinkled, the remaining wrappings being uniformly firm. The length was then vacuum treated in the usual way but was not left in the compound tank long enough to thoroughly fill it. Compound penetrated the whole cross section but not thoroughly, as was shown by examination after test, the gas spaces in the loose crinkled section being plainly visible when the wrappings were carefully removed.

Curve (*b*) in Fig. 4, extended back to 0 deg. cent. gives a voltage gradient of 12.5 kv. per cm., a dangerously low value. Curves for determining the maximum thickness of gas space are given in Fig. 7. The "equivalent pressures" are:

$$650 \times \frac{296.5}{298} = 647 \text{ mm. at } 23.5 \text{ deg. cent.}$$

$$760 \times \frac{328}{370} = 674 \text{ mm. at } 97 \text{ deg. cent.}$$

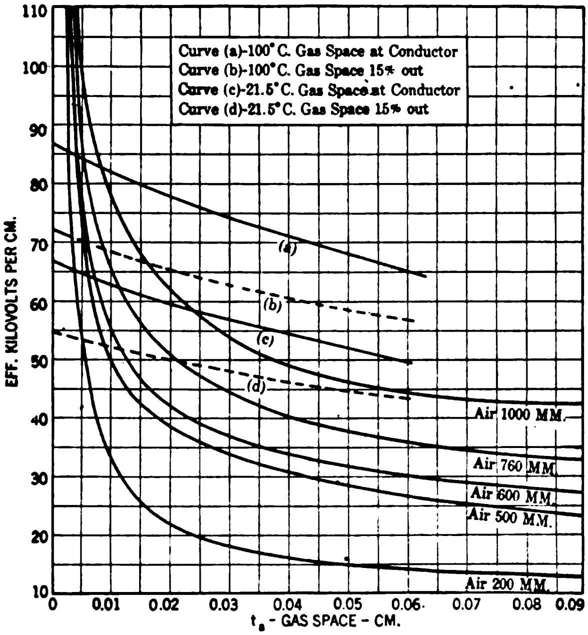

FIG. 6—CROSS CURVES FOR SAMPLE NO. 2 (SEE TABLE II)

With gas spaces assumed next to conductor the values of t_a are:

0.047 cm. at 23.5 deg. cent.
0.023 cm. at 97 deg. cent.

The spaces in this sample are therefore about seven times larger than those in samples Nos. 2 and 5 which are representative of average good cable of this type. It is obvious that large gas spaces are dangerous. All engineers have recognized this. The data given above merely verify a generally accepted view.

It will be noted that the 23.5 deg. cent. curve in Fig. 7 falls below the curve of the dielectric strength of air at 760 mm. This is very good proof that the pressure in the gas spaces is something less than atmospheric at room temperature.

Three-Conductor Paper Cable, Filled with Mineral Hydrocarbon Base Compound. We have had very poor success in attempting to investigate internal ionization and other characteristics of three-conductor cables with actual three-phase voltage. The degree of accuracy in the measurements has not been sufficient to obtain uniform and consistent ionization curves. Our work in this direction agrees with that of F. M. Farmer,[8] in that, as far as can be determined, there is no difference in the actual three-phase losses and those calculated from single-phase measurements. The investigation is being continued and we are hoping for better results later.

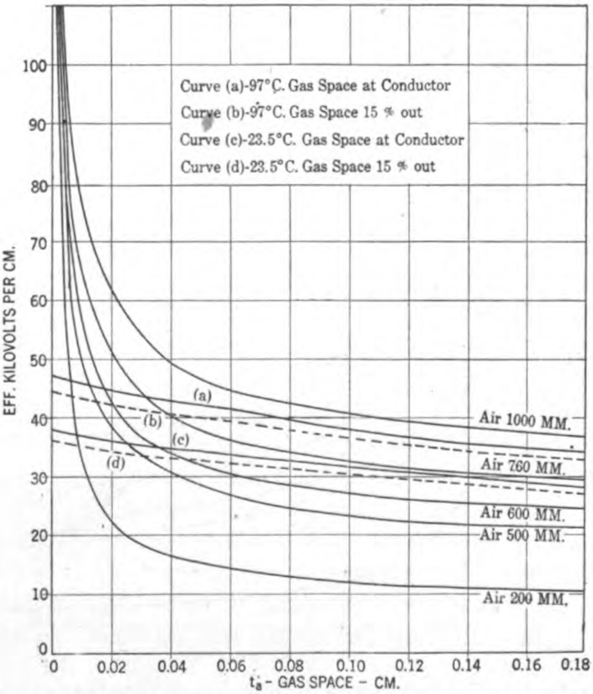

FIG. 7—CROSS CURVES FOR SAMPLE NO. 6 (SEE TABLE II)

				100	60	3.52	24.0	34.80	

The start of ionization between any two conductors cannot be studied with single-phase voltage, but only that between conductor and sheath. This is unfortunate, for in actual three-phase operation the stress is greatest between conductors, whereas with, single-phase voltage the stress is greatest between conductor and sheath, and ionization naturally starts here first, blanketing the results between conductors. A study of the stress between conductor and sheath is instructive, however, and will be given.

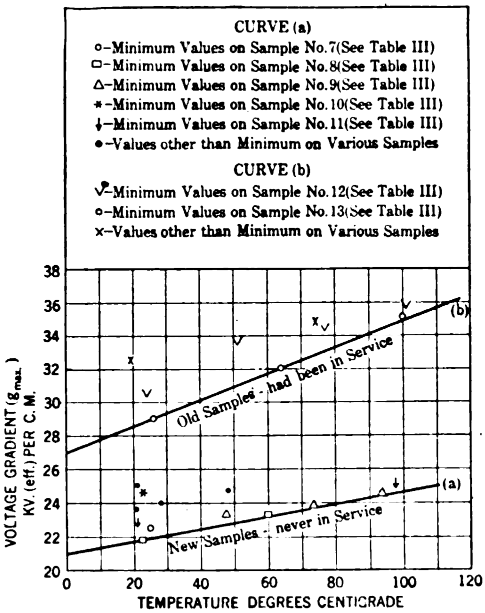

FIG. 8—MAXIMUM GRADIENT BETWEEN CONDUCTOR AND SHEATH (ASSUMING NO SPACE) AT START OF IONIZATION

Three-conductor paper cable filled with mineral hydro-carbon base compound

Calculation of the maximum stress between conductor and sheath (assuming no gas space present) is made by formula (**5**) in the Appendix. In this formula, it is assumed that the proximity of the other two conductors has no effect on g_{max}. The correctness of this assumption is verified by a comparison of the values of g_{max} for new cable in Table III and Fig. 8 with those of single-conductor cable in Fig. 4. A special test on sample No. 7 in Table III gives, perhaps, better verification.

Sample No. 7 was first tested by applying high voltage to all three conductors and grounding the sheath. The voltage at which ionization started (E_s) was found to be 15.5 kv. Two of the conductors were then carefully withdrawn from the sample, strand at a time, and the test repeated. E_s agreed exactly with that found in the first test.

The minimum values of g_{max}. for new samples of three-conductor cable, in Fig. 8 (curve *a*), agree closely with the corresponding values for single-conductor cable, Fig. 4 (curve *a*), and it must be concluded that the conditions, such as thickness of gas space, gas pressure, etc. are the same in both types of cables. This would be expected, since they are made of the same materials and by the same process.
